the natural phenomena of the island, and he published the results of his observations. He gave an account of the eruption of *Ætna* of 1811, in two letters: 'Lettere scritte da Catania à Monsignor Grano in Messina.' He wrote on the currents of the straits of Messina: 'Memoria su i Fili Reflui, e i Vortici apparenti dello Stretto di Messina,' in which he gave a better explanation of them than either Spallanzani or Brocchi has done. In 1818 he published an interesting 'Topografia di Palermo e de' suoi Contorni,' in which he describes the physical geography of the tract, its geological and mineral formation, its vegetable and animal productions, and its meteorology, the whole accompanied by a map. In the following year he was sent to explore the mountainous group called Monti Madonie, the ancient Nebrodes, which rises in the centre of the island, especially with regard to the frequent earthquakes to which that region is subject, and he wrote a 'Rapporto del Viaggio alle Madonie, intrapreso per Ordine del Governo,' Palermo, 1819. In 1823 he went on a like mission to the district of Ogliastro, near Termini, where an earthquake had made ravages, and among other things had affected the springs of the mineral waters from which the town of Termini takes its name. He wrote two reports on the subject, which were inserted in the Sicilian 'Giornale di Scienze, Lettere, ed Arti.' In 1830, on the occasion of some fossil remains found in the neighbourhood of Palermo, Scinà wrote a 'Rapporto sull' Ossa Fossili di Mardolce e degli altri Contorni di Palermo,' which attracted much attention. When a volcanic island arose suddenly off the southern coast of Sicily, Scinà was sent to examine the new phenomenon, and he wrote a 'Breve Ragguaglio del novello Vulcano.' Scinà was not neglected by the Sicilian government. Both King Ferdinand and his successor King Francis bestowed their favour upon him. In 1815 he was appointed historiographer of Sicily. In 1822 he was made chancellor of the University of Palermo, and a member of the commission of public instruction and education for the whole island. In 1823 he was made curator of the public library of Palermo, and also rector of the 'Educatario delle Nobili Donzelle,' or 'House of Education for young Ladies of Rank.' In 1828 King Francis presented him to the abbacy of S. Angelo di Brolo, and in the following year gave him the decoration of his own order. Scinà was also the author of the following works: 1, 'Introduzione alla Fisica Sperimentale,' 1803, a work which established his reputation as a man of science. 2, 'Elementi di Fisica.' 3, 'Elogio di Francesco Maurolico,' a distinguished mathematician of Messina in the 16th century. 4, 'Memorie sulla Vita e Filosofia di Empedocle, Girgentino,' in 2 vols. 8vo, Palermo, 1813, a work more concise but not less accurate and interesting than that of F. W. Sturz, Leipzig, 1805, on the same subject. Scinà's book is divided into four parts: the first treats of the time in which Empedocles lived; the second is a biography of the Argentine philosopher; the third treats of his philosophy; and the fourth is a collection of the fragments of his works translated into Italian. 5, 'Discorso intorno ad Archimede.' 6, 'I Frammenti della Gastronomia d'Archestrato,' Palermo, 1823, with a biography of that ancient and little-known Sicilian poet. 7, 'Prospetto della Storia Letteraria di Sicilia.' This is one of Scinà's most esteemed works, although it bears a very modest title. 8, 'Lettera al Padre Piazzi intorno a Girolamo Settimo, Matematico Palermitano.' 9, 'Esperienze e Scoperte sull' Elettro-magnetismo.' Scinà died of the Asiatic cholera, which afflicted Palermo in July 1837. He was one of the most learned men that modern Sicily has produced. (Tipaldo, *Biografia degli Italiani Illustri*; Mortillaro, *Sulla Vita e su le Opere dell' Abate Domenico Scinà*, Palermo, 1837.)

SCIOPIUS, CASPAR, was born on the 27th of May 1576, at Neumark in the Palatinate (Pfalz). His family was poor; but although he attacked Scaliger for his pretensions, he was very anxious to be considered of noble descent. At the age of seventeen he published some Latin poems, which were very favourably received. After the completion of his studies, he travelled into Italy, and in 1589 he was at Ferrara, where he wrote a panegyric on Pope Clemens VIII. and the king of Spain. The pope became his protector and patron, and Sciopius followed him to Rome, where he renounced the Protestant religion, and the pope gave him the title of a knight of St. Peter, and soon afterwards made him Comes Apostolicus de Claravalle. In consequence of his conversion, Sciopius studied theology, and published several little works, partly to justify his own conduct and partly to support the cause of the pope against the Protestants. But the study of ancient literature was not neglected: he also published an edition of Varro, 'De Ling. Lat.' Ingoldstadt, 8vo, 1605; 'Commentaries on Appuleius and the Priapea,' Frankfurt, 12mo, 1606, and reprinted at Padua, 8vo, 1664, with notes of Scaliger and Lindenbrog.

Sciopius had hitherto been well disposed towards Jos. Scaliger, but some remarks respecting his conversion to Catholicism, and Scaliger's letter to Douza, provoked the enmity of Sciopius, which was displayed in his 'Scaliger Hypobolimus, hoc est, Elenchus Epistolæ Joan. Burdonis, pseudo-Scaligeri, de Vetustate et Splendore Epistolæ Scaligeræ,' 4to, Maynz, 1607. In this book he ridiculed with the bitterest satire the pretensions of Scaliger, and attacked King Henry IV. of France for having granted civil liberty to the Protestants. As the book was against Protestants in general, the dispute was taken up by several persons of both parties, and was carried on for many years. In 1608 Sciopius published several other works against the Protestants. In the year following he travelled to Italy, and at Venice

which was involved in some dispute with the pope, Scioppius endeavoured to persuade Paolo Sarpi to join the party of the pope. The consequence of this attempt was that Scioppius was thrown into prison; but being soon restored to liberty, he visited Vienna, where he found a more favourable reception. The emperor not only made him councillor to his court, but raised him to the rank of count palatine. In 1611 he published two works, one called 'Ecclesiasticus Autoritati Ser. D. Jacobi, Magnæ Britannię regis, oppositus,' Hartberg, in 4to; and the other called 'Collyrium Regium, Ser. D. Jacobi, Magnæ Britannię regi, graviter oculis laboranti, omnium Catholicorum Nomine, grates voluntatis causa, muneri misum; una cum Syntagmate de Cultu et Honore,' in 8vo. Both books were mainly directed against King James I. of England, but the first also contained fresh attacks on Henry IV. of France. In Paris and in London the books were publicly burnt by the hangman, and in London Scioppius was hanged in effigy (1612). Scioppius returned to Italy, but after a short stay there he went in 1613 to Madrid. Here he became acquainted with the grammatical work of Sanchez, commonly known under the name of 'Sanctii Minerva,' which turned his attention to grammatical speculations, and which he subsequently made known in other parts of Europe. He had not been long in Madrid when one evening he was dreadfully beaten by some servants of the English ambassador, who, it is possible, had ordered his servants to punish Scioppius for his insolence towards his royal master. Scioppius, not thinking himself safe in Spain, fled to Ingolstadt, where he published his 'Legatus Latio,' addressed against the English ambassador. Casaubon had defended the King of England, and this circumstance gave Scioppius an opportunity of resuming his warfare against the Protestants.

In 1617 Scioppius again went to Italy, and settled at Milan, ever continuing his bitter enmity against the Protestants, who, as he now declared, ought all to be exterminated, with their women and children. This proclamation of a religious war is contained in his 'Classicum Belli Sacri, sive Heldus redivivus,' Pavia, 1619. When his rage had become exhausted he returned for a time to philological studies, and wrote several very good grammatical works; but this quiet mode of life did not suit his quarrelsome temper. In 1630 he returned to Germany, and requested from the diet of Regensburg a pension for his services, which being refused through the influence of the Jesuits, he became the most furious enemy of their whole order, though he had before frequently lent them his support. His first works against the Jesuits appeared without his name, but in 1634 he attacked them openly in a work called 'Astrologia Ecclesiastica.' When he saw that his own life became endangered by these ferocious attacks he retired to Padua, where he began to occupy himself with writing a commentary on the Apocalypse; but before he had completed this work he died, on the 19th of November 1649.

Scioppius was a man of immense learning, of a prodigious memory, and of great acuteness. In his knowledge of the Latin language he had no equal. With his talents and learning he might have been as great a man as Jos. Scaliger; but his quarrelsome disposition, his strong inclination to satire, and his intolerance, constantly involved him in disputes which reflect discredit upon his character. There are nevertheless among his numerous works some which are still very useful to scholars, especially those on the Latin language. The number of his works is stated to be 104, but he did not publish them all under his real name; many appeared under the fictitious names Nicodemus Macer, Oporinus Grubinius, Pascasius Grosippus, Holofernes Krigœderus, Mariangelus a Fano, and others. The following list contains the most important of his works which have not been already mentioned:—'Verisimilium Libri Quatuor, in quibus multa veterum Scriptorum loca emendantur, augentur, et illustrantur,' 8vo, Nürnberg, 1595, and Amsterdam, 1662; 'Suspectarum Lectionum Libri Quinque, in quibus amplius ducentis locis Plautus, plurimis Appuleius, Diomedes Grammaticus, et alii, corriguntur,' 8vo, Nürnberg, 1597, and Amsterdam, 1664; 'De Arte Critica et præcipue de altera ejus parte emendatrice, quænam ratio in Lat. Scriptoribus ex ingenio emendandis observari debeat Commentariolus,' 8vo, Nürnberg, 1597, and Amsterdam, 1662; 'Elementa Philosophiæ Stoicæ Moralis,' 8vo, Maynz, 1606; 'Grammatica Philosophica, sive Institutiones Grammaticæ Latine,' 8vo, Milan, 1628 (a new edition with additions appeared at Amsterdam, 8vo, 1664, and another at Franeker in 1704); 'Paradoxa Literaria, in quibus multa de literis nova contra Ciceronis, Varronis, Quintilianii, aliorumque literatorum hominum, tam veterum quam recentiorum, sententiam disputantur,' 8vo, Milan, 1628, and Amsterdam, 1659 (this work was published under the assumed name of Pascasius Grosippus); 'Auctarium ad Grammaticam Philosophicam, ejusque Rudimenta,' 8vo, Milan, 1629, and Amsterdam, 1664 (published under the name of Mariangelus a Fano); 'Arcana Societatis Jesu publico bono vulgata, cum Appendicibus utilissimis,' 8vo, 1635; 'Consultationes de Scholarum et Studiorum Ratione, deque Prudentiæ et Eloquentiæ parandis Modis,' 12mo, Padua, 1836, and 8vo, Amsterdam, 1660 and 1665; 'Mercurius Quadrilinguis, id est, de Linguarum ac nominatim Latine, Germanicæ, Græcæ, et Hebrææ nova et compendiaria Discendi Ratione,' 8vo, Basel, 1637. Scioppius also wrote notes on the 'Minerva' of Sanctius, which first appeared at Padua in 1663, and which have subsequently been incorporated in the various editions of the 'Minerva.'

SCIPPIO is the name of a family belonging to the patrician gens

Cornelia. This illustrious family produced some of the greatest men in Roman history; we shall subjoin a complete list of those members of the family whose names have been handed down by historical records. The first Scipio mentioned in Roman history is

1. P. CORNELIUS SCIPIO, whom, in B.C. 396, the dictator Camillus appointed master of the horse. (Liv., v. 19.) The Fasti of this year however do not mention him, but state that P. Cornelius Maluginensis was the magister equitum of Camillus. A short time afterwards (B.C. 394) Scipio is mentioned among the military tribunes (Liv., v. 24), and a second time in the following year. (Liv., v. 26.) In the year B.C. 389 he was appointed interrex (Liv., v. 31), and two years after he held the same office a second time.

2. P. CORNELIUS SCIPIO is mentioned as one of the first curule ædiles, which office was instituted in B.C. 366. He is probably the same man who was magister equitum under Manlius, B.C. 350. (Liv., vii. 24.)

3. L. CORNELIUS SCIPIO was interrex in B.C. 352. (Liv., vii. 21.)

4. P. CORNELIUS SCIPIO BARBATUS was, according to the Fast. Cons., consul with C. Plautius in the year B.C. 328; but Livy (viii. 22) calls the colleague of Plautius P. Cornelius Scapula. Scipio Barbatus was made dictator in B.C. 306, to hold the comitia for the election of the consuls, for the actual consuls were engaged in a war against the Samnites. (Liv., ix. 44.) A year later he appears as pontifex maximus. (Liv., ix. 46.)

5. L. CORNELIUS SCIPIO was consul B.C. 298, and gained a victory over the Etruscans in the neighbourhood of Fregella. (Liv., x. 12.) He is probably the same who, three years afterwards (B.C. 295), appears in another war against the Etruscans; and was left as proprætor at the head of the Roman camp while the prætor Appius went to Rome. (Liv., x. 25, 26.)

6. CN. CORNELIUS SCIPIO ASINA. He is the first member of the family from whom we are able to trace the pedigree of the Scipios with certainty. The story about the origin of his surname Asina is related by Macrobius. ('Sat.,' i. 6.) He was consul at the time of the first Punic war (B.C. 260), together with C. Duilius, and obtained the command of the fleet; but in his attempt to take the island of Lipara, he was blocked up by the Carthaginians with seventeen vessels in a port of the island. His soldiers escaped on land, but Scipio himself surrendered to the enemy. (Polyb., i. 21.) Livy ('Epit.,' 17) gives another account of the manner in which he was made prisoner. He must however have obtained his liberty soon after, for he was consul a second time in the year B.C. 254 (Val. Max., vi. 9, 11), with A. Atilius Calatinus. He and his colleague took Panormus, the largest town in the Carthaginian part of Sicily, and then returned to Rome in triumph. (Polyb., i. 38.) Further particulars of his life are not known.

7. P. CORNELIUS SCIPIO ASINA, son of Cn. Cornelius Scipio Asina. He was consul, in B.C. 221, with M. Minucius Rufus, and made a successful campaign against the Istri, who harassed the Romans by their piracy. (Oros., iv. 13.) Four years after (B.C. 217) he was appointed interrex, to hold the comitia for electing the consuls. (Liv., xxii. 34.) In the year B.C. 211, when the news arrived that Hannibal was advancing with his army towards Rome, it was Scipio's advice to give up all Italy, and to draw all the armies within the walls of the city. (Liv., xxvi. 8.)

8. L. CORNELIUS SCIPIO, a brother of Cn. Cornelius Scipio Asina. He was consul in B.C. 259, with C. Aquilius Florus. He put the fleet of the Carthaginians to flight, and attacked them in Corsica and Sardinia, and destroyed the towns of Aléria and Olbia. For these services he was honoured with a triumph. (Liv., 'Epit.,' 17; Flor., ii. 2, 16; Val. Max., v. 1, 2.) The year after his consulship (B.C. 258) he is mentioned in the 'Fast. Cap.' as censor.

9. P. CORNELIUS SCIPIO, son of L. Cornelius Scipio. He was consul in the first year of the second Punic war (B.C. 218). While his colleague T. Sempronius Longus was sent with the fleet to Sicily, Scipio went to Spain; but when he heard that Hannibal was already preparing to cross the Rhodanus (Rhône), he returned by sea to Massilia. The sufferings of his soldiers from this voyage prevented him from going up the Rhône immediately; and when, after the lapse of three days, he set out to meet Hannibal, the latter had already advanced into the interior of Gaul. Scipio therefore sent a part of his troops, under his brother Cneius, who was his legate, to Spain, and with the rest he embarked for Italy, to join the other Roman forces there, and to attack Hannibal on his descent from the Alps. An engagement between the Carthaginian and Roman horse took place on the Ticinus, in which the Romans were defeated, and Scipio was wounded, and compelled to retire across the river Po. He took up a position near Placentia, but he was induced by the Gauls to fortify himself on the Trebia, and to wait for the arrival of Sempronius, who had been called back from Sicily. When the latter arrived, Scipio, still suffering from his wound, advised him not to engage in a battle with Hannibal; but Sempronius, anxious to strike a decisive blow, and seeing that the enemy only profited by delay, offered battle. He was defeated, and the Carthaginians became masters of nearly the whole of Northern Italy. (Polyb., iii. 40, &c.; Liv., xxi. 32, &c.)

In the summer of the year B.C. 217, Scipio, whose imperium was prolonged at the end of his consulship, went to Spain with a fleet of 20 ships and 8000 land-troops (Polyb., iii. 97), to join his brother

Cneius, who had already achieved important things in that country. His intention was to drive the Carthaginians from Spain, and thus to cut off the supplies which Hannibal was to receive from that quarter. Cneius on his arrival from Massilia had landed at Emporium, and soon after the greater part of the eastern coast of Spain declared for him. His mildness also induced several of the inland tribes, who were discontented with the oppressive rule of the Carthaginians, to join the Romans. A battle near the town of Scissis, in which the Carthaginians were defeated and their general Hanno taken prisoner, made the Romans masters of nearly the whole country between the Iberus (Ebro) and the Pyrenees. Cneius now took up his winter-quarters at Tarraco (Tarragona). (Liv., xxi. 60, &c.; Polyb., iii. 76.) In the year following, a short time before his brother Publius arrived, Cneius defeated the Carthaginian fleet in the mouth of the Iberus. (Liv., xxii. 20; Polyb., iii. 96, &c.) About the middle of the summer Publius arrived, and the two brothers marched against Saguntum, where Hannibal had left the Spanish hostages on his setting out towards Gaul. The treachery of a Spaniard, called Abelux or Abilyx, delivered them up to the Scipios, who wisely sent them home to their relatives, and thus gained a hold on the affections of a great number of Spanish tribes, who gladly shook off the yoke of the Carthaginians. In B.C. 216 the Scipios gained a victory at Ibero over Hasdrubal, who, after the arrival of a fresh Carthaginian army under Himilco, intended to make a landing in Italy and to support his brother there. The whole army of Hasdrubal was defeated and routed, his camp was taken, and he himself escaped with only a few followers. (Liv., xxiii. 28, &c.) The Spaniards, who had been heavily taxed by the Carthaginians, willingly submitted to the Romans, but the Scipios knew the fickleness of the Spaniards, and, in order to keep up friendly relations with them, they did not levy any heavy contributions, but applied to the senate at Rome to provide them with the means of supporting their armies. In the meanwhile Mago arrived with another army from Africa, and laid siege to the revolted town of Illiturgi on the Baetis. Here again the Scipios gained a great victory, and soon after another near Intibili, where the Carthaginians on their flight from Illiturgi had taken refuge. In the year B.C. 214 the important town of Castulo deserted the cause of the Carthaginians and joined the Romans, and when the former made a new attempt against Illiturgi, they were beaten by Cneius, and completely defeated in the neighbourhood of Munda. They were not more successful in several other attempts. During the following year the Carthaginians were engaged in a war in Africa against Syphax, and the Scipios had time to strengthen themselves in Spain. But the uninterrupted series of brilliant victories of the Scipios was now at an end. In B.C. 212 the Carthaginians resumed the war in Spain, and took 20,000 Celtiberians into their pay. Publius Scipio commanded two-thirds of the Roman forces, and was arrayed against Mago, Hasdrubal, son of Gisco (who were supported by Massinissa), and the Spanish chief Indibilis. Cneius was opposed to Hasdrubal Barcas. Publius, in his assault on the ranks of Indibilis, was cut down with the greater part of his army. His brother Cneius, abandoned by the faithless Celtiberians, withdrew as far as he could. From the manoeuvres of the enemy, he conjectured the fate of his brother. On his retreat he found himself at last compelled to make a stand upon a hill which was of such a nature that it was impossible for him to fortify himself. Nearly the whole of his army was cut to pieces, and Cneius himself fell among the rest, 29 days after the death of his brother. The catastrophe took place in the spring of the year B.C. 211. (Becker, 'Vorarbeiten zu einer Geschichte des Zweiten Punischen Krieges,' in Dahlmann's 'Forschungen,' ii. 2, p. 113.)

10. CN. CORNELIUS SCIPIO CALVUS, the brother of P. Corn. Scipio (No. 9). His exploits in Spain have just been described. He was consul, in B.C. 222, with M. Claudius Marcellus, with whom he made an expedition against the Insubrians, and took Acerre and Mediolanum. (Polyb., ii. 34; Plut., 'Marcell,' 6.) At the beginning of the second Punic war he went, as we have seen, to Spain as legate to his brother Publius.

11. P. CORNELIUS SCIPIO AFRICANUS MAJOR, the son of P. Cornelius Scipio (No. 9). If it be true that at the age of seventeen he fought in the battle of the Ticinus (B.C. 218), and rescued his wounded father, he must have been born in B.C. 235. He was in the battle of Cannæ (B.C. 216) as a tribune, and was among those who after the defeat escaped to Canusium. Here the chief command of the remaining troops was unanimously entrusted to him and Appius Claudius Pulcher. (Liv., xxii. 53.) On this occasion it was owing to his presence of mind that the remnants of the Roman army did not in their despair quit Italy. (Val. Max., v. 6, 7.) In B.C. 212 Scipio was curule ædile, though he had not yet attained the legitimate age. The tribunes of the people endeavoured to prevent his election, but they were obliged to give up their opposition, for the people, who seem to have perceived the extraordinary abilities of the young man, elected him almost unanimously. (Liv., xxv. 2.) In B.C. 211 his father and uncle fell in Spain, and the Carthaginians again took possession of the country, which they had almost entirely lost. When Capua had fallen again into their hands, and Italy no longer required their exclusive attention, the Romans determined to act with more energy against the Carthaginians in Spain. On the day of the election, no one ventured to come forward to undertake the command in this war. Young Scipio,

then scarcely twenty-four years of age, at last offered to take the command of the army in Spain. The people were struck with admiration at the courage of the young man, and gave him the command, with proconsular power, which was afterwards prolonged to him for several years (B.C. 210-206).

The extraordinary power which young Scipio exercised over his contemporaries was perhaps partly owing to superstition, for he was believed to be a favourite of the gods. Ever since he had taken the toga virilis, he went every morning into the Capitol, where he spent some hours in solitude and meditation. Hence all he did was considered by the people to be the result of his intercourse with the gods. Scipio himself partook in this opinion, and cherished it; and the extraordinary success of all his enterprises must have strengthened his belief. Towards the end of the summer, in B.C. 210, or, as Livy (xxvi. 41) says, at the beginning of spring, Scipio set out for Spain with an army of 11,000 men, landed at the mouth of the Iberus, and undertook the command of the whole Roman forces in Spain. He was accompanied by his friend Lælius. His first object was to gain possession of New Carthage, where the Carthaginians kept their Spanish hostages. Lælius made the attack with the fleet from the sea-side, while Scipio conducted the operations on land. The town soon fell into the hands of the Romans, and the generosity with which Scipio treated the Spanish hostages gained over a great number of Spaniards. The hostages of those tribes who declared themselves allies of the Romans were sent home without ransom. A short time after the conquest of this place Scipio went to Tarraco, where he received embassies from various Spanish tribes, who offered to become the allies of the Romans or to recognise their supremacy. Scipio is said not to have set out against Hasdrubal until the year following, but it can scarcely be conceived why the Carthaginians should have been so long inactive, and it is a probable supposition that the battle with Hasdrubal, which Livy and Polybius assign to the year B.C. 209, was fought very soon after the taking of New Carthage. (Zonaras, ix. 8.) In this battle Scipio gained a great victory; 8000 Carthaginians were slain, and 22,000, with their camp, fell into the hands of the victor. Many of the Spaniards now wished to proclaim Scipio their king, but he refused the honour. (Liv., xxvii. 19; Polyb., x. 40.) Hasdrubal fled with the remainder of his army towards the Tagus and the Pyrenees. Scipio did not follow him, partly because he thought his enemy too much weakened to be dangerous, and partly because he feared lest he might expose himself to the combined attacks of the two other Carthaginian generals, Mago, and Hasdrubal, son of Gisco. Hasdrubal Barcas, the defeated general, however, had carried considerable wealth with him in his flight, and with these means he raised an army in Spain, to lead into Italy to the assistance of his brother Hannibal, hoping thus to bring the war to an end in Italy. During these preparations of Hasdrubal, Scipio was engaged against the two other Carthaginian generals, one of whom (Mago) was defeated, in B.C. 208, by the prætor Silanus, in the country of the Celtiberians, and Hanno, who came with an auxiliary army from Africa, was taken prisoner. After this success of the prætor, Scipio united his forces with those of Silanus to attack Hasdrubal, son of Gisco. But as this general had retired to the south of Spain, and had distributed his army in the fortified places on the Bætis as far as Gades, Scipio (through his brother Lucius) only took the important town of Oringis, and then gradually returned across the Iberus. The power of the Carthaginians in Spain was however already broken, and in the year following (B.C. 207) Scipio gained possession of nearly all Spain by a victory, the place of which is not clearly ascertained, some calling it Silpia or Bæcula, some Illipa, and others Carmo. Scipio, now in the almost undisputed possession of Spain, began to turn his eyes to Africa, and, accompanied by his friend Lælius, he ventured to pay a visit to King Syphax, with whom Lælius had already commenced negotiations. Here Scipio is said to have met Hasdrubal, son of Gisco, and to have made a very favourable impression on Syphax as well as on Hasdrubal. After a short stay in Africa, Scipio returned to Spain, where he first punished several towns for their faithlessness, and subdued some of the Spanish chiefs who ventured to claim their former independence. During these occupations Scipio was attacked by a severe illness, from which however he recovered in time to quell an insurrection of 8000 Roman soldiers, who were discontented from not having derived from their conquests those advantages which they had expected, and who are said also to have been bribed by the Carthaginians. Mago had in the meantime withdrawn to the Balearic Islands, and thence to Liguria. Gades, the last place which the Carthaginians possessed in Spain, was now taken from them, and thus the war in Spain was at an end.

Towards the close of the year B.C. 206, Scipio surrendered the command of the Roman forces in Spain to the proconsuls L. Lentulus and L. Manlius Acidinus, and returned to Rome, (Liv., xxviii. 38.) He delivered to the ærarium the immense treasures which he brought from Spain. He evidently wished for a triumph, but the senate paid no attention to his wishes, for no one had ever triumphed at Rome before he had held the consulship. In the year B.C. 205, Scipio was made consul with P. Licinius Crassus, who was at the same time pontifex maximus, and was consequently not allowed to leave Italy. If therefore a war was to be carried on abroad, the command necessarily devolved upon Scipio. His wish was immediately to sail with an

army to Africa, but the more cautious senators, and especially Q. Fabius, were decidedly opposed to his plan, partly because Hannibal, as long as he was in Italy, appeared too formidable to be neglected, and partly perhaps because they were influenced by jealousy. All that Scipio could obtain was that Sicily should be assigned to him as his province, with 30 vessels, and with permission to sail over to Africa in case he should think it advantageous to the republic. But he did not obtain from the senate permission to levy an army, and he therefore called upon the Italian allies to provide him with troops and other things necessary for carrying on the war. As they were all willing to support the conqueror of the Carthaginians in Spain, he was soon enabled to sail to Sicily with nearly 7000 volunteers and 30 ships. (Liv., xxviii. 45, &c.; Plut., 'Fab. Max.', 25.) Soon after his arrival in Sicily he sent his friend Lælius with a part of his fleet to Africa, partly to keep up the connection which he had formed there, on his visit from Spain, with Syphax and Massinissa (for to the latter Scipio had sent back a nephew who had been taken prisoner in the battle of Bæcula), and partly to show to his timid opponents at Rome how groundless their fears were. He himself employed his time in Sicily most actively in preparing and disciplining his new army.

Massinissa, dissatisfied with the Carthaginians, was anxious for the arrival of Scipio in Africa, but Syphax had altered his policy, and again joined the Carthaginians. The enemies of Scipio at Rome at last got an opportunity of attacking him, and they nearly succeeded in depriving him of his post. Without being authorised by the senate, Scipio had taken part in the conquest of Locri in Southern Italy, and had left his legate Q. Flaminius as commander of the Roman garrison in that place. The legate treated the Locrians with such severity and cruelty that they sent an embassy to Rome to lay their complaints before the senate. As Scipio, although acquainted with the conduct of Flaminius, had nevertheless left him in command, his enemies attacked him on this and other grounds, and Fabius Maximus even proposed that he should be recalled. A commission was sent out to inquire into the state of affairs, and to bring Scipio home, if the charges against him were found true. Scipio proved that his army was in the best possible condition; and the commissioners were so surprised at what they saw, that instead of recalling the consul, they bade him sail to Africa as soon as he might think it proper, and to adopt any measures that he might think useful. Scipio in consequence of this sailed, in B.C. 204, as proconsul, with a large army, from Lilybæum to Africa, and landed in the neighbourhood of Utica. Here he made successful incursions into the neighbouring country, and Hasdrubal, who attempted to prevent them, suffered a great defeat. But Scipio could not gain possession of Utica, which was of the greater importance to him and his fleet, as the winter was approaching, and he was obliged to spend the season on a piece of land extending into the sea, which he fortified as well as he could. Towards the close of the winter the Carthaginians, united with Syphax, intended to make a general attack on Scipio's army and fleet, but being informed of their plans, he surprised the camps of Hasdrubal and Syphax in the night, and only a small number of the enemy escaped. Syphax withdrew into his own dominions, but was defeated by Massinissa and Lælius, and taken prisoner with his wife and one of his sons. Massinissa married Sophonisba, the wife of Syphax, who had formerly been engaged to him, but had been given to Syphax for political reasons. Scipio, fearing the influence she might have on Massinissa (for she was a Carthaginian), claimed her as a prisoner belonging to the Romans, and Massinissa poisoned her, to save her from the humiliation of captivity. The fears and apprehensions of the Carthaginians now increased to such a degree that they thought it necessary to recall Hannibal from Italy, and at the same time they sued for peace. The terms which Scipio proposed would have concluded the war in a manner honourable to the Romans. The Carthaginians however, whose only object was to gain time, made no objections to the conditions, but only concluded a truce of forty-five days, during which an embassy was to be sent to Rome. Before this truce was at an end, the Carthaginian populace plundered some Roman vessels with provisions, which were wrecked off Carthage, and even insulted the Roman envoys who came to demand reparation. Scipio did not resent this conduct, and allowed the Carthaginian ambassadors, on their return from Rome, to pass on to Carthage unmolested. About this time (it was the autumn of the year B.C. 203) Hannibal arrived in Africa, and soon collected an army in numbers far exceeding that of Scipio. He first made a successful campaign against Massinissa. Scipio was at this time informed that the consul Tib. Claudius Nero would come with an army to co-operate with him against Hannibal. Scipio, who wished to bring the war to a conclusion, and was unwilling to share this glory with any one else, determined to bring Hannibal to a decisive battle. The Carthaginian at first avoided an engagement; but when Scipio, in order to deceive the enemy, hastily retreated as if he intended to take to flight, Hannibal followed him with his cavalry, and lost a battle in the neighbourhood of Zama. A tribune of Scipio soon afterwards cut off a large convoy of provisions which was on its way to the camp of Hannibal, and this suddenly threw him into such difficulties, that he began to negotiate with Scipio for peace. The conditions however which Scipio now proposed were so humiliating, that the Carthaginians would not accept them. Hannibal therefore, though he saw the impossibility of gaining

any further advantages, was compelled to decide the affair by a last and desperate effort. In a personal interview between the two generals Scipio was inexorable as to the conditions. Hannibal's army was in a bad condition; and in the ensuing battle, to the west of Zama, the victory of Scipio was complete. This defeat (in B.C. 202) was the death-blow to Carthage.

Scipio, on his return to Italy, was received with the greatest enthusiasm: he entered Rome in triumph, and was henceforward distinguished by the name of Africanus. Scipio now for several years continued to live at Rome, apparently without taking any part in public affairs. In B.C. 199 he obtained the office of censor with P. Ælius Pætus (Liv., xxxii. 7), and in B.C. 194 he was made consul a second time with Tib. Sempronius Longus (Liv., xxxiv. 42), and princeps senatus, a distinction with which he had already been honoured in B.C. 196, and which was conferred upon him for the third time in B.C. 190. (Liv., xxxiv. 44; xxxviii. 28.) In B.C. 193, during one of the disputes between the Carthaginians and Massinissa, Scipio was sent with two other commissioners to mediate between the parties; but nothing was settled, though, as Livy (xxxiv. 62) observes, Scipio might easily have put an end to the disputes. Scipio was the only Roman who thought it unworthy of the republic to support those Carthaginians who persecuted Hannibal; and there was a tradition that Scipio, in B.C. 193, was sent on an embassy to Antiochus, and that he met Hannibal in his exile, who in the conversation which took place declared Scipio the greatest of all generals. (Liv., xxxv. 14.) Whether the story of the conversation be true or not, the judgment ascribed to Hannibal is just; for Scipio as a general was second to none but Hannibal himself. In the year B.C. 190 some discussions arose in the senate as to what provinces should be assigned to the two consuls, Lælius and L. Cornelius Scipio, brother of the great Africanus. Africanus, although he was princeps senatus, offered to accompany his brother as legate, if the senate would give him Greece as his province, for this province conferred upon Lucius the command in the war against Antiochus. The offer was accepted, and the two brothers set out for Greece, and thence for Asia. Africanus took his son with him on this expedition, but by some unlucky chance the boy was taken prisoner, and sent to Antiochus. The king offered to restore him to freedom, and to give a considerable sum of money, if the father would interpose his influence to obtain favourable terms for the king. Africanus refused; but the king, notwithstanding, soon after sent the boy back to his father, who just then was suffering from illness, and was absent from the camp. To show his gratitude, Africanus sent a message to Antiochus, advising him not to engage in a battle until he himself had returned to the Roman camp. After the great battle near Mount Sipylus, Antiochus again applied to Scipio for peace, and the latter now used his influence with his brother Lucius and the council of war on behalf of the king. The conditions of the peace were tolerably mild, but they were afterwards made much more severe when the peace was ratified at Rome. [ANTIOCHUS.] The enemies of Africanus at Rome had now another charge against him. The peace with Antiochus, and the conditions proposed by Africanus and his brother Lucius, were regarded by the hostile party as the result of bribes from Antiochus, and of the liberation of the son of Africanus. A charge was therefore brought against the two brothers, on their return to Rome, of having accepted bribes of the king, and of having retained a part of the treasures which they ought to have delivered up to the ærarium. At the same time they were called upon to give an account of the sums of money they had taken from Antiochus. Lucius was ready to obey; but his brother Africanus with indignation snatched the accounts from the hands of his brother and tore them to pieces before the senate. (Liv. xxxviii. 55; Gellius, iv. 18; Val. Max., iii. 7, 1.) The tribune of the people, C. Minucius Augurinus however fined Lucius; and when he was going to be thrown into prison until he should pay the heavy fine, Africanus dragged him away; and the tribune Tib. Gracchus, though disapproving of the violence of Africanus, liberated Lucius from imprisonment. (Gellius, vii. 19; Liv., xxxviii. 56.) Africanus himself was now summoned before the people by the tribune M. Nævius, and he only saved himself by reminding the people of his victory at Zama. After these troubles he withdrew to his villa near Liternum, and it was owing to the interposition of Tib. Gracchus that he was not compelled to obey another summons. The estates of his brother Lucius however were confiscated (B.C. 187), but the sum produced by their sale did not make up the amount of the fine. His friends and clients not only offered to make up the sum, but their generosity would even have made him richer than he had been before; but he refused to accept anything beyond what was absolutely necessary for his support. (Liv., xxxviii. 60.) Africanus never returned from his voluntary exile, and he spent the last years of his life in quiet retirement at his villa. (Senec., 'Epist.', 86.) He is said to have wished to be buried on his estate; but there was, as Livy says, a tradition that he died at Rome, and was buried in the tomb of his family near the Porta Capena, where statues of him, his brother Lucius, and their friend Q. Ennius, were erected. The year of his death is not quite certain; for, according to Polybius, he died in the same year with Hannibal and Philopomen (B.C. 183); according to others, two years earlier (B.C. 185).

In judging of Scipio Africanus as a general, we may adopt the judgment ascribed to Hannibal; but as a Roman citizen he is very far

from deserving such praise. His pride and haughtiness were intolerable, and the laws of the constitution were set at naught whenever they opposed his own views and passions. As a statesman he scarcely did anything worth mentioning. By his wife *Æmilia*, daughter of *Æmilius Paulus*, he had two daughters, one of whom married *P. Cornelius Scipio Nasica Coreolus* (Liv. xxxviii. 57); the other, the celebrated *Cornelia*, married *Tib. Sempronius Gracchus*, and was the mother of the two *Gracchi*, the tribunes of the people. *Africanus* had also two sons.

12. *P. CORNELIUS SCIPIO*, son of the great *Scipio Africanus* (No. 11). He was *augur* in B.C. 180. (Liv., xl. 42.) *Cicero* ('*Brut.*' 19; '*De Senect.*' 11; '*De Off.*' i. 33) says that he was a man of great mental powers, but of a weakly constitution. He was the adoptive father of *P. Cornelius Scipio Æmilianus Africanus Minor*. His epitaph is given by *Orelli* ('*Onomast. Tull.*' p. 187).

13. *LUCIUS OR CNEIUS SCIPIO*, the second son of *Scipio Africanus Major* (No. 11). He was, as we have seen, taken prisoner in the war with *Antiochus*. He is described as a contemptible man. In B.C. 174 he became *prætor urbanus*, by the modest withdrawal of his competitor, who had been a scribe to his father; but he was in the same year expelled from the senate by the censors. (Liv., xli. 27; *Val. Max.* iii. 5, 1.)

14. *L. CORNELIUS SCIPIO ASIATICUS, ASIAGENES, OR ASIAGENUS*, son of *P. Cornelius Scipio* (No. 9), and brother of the great *Scipio Africanus* (No. 11). He accompanied, as we have seen, his brother *Africanus* on his campaigns in Spain. In B.C. 193 he was *prætor* in Sicily. In B.C. 190 he was made consul with *Lælius*, and obtained Greece as his province, with the command in the war against *Antiochus*, with whom he had already had some negotiations in B.C. 196. (*Polyb.*, xviii. 33.) The senate at Rome do not appear to have had any great confidence in his talents as a general (*Cic.* '*Phil.*' xi. 7), as it was only owing to the offer of his great brother to accompany him as his legate that he obtained Greece as his province. After the conclusion of the war with *Antiochus* he assumed the name of *Asiaticus*, and entered Rome in triumph. (Liv., xxxvii. 58, &c.) According to *Valerius Antias* (Liv., xxxix. 22), he celebrated in B.C. 185 magnificent games for ten days. The money expended on these games he is said to have collected in Asia during an embassy, on which he had been sent to settle some disputes between *Antiochus* and *Eumenes*, shortly after his condemnation. In B.C. 184 he was a candidate for the censorship, but he was defeated by his competitor *Cato*, the great enemy of his family, who in his censorship took away from *Scipio Asiaticus* his horse. (Liv., xxxix. 44.)

15. *P. CORNELIUS SCIPIO ÆMILIANUS AFRICANUS MINOR*, son of *L. Æmilius Paulus*, and adopted son of *P. Cornelius Scipio* (No. 12). He must have been born about B.C. 185, for in B.C. 168 *Scipio*, then a youth in his seventeenth year, took a very active part in the battle of *Pydna*, in which his father defeated King *Perseus* of Macedonia. (Liv., xlv. 44; *Plut.* '*Æm. Paul.*' 22.) From his earliest youth he had an ardent love of intellectual occupations, and cultivated the friendship of men like *Polybius*, *Panætius*, *Lælius*, and others. It was perhaps on this account that he appeared to his relatives to be wanting in youthful vigour, and no great hopes were entertained of him; but with his partiality for science, and Greek refinement and art, he esteemed no less the stern virtues of the best of the Romans. Old *Cato* was in this respect his model. At the beginning of the third Punic war, B.C. 151, when no one was willing to enter his name either as an officer or as a common soldier for the campaign in Spain, *Scipio*, although he was at this time requested by the Macedonians to settle some disputes among themselves, came forward and declared that he would gladly accept any post that might be assigned to him. This example inspired with courage even those who had hitherto kept back. (Liv., '*Epit.*' 48; *Polyb.*, xxxv. 4.) *Scipio* thus became military tribune under *L. Lucullus*. Two heroic deeds of *Scipio* in this expedition are recorded: he was the only Roman who ventured to accept the challenge of a huge Spanish chief, whom he slew in single combat; *Scipio* also was the first to scale the walls of the town of *Interctia* while it was besieged by the Romans. These proofs of personal courage, and his other virtues, filled even the enemy with admiration, and gained for him a greater influence over the Spaniards than his avaricious general, *Lucullus*, was able to acquire. (*Appian*, vi. 54.) The year following, B.C. 150, *Scipio* was sent by *Lucullus* to Africa, to request *Massinissa* to send a number of elephants over to Spain. *Scipio* was most honourably received. *Massinissa* and the Carthaginians were just preparing for battle; *Scipio* beheld the contest from an eminence, and as soon as the Carthaginians were apprised of his presence they entreated him to act as mediator between them and *Massinissa*. But he was not able to effect what they wished, and he returned to Spain with the elephants. (*Appian*, viii. 71, &c.) When the war between Carthage and Rome broke out, *Scipio*, then still military tribune, went to Africa, and here again distinguished himself so much by his courage, prudence, and justice, that he not only gained the unlimited confidence of his own countrymen and *Massinissa*, but even of the Carthaginians, who trusted no Roman but *Scipio*. Roman ambassadors who were sent to the camp in Africa to report on the state of affairs, on their return to Rome were unbounded in their praise of *Scipio* and of the attachment of the soldiers to him. (*Appian*, viii. 98, &c.) In B.C. 148, when the consul *Calpurnius Piso* undertook

the command in Africa, *Scipio* returned to Rome, where everybody appears to have been convinced that he alone was able to complete the conquest of Carthage. *Cato* said that *Scipio* alone was alive, while all the other generals were mere shadows. (Liv., '*Epit.*' 49; *Polyb.*, xxxvi. 6.) The consul *Piso* made very little progress in Africa, and when *Scipio* was a candidate for the ædileship, he was unanimously elected consul for the year B.C. 147, though he had not yet attained the legitimate age: he obtained Africa as his province. On his return to Africa he was accompanied by *Polybius* and *Lælius*, and immediately after his arrival he saved a considerable body of Roman soldiers, who had penetrated into one of the suburbs of Carthage. (*Appian*, viii. 113, &c.) He restored discipline in the Roman army. His first operation was to cut off all supplies which the Carthaginians had hitherto received from the interior of Africa, and in the following winter (B.C. 147-146) he succeeded in taking *Neperis*, whence the Carthaginians till then had received their supplies by sea. His command of the army was prolonged for the year B.C. 146, and in the spring of this year he made his attack on the city, which was defended with the utmost despair, and by a decree of the senate he razed the city to the ground. He is said to have wept over its ruins, and to have uttered the prophetic words of *Homer*:—

ἔσεται ἡμαρ, ὅτ' ἂν ποτ' Ὀδῶλ' Ἴλιος ἱρῆ,  
καὶ Πρίαμος καὶ λαὸς ἐμμελῆεν Πριάμοιο.

('*Iliad.*' vi. 448, &c.)

After he had made the necessary arrangements in Africa, and annihilated an enemy who, though humbled, was still looked upon by Rome with jealousy, *Scipio* returned to Italy, and entered Rome in triumph. In B.C. 142 he was censor with *L. Mummius*, and at this time of increasing luxury he fulfilled the duties of his office with the greatest strictness, and without any respect to person or rank. In the lustrum which he performed at the close of his census, he did not pray, as had been customary before, for the increase of the republic, but only for its preservation. (*Val. Max.*, iv. 1, 10.) It was probably after his censorship that he, together with *Sp. Mummius* and *L. Metellus*, travelled through Egypt, Syria, Asia, and Greece, to look into the state of affairs in these countries. (*Cic.* '*De Rep.*' vi. 11; *comp.* '*Acad.*' ii. 2.) The war against *Numantia* in Spain had been carried on for a long time without success; *Scipio* was considered the only man who could bring the war to a termination, and, although absent at the time of the elections, he was made consul for the year B.C. 134. On his arrival in Spain he found the Roman army in a most deplorable state, and here, as in Africa, he had to restore military discipline before he could venture upon any enterprise. The brave inhabitants of *Numantia* held out against him till famine rendered further resistance impossible. The town fell into the hands of *Scipio*, after most of the citizens had put an end to their own lives. Fifty of the survivors were selected by *Scipio* to adorn his triumph; the rest were sold as slaves, and the city was razed to the ground. (*Appian*, vi. 84, &c.; *Liv.*, '*Epit.*' 57, 59.) While he was engaged in the siege of *Numantia*, the Gracchian disturbances began at Rome. Although his wife *Sempronia* was a sister of the *Gracchi*, *Scipio* approved of his brother-in-law being put to death, but still he was not, like many others, an obstinate advocate of the privileges of a class, for we find him supporting the *lex Cassia tabellaria* against the aristocrats (*Cic.* '*Brut.*' 25), whence he was considered by some as a man of the people. (*Cic.*, '*Acad.*' ii. 5.) *Scipio* was opposed to all violent measures; caution was one of his prominent characteristics. But his opposition to the popular party deprived him of a great part of the favour and influence which he had hitherto possessed through the people. The consequence was, that when, in B.C. 131, he was inclined to undertake the command in the war against *Aristonicus*, he only obtained the votes of two tribes. (*Cic.* '*Phil.*' xi. 8.) But notwithstanding this slight, he still possessed great influence, for when the tribune *Papirius Carbo* proposed a law that the people should be at liberty to re-elect their tribunes as often as they pleased, the eloquent speech of *Scipio* induced the people to reject the measure, though it was in their own favour. (*Cic.*, '*Læli.*' 25.) Soon after this however a circumstance occurred which called forth the bitterest opposition of the popular party against him. *Scipio* had made a proposal in favour of the old Italian veterans, which had been approved by the senate, and according to which the disputes arising out of the distribution of the public land should not be decided by the distributors, but by other persons. This measure produced a delay in the distribution itself, and the popular leaders, *F. Flaccus*, *C. Gracchus*, and *Papirius Carbo*, made the bitterest invectives against *Scipio* in the assembly, and called him the enemy of the people. When *Scipio* repeated his approval of the death of *Gracchus*, the demagogues cried out, "Down with the tyrant!"

After these fierce debates *Scipio* went quietly home accompanied by the senate and a great number of Latins and Roman allies. (*Cic.*, '*Læli.*' 3.) In the evening he went into his bedroom with the intention of writing a speech to be delivered the following morning. But in the morning *Scipio* was found dead in his bed (B.C. 129.) (*Appian*, '*Civil.*' i. 19, &c.) An investigation into the cause of his death was prevented by the multitude, and the event remained a secret. Public opinion pointed out many who were suspected of having murdered him, and the heaviest suspicion fell upon *Carbo*. (*Comp. Dr. Fr. Gerlach*, '*Der Tod des P. Cornelius Scipio Æmilianus, eine Historische*

Untersuchung,' Basel, 1839; and 'Zimmermann, Zeitschrift für die Alterthumswissenschaft,' 1841, No. 52.)

16. L. CORNELIUS SCIPIO, son of L. Cornelius Scipio Asiaticus (No. 14). He was quaestor in B.C. 167. (Liv., xlv. 44; Val. Max., v. 1, 1; comp. Pighius, 'Annal. ad An.' 591.)

17. L. CORNELIUS SCIPIO, son of L. Cornelius Scipio (No. 16). According to Pighius he was quaestor in B.C. 96, *sedilis curulis* in B.C. 92, and praetor in B.C. 89 and 88. In B.C. 83 he was consul with C. Junius Norbanus, and marched against Sulla, but he was suddenly abandoned by his whole army, which had been worked upon by the agents of Sulla. Scipio was taken prisoner with his son Lucius. He was then indeed let go, but in B.C. 82 he was sent into exile, and spent the remainder of his life at Massilia. (Appian, 'Civil,' i. 82, &c.; Liv., 'Epit.,' 85; Cic., 'Pro. Sext.,' 3; 'Ad Att.,' ix. 15.) Cicero ('Brut.,' 47) says of him, "dicebat non imperite."

18. P. CORNELIUS SCIPIO NASICA, son of Cn. Cornelius Scipio Calvus (No. 10). In the year B.C. 203, when yet a young man, and even before he had been quaestor, he was declared by the senate to be the best of all good citizens, and commissioned to go with the Roman matrons to Ostia to receive the statue of the Idaeian mother, which had been brought from Pessinus. (Liv., xxix. 14.) In B.C. 200 he was one of the triumvirs to complete the number of colonists in Venusia. (Liv., xxxi. 49.) In B.C. 196 he was curule *sedile* (Liv., xxxiii. 25); in B.C. 194 he was praetor (Liv., xxxiv. 42), and the year following propraetor in Spain (Liv., xxxv. 1), where he fought several successful battles to the west of the Iberus. In B.C. 192 he was a candidate for the consulship, but he was not elected, notwithstanding his success in Spain, and notwithstanding the support of his cousin the great Africanus. (Liv., xxxv. 10.) But the following year he was more successful; he became consul with M. Acilius Glabrio (Liv., xxxv. 24), and gained a signal victory and a triumph over the Boians. (Liv., xxxvi. 38.) When L. Scipio Asiaticus was accused, Nasica came forward as his advocate. (Liv., xxxviii. 58.) In B.C. 184 he was a candidate for the censorship, but M. Porcius Cato was preferred to him. (Liv., xxxix. 40.) In B.C. 183 and 182 he was one of the triumvirs to establish a Latin colony at Aquileia. (Liv., xxxix. 55; xl. 34.) In B.C. 171 Spanish ambassadors came to Rome to complain of the extortions of their Roman governors, and when the senate granted them the privilege of choosing patrons to conduct their cause at Rome, Scipio Nasica was one of the patrons. (Liv., xliii. 2; compare Cic., 'De Orat.,' iii. 33.)

19. P. CORNELIUS SCIPIO NASICA CORCULUM, son of P. Corn. Scipio Nasica (No. 18). He was married to a daughter of Scipio Africanus Major, and distinguished himself in the campaign of Aemilius Paullus in Macedonia. (Liv., xlv. 35, &c.; Polyb., xxix. 6.) In B.C. 162 he was consul, but only for a short time, for he and his colleague were obliged to abdicate, because a mistake had been made in the auries for the election. (Cic., 'De Nat. Deor.,' ii. 4; 'De Div.,' ii. 35.) In B.C. 159 he was censor with C. Popillius Lanas, and they made a decree, that only the statues of those men should remain standing in the Forum who had held a magistracy, and that all the others should be removed. (Plin., 'Hist. Nat.,' xxiv. 14; Aurel. Vict., 'De Vir. Illustr.,' 44.) Scipio in his censorship introduced at Rome the use of a public clepsydra, and built a portico on the Capitol. In his second consulship, B.C. 155, he gained a victory over the Dalmatians, and took the town of Delminium. (Liv., 'Epit.,' 47; Aurel. Vict., l. c.) During this year there occurred a proof of the stern severity of his character, and of his influence: at his proposal the senate ordered a theatre to be pulled down, the erecting of which had been approved by the censors, and which was very near its completion. Scipio thought a theatre injurious to the morals of the Romans. (Liv., 'Epit.,' 48.) When Cato insisted upon the destruction of Carthage, Scipio Corculum opposed him on the ground that the existence of such a rival as Carthage was most wholesome to Rome itself, as a check against corruption. (Plut., 'Cat. Maj.,' 27.) In B.C. 150 he became pontifex maximus. Respecting his talents as an orator and his studies, see Cic., 'Brut.,' 20, and 'De Senect.,' 14.

20. P. CORNELIUS SCIPIO NASICA SERAPIO, son of P. Cornelius Scipio Nasica Corculum (No. 19). Before the outbreak of the third Punic war he was quaestor, and commissioned, with the consuls Censorinus and Manilius (B.C. 149), to demand from the Carthaginians the delivery of their arms to the Romans. (Appian, viii. 80.) His suit for the *sedile* was unsuccessful. (Cic., 'Pro Plane.,' 21; Val. Max., vii. 5, 2, in which passage however he is confounded with P. Corn. Scip. Nasica (No. 18).) In B.C. 138 he was consul with D. Junius Brutus Galliaicus. These two consuls were thrown into prison by the tribunes of the people, because they were too severe in raising soldiers for their armies. (Liv., 'Ep.,' 55; Cic., 'De Legg.,' iii. 9.) The chief enemy of Scipio among the tribunes was Curvius, and it is he who is said to have given him the nickname Serapio. Scipio was a man of vehement and irascible temper (Cic., 'Brut.,' 28), and of inflexible aristocratic principles. His hatred of the measures of Tib. Gracchus was so great, that during the election of the tribunes he placed himself at the head of his party in their attack upon Gracchus in the Capitol. This enraged the people so much against him, that the senate thought it advisable to send him on an embassy to Asia, although as pontifex maximus he was not allowed to quit Italy. He died at Pergamus soon after his arrival in Asia. (Plut., 'Tib. Gracch.,' 21; Cic., 'Pros. Flacc.,' 31.)

21. P. CORNELIUS SCIPIO NASICA, son of P. Corn. Scipio Nasica Serapio (No. 20). He was consul in B.C. 111 with L. Calpurnius Piso Bestia, who went out against Jugurtha, while Scipio remained in Italy. (Sallust., 'Jug.,' 27.) He is described as a man who was inaccessible to bribes, and throughout his life behaved in the most exemplary manner. (Diodor., 'Fragm.,' xxxiv., p. 214, ed. Tauchnitz.) He died during his consulship. (Cic., 'Brut.,' 34.) Cicero says that in wit and humour he excelled everybody.

22. P. CORNELIUS SCIPIO NASICA, son of P. Corn. Scipio Nasica (No. 21). He was praetor in B.C. 94. He is mentioned by Cicero ('Pro Rosc. Am.,' 27) as one of the advocates of Roscius of Ameria. His wife was Licinia, the daughter of the orator L. Crassus. (Cic., 'Brut.,' 58.) He was the father of L. Licinius Crassus Scipio, whom Crassus the orator made his adoptive son, and of Q. Metellus Pius Scipio, who was adopted by Q. Metellus Pius, and was father-in-law of Pompey. Metellus Scipio was defeated by Caesar, and fell in Africa.

23. Cn. CORNELIUS SCIPIO HISPALLUS, the son of a brother of the two Scipios who fell in Spain (No. 9 and 10). He was consul in B.C. 176, but during his consulship he was seized with a paralytic stroke, and died at the baths of Cumae. (Liv., xli. 20.)

24. Cn. CORNELIUS SCIPIO HISPALLUS, son of Cn. Corn. Scipio Hispallus (No. 23). In B.C. 149 he was with Scipio Nasica (No. 20) among the commissioners to Carthage. (Appian, viii. 80.) In B.C. 139 he was praetor, and promulgated an edict according to which all Chaldeans (astrologers) were to quit Rome, and Italy within ten days. (Val. Max., i. 3, 2, who calls him Caius Corn. Hispallus.)

25. Cn. CORNELIUS SCIPIO HISPALLUS, son of Cn. Corn. Scipio Hispallus (No. 24). He is mentioned only by Valerius Maximus (vi. 3, 3), who says that he was compelled to give up his province of Spain, to which he had been sent as quaestor, on account of his inability, and that afterwards he was condemned for dishonest conduct.

26. L. CORNELIUS SCIPIO HISPALLUS, son of Cn. Corn. Scipio Hispallus (No. 24). Pighius ('Annal. ad An.,' 646) thinks that he is the same of whom Appian ('Civil.,' i. 41) says that in the Marsian war he and L. Acilius were compelled to escape from Aesernia in the attire of slaves.

For the history of the family of the Scipios compare Orelli, 'Onomasticon Tullianum,' p. 183, &c.; Pauly, 'Real-Encyclopädie der Alterthumswissenschaft,' vol. ii., p. 650, &c.

The family tomb of the Scipios was first discovered in 1616, but it was soon forgotten, as few of its ruins had been laid open, and doubts were raised as to its genuineness. In 1780 the tomb was again discovered close by the modern gate of S. Sebastian. Visconti and the pope took great interest in the discovery, and in the course of a year the whole catacomb, though in a dilapidated state, was cleared and laid open. The inscriptions and other curiosities, among which we may mention the beautiful sarcophagus of Scipio Barbatus, were transferred to the Museum Pio-Clementinum at Rome. The monuments with their inscriptions are described in 'Monumenti degli Scipioni,' pubblicati dal Cavaliere Francesco Piranesi, Roma, folio, 1785; and in Lanzi, 'Saggio,' vol. i., p. 150, &c. For the inscriptions see Orelli, 'Inscript. Lat.,' n. 550-559.

SCOPAS, a celebrated sculptor, born in the island of Paros. Pliny ('Hist. Nat.,' xxxiv. 8) makes Scopas contemporary with Ageladas, Polyclethus, Myron, and other distinguished artists who were living in the 87th Olympiad; but from various circumstances, it seems probable that he did not flourish till a somewhat later period. Like many artists of antiquity, he united the two professions of sculpture and architecture; and the temple of Minerva Alea, at Tegea in Arcadia, was constructed under his direction. (Pausanias, viii. 45.) The date of the destruction of the temple which the new edifice was intended to replace, and the period at which another work on which Scopas was employed was completed, materially assist in establishing the age of this artist. Pausanias says the older temple referred to was burned during the archonship, in Athens, of Diophantus, in the second year of the 96th Olympiad (about B.C. 388); and Pliny (xxxvi. 5) tells us that Scopas was one of the sculptors employed on the tomb erected in honour of Mausolus, king of Caria, by Artemisia, his queen, who died (before the work was completed) in the 107th Olympiad, or about B.C. 350. Scopas, it is true, may have been living at the same time with some of the later artists mentioned by Pliny, but a calculation of the above dates will sufficiently prove almost the impossibility of his practising as a contemporary artist with the great sculptors preceding and forming the Phidian age and school, and likewise exercising his art at a date so distant from their time as three hundred and fifty years before our era. He lived between B.C. 400 and 300, and most probably in the first half of that century.

Pliny furnishes a copious list of works by this artist. Among those which he says were particularly worthy of admiration was a series of figures representing Neptune, Thetis, Achilles, Nereids mounted on dolphins, and attended by Tritons and other marine monsters. All these "were from the hand of Scopas," and Pliny adds, "it was a splendid work ('praclarum opus') sufficient for the fame of his whole life." It was preserved in the temple of Cneius Domitius, in the Circus Flaminius at Rome. The same writer also mentions two statues of Venus, one of Pothos, or Desire, one of Apollo, and a much admired Vesta in a sitting attitude; also a colossal sitting figure of Mars, and a Bacchus at Cnidus. Pliny tells us there was a doubt in his time

whether some statues representing the dying children of Niobe ('Niobe liberos morientes') in the temple of Apollo Sosianus at Rome, were by Scopas or Praxiteles. The well known group or series of figures representing this subject, now preserved in the gallery of the Grand-Duke of Tuscany at Florence, is generally believed to be the work alluded to by Pliny. Whether it be an original production of either of these great masters, or, as some critics have supposed, only copied from their work, it must be classed among the finest specimens of art, and as a noble monument of the genius of its author.

Scopas was employed upon the tomb of Mausolus, and had for his associates and rivals ('*semulos eadem ætate*') Bryaxis, Timotheus, and Leochares. This work, considered by the ancients one of the seven wonders of the world, was of a square form, having four faces. Each of the above-named artists completed one side. The eastern was given to Scopas; the northern to Bryaxis; the southern to Timotheus; and Leochares decorated the western façade. Pliny in mentioning this uses the terms '*cœlavere*' and '*cœlavit*,' from which it may be inferred that all their performances were in rilievo. The whole mass, measuring twenty-five cubits in height, was surmounted by a quadriga, or four-horsed chariot in marble. This was the work of one Pythis; of whom nothing further is known than his having been thus employed on this celebrated monument. The sculptured slabs which Sir Stratford Canning (now Lord Stratford de Redcliffe) obtained permission from the Porte to remove in 1845-46 from the walls of Budrum, the ancient Halicarnassus, and which are now deposited in the British Museum, are now generally admitted to be a portion of the bassi-rilievi with which Scopas and his associates adorned the tomb of Mausolus. The materials obtained from the ruins of the tomb were used by the knights of Rhodes in constructing, and afterwards in strengthening the citadel of Halicarnassus, and the sculptured slabs of the frieze appear to have been built into the inner wall of the citadel, where they remained till removed as above stated. The slabs are thirteen in number, of a uniform height of 3 feet, and of a connected length of nearly 65 feet—about equal to one side of the building. They represent the battle of the ancient Greek warriors with the Amazons, and are executed with considerable spirit and beauty, but they have suffered much injury from time and rough treatment. They are however decidedly inferior to works of the best style of Greek art, and inferior to what would be expected from the hand of Scopas, whence some critics have chosen quite gratuitously to assign them to his associates. (Newton, 'On the Sculpture from the Mausoleum at Halicarnassus,' in the 'Classical Museum' for 1847, p. 170, &c., where will also be found a restoration of the building by Mr. Cockerell.)

Pausanias, in his description of Greece, speaks of various performances of Scopas (both in bronze and marble), existing in the cities which he visited. In the temple of Venus at Megara were statues of '*Ἔρως*,' '*Ἔρως*,' and '*Πόθος* (Love, Passion, and Desire). (Paus., i. 43.) There was also a statue of Hercules by him at Sicyon (ii. 10); and at Gortys in Arcadia were two statues, one of Æsculapius, '*imberbis*' (or beardless), and the other of Hygieia (viii. 28). Two works by Scopas are celebrated by epigrams in the Greek Anthology: one of them refers to a much admired statue of Mercury; another pays a high compliment to the skill displayed by the sculptor in a figure of a Bacchante represented in a state of inebriety. The latter work was executed in Parian marble.

Strabo (lib. xiii., 604) mentions a statue by Scopas, of Apollo, in rather a remarkable character,—that of a 'killer of rats.' It was in the temple of the god surnamed Smintheus, at Chrysa or Chryse in the Troad. The figure was represented in the act of pressing or crushing a rat with his foot.

From the terms in which Pausanias speaks of the temple before alluded to, which Scopas built to Minerva Alea at Tegea, his merit as an architect must have been little if at all inferior to that which he displayed in the sister art. Pausanias says it far exceeded, both in the quality of its decoration and its dimensions, all the other temples in Peloponnesus. He describes it as being of the Ionic order on the outside; but within it was decorated with Doric columns having over them others of the Corinthian order. In the pediment in front was represented the hunting of the Caledonian boar, with Atalanta, Meleager, Theseus, and numerous other figures. The other pediment exhibited the contest of Telephus and Achilles. Pausanias does not state distinctly that these works were by Scopas, but it may fairly be inferred that they either were executed by him or at least were produced under his superintendence.

Before closing this short notice of Scopas it may be right to mention that the difficulty of reconciling the dates given by Pliny has led the learned antiquary Sillig ('*Catal. Artificum*,' p. 415) to suppose there may have been two artists of the name; one a native of Paros, and the other of Elis. But the reasons adduced do not however appear sufficient to warrant such a conclusion.

SCOPAS, or SCOPINAS, an artist or mechanist, of unknown date, mentioned by Vitruvius.

SCO'POLI, GIOVANNI ANTONIO, was born at Cavalese in the Tyrol, June 13, 1723. After pursuing his preliminary studies at Trent, he went to Innsbruck, and took the degree of Doctor in Medicine at that university in 1743. He early displayed a great fondness for natural history, and was in a great measure self-taught, since there was not then at Innsbruck any professor capable of directing his studies in

that department. Botany especially attracted his attention, and he formed a plan, which however he never executed, for publishing the Flora of his native country.

A journey which he made to Vienna led to his obtaining an appointment as a physician at Idria. Here he published a Flora of Carniola, and his proximity to the quicksilver-mines gave him many opportunities for cultivating mineralogy. The results of these studies appeared in various memoirs, among which was a valuable essay on the diseases to which the miners are liable. The talent and indefatigable diligence which he displayed, excited the envy and opposition of many of the officers in the mines, but his appointment as professor of mineralogy at Idria relieved him from all the disquietudes to which he had before been subjected. On the removal of Jacquin to Vienna, Scopoli succeeded to the chair of mineralogy at Schemnitz; and in 1777 he was appointed professor of natural history at Pavia, where he died on May 8, 1788.

Scopoli was well acquainted with all branches of natural history, though especially distinguished as a botanist. He was much respected by Jacquin and Linnaeus, the latter of whom named a plant in honour of him, and a genus Scopolia is still distinguished by botanists. His principal works are, '*Flora Carniolica*,' Vienna, 8vo, 1760, and Leipzig, 8vo, 1772; '*Entomologia Carniolica*,' Vienna, 1763; '*Tentamina Physico-chemico-medica*,' Venice, 8vo, 1761, Jena, 8vo, 1771, which contains his paper on the diseases of the workers in the quicksilver-mines; '*Deliciae Floræ et Faunæ Insubriae*,' &c., Pavia, 1766-88, three parts, folio.

SCORESBY, WILLIAM, AND SCORESBY, THE REV. WILLIAM, D.D., F.R.S., the most accomplished and successful Arctic navigators of their time, were descended from a Yorkshire family, of which notices exist referring to the beginning of the 14th century, its members occasionally possessing considerable property, and occupying conspicuous stations, but having descended, prior to the middle of the last century, to the class of yeomen. WILLIAM SCORESBY, the elder, was born on the 3rd of May 1760, on a small estate farmed by his father, called Natholm, in the township of Cropton, about twenty miles from Whitby. He received his chief education in an attendance often interrupted, at an endowed school in the village of Cropton, but from this he was removed at the very early age of nine, and employed in agricultural occupations, first on his father's farm, and as he advanced towards manhood on those of his neighbours. Undeserved treatment from one of these led him to resolve, in the winter of 1779-80, to try the adventure of a sea-faring life. Proceeding to Whitby for that purpose, he made an engagement with a ship-owner; but his service not being immediately required, he returned home, and after remaining at the farm he had somewhat abruptly left until his place could be satisfactorily supplied, set himself arduously to work to prepare himself by the study of such books as he could procure, for his new occupation, upon which he entered April 1780. The skill he very soon acquired in calculating his ship's position enabled him to save it from destruction, in the third voyage of both, but the ill-will this occasioned in the minds of the officers he had thus excelled caused him to leave the ship, and to engage in an Ordnance armed-storehouse, which was captured by a Spanish vessel. With one of his fellow-sailors however he escaped from Spain, and on his return to England retired, for a season, from his seafaring pursuits. He remained at home, assisting his father in the management of his farm, about two or three years, marrying in the interval the eldest daughter of Mr. John Smith, of Cropton. But in the spring of 1785 he entered upon that particular course of life in which both he and his son were afterwards so long distinguished, by embarking, though merely as one of the seamen, in the ship *Henrietta*, belonging to the Greenland whale-fishery, which at that period was pursued with considerable enterprise from the port of Whitby. In this congenial occupation, on his sixth voyage he had risen above all his associates, and attained the position of second officer, the 'speechioner' of the ship, who has special charge of the fishing apparatus and operations, and is a principal harpooner. In 1791 he was appointed to the command of the *Henrietta*. In his first voyage he returned with "a clean ship," or without whales, but this was amply compensated by the almost unprecedented success of the second, in which he took eighteen whales, a 'catch' which was extended, in his fifth year, to the extraordinary number of twenty-five, and the amount of his cargoes, during his six years' command of this ship, exceeded by 151 tons of oil that of the most successful of the Hull ships of the time. In 1798 he obtained the command of the *Dundee*, a London whaler of large size, in which his success was correspondingly great. She returned from her first voyage with the spoils of no less than six-and-thirty captured whales; and three years afterwards twenty-three were taken, which yielded the previously unequalled quantity of 225 tons of oil. In this engagement Mr. Scoresby's high reputation for pre-eminent skill and success was amply maintained. Up to the end of the century his successes, with but rare exceptions, were at the head of the lists of the whole of the northern whalers, both of Davis' Strait and Greenland. His voyages were not only unequalled in the Greenland whale-fishery in their measure of success, but likewise in the quickness with which they were accomplished, and the quality of the oil yielded by their cargoes.

In 1811 Mr. Scoresby resigned the command of the *Resolution*, in which his voyages had been made for eight years, to his son; but in

command of other ships he continued in the trade, with the results just described, until 1823, when he discontinued the pursuit, having acquired an ample competency.

The total number of voyages in the fishery in which he held the command, from first to last, was just thirty. The entire cargoes obtained, under his personal guidance, comprised the produce of 533 whales—a greater number than had fallen to the share of any other individual—with that of many thousands of seals, some hundreds of walruses, very many narwhals, and probably not less than sixty Arctic bears. The quantity of oil yielded by this produce was 4664 tuns, of baleine (commonly termed whalebone) about 240 tons in weight, together with the skins of the other animals taken. His yearly average was almost double that of the Hull whale-fishing, or in fact of that of any other port. The gross proceeds of the thirty years' adventures, in money, amounted to very nearly 200,000*l.*, of which the profits amounted to 90,000*l.*; while the capital annually invested did not exceed on an average 9000*l.*, which thus yielded, through a series of thirty years, no less a sum than 3000*l.* a year, being at the rate of 33½ per cent. per annum on the capital employed.

Mr. Scoresby survived his retirement six years, in a state however of deteriorated health, experiencing apparently in his leisure the effects of the wear and tear of the previous thirty-six years. His success had partly been founded on numerous new contrivances and improvements in the whale-fishing apparatus and operations. But he did not confine his attention to subjects immediately connected with his occupation. In the winter of 1816-17 he produced a pamphlet on the improvement of the town and harbour of Whitby, the substance of which, revised, extended, and illustrated by engraved plans, he again brought out in 1826 under the title of 'An Essay on the Improvement of the Town and Harbour of Whitby, with its Streets and Neighbouring Highways: Designed also for the maintenance of the Labouring Classes who are out of Employment.' A portion of the improvement thus proposed, with some little deviation, was carried into effect after Mr. Scoresby's decease, the entrance of the harbour having thereby become more safe, exactly as he had anticipated. He also left a manuscript document, dated London, 23rd of December 1824, entitled 'Hints; or Outlines of Improvements conceived by Mr. Scoresby.' These are stated, in an introductory paragraph, to be the result of reflection during forty years' occupation at sea, and are proposed in a manner much resembling that of the Marquis of Worcester's celebrated 'Century of Inventions' [WORCESTER, MARQUIS OF]: they include projected improvements in ship-building, seasoning timber, ports and harbours, breakwaters, the banks of rivers, barren lands, the ventilation of coal-mines, the building of streets (including the suggestion of sub-ways), making new roads, and other subjects connected with the arts of life and with human culture. Unfortunately no record of the nature of these projects appears to have been preserved.

Mr. Scoresby was the inventor of the 'round top-gallant crow's nest,' or small cylindrical observatory attached to the main top-mast for the safe and effective navigation of the Arctic seas, and the keeping of a due watch for the discovery of whales. The first example was built in May 1807. It was substituted for the unsafe and unprotected contrivance called the 'crow's-nest,' in which the navigator had hitherto been exposed to all the rigours of the weather whilst performing an indispensable duty. This invention became universally employed by the British Arctic whalers, and was adopted generally in our discovery ships, being in Dr. Scoresby's opinion the greatest boon of modern times given to the Arctic navigator. The construction of one for the *Isabella* discovery ship is recorded in Ross's first voyage, 1818, p. 124, but without any allusion to the inventor.

WILLIAM SCORESBY, the son, was born in 1790, and commenced his nautical life only ten years afterwards, accompanying his father in the *Dundee*, on her voyage of the year 1800. The passion for naval enterprise which the child's examination of the ship had evoked, was confirmed by his first voyage, and in 1803 the father and son sailed together in the ship *Resolution* of Whitby. This they continued to do for the ensuing eight years, the sedulous junior keeping a regular journal of their voyages. He was promoted in succession, as he became qualified, without being unduly favoured, through all the gradations of the service, until he was appointed chief mate of the ship; which responsible office he held in his sixteenth year. The long intervals during which, from the nature of the whale-fishery, the ships were laid up in winter, were devoted by the young navigator with the sanction and to the great satisfaction of his father, to regular study, and for a considerable portion of two sessions, at Edinburgh, where he secured the friendship of the late Professor Jameson and other professors of the university, and also of Dr. (now Sir David) Brewster. He thus acquired that definite knowledge of the principles of the various branches of science bearing upon his peculiar profession, which enabled him to extend them, by his own observations, in the voyages to the Arctic regions which alternated with and succeeded these periods of intellectual culture.

While filling the stations respectively of commander and chief-mate of the *Resolution* in 1806, the Scoresbys sailed to a higher latitude than had been reached before. In May of that year they were successively in 80° 50' 28", N. lat., 81° 1' 53", and 81° 12' 42", and once, by estimation, as far as 81° 30', the nearest approach to the pole—within about 510 miles—at that period authenticated. It has been

exceeded only by the late Admiral Parry [PARRY, WILLIAM EDWARD], who, in his celebrated boat expedition, during his fourth voyage, in 1827 reached 82° 45', the highest point yet attained; but this was accomplished by travelling across the ice, which had to be commenced on gaining the latitude of 79° 55' 20", inferior to that attained by the Scoresbys by ordinary sailing, and the honour still remains theirs of having in ordinary sailing navigated the highest northern latitudes. It may be remarked here that the boat expedition had itself been adopted from a suggestion made by the younger Scoresby (in a proposition which had been rejected by the Admiralty), but had not, in his opinion, been properly executed. It was always his conviction that by such an expedition, if carried out according to his views, the pole itself might have been arrived at; and at a later period he had the satisfaction of learning that Parry himself had expressed the same conviction. It is proper to note in this place, in order to preclude error, that the surgeon of the *Resolution* in this voyage, states, in an 'Account of a Voyage to Spitzbergen,' and in a manner taking the achievement to himself, that the highest latitude attained was 81° 50', but this, as Dr. Scoresby has explained in his 'Memorials of the Sea,' p. 153, is erroneous; the highest latitude observed being 81° 12' 42", as already stated. The *Resolution* was the property of a co-partnership, of which the senior Scoresby was one, and—influenced in a considerable degree by a kindly and parental regard for his son—he formally resigned his command in 1811, on the very day on which the subject of this notice completed his twenty-first year; and on the same day, the earliest at which he could legally hold a command, William Scoresby junior was unanimously elected his father's successor.

In consequence of information communicated by Captain Scoresby to Sir Joseph Banks, the President of the Royal Society, the attention of the council of that learned body and of the government was directed in 1817 to the dormant enterprise of endeavouring to reach the North Pole and discovering the long-sought North-West passage; the latter of which objects has at length been accomplished by Sir Robert McClure [MACCLURE, SIR ROBERT J. LE M.] in one of the recent searching expeditions for the ill-fated Franklin. Sir J. Banks was very desirous that his young but experienced friend should be employed in the proposed adventure, his father having deferred the fitting out of the ship *Fame*, which the son was to command, under the idea that she might be taken up for service. Their expectations however were altogether disappointed, and as is well known, Captain (the late Sir John) Ross with the *Isabella* and *Alexander*, and Captain Buchan with the *Dorothea* and *Trent*, were appointed to make the attempt. It appears to be the policy, not perhaps to be discommended on grounds of national justice, however the consequences of it may be regretted in particular instances, of the Board of Admiralty, to reserve these arduous expeditions and others destined for marine scientific research, as the encouragements and rewards of an inevitably laborious and ill-paid service. The history of this subject will be found in a paper by Dr. Scoresby, 'On some circumstances connected with the Original Suggestion of the Modern Arctic Expeditions' published in the *Edinburgh New Philosophical Journal*, vol. xx. 1835-36.

Having made seventeen voyages to the Spitzbergen or Greenland Whale-fishery, Captain Scoresby published, in 1820, his celebrated work entitled, 'An Account of the Arctic Regions, with a history and description of the Northern Whale-Fishery,' in 2 volumes consisting of 1217 pages, illustrated by twenty-four engravings. It had been undertaken at the suggestion of Professor Jameson, who did great service to scientific literature by stimulating his pupils or former pupils to make public the results of the observations made by them in their professional or official employments in distant countries. This was the first original work on the physical and natural history of the countries within the Arctic circle and on the nature and practice of the Whale-Fishery, published in this country, with the exception of a tract by Henry Elking on the latter subject. It obtained for the author a more general reputation than he had hitherto enjoyed, and justified the owners of the whaling ships he commanded, in countenancing a degree of enterprise in geographical discovery—not unconnected however with the object of the trade,—which had not before been united with the pursuit of whales, except through accidental circumstances. But on Captain Scoresby's return to Liverpool, from a voyage in 1822, in the ship *Baffin* of that port, undertaken with these views, he received on entering the Mersey the afflicting intelligence of the decease of his (second) wife while he was absent. He now quitted the whale-fishery, but published the geographical results of the voyage, in a 'Journal of a Voyage to the Northern Whale-Fishery; including researches and discoveries on the eastern coast of West-Greenland, made in the summer of 1822, in the ship *Baffin* of Liverpool,' Edinburgh, 1823, 515 pages, with 8 plates, including a chart, &c. A German translation by Professor F. Kries was published at Hamburg in 1825. Not long after the appearance of this work, on the 17th of June, 1824, he was elected a Fellow of the Royal Society, being already a contributor to the 'Philosophical Transactions,' and having been for some years a fellow of the Royal Society of Edinburgh. He subsequently received one of the highest honorary rewards of scientific eminence, in being made a corresponding member of the Institute of France, or Academy of Sciences of Paris. As the captain of a whaler he had been a remarkable man. His crews were

always distinguished by their discipline and respectability, and the lasting effect of his command upon the characters of some of those who sailed with him was a proof of the soundness of his judgment, temper and heart. "His success in whaling was remarkable; but he never, under any circumstances, allowed a whale to be pursued upon Sunday, and he succeeded in convincing his men that upon the whole they did not lose by keeping the appointed day of rest. Upon his later voyages he adopted the temperance principle on board his vessel, finding that hot coffee was a very much stronger preservative than spirits against the intense cold of Arctic regions."

Some years after his retirement from the whale-fishing the religious impressions which he had first received from his father and had always entertained, impelled him to desire a more formal and authorised position as a teacher of religion. He entered the University of Cambridge as a student of Queen's College, took his degree of B.D. in 1834, and Holy Orders in due course, taking the superior degree of D.D. in process of time. The Mariner's Church at Liverpool having been then just established, he accepted the chaplaincy. Private circumstances occasioned his removal to Exeter, but he afterwards became Vicar of Bradford, a very large parish in Yorkshire. After some years however he resigned this office, and retired to Torquay in Devonshire.

As a clergyman, Dr. Scoresby is stated to have "combined what may perhaps be considered extreme evangelical views with the most abounding charity and liberality to those who differed from him. His 'Discourses to Seamen' evince the earnestness with which he laboured for the good of the service in which he had passed his earlier years." He took also enlightened and enlarged views of public education, which while vicar of Bradford he laboured zealously to realise.

But of all the very various subjects to which Dr. Scoresby directed his attention, practical magnetism and its relation to navigation appear to have been most actively pursued by him through his life. The increasing quantity of iron introduced into the equipment and construction of ships, and the recent construction of the entire hull of that metal, were watched by him with unceasing care; and all the resources of his cultivated mind were at length applied to the most important of all subjects of this class—the influence of the iron of ships upon their compasses, and the requisite correction of the indications of the latter. He had published various papers on magnetism in the 'Philosophical Transactions,' the 'Transactions of the Royal Society of Edinburgh,' the 'Reports of the British Association,' the 'Edinburgh Philosophical Journal,' and the two journals which succeeded it. The substance of these, or of many of them, he now made public, in an improved form, in his 'Magnetical Investigations.' Part i. 'Comprising investigations on the principles affecting the capacity and retentiveness of steel for the magnetic condition; with the development of processes for determining the quality and degree of hardness of steel.' London, 1839; 92 pages, 2 plates. Part ii. 'Comprising investigations concerning the laws or principles affecting the power of magnetic steel-plates or bars in combination, as well as singly, under various conditions as to mass, hardness, quality, form, etc., as also concerning the comparative powers of cast-iron.' London, 1843; 280 pages, 2 plates. Vol. ii., part iii., 'Investigations, with illustrative experiments, on the nature and phenomena of magnetic induction, and the mutual influences of magnetical bodies.' London, 1852; 463 pages.

To the section of Mathematics and Physics of the meeting of the British Association at Glasgow in 1855, he communicated a summary of his matured views, and of the evidence in their favour which had occurred since their original promulgation, entitled 'Elucidations, by Facts and Experiments, of the Magnetism of Iron ships and its changes.' In this he recalled attention to his plan of a *compass aloft*, as affording a simple and effective mode of ascertaining the direction of a ship's course, stating that it had not only been extensively adopted by some of our first firms interested in the building and property of iron ships, but had received the particular sanction and commendation of Mr. Airy, the astronomer-royal, and of Lieut. M. F. Maury, the American hydrographer; "that is, as being recommended by both these gentlemen for adoption for determining safe compass guidance, or the correction of adjusted compasses whenever they might be found to be in error." In the further prosecution of his researches on this subject, and with a view to determine various questions in magnetic science, Dr. Scoresby undertook in his age a voyage to Australia in the Royal Charter. He was received at Melbourne with great distinction, almost with enthusiasm, and was granted the honorary degree of M.A. by the new university of that city. He returned last year (1856), but with his constitution much enfeebled by the arduous labours to which he had subjected himself during the voyage; and after a lingering illness he died at Torquay, on the 21st of March 1857, aged sixty-seven, and leaving a widow.

Three principal scientific works of Dr. Scoresby have been described above. The following enumeration will render the account of his separate publications nearly complete. 'Memorial of an Affectionate and Dutiful Son, Frederic R. H. S., who fell asleep in Jesus, December 31, 1834, aged 16 years.'—'Discourses to Seamen: consisting of Fifteen Sermons, preached in the Mariners' Church, Liverpool, treating for the most part generally on subjects of Christian Practice and Doctrine.'—'Jehovah glorified in his Works: a Sermon preached in St. James' Episcopal Chapel, Edinburgh, August 4, 1850, on occasion

of the Meeting of the British Association.'—'Memorials of the Sea: 1, 'Sabbaths in the Arctic Regions;' 2, 'The Mary Russel.' Of both these two editions have appeared. 3, 'My Father: being Records of the Adventurous Life of the late William Scoresby, Esq., of Whitby,' 12mo, Lond., 1851, pp. viii. and 232. 4, 'The Franklin Expedition,' stating his views on its probable course and fate, and on the measures of search for it.

'Zoistic Magnetism.' The contents of this work on a peculiar subject are thus stated by the author himself: "Original Researches in Mesmeric Phenomena, with the view of eliciting the scientific principles of this mysterious agency, and in which experiments are described, eliciting strong electric or magneto-electric conditions, with the intercepting of the mesmeric influence by electrica, and the neutralising of the effects of substances having an ungenial influence on the subject, by the same process as was found to neutralise the electricity of sealing-wax, &c., as acting on the electroscope."

It is understood that a work in the press which Dr. Scoresby had prepared for publication prior to his decease, fully detailing the results of his most recent investigations in nautical magnetism. As he contemplated, while commemorating his father, a continuation of the series of 'Memorials of the Sea,' in which the story of his own life should be told, it is not improbable that this also may find a place in the coming work.

SCOT, REGINALD. This learned and extraordinary man was born early in the sixteenth century, in which he was the most distinguished opposer of the then almost universal belief—'witchcraft.' He was the son of an English gentleman of family, and educated at Oxford. (Wood, 'Athen. Oxon.,' vol. i.) He took no degree there; but returning to Smeth in Kent, devoted himself to study, and more particularly to the perusal of old and obscure authors; occupying his hours of relaxation in gardening. The fruits of this learned leisure were, 'A perfect platform of a Hopgarden,' and 'The Discoverie of Witchcraft,' 1584. In both of these we see the mixture of sagacity and absurdity, extensive learning and puerile paradoxes, and ostentatious quoting of Greek and Latin authors, so common to writers of that period, when the writing a book, being an event in a man's life, he seized upon that opportunity to thrust in all he knew. The following is the title of the latter work:—"Discoverie of Witchcraft, proving the common opinion of witches contracting with devils, spirits, familiars, and their power to kill, torture, and consume the bodies of men, women, and children, or other creatures, by diseases or otherwise, their flying in the air, &c., to be but imaginary, erroneous conceptions, and novelties. Wherein also the practices of witchmongers, conjurers, enchanters, soothsayers, also the delusions of astrology, alchemy, legerdemaine, and many other things are opened that have long lain hidden, though very necessary to be known for the undeceiving of judges, justices, and juries, and for the preservation of poor people;" and its boldness and humanity would alone entitle it to consideration. A striking passage in the preface is to this effect: this work is composed, that, "first, the glory of God be not so abridged and abased as to be thrust into the hand or lips of a lewd old woman, whereby the work of the Creator should be attributed to the creature; secondly, that the religion of the Gospel may be seen to stand without such peevish trumpery; thirdly, that favour and Christian compassion be used towards these poor souls, rather than rigour and extremity." Such a work, with such a purpose, and such a common-sense straightforwardness mingled with its humanity, could not fail to draw down on the author's head every possible ridicule, obloquy, and confutation. And when Scot laughed at the difficult tricks of legerdemaine, and explained how they were performed, we cannot wonder at his book being burnt by the common hangman, and at 'refuters' appearing on all sides. He was attacked by Meric Casaubon, Glanvil (author of the 'Scepis Scientifica'), and finally, by the sapient King James himself, who wrote his 'Demonologie,' as he informs us, "chiefly against the damnable opinions of Wierus and Scot; the latter of whom is not ashamed in public print to deny there can be such a thing as witchcraft."

Scot's boldness could not at once succeed, when opposed by a reigning king and the statute law of the land. When human reason was so blinded by superstition that it was a common practice to throw a woman, suspected, into a pond, and if she escaped drowning she was burnt as a witch; it is not to be expected that common sense could gain many converts; and yet, from its having had three editions, and being translated into French and German, it would appear to have met with great success. It is now extremely rare: as an evidence of the peculiar phases which the human mind historically exhibits, this work, as well as the superstition which it combats, merits attention. This "solid and learned person," as Hallam calls him, "for such he was beyond almost all the English of that age," died in 1599, and was buried with his ancestors in the church at Smeth.

SCOTT, DANIEL. [STEPHENS, H.]

SCOTT, DAVID, was born in Edinburgh, October 10, 1806. The son of a landscape-engraver, he was brought up to his father's profession; but from childhood he had sketched and drawn incessantly, and at length his father yielded to his desire to become a painter. From the first his ambition was to paint in the 'grand style.' His early pictures were of themes such as the 'Hopes of Early Genius dispelled by Death,' 'Fingal and the Spirit of Lodi,' and 'Lot and his Daughters flying

from the Cities of the Plain.' Of a melancholy turn of mind, and of somewhat gloomy theological views, his pictures naturally wore a sombre air, and attracted few admirers beyond the circle of his friends. His 'Lot and his Daughters' was returned from the British Institution as too large; his series of outline etchings, 'Monograms of Man,' met with a slow and unremunerative sale; and it was not till 1831 that he sold his first picture. But he loved labour, and he went on painting subjects with which few could sympathise, in a manner that did little to remove the unattractiveness of the theme. Slowly however he made his way, finding ardent if not numerous admirers; and his progress began to be watched with interest by his fellow-citizens. In 1832 he visited Italy, staying awhile at the Louvre on his way. In Italy of course his chief stay was at Rome, but the amenities of Raffaele seem rather to have repelled him, his chief attention, characteristically enough, being fixed on Carravaggio. Here however he made the acquaintance of the leading resident artists; he worked hard, and painted much; and his power in painting was evidently enlarged. His style however was not materially changed. He continued to paint in the 'grand style' pictures of heroic size; and even when he stooped to the simpler realities of life, or to such matters as 'Love whetting his Darts,' 'Ariel listening to the Mermaid,' 'Beauty wounded by Love,' the 'Triumph of Love,' and the like, it was very much in the spirit of an ancient Covenanter. The themes he entered upon with more congenial feeling were such as his 'Genius of Discord' (a large work, painted at Rome, but repainted on his return); 'Descent from the Cross'; 'Jane Shore found Dead in the Street'; 'Orestes pursued by Furies'; 'Achilles mourning over the Dead Body of Patroclus'; 'Paracelsus, the Alchemist, in his Lecture-Room'; 'Hope passing over the Horizon of Despair'; 'The Dead rising at the Crucifixion'; 'Peter the Hermit addressing the Crusaders,' and several others, which alike attest his remarkable diligence and his soaring ambition; but which, in their want of power to interest the spectator, and their artistic shortcomings, too clearly show that lofty ambition, strong imagination, and unwearied industry, are insufficient to form a great painter, without living genius, a well-directed purpose, and carefully disciplined technical skill. Mr. Scott had built himself a large studio in Edinburgh, and was full of dreams of future glory, despite the warnings of failing health, when the cartoon competition in connection with the new houses of parliament aroused his feelings to a high pitch of excitement. He prepared and sent in a large cartoon of 'The Defeat of the Spanish Armada,' but it was unnoticed by the judges who awarded the prizes, and the blow fell upon the painter with a severity similar in its intensity to that which the like fate inflicted upon Haydon—whom in his ambitious thoughts, and passion for 'grand art' and huge canvasses, Scott greatly resembled. But Scott painted on; devoting now all his energies to his largest and perhaps on the whole best work, 'Vasco da Gama encountered by the Spirit of the Storm in passing the Cape,' now in the hall of the Trinity House, Leith. This work occupied him during the last ten years of his life, and he lived only to complete it, dying on the 5th of March 1849 in his forty-third year. Some of his great works have been purchased for public institutions in Edinburgh. Scott was a vigorous writer both in prose and verse. His 'Essays on the Characteristics of the Great Masters' excited a good deal of attention when first published in 'Blackwood's Magazine,' 1840; and some of his poetry is contained in the 'Memoir of David Scott, R.S.A., containing his Journal in Italy, Notes on Art, and other Papers,' 8vo, 1850. This 'Memoir' is a warm-hearted tribute to his worth and merits by his brother, Mr. William B. Scott, himself an artist of considerable ability.

\*SCOTT, GEORGE GILBERT, A.R.A., one of the most distinguished English practitioners of gothic architecture, was born about 1811, at Gawcott, near Buckingham, of which place his grandfather, the author of a much esteemed 'Commentary on the Old and New Testament,' was the incumbent. Apprenticed to an architect, Mr. Scott early directed his attention chiefly to gothic architecture, the study of which was then attracting very general attention. Having entered into partnership with Mr. Moffatt, the superiority of their designs soon began to secure to the firm a large measure of patronage. The first of their works which gained general notice was however the very elegant cross erected at Oxford, and known as 'the Martyrs' Memorial,' and which in its admirable proportions and excellent finish was an undoubted advance on any modern structure of the kind. It was followed by the large and handsome parish church at Camberwell, finished about 1844, by the Infant Orphan Asylum at Wanstead, and other important works. The partnership was dissolved in 1846; and after the fire of 1846 Mr. Scott was employed after a severe competition to erect the magnificent church of St. Nicholas at Hamburg, one of the finest gothic churches recently erected in Germany, and a work that did no little to raise the character of English architects on the Continent. In 1847 the erection of the cathedral church of St. John, Newfoundland, was commenced from his designs; and in 1848 the College at Brighton, Sussex. Among his English churches may be mentioned St. John's, Holbeck, Leeds; West Derby, Liverpool; Croydon; Holy Trinity, Rugby; St. Andrews, Ashley Place; and others at Harrogate; at Trefnant, near St. Asaph; and at Haley Hill, Halifax. He has also been entrusted with the restoration or rebuilding of the fine church of St. George, Doncaster, and with the superintendence of the works at Ely Cathedral. Another very important

work when completed will be the new chapel, library, rector's residence, and other additional buildings at Exeter College, Oxford, now in course of erection. But all these works will be thrown in the shade by the noble Hôtel de Ville, Hamburg, for which in a competition of many of the leading architects of Europe he carried off the first prize; and which will be in extent and costliness one of the most important, and judging from the designs, one of the most imposing modern works in gothic architecture.

Mr. Scott was in 1849 appointed architect to the Dean and Chapter of Westminster, in which capacity he designed the new Abbey Gate-House, and buildings on the north of the Abbey; has made various judicious restorations and improvements in the Abbey itself; and designed a 'restoration of the Chapter House, executed from very careful examination and measurement,' which was exhibited at the Royal Academy in 1850. Mr. Scott was one of the founders of the Architectural Museum. In 1855 he was elected an Associate of the Royal Academy. He is the author of the following pamphlets:—'A Plea for the Faithful Restoration of our Ancient Cathedrals,' 12mo, 1850; 'Additional Churches, a Letter' [to Dr. C. Wordsworth], 8vo, 1854; and 'Some Remarks on Gothic Architecture: Secular and Domestic, Present and Future,' 8vo, 1857.

SCOTT, JOHN. (ELDON, EARL OF.)

SCOTT, WILLIAM. (STOWELL, BARON.)

SCOTT, SIR MICHAEL, was born in Scotland, in the early part of the 13th century. If he really was, as has been assumed, Scott of Balweary, he succeeded in right of his mother, who was the daughter and heiress of Sir Richard Balweary of that ilk (as it is phrased), to that estate, which is in the parish of Kirkcaldy, in Fifeshire. The literary reputation both of Sir Michael Scott and of his contemporary Thomas Learmont (the Rhymer) may be taken as affording a presumption, which other circumstances go to corroborate, that Scotland in the 13th century was by no means in the benighted state commonly supposed. In fact there is reason to believe that during the peaceful and prosperous reign of Alexander III., which terminated in 1286, the dawn of civilisation in the northern part of our island made a nearer approach to the more advanced light of art and letters in England than was generally maintained in the subsequent progress of the two countries. Scott however probably studied at some foreign university, either Oxford or Paris. He is said to have gone to France in early life, and to have spent some years in that country; after which he proceeded to the court of the emperor Frederic II., who, possessed of remarkable literary acquirements himself, was then the great patron of learned men. If he did not however remain in Germany after the death of Frederic, which took place in 1250, he must have been still only in early manhood when he left that country—most probably at least under thirty,—since, as we shall find, he was employed in public duties scarcely suited to a person in very advanced age forty years after this date. If he passed some years, as is asserted, at the court of Frederic, he could not well have been much more than twenty when he first presented himself to or was sent for by the Emperor. Dempster indeed states that he was but a young man when he was writing books at the request of Frederic, "cujus rogatu hic etiam juvenis multa opera scribere est agressus." Yet Dempster was not aware that he was Scott of Balweary; he tells us indeed that his name Scotus was not that of his family, but of his nation. Is it possible that the Michael Scott of Balweary, whom we find living in Scotland, and actively engaged in the public service, in 1290, may be mistakenly assumed to have been the learned person of that name who resided at the court of Frederic II.? It is said further, that upon leaving Germany, Scott came to England, where he was received into great favour by Edward I. But Edward did not become king of England till 1272, twenty-two years after the death of the learned Scotsman's German patron.

From England he is said to have returned to his native country, though when is not precisely noted. For the rest, all that is known is that a Michael Scott of Balweary, who is spoken of by Hector Boece as the famous scholar of that name, was one of the two ambassadors (Sir Michael de Wemyss, another Fife baron, was the other) sent to Norway by the estates of Scotland, in 1290, to bring home the infant heiress of the throne (Margaret, called the Maiden of Norway, daughter of the Norwegian king Eric.)

The common account is, that Sir Michael Scott died in Scotland in the following year, 1291. Dempster says, "Vixit usque in ultimam senectutem, et attigit annum MCCXCI, quo obiisse certum." But Sir Robert Sibbald, in his 'History of Fife and Kinross,'—after telling us that, "in testimony of this honourable commission and embassy" in which the two "equites Fifani illustres, et summe prudentie apud suos illis temporibus habiti," as Buchanan describes them, were employed, "there is still preserved in the house of Wemyss a silver basin of an antique fashion, which David [Michael?] de Wemyss got from the king of Norway at that time"—adds: "And there is an indenture betwixt Sir Michael Wemyss de eodem miles, and Sir Michael Scott of Balweary, miles, in presentia Joannis Balioli regis apud Monasterium de Lundoris, anno 1294." (Edit. of 1802, p. 326.) We suspect there is no evidence for the death of Sir Michael Scott in 1291, at all to be compared with this evidence of the existence of a person of the same name and designation three years later. But in another place (p. 316) Sibbald asserts that the same Scott who was

sent to Norway in 1290, went on a second embassy to that country to demand the cession of the Orkades in the fifth year of Robert I., that is to say, in the year 1310. If this statement be correct, it is in the highest degree improbable that Michael Scott the ambassador could have been the person of the same name who figured as a distinguished literary character at the court of Frederic II. more than sixty years before. It is more likely that the one was the son of the other.

The real or supposed literary works of Sir Michael Scott are the following:—1, 'A History of Animals,' in Latin; according to some authorities, a translation from the Arabic of Avicenna. But of this we know nothing. Dr. George Mackenzie, Scott's most elaborate biographer, says that the work exists "in fol. editionis neque tempore neque loco expressis." Dempster mentions 'Abbreviationes Avicennæ' in one book, and also 'De Animalibus ad Cæsarem' (i. e. Frederic) in one book. 2, 'Aristotelis Opera, Latine versa, partim e Græco, partim Arabico, per viros lectos et in utriusque linguæ prolatione peritos, jussu Imperatoris Frederici II., fol., Venet., 1496. The common accounts make Scott to have been the sole author of this translation; but it proclaims itself, as we see, to be the work of several hands. Possibly Scott may have contributed the translation of the Natural History, and may have done it from the Arabic, which may be all the foundation for the assignment to him of the version of Avicenna. Warton, speaking of the new translations of Aristotle from the original Greek into Latin, made about the 12th century, says, "I believe the translators understood very little Greek. Our countryman Michael Scotus, was one of the first of them, who was assisted by Andrew, a Jew. Michael was astrologer to Frederic, emperor of Germany, and appears to have executed his translations at Toledo in Spain, about the year 1220. These new versions were perhaps little more than corrections from those of the early Arabians, made under the inspection of the learned Spanish Saracens." ('Note to Dissert. on Introd. of Learning into England,' in 'Hist. of English Poetry.') 3, 'De Procreatione, et Hominis Phisionomia, Opus.' There is a copy of the first edition of this tract in the King's Library at the British Museum, printed without the name of the place, in 1477; and in the general library of the museum are other editions, with the title slightly varied, printed in 1480 and 1487; and some, both in 4to and 12mo, without date, and possibly still older. It is also the same work which was printed, with the title of 'De Secretis Naturæ,' at Strasbourg in 1607, and at Frankfurt in 1615, in 16mo, and with the works of Albertus Magnus, at Amsterdam, in 1655, 1660, &c., in 12mo. Bayle had an Italian translation of it, an octavo pamphlet of seven leaves, printed at Venice in 1533, with the title 'Physionomia, laqual compilo Maestro Michael Scotto, à prieghi di Federico Romano Imperatore, huomo di gran scienza; e è cosa molte notabile, e da tener secreta, pero che l'è di grande efficacia, e comprende cose secrete della natura, bastanti ad ogni astrologo; e è diviso in tre parti.' 4, 'Mensa Philosophica, seu Enchiridion, in quo de quæstionibus mensalibus, et variis ac jucundis hominum congressibus, agitur,' 12mo, France, 1602; 8vo, 1608; 24mo, Lips., 1603. There is an English translation of this treatise (which Tiedemann, in his 'Esprit de la Philosophie Speculative,' says contains some curious things), entitled 'The Philosopher's Banquet,' done into English by W. B., 3rd edit., enlarged, 12mo, London, 1633. The 'Mensa Philosophica' is one of the works attributed to Theobald Anguilbert. 5, 'Quæstio Curiosa de Natura Solis et Lunæ.' This is a chemical treatise upon the transmutation of gold and silver, and is printed in the 5th vol. of the 'Theatrum Chemicum,' 8vo, Strasbourg, 1622. 6, 'Eximii atque excellentissimi physicorum motuum cursusque syderii investigatoris, Mich. Scotti, super autor. Sphærar., cum questionibus diligenter emendatis, incipit expositio perfecta, illustrissimi Imperatoris D. D. Frederici precibus.' This is a commentary upon the celebrated treatise of Sacrobosco 'De Sphæra,' but is a mere compilation, and is believed to be falsely attributed to Scott. Dempster, after his fashion, enumerates a long list of additional titles, which it is quite unnecessary to transcribe.

But Michael Scott's chief reputation after his death, if not in his lifetime, was as a great magician. "De quo," says Dempster, writing in the beginning of the 17th century, "innumerales etiam nunc hodie aniles fabulæ circumferuntur, nec ullum apud nostrates clarius nomen." Even to this day he is traditionally remembered in that character in his own country; and various legends of his wondrous performances are still told, and half believed, among the peasantry, some of which may be found collected in the notes to Sir Walter Scott's 'Lay of the Last Minstrel,' in which poem the opening of the wizard's grave in the abbey of Melrose, and the taking from the dead man's cold hand of his "book of might," makes so striking an incident. Dempster says:—"Ut puto, in Scotia libri ipsis dicebantur me puero extare, sed sine horrore quodam non posse attingi, ob malorum demonum præstigias, quæ illis apertis fiebant." But in earlier times the fame of his magic skill was spread over Europe. Dante has introduced him in his 'Inferno':—

"Quell' altro, che ne' fianchi è così poco,  
Michele Scottò fu, che veramente  
Delle magiche frode seppe il giuoco,"

(Canto xx., v. 117.)

and he is also mentioned by Boccaccio and other early Italian writers. He is severely arraigned by John Picus (Mirandula), in his work

against astrology; and is defended from such charges, as well as Picus himself, in Naudé's 'Apologie pour les grands personnages faussement accusés de Magie.'

The Scottish tradition, as we have seen, is, that Michael Scott was buried in his own country at Melrose. Another account however makes him to have died, and his remains to have been interred, in the abbey of Ulme, or Holme Cultram, in Cumberland; and here also, it is pretended, his magic books were preserved. Satchells, in his rhyming 'History of the Right Honourable name of Scott,' affirms that he got his account of the origin of that name out of an extract from one of Michael Scott's works, which a person showed him at Burgh-under-Bowness, in Cumberland, in the year 1629. His informant told him, he says, that the book from which the passage was taken was never yet read through, and never would be; young scholars had only picked out something from the contents, but none dared to read the body of the work. And he adds:—

"He carried me along the castle then,  
And showed me his written book hanging on an iron pin;  
His writing pen did seem to me to be  
Of hardened metal, like steel, or accumie;  
The volume of it did seem so large to me  
As the Book of Martyrs and Turk's Historie.  
Then in the church he let me see  
A stone where Mr. Michael Scott did lie;" &c. &c.

This has been taken for a piece of poetic invention in Satchells; but we may observe that Camden, in his 'Britannia,' tells us that the magic books of Michael Scott were in his time still said to be preserved at Ulme, though they were then mouldering to dust. It is probable from this that they had been in the habit of showing at that place some ancient volumes which they called Scott's magic writings. Camden adds:—"He was a monk of this place about the year 1290, and applied himself so closely to the mathematics and other abstruse parts of learning, that he was generally looked on as a conjuror; and a vain credulous humour has handed down I know not what miracles done by him."

SCOTT, WALTER, was born in Edinburgh on the 15th of August, 1771. The sixty-one years of his life were filled by the incessant labours of a strong and restless mind, which in the latter half of its career fixed upon its own efforts no small share of public attention, during one of the most exciting periods of European history. The history of his early boyhood is the tale of a naturally strong constitution struggling with disease. He had attained his twenty-second month, and could already walk tolerably well for a child of his age, when the girl who took care of him was awakened one morning by his screams, and on examination found his right leg powerless and cold as marble. Medical aid was vain; he was lame for life; and during upwards of two years the previously healthy boy continued a pining child. In his fifth year his parents thought him sufficiently recovered to trust him, first to the charge of his grandfather at Sandy Knowe on the Tweed, and afterwards to that of a maiden aunt, who carried him to Bath. The boy had attained his eighth year before he was deemed strong enough to be sent to the high school of Edinburgh. While attending this seminary, and during the first winter of his attendance at college (1784), he enjoyed tolerably good health, and was able, notwithstanding his lameness, to join in most of the sports of his class-fellows. Towards the close of the year 1784 he had a violent attack of sickness, for the only distinct account of which we are indebted to himself:—"My indisposition arose in part at least from my having broken a blood-vessel, and motion and speech were for a long time pronounced positively dangerous. For several weeks I was confined strictly to my bed, during which time I was not allowed to speak above a whisper, to eat more than a spoonful or two of boiled rice, or to have more covering than a counterpane." In May 1786 he was sufficiently recovered to commence his apprenticeship as writer to the signet, at that time the usual commencement of the education of Scotch barristers; and his subsequent life was little troubled with indisposition.

These juvenile sicknesses had a powerful influence upon the development of his mental powers. The aunt to whose care he was intrusted when a mere boy possessed an immense store of legendary tales, which were frequently put in requisition for the amusement of the invalid. During the confinement of his second attack he was allowed to devour the contents of a circulating library, founded, it is believed, by Allan Ramsay, rich in "the romances of chivalry and the ponderous folios of Cyrus and Cassandra, down to the most approved works of modern times." Scott has declared, "I believe I read almost all the romances, old plays, and epic poetry in that formidable collection." The child's love of stories was thus ripened into an ill-regulated fondness for books; the practice of reading, to which he was drawn by inability to do anything else, created a craving for that pleasure, and the constant succession of new books rendered unnecessary the exercise of attention required to extract a new pleasure on reperusal. His mind was accustomed to find pleasure in yielding passively to a succession of new images. Those ideas remained impressed on his memory which most roused his emotions; and he contracted unconsciously the habit of grouping them in conformity to that law of association which links events following or seeming to arise out of each other in the progress of an adventure. His mind even at that early age was developing the

talents of the story-teller; and, as in the cases of Göthe and Richardson, the precocious command of language, giving voice and form to the stories which his imagination constructed, showed itself in the pleasure he found in inventing and telling tales for the amusement of his companions.

The society around him was favourable to the nourishment of such tendencies. His father was a strict disciplinarian, a precisionist in religion, and a legal formalist. He exacted from his children a strict observance of the outward forms of religion, and spared no trouble to imbue their minds with a knowledge of the doctrines of the national church. He strove to make the actions of his domestic circle as strictly conformable to rules as his causes in the Court of Session. The strong hand of discipline like this usually serves to make children more intent upon the stolen enjoyment of their favourite amusements. Walter read with more avidity what his father scorned as trifling reading, and hung on the lips of every one who could gratify him with legendary tales. He was surrounded too by characters calculated to leave a deep impression on the mind of a bookish boy. The Lowlands of Scotland had by that time settled down into the same regulated habits of steady industry that still characterise them; but many old-world characters belonging to a less tranquil period were still surviving. George Constable, of Wallace Craigie, near Dundee, who sat for his picture in the 'Antiquary'; Mrs. Anne Murray Keith, the Mrs. Bethune Babel of the 'Chronicles of the Canongate'; Mrs. Margaret Swinton, who figures in the introduction to 'My Aunt Margaret's Mirror'; Alexander Stewart, of Invernahyle, a Highland gentleman, who had been "out in the forty-five," by their appearance and conversation carried the boy's imagination back to a state of society which had ceased to exist, and formed a connecting link between the real world in which he lived and the imaginary world which he found in his romances. He had opportunities too of observing closely the manners and feelings of the lower classes of society in the agricultural districts in the south of Scotland. His grandfather, being a farmer, lived on a footing of more familiar intercourse with his domestics than was even then customary in towns, and in his house Scott learned the pass-word to the confidence of that class. As he grew in years and in strength, he was encouraged by his family, probably with a view to confirm his health, to take long rambles on foot and on horseback through the border and highland countries where his father had relations or clients.

The impressions thus derived might have faded even from a retentive memory in the busy period of confirmed manhood; but a direction had been given to his awakening intellect, which led him to brood over and cherish them. On one of his visits to a paternal uncle, who resided in the environs of Kelso, he became acquainted with the collections of the Bishop of Dromore. "In early youth," he says, in the 'Essay on Imitations of the Ancient Ballad,' prefixed to the third volume of the 'Minstrelsy of the Scottish Border,' "I had been an eager student of ballad poetry, and the tree is still in my recollection, beneath which I lay and first entered upon the enchanting perusal of Percy's 'Reliques of Ancient Poetry,' although it has long perished in the general blight which affected the whole race of oriental platanus to which it belonged." The perusal of this work led him on to the kindred publications of Herd and Evans. Herd's book was an attempt to do for Scottish what the bishop had accomplished for English traditional song. In Evans's work some poems of modern date were intermingled with the old ballads, and among others 'Cumnor Hall' by Mickle, adverted to in the notes which Scott appended to 'Kenilworth,' in Cadell's collective edition of his novels. The hot controversy which arose between Percy and Ritson led the amateurs of old ballad poetry to plunge more deeply than they contemplated into philological and antiquarian discussions. The effects of this upon Scott may be conjectured from the subjects of one essay composed as a class exercise during his attendance on the moral philosophy lectures of Dugald Stewart in 1790, and three which he read in the years 1792-93 in the Speculative Society. They are, 'On the Manners and Customs of the Northern Nations of Europe,' 'On the Origin of the Feudal System,' 'On the Origin of the Scandinavian Mythology,' and 'On the Authenticity of Ossian's Poems.' The topics which at that time engrossed the attention of his young contemporaries (among whom were the future founders of the 'Edinburgh Review') were practical, economical, and political discussions. Scott however held on his own way: his favourite themes were the old world, the bent of his mind was historical.

Like most young men addicted to literary pursuits, he had at an early age tried his hand at rhyme. His ballad studies kept alive the inclination. Burns, whom he saw at the house of Professor Ferguson in 1786-87, seems to have made a lasting impression upon him, both by his writings and his personal appearance. For ten years however his rhyming propensities remained in abeyance, till they were re-awakened by the popularity earned by the ballads of Monk Lewis. Scott's attention had been directed to German literature by a very superficial essay on 'The German Theatre,' read by Henry Mackenzie at a meeting of the Royal Society of Edinburgh in 1788. Scott and several of his companions formed a class, soon after the publication of that paper, for the purpose of studying the German language; but these studies were followed up in a rather desultory manner till the year 1793 or 1794, when Miss Aiken (Mrs. Barbauld) directed his attention to the works of Bürger. He had some difficulty in procuring them;

and had already met the young lion of the day, Lewis, and been stimulated, by his conviction of his own superiority in general information, to attempt an appeal to the public, when an edition of Bürger, which a friend had procured for him from Hamburg, came into his hands. Having made a free version of the poems which had most caught his fancy, they met with so much applause in the friendly circles where he recited them, that he was, as he himself playfully says, "prevailed on by the request of friends to indulge his own vanity by publishing the translation of Bürger's 'Leonora,' and the 'Wild Huntsman,' in a thin quarto" (1796). This event is mainly of importance as it marks the termination of his probationary career, his course of hard study, with vague aspirations after some mode of turning it to account. The die was in fact cast: from that moment he was an author for life.

It is necessary that we advert to Scott's more active pursuits before closing this retrospect of his probationary years. He was apprenticed to his father in May 1786. He never however acted regularly as clerk. His absences on jaunts to the Highlands and the border counties were long and frequent; and a gentleman who was in Mr. Scott's office during the period of Walter's nominal apprenticeship, assured us that his time while there was mostly spent in playing chess. In 1791, having finally resolved to adopt the profession of advocate, he recommenced his attendance upon the college classes, interrupted by his illness, and joined the Speculative Society. In 1791 he petitioned and was admitted by the Faculty of Advocates to his first trials; in 1792 he passed the rest, and was called to the bar. As a member of the Speculative Society and the faculty, he took an active part in the private business of both bodies. In the civil court, he has told us, his employment did not exceed one opportunity of appearing as the prototype of Peter Public. But in the Court of Justiciary he made several appearances, in all of which he distinguished himself by diligent preparation. His conduct at this period was marked by an anxious desire to force himself into professional employment, and by that energy which promised success, could he but succeed in making a beginning.

We have now brought the subject of our narrative to the commencement of that literary career which he prosecuted with unabated perseverance till his death. The story of his literary life naturally divides itself into three epochs: that during which he was achieving his poetical fame, extending from the publication of his translation of Bürger in 1796 to the publication of 'Waverley' in 1814; the period of the celebrity of his novels, during which they followed each other in brilliant and rapid succession from the publication of 'Waverley' till the bankruptcy of Constable in 1826; the period of his Herculean struggle to re-adjust his affairs, shattered by the convulsion of 1826, till he sunk over-tasked into a premature grave in 1832. It is in every case difficult, perhaps inexpedient, to separate the part from the man: in the case of Scott it is impossible. We proceed therefore briefly, as our limits command, to trace, for each of the three periods we have enumerated, an outline of his actual life and circumstances, and of the literary works produced under their influence.

Unaware of the extent to which he had become involved in the literary career, he continued for some time his professional efforts. He was engaged as counsel for the defendants in several of the prosecutions for riots, seditious practices, and other offences arising out of the political ferment of the day. It has been imagined that the active part which his political zeal induced him to take in organising and disciplining the volunteer corps of horse formed in Edinburgh, contributed to mar his professional prospects. It certainly distracted his attention from legal studies, but it accelerated rather than retarded his promotion. In December 1799 he was appointed sheriff of Selkirkshire; in 1806 he was appointed one of the principal clerks of the Court of Session. The duties of these offices, even when discharged by the same individual, left a large proportion of his time at his own disposal. The first mentioned insured to him a small competency; the other was ultimately a lucrative appointment, although the arrangement he made with his predecessor in office prevented his deriving the full emolument from it till 1812. In addition to these sources of income he succeeded to a small landed property on the death of an uncle in 1797, and received a moderate fortune with Miss Carpenter, whom he married towards the close of the same year. He was thus placed above absolute dependence upon the literary exertions to which his inclination and leisure invited him. At the same time his relish for the elegant luxuries of life and the ambition to mingle on a feeling of equality with the families of the aristocracy, upon some of whom, as well as upon the honest farmers above alluded to, he had a claim of relationship—an ambition strengthened by his fondness for the legends of chivalry operating on an imaginative disposition, rendered further additions to his fortune not indifferent to him. It is questionable whether even this stimulus could have nerved him to perseverance in the dry drudgery of the law, but his active and energetic disposition courted labour so long as it did not impose any restraint upon the rambling desultory habits of thought acquired during the days of incessant reading of his sickly boyhood.

Even before he formed his final resolution to use literature "as a staff—not as a crutch," he followed up the appeal made to the public by the printing of 'William and Helen.' In 1799 he published a translation of Göthe's 'Götz of Berlichingen.' He composed and

circulated among his friends the ballads of 'Glenfinlas' and 'The Eve of St. John.' In 1799 he received a visit from Mr. (now Sir John) Stoddart, who repeated to him many then unpublished poems of his friends Wordsworth, Coleridge, and Southey, and inspired him with a relish for their peculiar beauties. An intimacy which Scott formed with Mr. Heber, on the occasion of that gentleman's residence in Edinburgh during the winter of 1799-1800, confirmed his antiquarian tastes and extended his acquaintance with old English literature: he advanced from the school of the old ballad into that of the Elizabethan drama. The bustling patronage of Lewis had made Scott's name familiar to many persons of literary tastes in England, and his acquaintance with the literati of Edinburgh became more extensive and intimate. About the beginning of the present century he paid several visits to Teviotdale, a district even less visited at that period than the Highlands, and in the course of these excursions not only added considerably to his stores of traditional song, but, what was of more consequence, learned to know that stalwart race whom he afterwards portrayed with such graphic power in 'Guy Mannering.'

We have now reached the period of his life at which he took his final plunge into literary occupation and avowedly commenced author by profession. His first publication in this capacity was his 'Border Minstrelsy,' a work which afforded him an opportunity of exercising his talents in various departments and showing the magnitude of his store of heterogeneous and not very well assorted knowledge. In his introductions he showed his talents as an essayist; in his notes, his research and critical acumen as an antiquarian; in the imitations of the old ballad, his taste and talent for poetical composition. 'The Border Minstrelsy' is indeed little more than the accumulated materials out of which he hewed the best of his later works—a chaos through which the fragmentary lights of creative imagination were everywhere sparkling. The book is scarcely less interesting when viewed as the commencement of his connection with those commercial speculations in literature which ultimately broke down and crushed him, than as his first serious effort in the character of an author. Mr. James Ballantyne was, at the time of the publication of the 'Border Minstrelsy,' the editor of a provincial newspaper in Kelso. To him Scott offered the printing of his book. The offer, after some hesitation, was accepted, a new fount of types, superior to anything previously seen in Scotland, was procured, and under the direction of the principal workman on Mr. Ballantyne's establishment, who had been some time in the employment of Bensley, a specimen of typography was produced, which at once established the reputation of what was for a time rather affectingly called the "border press." Not long after Mr. Ballantyne removed to Edinburgh, and commenced printer on a large scale, in partnership, as was proved by subsequent disclosures, with Scott. To this part of Scott's history we shall have occasion to return hereafter.

Scott commenced his career as the most popular poet of his day, in 1805, with the publication of 'The Lay of the Last Minstrel.' This poem was followed in 1808 by 'Marmion,' in 1809, by 'The Lady of the Lake,' in 1811, by 'Don Roderick,' in 1813, by 'Rokeby,' in 1814, by 'The Lord of the Isles.' To these may be added 'The Bridal of Triermain' and 'Harold the Dauntless,' published anonymously, the former in 1814, the latter in 1816. These poems took the literary world by surprise; they were unlike anything that had preceded them. There was an easy flow in their frequently slovenly versification, a condensed energy of thought, which even the total neglect of the 'limæ labor' could not entirely conceal or obliterate; a pithy shrewdness in the occasional remarks upon life and manners; enough of the wild recondite spirit which the author had caught from Coleridge to lend a zest to his composition; enough of the leaven of common-place to render it intelligible to the mass of readers; and an entirely new class of heroes and adventures. Much of the popularity which attached to Scott's poems was owing to the novelty of their subjects, and much to his compliance with the taste of the times; but his strong native sense, the stores of out-of-the-way knowledge upon which he could draw, and the easy flow of his versification and imagery, rendered them also works of real intrinsic merit. As the first gloss of novelty wore off, the voice of criticism was more distinctly heard. Lord Byron's more exaggerated tone of sentiment and greater power of condensed rhythmical declamation made a deeper impression upon the public mind, and caused Scott's works to appear comparatively feeble by the force of contrast. The imitators, too, who had caught the outward form of Scott's versification, and found plenty of heroes in old 'fabliaux' and romances, had for a time surfeited the public with his peculiar style of poetical composition. With a prudent caution, said to be characteristic of his nation, he prepared to exchange a field of literary exertion in which he found himself in danger of losing his popularity, and after the failure of two anonymous trials ('The Bridal of Triermain,' and 'Harold the Dauntless') never attempted to re-enter it.

Some time previous to his abdication of the laurel, the success of Miss Edgeworth's 'Pictures of Irish Life,' and his consciousness of an extensive acquaintance with the manners and customs of Scotland, more especially of the olden time, had stimulated him to attempt a portraiture of them in a prose imaginative narrative. The task was prosecuted for some time, but in consequence of the unfavourable opinion of a friend, laid aside. In 1814 however he resolved to make

the attempt, and 'Waverley' was published anonymously. This book, published without any parade of announcement, and without the attraction of an author's name, made its way noiselessly and rapidly to a high place in public estimation. In the course of four years it was followed in rapid succession by 'Guy Mannering,' 'The Antiquary,' 'The Black Dwarf,' 'Old Mortality,' 'Rob Roy,' and 'The Heart of Mid-Lothian,' all bearing the indisputable impress of the same parent mind. The circumstance of Scott's having published a poem in the same year in which 'Waverley' appeared, and his engagement in other literary undertakings being known, combined, with the common prejudice that a poet cannot excel as a prose writer, to avert from him for a time the suspicion of the authorship of the 'Waverley' novels. The taciturnity of the few intrusted with the secret defeated all attempts to obtain direct evidence as to who was the author. From the first, however, suspicion pointed strongly towards Scott, and so many circumstances tended to strengthen it, that the disclosures from Constable's and Ballantyne's books, and his own confession, scarcely increased the moral conviction which had long prevailed, that he was the "great Unknown."

The light half-playfully worn veil of mystery served however, no doubt, to excite the public curiosity and to add a factitious interest to the 'Waverley' novels at the time of their publication. But their own merits were doubtless the main cause of their success. As narratives they have little merit: the plot is uniformly artificial and unskillfully wrought up; the ostensible heroes and heroines, insipid or unnatural. It is in the admirable Scotch characters, in the ease and truth of their actions and conversation, that the charm of these novels consists. There is a power and depth in the characters themselves; they had been originally conceived with the intense love of a strong mind; they had remained stored up in its memory for years, mellowing in tone and growing more distinct in form, and were at last, accidentally we may almost say, poured out with a felicity and strength of expression of which the author was himself scarcely aware that he was capable. This new vein of popular applause was worked as sedulously as the former, and, like it, worked out. The novels which from 1818 to 1826 followed those we have enumerated in rapid succession, are not, like them, the outpourings of long-treasured thoughts; they bear marks of reading for the purpose of finding materials to fill up a previously sketched outline. They are of different degrees of merit, but all are inferior in depth of tone and weight of metal, to the works of the first four years. Individual characters and incidents in some of them may be equal, but not one of them can bear comparison when considered as a whole.

Scott's novels and poems however occupied by no means the whole of his time, during the thirty years of his busy life, of which they were the luxuriant produce. He contributed to the 'Edinburgh Review' at its commencement, and when differences of political opinion induced him to break off from that publication, he took a warm interest in the establishment of the 'Quarterly.' His trade connections with the Ballantynes, and through them with Constable and other publishers, led him to project many publications, and to take an active part in them as editor or contributor. To these we owe the 'Life of Dryden' (1808), of Swift (1814), the biographical and critical prefaces to Ballantyne's collection of the English novelists, and his annotations to such books as Sadler's 'Correspondence.' His biographical and critical writings are characterised by masculine good sense, vigour, and a happy play of humour, rather than by subtle analysis or a just and delicate taste.

From 1796 till 1826 Scott's life was busy and happy, and seemingly prosperous. By the patronage of friends he was rendered independent; by his own exertions he was raised to affluence. His notoriety as an author gave him an extensive circle of acquaintance. His manly and sensible character commanded respect, his *bonhomie* and talent for increasing the hilarity of the social hour conciliated the love of all who knew him. The continuance of apparent success increased his confidence in his own resources to a degree bordering on presumption. The ambition of his life was to enact the part of one of those feudal lords who were the favourite objects upon which his imagination dwelt. To this was owing the purchase and building of Abbotsford, the strewing of it with "auld nick-nackets," and the extensive scale on which he exercised his hospitality. He endeavoured to revive old times in his mansion on the Tweed. The last few years of his prosperity were spent in a gorgeous dream. The open-air daylight masquerade of the reception of George IV. in Edinburgh, in which Sir Walter Scott was a prominent actor, was the most gorgeous scene of what we can scarcely look upon in any other light than that of an opium dream. But the worm was gnawing at the root of his magnificence. Constable, Ballantyne, and Scott were all men of sense and talent, but the spirit of enterprise was stronger in them than that of accurate mercantile calculation. From the beginning their undertakings had been on a larger scale than their capital warranted; and as difficulties thickened around them their confident spirits looked for relief to bolder and more extensive speculations. This could not go on for ever: the commercial crisis of 1825-26 precipitated, but did not cause the catastrophe.

When what is called in Scotland "a state of the affairs" of Constable and Co. and Ballantyne and Co. was made up subsequently to the bankruptcy of the two companies, it appeared that Sir Walter Scott

was indebted to Constable's creditors, as a partner of Ballantyne and Co., for nearly 72,000*l.*; and that the total amount of the debts of Ballantyne and Co. was about 110,000*l.*, for the whole of which Sir Walter was liable as a partner. About half of the 72,000*l.* due to Constable and Co. being included in the debts of Ballantyne and Co., Scott's actual liabilities were somewhere about 147,000*l.* The presumptuous rashness with which, in order to indulge himself in the theatrical pleasure of enacting the part of one of the favourite heroes of his imagination, he incurred this immense load of debt, cannot be palliated. From 1823, if not from an earlier period, novels were contracted for and paid in bills, before even the subjects or names of the future publications were fixed. This was not a mere speculation upon popularity: it was a wanton setting of health, mental and corporeal, and of life itself, upon the hazard. But to the honour of Scott, he did not flinch from the terrible responsibility he had so presumptuously incurred. "Gentlemen," he said to the creditors, "Time and I against any two. Let me take this good ally into my company, and I believe I shall be able to pay you every farthing." He surrendered the whole of his property; executed a trust-deed in favour of certain gentlemen, who were to receive the funds realised by his labours, and pay off his debts with interest by instalments; sold his house and furniture, and retired to lodgings, and resumed his literary labours with dogged resolution. "It is very hard," he said, in his deep thoughtful voice, to a friend who expressed his sympathy, "thus to lose all the labours of a lifetime, and be made a poor man at last, when I ought to have been otherwise. But if God grant me life and strength for a few years longer, I have no doubt that I shall redeem it all."

Scott's works, published during the six years which elapsed between his bankruptcy and his death, which occurred on the 21st of September 1832, possess a painful interest. They want the energy and buoyancy of his earlier writings; they bear the impress of the lassitude of a spirit engaged in a hopeless task. Some of them, like the 'History of Napoleon,' are works which lay out of his line; some of them, like the 'Letters on Demonology and Witchcraft,' are of a class to which humbler pens alone ought to be tasked; some of them, like the gossiping notes to his collected works, are concessions to the impertinent curiosity of the public, to which it is painful to see a great man stooping. Neither Walter Scott, nor any other really great author, ought to be his own Boswell. Making allowance for every drawback however, the old fire glows in his ashes. Nor was his self-immolation altogether in vain. There can be little doubt that the disease which proved fatal to him was superinduced by excess of mental toil, but the purpose for which he sacrificed himself was attained. His debts, materially diminished before his death, have since been entirely liquidated by the profits of the collected editions of his works. The certainty of this event, the consciousness that he had not shrunk from the responsibilities he had incurred, the feeling that he had deserved and retained the love and respect which waited upon him in more prosperous days, was his consolation in the dark hours of his closing life. The political party to which he was devoted was overthrown, and the institutions he venerated were in his opinion about to be swept away; his wealth had melted from his grasp, toil was the lot and prospect of his old age, the friends of his youth were dying out one by one; but the consciousness of honourable and manly endurance, and the devoted love of his children, smoothed his passage to the grave. He sought, but too late, health in a foreign climate. The worn-out frame craved to be at home and at rest. He murmured, "Now he knew he was at Abbotsford," when his friend Mr. Laidlaw welcomed him on his return, and for a few days enjoyed the mansion he had reared with so much love and pride. His strong frame struggled hard with the disease, but exhausted nature gave way at last, and he expired after fourteen days of total insensibility, on the 21st of September 1832.

It is even yet perhaps too early to attempt a dispassionate estimate of Scott and his writings. Making allowance for increased facilities of communication, and more generally diffused education, the fervour of popular enthusiasm with which his works were received was not greater than was experienced by the publications of Richardson. Time alone can decide how much of his writings will survive, and what place they will permanently occupy in the estimation of the literary world. Of this however there can be no doubt, that in Scott a strong and healthy intellect was engrafted on a powerful will; that he had a natural and easy play of humour, with no inconsiderable portion of poetical imagination, and a large share of that power of apprehending and portraying character which is the great charm of Fielding. Great part of his life he indulged in a dream-world of his own; but when rudely awakened by adversity, he submitted to the consequences with heroic submission. He was a great and a good man.

Walter Scott was the fourth of ten children, of whom only Thomas, a younger brother, left any descendants. His own four children all survived him, but all have since passed away; and with the death of his grandson, Walter Scott Lockhart, ended his vain hope of building up a family name. The house and estate of Abbotsford have become the property of J. R. Hope, Esq., who married Scott's granddaughter, Charlotte Harriet Jane Lockhart, the daughter of Mr. J. G. Lockhart [LOCKHART, J. G.] and Scott's eldest daughter Sophia.

*edition of his Collected Works; Publications by the Trustees of the Messrs. Ballantyne; MS. Communications.)*

SCOTUS, DUNS. [DUNS SCOTUS.]

SCOTUS, JOHANNES. [ERIGENA.]

\*SCRIBEE, AUGUSTIN-EUGENE, one of the most fertile and successful of the modern French dramatic writers, was born in Paris, on December 24, 1791, the son of a merchant, who on his death left him a considerable fortune. His first studies were directed to the law, but his dramatic talent was indicated so early that his guardian, the advocate Bonnet, recommended him to abandon the bar for the stage. His first drama was produced in conjunction with his schoolfellow Germain Delavigne. It was entitled 'The Dervise,' and was performed in 1811 with great applause. His course has been uninterrupted ever since, and the number of his productions almost innumerable. He has not only supplied the French stage, but through translations, adaptations, and suggestions, the stages of the greater part of Europe, and especially that of England.

Scribe's productions are of a peculiar character. He is by no means a dramatic poet; though he possesses facility of invention it is shown more in the clever development of his plots than in the imagining of the higher and nobler description of character. Where he has attempted this he has failed. His distinguishing merits are a remarkable ingenuity and inexhaustible variety in the construction of his plots, a lightness and ease in their development, the conversational fluency and point of his dialogue, and a correct conception and vigorous delineation of character in what may be called the outside circles of civilised—or rather, Parisian—life. In his operas, for many of which he has produced librettos, he has well adapted his language to the music, but, as we have said of his other writings, he does not reach—probably he does not aim at—the poetical. His success has been not less than his industry, and he is said to have received immense sums for many of his pieces, and to have realised considerable wealth. It would not be easy to enumerate all his pieces, as many of them, vaudevilles especially, were originally issued under assumed names; but among those by which he will be known to English readers we may mention 'Le Comte Ory,' 'Le plus beau Jour de la Vie,' 'La Muette de Portici,' 'Fra Diavolo,' 'Robert le Diable,' 'Les Diamants de la Couronne,' 'Bertrand et Raton,' 'La Verre d'Eau,' all of which, as well as numerous others, have been reproduced at English theatres. A selection from his works was published in 1845 in seven volumes; and a romance of his has been translated and published in England, called 'The Victim of the Jesuits.'

SCRIBONIUS LARGUS DESIGNATIUS, an ancient Latin physician, who lived at Rome in the reigns of Tiberius and Claudius, the latter of whom he accompanied in his campaign in Britain. He is the author of a work in Latin, 'De Compositionibus Medicamentorum;' but little is known of the events of his life, and even the language in which he wrote has been disputed. As the Latin of this work is somewhat barbarous, and as Galen, who never mentions any Latin writer, quotes the author, it was thought that it had been written originally in Greek, and translated afterwards into Latin. Physicians however have in general cared little for purity of language, and it may easily have happened that in the Silver Age of Latin literature a practitioner may have written in a barbarous style. Besides, the diction itself seems to prove that the work was originally composed in Latin (Bernhold, 'Prefat. ad ed. Scribon. Larg.,' p. 17); and again, there is no author whom Galen has copied worse than he has Scribonius, probably because he did not understand Latin sufficiently well. (Cagnati, 'Observ. Var.,' 8vo, Romæ, 1587, lib. iii., c. 14, p. 222.) Although, says Sprengel ('Hist. de la Méd.'), in one place, Scribonius will not admit of any separation between the different branches of his art, at least he does not prove that he himself was ever able to unite the theory of medicine to the practice. He spared no pains in collecting together all the preparations mentioned in different authors (cap. 1, p. 35, ed. Bernhold), without paying the least attention to the difference of the diseases for which they were prescribed. He copied Nicander almost literally, and adopted from other authors a number of superstitious remedies. He believed, for example, that he had found a certain preservative against the bite of serpents in the plant which he called *ἀντιφύλακον* (Allehira), and which ought to be gathered with the left hand before sunrise (cap. 42, p. 91). He also recommended many preparations against sighing; which shows how much he was attached to empiricism (cap. 19, p. 51). Amongst other antidotes he much esteemed the 'Hiera' of Antonius Paecobius (cap. 23), and a composition of Zopyrus of Gordium, which, according to the custom of the times, that physician prepared every year with much ceremony. The work of Scribonius is chiefly valuable for the information it contains relating to the *Materia Medica* of the ancients. It was first published by J. Ruellius, at the end of his edition of Celsus, fol., Paris, 1529. This edition was printed in October 1528, which therefore gives it a few months' priority over that published at Basel, 8vo, 1529, ap. And. Cratandrum, which is sometimes said to be the editio princeps. The best edition, according to Choulant ('Handb. der Bücherkunde für die Aeltere Med.,' 8vo, Leipzig, 1828), is that by Rhodius, 4to, Patav., 1655; the last (which is less complete than the preceding) is Bernhold's 8vo, Argent., 1786. A future editor may profit by three dissertations by C. G. Kühn, 4to,

Lips, 1825-26, entitled 'In Scribonium Largum Animadversionum Ottonis Sperlingii Specimen.'

SCUDÉRI, GEORGE DE, was born about 1601, at Hâvre in Normandie, of which place his father was governor (lieutenant de roi). Young Scudéri was brought up by his father to the profession of arms, but he quitted it about 1630 for that of a dramatist, in which he had at first little success, and was very poor. But both his reputation and circumstances gradually improved, and he was regarded by many as equal to P. Corneille, with whom he was on terms of intimacy, till the unusual success of 'The Cid' threw Scudéri in the shade, and caused a feeling of envy, to which he gave vent in 'Observations sur le Cid,' Paris, 1637: these Observations were published anonymously, but the author soon became known, and Corneille replied in a bitter epigram, in which he described his late friend as a 'solemn fool.' Scudéri however was favoured by Cardinal Richelieu, who was also offended to find that Corneille had obtained a degree of patronage from the public which rendered the great poet independent of the great minister. In 1641 or 1642 Scudéri was appointed governor of Notre Dame de la Garde, a small fort situated on a rock near Marseille, where he went to reside, but soon returned to Paris, and it was humorously said of him in 1656, that he had "shut up the fort, returned to Paris by the coach, and for fifteen years had carried the key in his pocket." In 1650 he was elected a member of the Académie Française. He died at Paris, May 14, 1667.

In the period from 1631 to 1644, Scudéri produced sixteen plays under the following titles:—*L'Amour Tyrannique*, 'Armenius,' 'Orante,' 'Lygdamon,' 'Le Vassal Généreux,' 'Le Trompeur Puni,' 'La Mort de César,' 'L'Amant Libéral,' 'Didon,' 'Eudoxe,' 'Andromire,' 'Axiane,' 'Le Fils Supposé,' 'Le Prince Deguisé,' 'L'Illustre Bassa,' and 'La Comédie des Comédiens.' He also wrote 'Poesies Diverses,' 4to, Paris, 1649, and 'Alaric, ou Rome Vaincue,' folio, Paris, 1654, an heroic poem, which he undertook at the request of Christina, queen of Sweden. He also wrote a few other works, but they are not worth mentioning.

Scudéri is one of those who have left "a lasting tomb." His name is familiar to us from the reputation which he once had, but both his plays and poems are deservedly neglected, or are only looked into from a motive of curiosity. He was a man of excessive vanity, and in the prefaces to some of his plays boasts of his own merits in terms which indicate the most perfect self-satisfaction, which, taken in connection with the patronage of Richelieu, may partly account for the fame which he had in his day, the mass of mankind, little capable of judging for themselves, for the most part allowing a man to take that station which he assumes, rather than placing him in that to which his merits entitle him.

SCUDÉRI, MADELENE DE, the sister of George de Scudéri, was born in 1607. She is the authoress of several voluminous romances which had an extraordinary reputation:—*Ibrahim, ou l'illustre Bassa*, 4 vols. 8vo, Paris, 1641; *Artamène ou le Grand Cyrus*, 10 vols. 8vo, Paris, 1650; *Clélie, Histoire Romaine*, 10 vols. 8vo, Paris, 1656; *Almahide, ou l'Esclave Reine*, 8 vols. 8vo, Paris, 1660. *L'illustre Bassa*, 'Cyrus,' and some of the first volumes of 'Clélie,' were published under the name of George de Scudéri, but after the authoress became known her other works were published anonymously. Besides these grand romances, Mademoiselle de Scudéri wrote—*Celinte*, 8vo, 1661; *Femmes Illustres, ou Harangues Heroïques*, 12mo, 1665; *Mathide d'Aguilair*, 8vo, 1669; *La Promenade de Versailles*, 8vo, 1669; *Discours de la Gloire*, 12mo, 1671, which obtained the prize of eloquence given by the Académie Française; *Conversations sur divers Sujets*, 2 vols. 12mo, 1684; *Conversations Nouvelles*, 2 vols. 12mo, 1684; *Conversations Morales*, 2 vols. 12mo, 1686; *Nouvelles Conversations de la Morale*, 2 vols. 12mo, 1688; *Entretiens de Morale*, 2 vols. 12mo, 1692; *Nouvelles Fables en Vers*, 12mo, 1685; besides a great number of 'Vers de Société,' addressed to her contemporaries.

Mademoiselle de Scudéri was a sort of queen of the Parisian Blue-Stockings, the 'Précieuses Ridicules' of the 17th century, and she enjoyed this 'high and palmy state' of honour till her death, which did not occur till June 2, 1701, when she was in her ninety-fourth year. The praises bestowed upon her were not confined to the fashionable society of the Hôtel de Rambouillet, of which she was the acknowledged dictator, but eulogiums in no measured terms were bestowed upon her by Huet, the learned bishop of Avranches, by Mascaron, bishop of Tulle, by the Cardinal de Bouillon, and many others. Christina of Sweden honoured her with her correspondence, and gave her a pension. She had a pension also from Cardinal Mazarin, which, at the request of Madame de Maintenon, was continued and augmented by Louis XIV.

Mademoiselle de Scudéri seems to have been indebted for her pre-eminence of honour partly to the tact with which all her works were adapted to the usages of the society in which she moved, many of the frequenters of the Hôtel de Rambouillet being recognised in the heroes and heroines of her romances, and partly to a factitious brilliancy of conversation which consisted of ridiculous puerilities and a play of imagination in the worst taste, all founded upon those conventionalisms of politeness and gallantry which were current among the fashionable society of that age. Love was the inexhaustible theme of all these romances and conversations; the heroes of antiquity are

transformed into French petit-maitres, and the heathen mythology supplied its store of imagery and allusion to decorate the fashionable manners and personages of the age of Louis XIV. It must be added, however, that Mademoiselle de Scudéri appears to have been a woman of amiable disposition, was greatly esteemed by her female associates, and had several professed admirers among the gentlemen, though she was very ugly.

SCYLAX of Caryanda, a town of Caria near Halicarnassus, a mathematician and musician, was the author of a 'Periplus of the parts beyond the Columns of Hercules,' of the 'History of Heraclides, king of the Mylaseis,' of a 'Periodos of the Earth,' and an 'Answer (ἀντιγραφὴ) to the history of Polybius' (Suid., Σκύλαξ.) If all these works are rightly assigned to the same person, Scylax was at least not earlier than the age of Polybius. But it seems probable that there were two writers of the name.

Herodotus (iv. 44) says that Darius, the son of Hystaspes, wishing to know where the Indus entered the sea, sent various persons in whom he had confidence, and among them Scylax of Caryanda, to make the discovery. They set out from the city Caspatyrus and the territory Pactuica, and sailed down the river to the east and the rising of the sun. On reaching the sea they sailed westwards, and in the thirtieth month arrived at the place whence the Phœnicians had set out who were sent by the king of Egypt to circumnavigate Libya. To this Scylax some writers attribute the extant work entitled *Περίπλους τῆς Οἰκουμένης*, or the 'Periplus of the Inhabited World,' which contains valuable information on the settlements of the Carthaginians, on the towns and colonies of the Greeks, and other matters. Consequently Scylax must, it is supposed, have lived about B.C. 500. Niebuhr and other critics however assign the authorship of the extant 'Periplus' to the middle of the 4th century, B.C. Dodwell considers the author of this 'Periplus' to be a contemporary of Polybius, and consequently he would belong to the 2nd century, B.C. The 'Periplus' was first published by Hoeschel, with other minor Greek geographers, Augsburg, 8vo, 1600. It is also comprised in the first volume of the 'Geographi Græci Minores' of Hudson, which contains the Dissertation of Dodwell. This dissertation, and that of Sainte-Croix, in the 42nd volume of the 'Recueil de l'Académie des Inscriptions,' appear to exhaust the subject of Scylax the geographer. The 'Periplus' is also included in the first volume of the 'Geog. Græciæ Minoris,' edited by Gail, 8vo, Paris, 1826; and by Klausen, with the Fragment of Hecateus, Berlin, 1831.

SCYLITZES. [BYZANTINE HISTORIANS.]

SCYMNUS of Chios, who was alive about B.C. 80, wrote a description of the earth (*περίγησις*) in Greek iambic verse, which he dedicated to Nicomedes, king of Bithynia, probably the third of the name. The first 741 verses are extant, and fragments of 236 other verses. His description begins at Gades, and follows the left coast of the Mediterranean as far as the entrance of the Pontus Euxinus, where the last verse ends. Among the remaining verses there are about 90 on the coast of Asia. The work has no value as a poem, and very little as a geographical description. Still it contains some curious facts. It was first printed by Hoeschel with Scylax in 1600, but under the name of Marcianus of Heraclea. It is also comprised in the second volume of Hudson's 'Geographi Græci Minores,' and in the editions of that work by J. F. Gail, vol. ii., 8vo, 1828; and by Fabricius, Berlin, 1846. Meineke however, in his edition of the poem (*Seymni Chii Periegesis et Dionysii descriptio Græciæ*, 8vo, Berlin, 1846), has endeavoured to prove that the poem is not the work quoted by ancient writers under the title of the 'Periegesis of Scymnus,' which was written in prose, but an entirely different work by some other and unknown author.

SEBA, ALBERT, a native of East Friesland, was born on the 2nd of May 1665. He at first followed the occupation of a druggist at Amsterdam; but afterwards, entering the service of the Dutch East India Company, acquired great wealth. His early studies had given him a taste for natural history, and he spent his large fortune in forming a collection of the most interesting objects in the animal, vegetable, and mineral kingdoms. In 1716 Peter the Great purchased his museum, and removed it to St. Petersburg; but Seba immediately set about forming another collection, which soon surpassed every other in Europe. This was unfortunately dispersed after his death, which took place on the 3rd of May 1736.

Seba wrote several papers on scientific subjects; but his great work was a description of his museum, published in Latin and French, in 4 vols. fol., between the years 1734 and 1765. The first volume only was published during Seba's lifetime; the last three were edited by different persons after his death. The work is noted for the beauty and accuracy of its engravings, which caused it for many years to be regarded as the standard authority on subjects connected with natural history. The bad arrangement of the subjects however, and the inaccuracy of the descriptions, which resulted from Seba's want of scientific knowledge, greatly diminish its value.

SEBASTIAN, DOM, the posthumous son of the Infante Dom Joam, by Joanna, daughter of the emperor Charles V., was born at Lisbon, July 20th, 1554. After the death of his grandfather, Joam III., in 1557, Sebastian, who was then only three years old, ascended the throne of Portugal, the regency being vested in the widowed queen, Catherine of Austria, in conformity with the will of the late king.

From infancy Sebastian showed that the love of arms would be his ruling passion. Possessed of a romantic disposition and an extraordinary admiration of chivalrous exploits, all his thoughts tended to the entire subjection of Africa, where his ancestors had made considerable conquests. At the age of twenty (in 1574) he undertook a campaign against the Moors of Africa, in which however he gained no advantage. Soon afterwards, the troubles which arose in Africa gave him the opportunity of carrying his gigantic projects into execution. Muley Abdullah, sultan of Fez and Marocco, had been succeeded by his son Muley Mohammed, in opposition to the order of succession established by the sherifs, that the sons should succeed in the order of their birth, to the exclusion of the grandsons, and which would have required the succession of his uncle. Knowing that his life was in danger, Abdu-l-mâmen, the next brother of Abdullah, on whom the crown should have devolved, accompanied by his younger brothers Abdu-l-mâlik and Ahmed, fled to Tremecen, where he was put to death by assassins who were paid by his nephew. Abdu-l-mâlik retired to Algiers, whence, having obtained the succour of the Turks, he marched to Marocco, defeated the usurper, who went out to meet him, and made himself master of that capital. Mohammed then solicited the aid of Philip II. of Spain; but as that monarch refused to give him any, he applied to Sebastian, who readily promised to replace him on his throne, against the advice of his best and wisest friends. However, before starting on his wild expedition, Sebastian communicated his design to Philip, who earnestly dissuaded him from it; though he has been unjustly accused by the French historian Laclede (*'Histoire Générale d'Espagne,'* vol. v., p. 170) of having encouraged him in his attempt, in the hope that he might perish, and the crown of Portugal devolve on himself.

The preparations being completed, and the cardinal Enrique vested with the regency, in June, 1578, the armament put to sea. It consisted of 9000 Portuguese, 2000 Spaniards, 3000 Germans, and 600 Italians; in all about 15,000 men. These forces landed on the 10th of July, at Arсила, where they were joined by Muley Mohammed at the head of his army. A council of war was immediately summoned; and after losing eighteen days, during which time the provisions of the army were greatly diminished, and the enemy were enabled to collect their forces, it was resolved to begin the campaign by the siege of Larache. Though on the arrival of his enemies Muley Abdu-l-mâlik, improperly called Moluc by the chroniclers of the day, was suffering under a disease which soon after caused his death, he had prepared with activity for their reception, and he hastened to the shore borne in a litter. His army, which was far superior in numbers to the Portuguese, being increased by the arrival of his brother Ahmed, governor of Fez, who joined him near Alcazar-kebir (Alcazar-quebir), Abdu-l-mâlik determined to oppose the passage of the Christians over the river Luk in the way to Larache; and with this view he posted his troops at the only ford in the neighbourhood. Perceiving, however, that Sebastian, by the advice of his ally, Mohammed, had desisted from his former intention, and was attempting to reach Larache by a more circuitous route, he crossed the river and offered him battle. The cavalry of the Christians, unable to withstand the impetuous onset of the Moors, at first gave way; but Sebastian placed himself at the head of his infantry, and charging the enemy, compelled him to fall back on his artillery. At this moment, Muley Abdu-l-mâlik, fearful of the result, mounted a horse, drew his sabre, and placing himself at the head of a body of cavalry, chiefly composed of Spanish Moriscos whom Philip had banished from his kingdom after the revolt in the Alpujarras, made a desperate charge, by which the Portuguese infantry, consisting of raw soldiers, was broken. Though a vigorous resistance was made on the right and left wings, which were composed of the Germans and Spaniards, the rout soon became general. Sebastian made every effort to rally the fugitives; but in vain. Most of the officers and courtiers by whom he was surrounded fell by his side. Two horses had already been killed under him, and the third was exhausted. His retainers, anxious to save his life, earnestly entreated him to fly; but he haughtily refused, and plunged into the thickest of the fight, where he met with an honourable death, according to some authorities; others assert that he was taken prisoner by some Moors, but that as they were about to dispute about the possession of so rich a prize, one of their officers came up and killed him with his own hand. On the morning after the day of the battle a search was made, and a body was found, which, though much disfigured, was instantly recognised by Resende, a valet of Sebastian, to be that of his master. Mohammed succeeded in escaping from the field of battle; but he was drowned whilst attempting to cross the river. Abdu-l-mâlik, exhausted by the fatigue of the day, had also breathed his last during the action, though his death was kept secret by his orders; so that the three kings who entered the field perished on the same day.

Sebastian was succeeded by his brother Ahmed. The news of Sebastian's death caused the greatest consternation. The Portuguese could scarcely believe in his death, and for many years after it was generally supposed that he was still living in captivity. This belief produced several impostors, such as Alvarez, the stone-cutter, Gabriel de Espinosa, called by the Spaniards el Peastelero de Madrigal, and two others, who ended their days on the scaffold or in the galleys.

By the death of Sebastian without issue, the kingdom of Portugal became annexed to Spain.

(Cabrera, *Historia de Felipe II.*, Mad., 1619, lib. xii.; Faria y Sousa, *Epitome das Historias Portuguezas*, part iii.; Vasconcellos, *Anacephaleosis*.)

SEBASTIAN DEL PIOMBO. [PIOMBO, SEBASTIANO DEL.]

SÉBASTIANI, HORACE FRANÇOIS COUNT, was a native of Corsica, having been born at the hamlet of Porta, near Bastia, on Nov. 11, 1776. His uncle, who was a priest, took charge of his education, and was preparing him for his own profession, when the call to arms, in 1792, induced the lad to exchange his cassock for a uniform. He then became secretary to General Casabianca, after which he joined the army of Italy, in 1796, was noticed by Bonaparte, and was made a chef-de-bataillon after the battle of Arcola. In 1799, he distinguished himself greatly at Verona, for which conduct General Moreau appointed him to a regiment on the field of battle. On the 18th Brumaire, being in garrison at Paris, with his regiment of Dragoons, he assisted in the coup d'état by which Bonaparte became master of France. The First Consul promised to reward this proof of devotedness on the part of his compatriot, and henceforth took charge of his fortune.

After the battle of Marengo (June 14th, 1800) Colonel Sébastiani was appointed commissioner along with Marmont, to conduct negotiations preparatory to the armistice of Treviso. In 1802, he was sent to Turkey, Egypt, and Syria, on an important diplomatic mission, which he conducted so skilfully as to obtain the rank of General of Brigade for his address.

In 1804, he was despatched to watch the movements of the Austrian army in Germany, when the reports he addressed to the War Office are said to have partly determined the campaign of 1805. General Sébastiani commanded the vanguard of Murat's cavalry when that brilliant corps entered the Austrian capital. At the battle of Austerlitz he displayed his habitual energy, was badly wounded in a desperate charge, and was raised to a division for his conduct. During the next few years he was employed with much distinction in diplomatic missions; in one of which he lost his first wife, who died in giving birth to a girl, afterwards known as the unfortunate Duchesse de Praslin, murdered by her husband in 1847.

General Sébastiani was one of the many French officers sent to Spain to retrieve the fortunes of the Emperor, in 1809. He crossed the Gaudiana and defeated the Spaniards at Ciudad-Real, at Santa Cruz, and several other places. In the early part of 1810 he took possession of the provinces of Jaen, Granada, and Malaga, and is accused of having greatly mutilated the Alhambra and other monuments of antiquity, and of ransacking the convents for his own private gain. In the following year, not deeming his services sufficiently appreciated, he returned to France. Napoleon I., who considered the chief talents of this General to be diplomatic, rather than military, had determined not to give him a command during the Russian campaign. But the remonstrances of Sébastiani overcame this decision; he was therefore placed in the vanguard of the Grand Army. During the march to Moscow he strongly urged upon the Emperor the prudence of wintering in the province of Lithuania; but this advice was unheeded. General Sébastiani was present at the battles of Smolensko and Moskwa; he was also one of the first to enter the Russian capital, at the head of the 2nd corps. He suffered greatly during the retreat, lost all his artillery, and all his horses perished in the snow.

In 1813, after the battle of Leipzig, at which he was wounded, he contributed to the victory at Hanau, where Prince Wrede was defeated. Napoleon afterwards gave him the command of the 5th corps, and ordered him to defend the left bank of the Rhine, at Cologne; but he was obliged to fall back into Champagne; where, at the head of three regiments of cavalry of the Imperial Guard, he repeatedly won new honours, particularly at the battles of Arcis-sur-Aube and Saint Dizier.

On the abdication of Napoleon he retired to private life, but during the Hundred Days he became a member of the Chamber of Representatives, and was sent as one of the deputies to wait on the allied sovereigns after the battle of Waterloo. After the return of the Bourbons he spent a few months in England in voluntary exile, though they had not included his name in their list of proscription. In 1819 he was chosen deputy for Corsica, and soon became distinguished as a member of what was termed the liberal opposition in the *Chambre des Députés*. In 1826 he succeeded General Foy as representative of the department de l'Aisne. After the revolution of 1830, Louis Philippe, in August, appointed him minister of marine, and in the following November, on the retirement of Molé, made him minister for foreign affairs; in which office he continued until 1832. It was during his administration of this office, in September, 1831, that he incurred so much obloquy by his famous announcement from the tribune of the chamber that "order reigns in Warsaw." In 1833 he again filled for a short time the office of minister for foreign affairs, but resigned on the chamber refusing to confirm the treaty he had made with the United States of America, and was appointed ambassador to Naples. In 1835 he was sent ambassador to London, where he was replaced by Guizot in 1840, and on the death of Marshal Maison, he received his bâton de Maréchal after 43 years service. In 1841 he spoke strongly in the

chamber in favour of the project for fortifying Paris. Ill health compelled him soon afterwards to retire from public business, and the unfortunate fate of his daughter, the Duchesse de Praslin, darkened the latter years of his life. He died however suddenly while at breakfast, on July 20, 1851. He was buried in the church of the Invalides, and during the funeral some of the hangings caught fire, endangering the whole building, but the fire was fortunately subdued with only the loss of several of the military trophies.

SECKENDORF, VEIT LUDWIG VON, was born on the 20th of December 1626, at Herzogenaurach near Erlangen. He belonged to an old and noble family of Franconia, and his father held a high post in the army of Gustavus Adolphus during the Thirty Years' war. The boy lived with his mother partly at Coburg, partly at Mühlhausen, and partly at Erfurt. He began his studies at the gymnasium of Coburg in 1638; but Ernest, duke of Gotha, invited him to the gymnasium of Gotha; and after the death of his father, who was executed in 1642 by a Swedish court-martial, the duke acted towards the youth with all the care of a father. The young man showed great talent and unusual diligence, and persons of the highest rank gave him their protection and encouragement. From 1643 till 1646 he studied in the university of Straßbourg; and applied most zealously not only to jurisprudence, history, and classical literature, but to philosophy and theology. After he had completed his studies, he made a journey through the Netherlands, and was appointed page to the Duke of Gotha, who not only superintended his practical training as a statesman, but intrusted him with the care of his library. Seckendorf now gradually rose from the lower to the highest offices in the duke's service, and in 1664 he was appointed privy councillor and chancellor. In all his offices he took a most active part in the important changes which the duke made in the administration of his dominions, as well as in the affairs of religion and the education of the people. For reasons which are not known, Seckendorf, at the close of the year 1664, left the service of the Duke of Gotha, and entered that of Moritz, duke of Zeitz, who appointed him his privy councillor, chancellor, and president of the consistory. In his new sphere Seckendorf showed the same activity and good-will towards the people as before; but owing to some measures which he had proposed, he became involved in disputes with the clergy; and when Duke Moritz died in 1681, he laid down his offices, and retired to his country-seat, Meuselwitz near Altenburg. In 1691 Frederic III., elector of Brandenburg, invited him to Berlin as his privy councillor, and also appointed him chancellor of the newly established university of Halle. Seckendorf accepted the offer, but died in the year following, 1692, at Halle.

Seckendorf as a statesman showed great judgment and skill in the complicated affairs of the various houses of Saxony, but he was more distinguished as a political writer, an historian, a scholar, and a theologian. His principal political work is—'Deutscher Fürstenstaat,' Gotha, 1665, which for a long time was thought the most useful manual of political science. His theological and historical works are: 'Compendium Historiæ Ecclesiasticæ,' Leipzig, 1666; this work was completed by Artopæus; 'Der Christenstaat,' Leipzig, 1685; 'Commentarius Historicus et Apologeticus de Lutheranism,' &c., 3 vols. fol., Leipzig, 1688, &c.: it is chiefly directed against Maimbourg, 'Histoire du Lutheranisme.' Seckendorf also wrote several smaller discourses in German, and sacred hymns, some of which are still sung in the Protestant churches of Germany. See Schreber, 'Historia Vitæ et Meritorum Viti Ludovici à Seckendorf,' 4to, Leipzig, 1733.

SECKER, THOMAS, a learned and eminent prelate of the English church, who was successively bishop of Bristol and Oxford, and archbishop of Canterbury, was born at Sibthorpe in Nottinghamshire in 1693.

The early history of this distinguished person is essentially different from that of many other persons whose early life, progress, and final success in the church we have had to describe; for while they have usually gone from the endowed grammar-schools to the universities of the realm, Secker (being born of parents who were not members of the Church of England, but dissenters from it), after he had been trained in the grammar-school at Chesterfield in Derbyshire, where a sister much older than himself and her husband Mr. Milnes resided (two relatives who had much to do with his early training), was sent to an academy which the dissenters of the north of England had established at a village called Attercliffe, about fourteen miles from Chesterfield. It was intended for the education of dissenting ministers, and for that profession young Secker was designed. But after a residence of two or three years, he was removed to another establishment of the same kind, in which the studies appear to have been of a more liberal kind, and the learning communicated to the pupil more exact and critical. This academy was kept at Tewkesbury, and at the head of it was Mr. Jones, a divine of considerable eminence. Here Secker found Samuel Chandler going through the same course with himself, who was a minister of much celebrity among the dissenters, and author of various critical works, and Butler, the author of 'The Analogy of Natural and Revealed Religion,' who conformed and became bishop of Durham. With both of these divines Secker formed an intimacy, and they remained on friendly terms during the remainder of their lives. It was in these academies that the foundation was laid of those

eminent theological attainments by which he was distinguished, of which his printed works are some proof, but there is still stronger evidence in his manuscript notes on the Scriptures, which still remain in the library at Lambeth.

When he left the academy, the natural course would have been that he should have settled as the minister of a dissenting congregation. He preached among the dissenters occasionally, but he never became the settled pastor of any dissenting congregation. Perhaps the excellences of his character were not appreciated as they ought to have been by the persons amongst whom he fell. However, it is certain that he soon determined to abandon the path which had been chalked out for him, and he devoted himself to the study of medicine, attending lectures in London, and going afterwards to Paris.

There were persons however who were unwilling that the talents and attainments of Secker should not be made available in the way that was first intended, though not as a nonconformist, but as a minister of the Established Church; and particularly his early friend Butler, who had conformed and was become preacher at the Rolls, and Mr. Talbot, to whom Butler introduced him, a son of the Bishop of Durham. Secker was induced to enter fully into the question of conformity, and his deliberations issued in the determination to enter the church. He entered himself at Exeter College, Oxford, and in a very short time was ordained by the Bishop of Durham; this was in 1723.

His progress in the church was rapid. He was made chaplain to Bishop Talbot; had the living of Houghton-le-Spring, which he soon exchanged for that of Ryton, both in the diocese of Durham; but in 1732 he was brought into a more public sphere of action, being nominated one of the king's chaplains, and rector of St. James's, Piccadilly. Early in 1735 he was made Bishop of Bristol; in 1737 he was translated to Oxford. In 1750 he gave up the rectory of St. James's, in which parish he had accomplished some useful reforms, and was made Dean of St. Paul's. In 1758 he became Archbishop of Canterbury. In all the various situations which he was called to fill, his conduct was that of a conscientious, liberal, and pious man; assiduous in the discharge of all his duties, acting with moderation and discretion. His printed works consist only of sermons, lectures, and charges. He died on the 3rd of August 1768, and is buried in an humble grave in the churchyard of Lambeth parish.

SECUNDUS, JOHANNES, born in 1511, is one of the most esteemed of modern Latin poets. His verses are chiefly amatory, and modelled after Catullus, whose passionate and tender spirit he had caught, without descending to the extent of his licentiousness. Like other learned men of the age, he took a Latin name: why that of Secundus, does not clearly appear. His family name was Everts, which in other languages is softened into that of Everardi and Everard. His father Nicholas or Klaas Everts, himself a learned man, and a distinguished jurist and magistrate, had five sons, all more or less eminent, among whom however John's fame stands highest. He early showed that taste for Latin poetry to which he owes his reputation; but he adopted the law as his profession, and graduated with distinction at Bourges, in 1533. That his talents and acquirements were well known may be inferred from the archbishop of Toledo having chosen him for private secretary. Through this connection he obtained the notice and esteem of Charles V., whom he accompanied to Tunis in 1534. Unfortunately the climate of Africa sowed in him the seeds of a mortal disease; and he was fain, instead of following up his fortunes by accepting an important post at Rome, to return to his native climate, only to die at Tournai, October 8, 1536, at the early age of twenty-five.

His Latin poems are—Elegies (3 books), 'Basia,' Epigrams, Odes, Epistles, Funera (elegies in the English meaning), and Miscellanies, one book each. There are many editions, among which that of Leyden, 2 vols. 8vo, 1821, is recommended. His works are published jointly with those of his brothers Nicholas and Adrian, who assumed respectively the names of Grudius and Marius, under the title 'Poemata et Effigies Trium Fratrum Belgarum.' There are translations of the 'Basia' into English, French, &c. Of the former, that of 1775, with the Life of Secundus, and of the latter, that by Tissot, 1806, are said to be the best.

SEDAINE, MICHEL JEAN, a dramatic writer of considerable merit, was born at Paris, July 4, 1719. On the death of his father, who was an architect, he was reduced to follow the trade of a stonemason. He continued however to study, and casually attracted the notice of his employer, an architect named Buron, who, on discovering his talents, gave him instruction, and finally took him into partnership. This service he afterwards repaid by educating the painter David, who was Buron's grandson. Sedaine made his first appearance as a dramatist in a piece taken from the 'Devil on Two Sticks,' played at the Opera Comique in 1756, which was very popular. After writing for that theatre during several years with brilliant success, he took a bolder flight, and brought out his 'Philosophe sans le Savoir,' on the more classical stage of the Comédie Française. This, which is esteemed his most sterling piece, had a great run. He also wrote for the Grand-Opéra; and thus, it has been observed, shone at once on three of the chief theatres of France. The well-known opera of 'Richard Cœur-de-Lion,' for which, and many other of Sedaine's works, Gretry composed the music, procured for him, at the age of

sixty-five, admission to the Académie Française. He died on the 17th of May 1797.

Gaiety, originality, truth of dialogue, and skill in raising and sustaining interest in his plots, are the merits ascribed to Sedaine as an author. His style is censured for negligence, but it is forcible and flowing, and well adapted to his usual melodramatic composition. He himself maintained that what were called his faults really contributed to his success. "They will have it," he said, "that I can't write French; and I say that none of them could write 'Rose et Colas.'" This was said in mortification at having been left out of the Institut National, when the pre-existing Académies were remodelled into that body. The catalogue of his plays amounts to thirty-two. There is a selection (*Euvres Choieses de Sedaine*) with a memoir, Paris, 1813.

\* SEDGWICK, REV. ADAM, M.A., F.R.S., F.G.S., Woodwardian Professor of Geology in the University of Cambridge, one of the most eminent living geologists, was born about 1786 at Dent, in Yorkshire. He took his B.A. degree in 1808, and in the following year became a fellow of Trinity College, of which he is now (1857) a senior fellow, and also vice-master. In 1818 he succeeded Professor Hallatone in the chair of geology founded at Cambridge by the celebrated Dr. Woodward [WOODWARD, JOHN], and frequently termed the Woodwardian professorship. In the same year, on the 21st of February, he was elected a Fellow of the Royal Society. He was one of the secretaries of the Cambridge Philosophical Society at its establishment in 1819, and has frequently been an office-bearer since, continuing of course to be a leading member of that body, whose 'Transactions' have done so much honour, not only to the science of the university, but to British science in general. Gradually becoming a leading Fellow also of the Geological Society of London, and having filled several offices in it, he was elected the president at the anniversary of 1829, holding the office for the stated two years following. He is a prebendary of Norwich cathedral, and is also university-secretary to his Royal Highness Prince Albert as chancellor. In the fourth volume of the 'Bibliographia Zoologia' of Agassiz, Strickland, and Jardine, published in 1854, thirty-two papers by Professor Sedgwick, including a 'Syllabus of Lectures' separately published, are enumerated; ten by him and Sir R. I. Murchison in conjunction, and two by him and Mr. Williamson Peile. These papers are contained in the 'Transactions' of the Cambridge Philosophical Society; the 'Transactions' (second series), 'Proceedings,' and 'Quarterly Journal' of the Geological Society of London; the 'Reports' of the British Association; the first and second series of the 'Annals of Philosophy'; the 'Philosophical Magazine'; and the 'Edinburgh New Philosophical Journal.' They relate exclusively to geology, and principally to that of the palæozoic and of the older metamorphic and the crystalline rocks. He has since communicated several other papers to the Geological Society and the 'Philosophical Magazine.' He is reputed to be the author of an elaborate and powerful article in the 'Edinburgh Review' on the views advocated in the work entitled 'Vestiges of the Natural History of Creation.'

Professor Sedgwick has given more attention perhaps than any other English geologist, except the late Sir H. T. De la Beche, to the study of the crystalline rocks, which, in their actual position, are the bases upon which the entire series of our sedimentary formations repose. While his numerous descriptive essays on English geology evince a regard for mineralogical and chemical distinctions which have not been duly regarded by some geological inquirers, he has not been misled, as the late Dr. Macculloch was, by his mineralogical knowledge, to undervalue those principles of the classification of rocks which are derived from the organic remains they include, and which, as yet, are principally zoological. He has been eminently successful in determining the relative position of the great masses constituting the palæozoic rocks of the north of England, especially where the original stratification has been thrown into disorder by subsequent geological operations, or where the original characters of the strata have been changed or even obliterated by metamorphic action. His application of general physical knowledge to this branch of the science has been of inestimable advantage in the progress of geology in England.

No member of his university has contributed in a higher degree to elevate its character as a school of the natural sciences. To him it is also indebted for his care of the continually augmenting collections of the geological museum, the foundation of which was Dr. Woodward's own collection. He has himself contributed to it a noble series of many thousand rock-specimens, chiefly British, and a still more valuable series of organic remains. For the arrangement of the latter, and of all the palæontological collections added to the museum during the last thirty-eight years, he secured the services for four years of a distinguished palæontologist, Mr. McCoy, subsequently professor of geology and mineralogy in Queen's college, Belfast, and since appointed to the chair of natural history in the University of Melbourne, Victoria, Australia. Professor McCoy's descriptive catalogue of the 'British Palæozoic Fossils,' contained in these collections, has been published by the university, introduced by an elaborate dissertation by Professor Sedgwick, entitled 'A Synopsis of the Classification of the British Palæozoic Rocks,' and this is almost the only separate work on geology which he has produced. In it he has enunciated his matured views, and as it were final decision on the subject of the classification and nomenclature of the older palæozoic

formations, on which he is at issue with his friend and former collaborator, Sir R. I. Murchison, [MURCHISON, SIR RODERICK IMPEY], giving to the Silurian system of strata of that geologist all the lower palæozoic formations above the Coniston grits, and claiming for his own Cambrian system everything from the Coniston grits inclusive down to the Skiddaw slate, and its equivalents the Bangor and Longmynd group, the most ancient of British rocks.

A more general work of considerable importance has also been produced by Professor Sedgwick. This is 'A Discourse on the Studies of the University of Cambridge,' first published as a pamphlet, but the fifth edition of which, published in 1850, is a volume of 764 pages, of which the expanded preface occupies 442. This work may be said to present a comprehensive enunciation of the author's views on physical philosophy and natural theology, and their relations to the Christian religion. It expresses them in an especial manner on what may be termed the philosophy of geology and palæontology. To it all may be referred who desire to learn the sentiments of Professor Sedgwick, acquired by a life of application to the acquisition and extension of knowledge, upon any of the great questions of science, and its bearings on revelation, which the progress of discovery for nearly a century past has evoked, and upon the authority of the men by whom they have been raised. It was originally delivered as a sermon in the chapel of Trinity College, (at an annual commemoration), directed against what has been termed by some writers "the utilitarian theory of morals as being not merely false in reasoning, but as producing a degrading effect on the temper and conduct of those who adopt it." "In this line," it has been remarked, "he had been preceded by the present master of Trinity (Dr. Whewell), in Four Sermons on the Foundation of Morals, and by the late Archdeacon Hare, [HARE, JULIUS CHARLES], in various sermons preached before the University of Cambridge. These three great men (who had a most noble and tender friendship for each other), had and have long been seeking to counteract the influence which they think Paley, in his 'Moral Philosophy,' has injuriously exercised on the studies of their Alma Mater."

SEDLEY, SIR CHARLES, an English poet, the son of Sir John Sedley of Aylesford in Kent, was born in 1639. His mother was Elizabeth, daughter of Sir Henry Saville, warden of Merton College, Oxford. At the age of seventeen, in the year 1655-56, he became a fellow-commoner of Wadham College, and taking no degree, retired to his own county, where he lived till the restoration of Charles II. After this event he came to London, and, to use the words of Antony a Wood, set up for a satirical wit, a comedian, poet, and courtier of ladies. A thorough debauchee he in 1663 was fined very heavily for a most disgusting drunken frolic in which he had been engaged, the particulars of which are told by Wood. ('Athenæ Oxon.') Shortly after this he represented the borough of New Romney in Kent. Several of his speeches in parliament are printed among his works. During the reign of James II., Sedley, whose daughter was one of the mistresses of that monarch, appears to have retired from the court, which he had much frequented in the lifetime of Charles. At the Revolution he joined the party of William. He died August 20, 1701.

Sedley's works, with a short memoir prefixed, were published in 1722. They consist of various short amatory poems, a few speeches in parliament, translations from the classics, and the following plays: 'The Mulberry Garden,' a comedy; 'Antony and Cleopatra,' a tragedy; 'Bellamira, or the Mistress,' a comedy. ('Tunbridge Wells, or a Day's Courtship,' a comedy; 'The Tyrant King of Crete,' a tragedy; 'The Grumbler,' a comedy, are also attributed to him.)

As a poet Sedley is in simplicity and ease of expression, in sprightliness of fancy, in the skilful treatment of common and trivial subjects, surpassed by none of his contemporaries. He is extremely licentious, but his licentiousness is of a refined kind, and his pages are not disfigured by the grossness of language so common in his time. The best of his short poems are printed in Ellis's 'Early English Poets.' His plays have little merit, and he is one of those writers whose works might pass into oblivion without real loss either to taste or morality.

SEDULIUS, CÆLIUS, a Christian Roman poet, is generally supposed to have lived during the first half of the 5th century of our era; but who he was and where he lived is unknown. Some writers call him a presbyter, others an antistes, and others again call him a bishop. A few very late writers state that he was a disciple of Hildebert, archbishop of the Scots, and that he came from Scotland or Ireland to France, and thence to Italy. But these statements are either entirely groundless, or arise from the circumstance that the old Christian poet Sedulius was confounded with another Sedulius who lived in the 8th or 9th century of our era.

There are four poems which are usually ascribed to Sedulius:—1, 'Mirabilium Divinorum, sive Operis Paschalis Libri (quatuor) Quinque,' it is preceded by a prose letter to an abbot Maedonius, from which we learn that the poet treated of the same subject in prose also, and that he himself divided the poem into four books, though in all our editions it is divided into five books. Whether the fifth book was added by Sedulius himself at a later period of his life, or whether it was added by some one else, is uncertain. The poem, which is in tolerably good hexameters, contains some portions of the history of the Old Testament and the life of Christ. The language is purer than that of many of his contemporaries, and in some passages it is really poetical.

2, 'Collatio Veteris et Novi Testamenti.' This poem is written in elegiac verse, and in such a manner that the first words of every hexameter form the second half of the pentameter which follows. It contains narratives from the Bible, so arranged that those taken from the Old Testament always appear in juxtaposition with those taken from the New Testament. 3, A 'Hymnus,' written in iambic dimeters, in which the verses of each stanza begin with the letters of the alphabet in their usual succession (Acrostichs). It is a panegyric upon Jesus, and one of the best productions of the Christian poetry of the age. 4, 'De Verbi Incarnatione' is composed of verses taken from Virgil, which by slight alterations are combined into a Christian poem.

The editio princeps of Sedulius is the 'Ascensiana,' 4to, Paris, without date. The latest editions are by Cellarius, Halæ, 8vo, 1704 and 1739; by J. Arntzen, Leuwarden, 8vo, 1761; and by Faustino Arevalo, Rome, 4to, 1794.

Comp. Bähr, 'Die Christlichen Dichter und Geschichtschreiber Roms,' p. 54, &c.

SEETZEN, ULRICH JASPAR, was born on the 30th of January, 1767, at Sophienroden near Jever. His father was in good circumstances, and gave his son an excellent education, which was commenced at Jever, and completed in the university of Göttingen, where Seetzen from 1785-88 studied medicine, the natural sciences, and especially agriculture and political economy. Here he became acquainted with Alex. von Humboldt and Link, with whom he conceived the plan of travelling into distant countries which were then little known. Seetzen chose Asia and Africa as the fields of his enterprise, and was encouraged in his design by Heyne, Gatterer, Eichhorn, and Blumenbach. After the completion of his studies, he returned to Jever, and made several journeys through Germany and Holland. He however never lost sight of the great object of his life, and studied with great care what had then been written upon Asia and Africa. After he had made all the preparations which private study enabled him to make, he applied to Blumenbach for his advice and support. This great naturalist recommended Seetzen to Baron von Zach, who, though at first not favourably disposed towards the extensive plans of Seetzen, soon altered his opinion, and not only instructed the young man in astronomy, but induced the Duke of Gotha to provide Seetzen with the necessary instruments for making astronomical observations, and afterwards also to grant him an annual sum for the prosecution of his objects. It was also resolved that a museum should be formed at Gotha, and the duke intrusted Seetzen with considerable sums to purchase any interesting objects connected with the arts, religion, and literature of the countries through which he was about to travel.

On the 13th of June, 1802, Seetzen set out from Jever, accompanied by a surgeon who had been educated at Göttingen at the expense of Seetzen himself. The proposed subjects of his inquiry in Asia and Africa were natural history, statistics, agriculture, commerce, the arts, mathematical, physical, and ancient geography, and archæology; in fact, everything that might contribute to an accurate knowledge of the countries. Seetzen stopped for a short time at Vienna, to learn the art of drawing plans and maps; and thence he went, by way of Bucharest and across the Balkan to Constantinople, where he arrived on the 12th of December. After a stay of six months, which were spent in various preparations, he crossed over into Asia Minor, and travelled by land to Smyrna. Here his companion was taken ill, and he was obliged to leave him behind. Seetzen continued his journey to Haleb with a caravan, and arrived there towards the end of 1803, and stayed for nearly fifteen months, which he devoted to the study of Arabic. From Haleb he proceeded to Damascus, through Syria and Palestine, as far as the deserts of Arabia, and got much new information, and made valuable collections. In 1805, he returned to Damascus; and, dressed in the costume of a Turk, he made excursions into Libanus and Antilibanus. The year after he began his travels in the country east of Hermon, the Jordan, and the Dead Sea. His journeys in these districts were made under the greatest privations and dangers; but they were amply rewarded by the discovery of the ruins of several ancient towns, the site of which had till then been unknown to Europeans. He also penetrated farther south along the eastern shore of the Dead Sea, and he proceeded around the southern shore to Jerusalem. From this place he travelled to Joppa, and thence by sea to Acre, where he remained till the end of the year 1806. We now lose sight of him for some months, as the documents belonging to this period are missing; but in March, 1807, we find him again at Jerusalem, from which place he travelled to Hebron, Horeb, Sinai, then back towards the north, and across the isthmus of Suez to Cairo, where he remained for two years. Here he purchased for the museum of Gotha a collection of 1574 MSS., 3536 archæological subjects, and collected a great many specimens in mineralogy, botany, and zoology. In 1808 he visited the province of Faïoum, and examined the pyramids, the catacombs near Saccara, and the great lake of Birket-el-Karun. About this time he adopted externally the Mohammedan religion, in order to gain the confidence of the Egyptians and the Arabs, and to be able to visit those places in Arabia to which Mussulmen alone have access. He then attempted to proceed to Acaba, but was obliged to return to Suez. Soon afterwards however he travelled by sea to Yambo and Jidda, and thence to Mecca and Medina. In the two last places he made a great many drawings and

plans. In March 1810 he sent out for Mocha. A letter, dated Nov. 17, 1810, and addressed to Mr. Lindenau of Gotha, was the last account that he himself sent to Europe. In 1815, Von Hammer of Vienna was informed by Mr. Buckingham, in a letter written at Mocha, that Seetzen had suddenly died in 1811, in the neighbourhood of Taes, while he was on his way to the Imam of Sana to recover his luggage, &c., which had been seized at Mocha, and that it was generally believed that the unfortunate traveller was poisoned by the command of the Imam. A report which was afterwards brought over to this country from Bombay, agreed in the main points with that of Mr. Buckingham. The diary of Seetzen's journeys, and his maps, plans, and drawings, were for some time supposed to be lost, but nearly the whole have been recovered, and were placed in the hands of Professor Kruse of Dorpat.

SEGNERI, PA'OLO, was born in 1624, at Nettuno in the Campagna of Rome. He studied at Rome under the Jesuits, and afterwards entered that order. He applied himself more particularly to sacred oratory, and became a distinguished preacher. He formed a style of his own, avoiding both the dryness of his predecessors and the turgidity of his contemporaries, and he is one of the few really eloquent preachers that Italy has produced. (Maury, 'Essai sur l'Eloquence de la Chaire.') Segneri's 'Quaresimale,' or series of sermons for Lent, is still read with pleasure and profit. The author is rather too fond of figures and antithesis; at times he indulges too much in profane and even mythological erudition, in doing which he conformed to the vitiated taste of his age, which is known as that of the Seicentisti, but he is one of the purest writers of that age, and his language has been approved by the Crusca Academy. Segneri was an earnest and truly Christian preacher. In that vocation he visited almost every corner of Italy, and he always won the attention and affection of his audience. He composed also 'Laudi,' or prayers in verse, of an easy and popular style, to be sung before and after his sermons.

Pope Innocent XII. chose Segneri for his own preacher, as well as of the College of Cardinals, in which office he continued three years, until 1694, when he died at Rome. He was succeeded by father Casini, who nearly equalled him in eloquence, and surpassed him in the boldness and freedom with which he spoke truth, however unwelcome it might be to men in power, which however did not prevent Pope Clement XI. from making him a cardinal. Segneri composed, besides his sermons, several pious tracts, such as 'Il Cristiano Istruito,' which contains many excellent precepts for living a Christian life.

(Corniani, *Secoli della Letteratura Italiana*; Maffei, *Vita del Segneri*.)

SEGNÍ, BERNARDO, was born at Florence about the end of the 15th century. He studied the law at Padua, but afterwards proceeded to Aquila in the kingdom of Naples, where he followed the profession of a merchant. On his return to Florence after the fall of the republic, he courted the new sovereigns of the house of Medici, and found favour with Duke Cosmo I., who employed him in several missions and other affairs of state. Cosmo employed him also in translating the works of Aristotle from the Greek into Italian. His translations of the Rhetoric, Ethic, Politic, and the Treatise on the Soul, are the only parts that have been published. Segni also busied himself in writing a history of his own times and country: 'Storie Fiorentine dall' anno 1527 all' anno 1555,' which he kept secret in his lifetime. In this history he speaks with the freedom of a conscientious historian, and as such he is placed among the best writers of Italy. The first part of Segni's history refers to the same period as the latter part of that of Guicciardini, both embracing the important event of the fall of the Florentine republic, with this difference, that Guicciardini's is a general history of Italy, and Segni's a particular history of his native Florence. No less than three other Florentine contemporary historians have treated the same period, namely, Varchi, who wrote, in a prolix style, 'Storia Fiorentina,' from the year 1527 to 1538; Nardi, who wrote 'Istorie della Città di Firenze,' from 1494 to 1531; and Nerli, in his general history, or rather chronicle, of Florence, 'Commentarij de' Fatti Civili occorsi in Firenze dall' anno 1215 all' anno 1537.' Segni however went farther than any of them, by continuing his narrative till the year 1555, thus embracing not only the period of the profligate sway of Alessandro de' Medici, included in the histories of Varchi and Nerli, but the subsequent and more important reign of his successor, Duke Cosmo I., who was the real founder of the Tuscan dynasty, and who, by the subjugation of Siena, the last of the three great Tuscan republics, united the whole of Tuscany into one principality. Segni died in 1559.

There have been two other writers of the same family: Pietro Segni, who translated and commented on the work of Demetrius Phalereus 'On Elocution;' and Agnolo Segni, who wrote a valuable treatise, 'Della Imitazione Poetica.'

SEQUIER, PIERRE, was one of an ancient and distinguished French family which, in the space of three centuries (1460 to 1789), is recorded to have had no less than sixty-eight of its members raised to the highest legal dignities of France. Pierre Seguiet, one of the most eminent of them, was born at Paris in 1504. He began life as an advocate, and, after filling various high offices, was raised in 1564 to the rank of president à mortier, the highest grade but one in the Parisian parliament. In that capacity the parliament, having refused to register an edict for the establishment of the Inquisition, deputed

him to lay their remonstrances before the king, Henri II.; and he had the distinguished honour of preventing, by the boldness and force of his arguments, the introduction of that odious tribunal into France. His speech on this occasion has been preserved. (Garnier, 'Continuation of Velly,' vol. 27.) He resigned his office of president in favour of his second son Pierre, two years before his death, which happened in 1580; and it is remarkable that every one of his sons, six in number, filled some high legal office. Antoine, as well as Pierre, was president à mortier, and both of them enjoyed the special confidence of Henri IV.

SEQUIER, PIERRE, born at Paris, May 28, 1588, was the son of Jean, sixth son of the above Pierre Segulier, lieutenant-civil of Paris, a steady friend, like his brothers above noticed, of Henri IV., and a valuable public officer. Pierre Segulier, like his grandfather, rose through various offices to the rank of president à mortier in 1633, and that of chancellor in 1635. Having rendered important services to Anne of Austria during the ascendancy of Richelieu, at the risk of incurring that minister's vengeance, he obtained Anne's full confidence; and, during her regency, rose to as high power and influence as a subject could well attain. At the breaking out of the war of the Fronde he escaped narrowly with his life, in a resolute attempt to pass the barricades to the usual discharge of his official functions; and in the sequel of those disturbances, the seals of office were for a time taken from him. He was replaced in 1656, and continued chancellor till his death, January 28, 1672, maintaining through life the honour of his family as an independent, able, and enlightened magistrate. He was also a lover and encourager of art, and a man of elegant and accomplished mind. He was one of the originators, and president, with the title of protector, of the Académie Française, which during thirty years held its sittings at his hotel.

SEQUIER, ANTOINE-LOUIS, of the same family, being descended from a brother of the first-named Pierre Segulier, was born at Paris, December 1, 1726; and owed (1748) to the regard of Louis XV. to his name and family his first step in the law, namely, the office of king's advocate in the court of the Châtelet. In 1755 he rose to be advocate-general in the parliament of Paris, which office he held till the dissolution of that body in 1790, except that he resigned it in 1771 in consequence of the exile, and returned to it in 1774, on the return of the parliament. In forensic eloquence he is reputed a worthy successor to D'Aguesseau and other distinguished men of his predecessors, and he possessed considerable literary acquirements. In the revolution he was offered and refused the post of mayor of Paris; and he lived retired until the appearance of an attack entitled 'Segulier treated as he Deserves,' on which he took the alarm and emigrated. After sojourning in several places he fixed his abode at Tournai, but died of apoplexy, January 25, 1792, leaving an unsullied character for integrity, and a high reputation as a judge, a lawyer, and a statesman. Several of his professional speeches and some of his writings are extant, but in no collected form.

SEQUIER, JEAN-FRANÇOIS, of another branch of the same family, was born at Nismes, November 25, 1703, and devoted himself early to the study of antiquities. Having formed a close friendship with the learned Scipio Maffei, during his visit to Nismes in 1732, he accompanied him in his travels, and resided with him till his death in 1755. Segulier then returned to his native place, and applied himself to the illustration of its splendid Roman remains. He displayed much ingenuity in deciphering, from the holes in the stones to which metal letters had been attached, the inscription formerly existing on the temple called *La Maison Carrée*, which he conceived to have been erected in honour of Caius and Lucius, the sons of Agrippa and grandsons of Augustus. Later researches have shaken this opinion. Great part of his life was occupied, in concert with Maffei, in forming a collection of all known ancient inscriptions: their work however was never published in a complete form. Segulier continued to labour on this subject to the end of his life, and left ready for the press a bulky manuscript, now in the king's library at Paris, which has never been printed. ('*Inscriptionum Antiquarum Index absolutissimus*,' &c.) He died of apoplexy, September 1, 1784, leaving his library and valuable museum of medals, natural history, &c., to the academy of Nismes, on the dissolution of which the collection was made over to the public library of that place.

SEGUR, HENRI-FRANÇOIS, COMTE DE, son of the Marquis de Segur, was born in 1689, and died in 1751. His life was passed in active service, chiefly in Spain, Italy, Bohemia, Germany, and Flanders, first as colonel and afterwards as lieutenant-general in the French army.

SEGUR, PHILIPPE-HENRI, MARQUIS DE, son of the Comte Henri-François, was born January 20, 1724. He distinguished himself when very young in the wars of Italy and Bohemia, especially at the siege of Prague: at the battle of Rocoux a musket-ball entered his breast, passed through to the back, and had to be extracted by the spine; at the battle of Laufeld, in leading his regiment to a charge after it had been three times repulsed, his arm was shattered in such a manner that it was necessary to amputate it. By two successive and rapid promotions he was made *maréchal-de-camp* and lieutenant-general. At Clostercamp he was pierced in the neck by a bayonet, received three sabre-wounds on the head, and was made prisoner. At the termination of the war he was appointed inspector-general of the infantry. In 1780 Louis XVI. called him to his councils as minister of war, and in 1783 raised him to the dignity of *Maréchal de France*. He was

war-minister during seven years, in the course of which he introduced many ameliorations into the army, in discipline, in expenditure, in the personal comfort of the soldiers, and in the management of the military hospitals. He afterwards lived in retirement till he was arrested by order of the Convention in 1790; his furniture was sold by public auction; and at the age of seventy, infirm, mutilated with many wounds, deprived of an arm, and afflicted with the gout, he was thrown into the prison of La Force. He was deprived of his military pensions, as well as of his titles and his orders. Fortunately he had no property to stimulate the tyrants of the revolution further, and his life was spared. Bonaparte when first consul set him at liberty, treated him with marked respect, and granted him a pension of 4000 francs. He died at Paris, October 8, 1801, in his seventy-eighth year. His character is thus summed up by his son:—"When in power, he was guilty of no injustice; when oppressed by his country, he did not cease to love it. He was a good husband, a good father, a good general, a brave soldier, a just and wise minister, and an excellent citizen."

SEGUR, LOUIS-PHILIPPE, COMTE DE, eldest son of the *Maréchal de Segur*, was born in Paris, December 10, 1753. He chose the army as a profession, and at an early age was made colonel of a regiment of dragoons. He was one of the three first Frenchmen of high rank who offered their services to the American deputies in the cause of American independence, the other two being the Marquis de la Fayette and the Vicomte de Noailles, but they were formally prohibited by the French ministry from leaving France. La Fayette escaped, and reached America; Noailles obtained leave to go there about two years afterwards, but Segur was not permitted to leave France till May, 1782. He entered the Delaware in September 1782, narrowly escaped being taken by the English, and with much difficulty reached the camp of the French general Rochambeau, under whom he fought till the termination of the American war. He then returned to France, which he reached in June 1783. In the latter part of 1784 he was appointed ambassador to Russia, and arrived at St. Petersburg March 19, 1785; he was treated by the Empress Catharine II. with especial favour, accompanied her in the great progress which she made from St. Petersburg to the Crimea in 1787, and retained her confidence as long as he remained at her court. He left St. Petersburg October 11, 1789, on his return to Paris.

In 1790 he was sent as ambassador to the court of Frederic of Prussia. Having returned to France, he was twice arrested by the revolutionists in 1793, but obtained his freedom by his prompt eloquence. He then retired into the country, and was obliged to have recourse to his pen for the means of subsistence. In 1798 he published his '*Théâtre de l'Hermitage*;' in 1800, his '*Histoire des Principaux Evénemens du Règne de Frédéric-Guillaume II., Roi de Prusse*,' 3 vols. 8vo, Paris; and in 1801, his '*Décade Historique, ou Tableau Politique de l'Europe depuis 1786 jusqu'à 1796*,' 3 vols. 8vo, Paris. In 1803 he was chosen a member of the Académie Française, and about the same time he was appointed *grand-maitre de cérémonies* to Bonaparte. After the Restoration he became a member of the Chamber of Peers. In 1819 he published his '*Contes Moraux et Politiques*,' 2 vols. 12mo, Paris; in 1821, his '*Histoire Universelle, Ancienne et Moderne*,' 10 vols. 8vo, Paris; in 1822, his '*Pensées, Maximes, et Reflexions*,' 18mo, Paris; in 1823, his '*Galerie Morale et Politique*,' 3 vols. 8vo, Paris. In 1824 appeared his '*Ceuvres Complètes*,' 30 vols. 8vo, Paris, which in 1828 were reprinted and augmented to 36 vols. His '*Mémoires, Souvenirs, et Anecdotes*,' were published in 1826, 3 vols. 8vo, Paris, an extremely amusing and instructive work. His death occurred in July 1830.

PHILIPPE-PAUL, COMTE DE SEGUR, his son, born November 4, 1780, was one of Bonaparte's favourite generals; he accompanied him in the disastrous Russian campaign, of which he has written the history, '*Histoire de Napoléon et de la Grande Armée en 1812*,' 2 vols. 8vo, Paris, 1825, which has passed through numerous editions. He wrote the '*Histoire de Charles VIII.*' from his father's papers, and also other works.

SEGUR, JOSEPH-ALEXANDRE, VICOMTE DE, the second son of the *Maréchal de Segur*, and brother of the Comte Louis-Philippe, was born at Paris in 1756. He entered the army, and rose to the grade of *maréchal-de-camp*, but he was more fond of pleasure than war, and attached himself chiefly to the drama. He wrote '*Contes, Fables, Chansons, et Vers*,' 8vo, Paris, 1801; '*Ceuvres Diverses*,' 8vo, Paris, 1819; '*Les Femmes, leur Condition et Influence dans l'Ordre Social*,' 2 vols. 8vo; 4 vols. 12mo, Paris, 1820; '*Romances et Chansons*,' 18mo, Paris, 1820; besides a great number of comedies, vaudevilles, and operas, several of which are yet popular. He died July 27, 1805, at Bagnères.

SEJANUS, LUCIUS ÆLIUS, a native of Vulturni, in Etruria, was the son of Seius Strabo, a Roman knight. (Tacit., 'Ann.,' iv. 1.) He first attached himself to the interests of Caius Cæsar, the grandson of Augustus, but afterwards gained the favour of Tiberius, who shortly after his accession appointed him to the command of the Prætorian troops, in conjunction with his father, who had held the command under Augustus. He continued to increase in power and influence till the whole administration of the state was eventually committed to him. Tiberius sent him with his son Drusus, in order to suppress the insurrection of the legions in Pannonia (Tacit., 'Ann.,' i. 24, &c.); and when his father, Seius Strabo, received the govern-

ment of Egypt, Sejanus obtained the sole command of the Prætorian troops. These troops, which had previously been quartered in different parts of the city, he collected into one camp, and used every effort to gain over to his interests. He also secured the support of the leading members of the senate; and as his influence increased, so did his ambition, and he resolved to secure, if possible, the imperial power. Drusus, the son of Tiberius, and the children of Germanicus, stood however in his way. He first determined to remove Drusus, against whom he had a personal hatred on account of a blow which he had received from him; and in order to accomplish his purpose, he seduced Livia, the wife of Drusus, and then holding out to her the prospect of marriage and his own accession to the Imperial power, he induced her to consent to the murder of her husband, who was shortly afterwards removed by poison. (Tacit., 'Ann.,' iv. 3, 8; Dion Cass., lvi. 22; Suet., 'Tib.,' 62.)

Sejanus was anxious to marry the widow of Drusus, but he was strongly dissuaded from it by Tiberius. He now began to fear lest Tiberius should suspect his designs, and accordingly he persuaded the emperor, who was fond of ease, to retire from the city, and to leave the management of public affairs in his hands. Tiberius first withdrew to Campania, and afterwards to the island of Caprea. Sejanus, now released from any restraint, acted in the most arbitrary and oppressive manner. He procured the death of Agrippina, the widow of Germanicus, and also of her two sons Nero and Drusus, and nothing now seemed to stand in the way of his wishes, when the suspicions of Tiberius became at length aroused, and he resolved upon the death of his favourite. Tiberius was obliged however to proceed with caution. At a meeting of the senate, which Sejanus was induced to attend, he was arrested by Nervius Sertorius Marco, to whom Tiberius had intrusted the tribunical power, and was the same day condemned to death. His body was exposed to the fury of the people, and his children and many of his relations and friends were also put to death. (Dion Cass., lvi. 6-19; Tacit., 'Ann.,' v. 6, &c.; Suet., 'Tib.,' 65.)

SELDEN, JOHN, was born December 16, 1584, at Salvington, near Worthing, in Sussex. His mother, Margaret, was the daughter of a knightly family of the name of Baker, in Kent, whom her husband, John Selden, known by the name of the 'Minstrel,' obtained in marriage by means of some proficiency he had in music. Their son began his education at the free grammar-school at Chichester, and at the age of fourteen entered at Hart or Hert Hall, in Oxford, a foundation since merged in the present Magdalen Hall in that University. When about nineteen he was admitted a member of Clifford's Inn, and in 1604 removed to the Inner Temple.

By nature unfit, or by accident unable, to apply himself to the more active business of his profession, Selden devoted this time of his life to the study of history and antiquities, both civil and legal, to the acquirement of languages, and the study of logic and of moral philosophy, with an application which was eventually rewarded by the honour of being considered one of the most learned writers of his age. At twenty-two years of age he wrote his first published treatise, the 'Analecton Anglo-Britannicon,' a work which surprised his friends, and gave him an immediate reputation. This was followed by other works, and in 1614 appeared his treatise upon 'Titles of Honour,' a book then and ever since regarded as one of authority. In 1618 he was summoned before the High Commission Court for publishing the 'History of Tithes,' wherein he allows the legal but denies the divine right of the clergy to the receiving of tithes. In the early ages of christianity, tithes were, in imitation of the Jewish law, a source of church revenue, and were originally paid to the bishop, and not for the maintenance of a resident clergy; and it was not till later, when the people began to question this right, that Charlemagne first gave a legal confirmation to these ecclesiastical claims. By denying then the divine right, the reason for the legal injunction is abandoned, and the payment of tithes becomes a mere tax. Selden apologised in words which did not express a recantation of opinions, but regret for having disturbed the church and offended the court. He was considered the instigator of the remonstrance on the subsequent protestation of the House of Commons, which that House made in 1621, wherein under Selden's advice, though not then himself a member, it asserted its right to offer advice to the crown, and claimed the liberty of the subject. The king, in consequence of whose speech at the opening of the parliament these memorable declarations were made, erased them from the journals of the House with his own hand, and dissolved the parliament. Selden was committed to prison, from which, through the interest of the bishop of Winchester, he was released in five weeks.

He first appeared in the House of Commons as member for Lancaster, for which place he was returned in the parliament which assembled in 1623, the last parliament of James I.; and in 1625, on the accession of Charles, in the 'parliamentum vanum,' which assembled at Oxford, he sat for Great Bedwin. In the former of these years he gave a strong instance of independence or self-will, for which there seems no reason, for on being chosen reader of Lyon's Inn, he refused to perform the office. The register of the Inner Temple contains an order passed in consequence by that society, that there should be a 'ne recipiatur' entered upon his name; that he be fined, and for ever disabled to be called to the bench. This order was repealed in 1624.

Charles soon summoned a second parliament on the speedy dissolution of the first, and Selden was again returned for Bedwin. The impeachment of the Duke of Buckingham was at once determined on by the new parliament, and Selden was one of the members appointed to prepare the articles, and was named a manager of the prosecution. From this it appears that he had zealously joined the party in opposition to the court, yet, though thus implicated, he escaped the fate of Digges and Elliot, who were employed in the same capacity, and were thrown into prison accordingly. Another dissolution in 1626 stopped the proceedings against the duke, but a forced loan which Charles was driven to have recourse to in the assumed exercise of his prerogative, called Selden, though not in the habit of appearing at the bar, to defend in the Court of King's Bench Sir Edward Hampden, who had by warrant of the council been imprisoned with four others for refusing to pay his portion of the loan. They were brought up by writ of Habeas Corpus, but Selden and his fellow-counsel were unsuccessful in their endeavours to obtain the discharge of the prisoners, who were all remanded on the judgment of Hyde. In Charles's third parliament, which met in 1628, Selden was returned member for Ludgershall; and on the proceedings against the Duke of Buckingham being renewed, he demanded that judgment should be given against the duke upon the impeachment of the former parliament. He took an active part in the discussions which now occupied the House of Commons on the levying of tonnage and poundage, and in the drawing up of the Petition of Rights, to which Charles gave his consent in 1628. Court influence still protected Buckingham, and the conflict between the king and his Commons might have begun earlier if immediately after the prorogation the duke had not fallen by the hand of Felton.

During this recess Selden devoted himself to literary pursuits. At the request of Sir Robert Colton, he transcribed the Greek inscriptions in the collection of ancient marbles which the Earl of Arundel had received from the East, and they were published by the name of 'Marmora Arundeliana.'

Parliament re-assembled in January 1629, and Selden appeared still more to have inclined to the discontented party. During the continuance of the late prorogation the goods of several merchants had been seized by the crown to satisfy the duty, among which were those of one Rolles, a member of the House. The Speaker, on an early day after the meeting of parliament, being desired to put the question that the seizure of these goods was a breach of privilege, declared "he durst not, for that the king had commanded to the contrary." Selden instantly rose, and in strong words expostulated with the Speaker, whom he considered bound to obey the commands of the Commons. The House adjourned in a state of great excitement, and on its meeting again, and the Speaker still refusing, two members held him in his chair; Hobart locked the door of the House; and Elliot and Stroud moved the question. The Speaker again declining to obey, a short remonstrance against the levying of tonnage and poundage was immediately framed; at Selden's desire it was read by the clerk, and passed by acclamation rather than by vote. The king, exasperated with his faithful Commons, the following day dissolved the parliament, and Selden, with some others concerned in the late proceedings, which were deemed seditious, was committed to the Tower. After remaining there eight months, and for some time denied the use of books, or allowed to write, he was brought up by Habeas Corpus to the King's Bench, and on refusing to give security for his good behaviour, though his discharge was offered him on that condition, his confinement was continued in the King's Bench prison, though with less rigour. This appears from the fact that he was appointed by the students of the inns of court to prepare a masque, which they were anxious to represent before the royal family, to show their disapprobation of Prynne's 'Histrio-mastix.' In 1634 he consented to give bail, and he was suffered to go at large.

A petition to the king, to whom it appears that Selden was less obnoxious than the others of his own party, either through admiration of his learning, or from conviction that his natural love of ease and retirement, which Clarendon speaks of, would make him less likely to proceed to violent measures, obtained for him, through the interest of Laud, his entire liberation. Soon after he appears to have approached the court party, and to have gained even the personal favour of Charles, to whom he dedicated the well-known treatise, 'Mare Clausum.'

In the great case of ship-money we find no mention of Selden; and as his knowledge and learning would have made him a valuable counsel in Hampden's behalf, it is probable that he either declined to defend, or that Hampden's party thought it not prudent to request his aid on account of his recent approaches to the court party. From this time his behaviour may be thought somewhat inconsistent, unless we consider his conduct in the Long Parliament, which assembled in 1640, and to which he was unanimously returned a member by the University of Oxford, rather as that of a retained advocate. He sat on the committees of the lower house, which undertook the proceedings against Strafford, though he was not one of the managers before the House of Lords, and his name also was enrolled as "one of the enemies of justice," a title given to those who favoured the earl. Though the friend of Laud, by whom he was desired to write many of his works, he was nominated by the House to frame the articles of impeachment against the archbishop. He made no opposition to the

resolutions which ultimately caused the exclusion of the bishops from the house of peers. Afterwards we find him agreeing to a protestation that the House of Commons should maintain the Protestant religion according to the doctrines of the English Church, and defend the authority, privileges, and person of the king. He also appears to have offered no opposition to the illegal proceedings of this parliament in the affair of Sir John Hotham; but as he did not expressly favour them, the court continued to regard him as their friend, until the quarrel of the king with his Commons arose about the militia, when Selden spoke against the commission of array which Charles had been driven to resort to on being deprived of all authority over his own army. Lord Falkland, by the king's desire, wrote a friendly letter to Selden, asking his reasons for the strong opinion which he gave in this question. In his answer Selden still urged the illegality of the commission, but at the same time he inveighed against the ordinance for the militia, which the parliament had declared as being "without any shadow of law or pretence of precedent, and most destructive to the government of the kingdom." He further declared his intention of speaking against this ordinance, and he did his utmost to obtain the rescinding of it, though without success.

Charles about this time becoming displeased with the wavering conduct of the Lord Keeper Littleton, inclined to take from him the great seal, and give it either to Banks or Selden. He did not doubt the affection of the latter to his person, yet knowing that he was in years, and preferred ease to any preferment, and private studies to public business, he abandoned the idea; indeed throughout his whole life Selden was devoted to retirement and to literary pursuits, and it is not easy to decide to which party he most inclined; it is probable that he was respected by the king, who knew his honesty. His last public acts of any importance were the discussions in which he took part in the Assembly of Divines at Westminster, to which he was appointed one of the lay members, and where he is said to have perplexed his ecclesiastical antagonists by the depth of his learning and the variety of his knowledge. In 1643 he took the Covenant, and in the same year the parliament made him chief keeper of the rolls and records in the Tower. In 1645 he was one of the twelve commoners appointed to be commissioners of the Admiralty; and he was chosen to succeed Dr. Eden as master of Trinity Hall, Cambridge, an honour which he declined. In the following year the parliament, sensible of his services, voted him the sum of 5000*l*. "Though some there are that say that he refused and could not out of conscience take it, and add that his mind was as great as his learning, full of generosity and harbouring nothing that seemed base" (Wood's 'Athenæ'); and though these latter acts are proof of his adherence to the popular party, yet he continued to be much esteemed by many of the royalists, and Charles, even if he had the will, was by this time deprived of the power to retaliate. Selden had great influence in the House of Commons, and he frequently used it for the best purposes. He procured the restitution of the endowment of the Arabic professorship in Oxford, which had been seized on the attainder of Laud, by whom it was founded; and he succeeded in preserving the library of Archbishop Usher from dispersion. He remained in parliament after the execution of the king, though it does not appear what his conduct or opinions were in that transaction. He withdrew from public affairs as much as possible, and declined to write an answer to the 'Eikon Basilike,' at the request of Cromwell. Selden died November, 30, 1654, at the Carmelite or White Friars, the house of Elizabeth, countess dowager of Kent, whose estates he had latterly managed. He had lived with the countess for some time, and it was reported that he had been married to her. He was buried in the Temple Church, where a monument was erected to him. He bequeathed his very valuable collection of books to his executors, of whom one was Sir Matthew Hale, to be placed in some convenient library or college. His original intention was to give it to the University of Oxford, but having taken offence at the authorities of the Bodleian, for requesting a bond of restitution from him on an occasion of his desiring to borrow one of their MSS., he struck the bequest from his will. Hale and his co-executors however, considering themselves executors "of his will, and not of his passion," sent the books, about 8000 volumes, to Oxford, where a noble room was allotted for their reception. It is said the executors first offered them to the society of the Inner Temple, but the society, neglecting to provide a proper place for them, lost the valuable gift.

Selden was a diligent student, and his literary labours only ended with his life. In the treatise entitled 'Mare Clausum,' published in 1635, he maintains the right of England to exclude the fishermen of Holland from the seas, which she asserted to be her own, in answer to the treatise of Grotius, entitled 'Mare Liberum,' which denied the right. The controversy arose from a dispute between the British and the Dutch concerning the herring fishery on the British coast. Selden maintained that a dominion over any part of the sea may be acquired. This work greatly raised his reputation at Court, where his arguments were considered conclusive. In 1640 appeared his great work, 'De Jure Naturali et Gentium, juxta Discipulinam Ebraeorum,' "The object of the author," says Hallam, "was to trace the opinions of the Jews on the law of nature and nations, or of moral obligation, as distinct from the Mosaic law; the former being a law to which they held all mankind to be bound. This theme had been of

course untouched by the Greek and Roman philosophers, nor was much to be found upon it in modern writers. His purpose is therefore rather historical than argumentative; but he seems so generally to adopt the Jewish theory of natural law, that we may consider him the disciple of the Rabbis as much as their historian." (Hallam's 'Literature of Europe,' vol. iii. p. 334.) He published also 'A Brief Discourse concerning the Power of Peers and Commons;' 'Privileges of the Baronage of England;' an edition of the 'Origines' of Euty-chius; 'De Anno Civili et Calendario Judaico;' &c.

As a learned lawyer Selden holds a high rank. His 'Dissertation on Fleta,' which, like most of his other works, is written in Latin, shows him to have been thoroughly acquainted with the origin of our own law, and its gradual development under the influence of the civil law. Some few errors have been detected in this valuable essay, but it is an evidence of learning and research of which there have been few similar instances among English lawyers since his time. To say that Selden wrote Latin with ease and sufficient correctness and elegance is no great praise, considering the age in which he lived. Whitelocke, his biographer, Wilkins, Baxter, and Clarendon, all bear testimony to the excellence of his character and his learning. Clarendon, who was his intimate friend, says, "Mr. Selden was a person whom no character can flatter or transmit in any expressions equal to his merit and virtue."

Wood says of him: "After he had continued there (the Temple) a sedulous student for some time, he did, by the help of a strong body and a vast memory, not only run through the whole body of the law, but became a prodigy in most parts of learning, especially in those which were not common or little frequented or regarded by the generality of students of his time. So that in few years his name was wonderfully advanced not only at home but in foreign countries, and was usually styled the great dictator of learning of the English nation. . . . He was a great philologist, antiquary, herald, linguist, statesman, and what not." (Wood's 'Athenæ'.)

There was an apparent indecision and variableness in Selden's public conduct, which makes it difficult to determine what his political principles really were. The most favourable and perhaps the most correct judgment is, that he was sincerely opposed to the arbitrary measures of the crown, and equally unwilling to go all lengths with the parliaments.

Selden was very intimate with Ben Jonson, who addressed a poetical epistle to him, in which he styles his friend "monarch in letters." Selden's name has been made familiar to many persons by a small volume entitled 'Table-Talk,' which has been many times reprinted. This valuable little collection of acute and learned remarks was first published in 1689, thirty-five years after Selden's death, in a quarto pamphlet of sixty pages, with the title of 'Table-Talk; being the Discourses of John Selden, Esq., or his sense of various matters of weight and high consequence, relating especially to Religion and State.' In the dedication, his amanuensis, Richard Milward, by whom it had been compiled, states that he had had the opportunity of hearing Selden's discourse for twenty years together, and that of what is here collected "the sense and notion is wholly his, and most of the words." Selden's 'Table-Talk' contains many just remarks on matters moral and political, expressed in a forcible manner; but though they are not wanting in originality, they can hardly be said to be marked by depth, and many of them are rather characteristic of a man of the world than of a retired student.

SELEUCIDÆ, a Greek dynasty in Asia, founded, after the death of Alexander the Great, by SELEUCUS, the son of Antiochus. His father was one of the generals of Philip, and he himself accompanied Alexander in his Asiatic campaigns, in which he so distinguished himself as to be ranked among his greatest generals. On the division of the empire at the death of that prince, Seleucus was intrusted with the important command of the body of cavalry called the Companions, which had been before held by Hephæstion and Perdicas; and he was also, according to Justin, made commander of the camp. The satrapy of Babylon was bestowed upon him in the new partition, after the death of Perdicas (B.C. 321). In the war which followed, he took the part of Antigonus against Eumenes. After the death of the latter (B.C. 315), he received Antigonus into his territory with great appearance of friendship; but taking offence at the tone of superiority which his guest assumed, and dreading his power, he fled to Egypt, and joined Ptolemy Soter, Lysimachus, and Cassander in a league against him.

The defeat of Demetrius at the battle of Gaza enabled Seleucus to recover Babylon with a very small force. From this period, B.C. 312, commences the era of the Seleucids. Shortly afterwards he obtained possession of Media, in consequence of his victory over Nicanor, the satrap appointed by Antigonus over this province, whom he is said to have killed with his own hand. After the sea-fight, B.C. 306, in which Demetrius defeated Ptolemy, Seleucus, following the example of the three other great monarchs, assumed the diadem and the title of king. Extending his dominions partly by force and partly by conciliation, he conquered Bactria, and probably most of the provinces enumerated by Appian ('Syriaca,' 55), which Diodorus calls the Upper Satrapies; and is said, in consequence of these victories, to have assumed the title of Nicator. Making an expedition against Sandrocottus, an Indian king, he was induced to form an

alliance with him, strengthened by which he returned with a large army to the war with Antigonus, which was finally concluded by the battle of Ipsus, B.C. 301. In the division of territory which followed, Seleucus obtained for his share Syria and the inland part of Phrygia, and he made further accessions till he acquired Cappadocia, Seleucia, and, according to Appian ('Syriaca'), all the provinces conquered by Alexander between Phrygia and the Indus. Having now leisure to promote civilisation, he planted many cities, the most celebrated of which were Antioch in Syria and Seleucia near Babylon: in peopling these he gave great privileges to the Jews. In consequence of the close alliance between Ptolemy and Lysimachus, Seleucus took in marriage Stratonice, the daughter of Demetrius Poliorcetes; but wishing him to give up Cilicia and Sidon, and finding him unwilling to accede to his demands, he soon engaged in a war with him, which was terminated in the defeat of Demetrius, who was taken prisoner, B.C. 286, and died after three years' captivity. Before this marriage, Seleucus, by a former wife, Apama, the daughter of Artabazus, had had a son Antiochus, who conceived a strong passion for his mother-in-law Stratonice, to gratify which Seleucus resigned her, making over to him at the same time the majority of the seventy-two satrapies comprised in his great empire, and reserving for himself those only to the west of the Euphrates. At the close of his reign, he made war upon Lysimachus, and, upon his defeat and death, conceived the design of conquering Macedonia. Passing over to Europe for this purpose, he was treacherously killed by Ptolemy Ceraunus, whom he had received with great kindness on his flight from Egypt. This was B.C. 280, in his eighty-second year. The character of Seleucus is much praised by ancient historians. His military talents are generally admitted, and he was not deficient in the virtues of civilisation. A liberal spirit is shown in his treatment of Demetrius after he fell into his hands, and in other anecdotes recorded of him. The prudence of the later measures of his reign, the division of his empire and his expedition into Macedonia, may be doubted. He was possessed of great personal strength and courage.

The following list contains the successors of Seleucus, with the dates of their accessions, and a short notice of those who bore his name:—

2. Antiochus Soter.
3. Antiochus Theus, B.C. 261.
4. Seleucus Callinicus succeeded his father Antiochus Theus, B.C. 246. The empire was at this time much weakened by the defection of Bactria and Parthia, and the wars of the Antiochi with Ptolemy Philadelphus. Immediately on the accession of Seleucus, his mother, jealous of any rival candidates for the throne, contrived the death of Berenice, the Egyptian wife of the late king, and of her son. To avenge his sister's death, Ptolemy Euergetes invaded the dominions of Seleucus, and, passing the Euphrates, overran them as far as Bactria. Seleucus, being hard pressed in this war, called in the aid of his brother Antiochus Hierax, promising him all the provinces of his empire in the lesser Asia. Strengthened by an alliance with some of the cities in Asia Minor (his treaty with Smyrna is still preserved among the Arundelian Marbles), he attempted to conclude a peace with Ptolemy, but which was broken off by his ambitious brother Hierax, who, supported by the King of Egypt and some of the Gaulish mercenaries, maintained himself for a long time against Seleucus, and being at length defeated, fled to Ptolemy, and perished in Egypt.

5. In the latter part of his reign, Seleucus seems to have made two expeditions against Parthia, in the latter of which he was taken prisoner by Arsaces, and it does not appear that he was ever released from his captivity. He died of a fall from his horse, and was succeeded by his son Seleucus Ceraunus, B.C. 226, a weak prince, who was cut off by a conspiracy in his own army while on his march to attack Attalus, king of Pergamus, who had seized the greater part of Asia Minor, B.C. 223.

6. Antiochus Magnus, brother to the late king.
7. Seleucus Philopator, B.C. 187, son of Antiochus, succeeded to an impoverished kingdom, and, reigning feebly for twelve years, was murdered by Heliodorus.
8. Antiochus Epiphanes, his brother, B.C. 175.
9. Antiochus Eupator, B.C. 164.
10. Demetrius Soter, B.C. 162.
11. Alexander Bala, a usurper, B.C. 150.
12. Demetrius Nicator, B.C. 146.
13. Antiochus Sidetes, B.C. 137 to 128.
14. Seleucus, son of Demetrius Nicator, put to death by his own mother immediately on his accession.
15. Antiochus Grypus, B.C. 125.
16. Antiochus Cyzicenus, B.C. 112 to 95; after the first eighteen months of his reign, jointly with Grypus, till the death of the latter, B.C. 96.
17. Seleucus VI., and last of the name, surnamed Epiphanes Nicator, the son of Antiochus Grypus, driven by Antiochus Eusebes into Cilicia, was there besieged in Mopsuestia, and killed, B.C. 95.
18. Antiochus Eusebes.
19. Philippus.
20. Antiochus.
21. Tigranes, king of Armenia till B.C. 69.

22. Antiochus Asiaticus, expelled by Pompey, B.C. 65. End of the dynasty of the Seleucidæ.

With few exceptions, the kings of this race were weak and depraved, enfeebled by the vices of their age and country, or not less by the decaying state of their empire. The decline of this monarchy, commencing from the latter years of the reign of its first founder, was accelerated by the maritime and commercial superiority of Egypt owing to the possession of Cyprus, Cilicia, and Tyre, by the formation of the independent kingdoms of Bactria and Parthia, and the growth of the power of the kings of Pergamus. After the defeat of Antiochus Magnus by the Romans, the Seleucidæ could only maintain a hopeless struggle with hostile neighbours and disaffected subjects. How far the destinies of the eastern world might have been changed had Seleucus made the Euphrates the boundary of his empire, and abandoned his western conquests, is a question not undeserving consideration.

The coins of this dynasty are very numerous. Those of Seleucus Nicator are distinguished from the rest by their exact resemblance in type, style, and weight to those of Alexander the Great. The young head of Hercules in the lion's skin, Jupiter Ætophorus seated, the head of Pallas on the obverse, and of Victory holding out a wreath on the reverse, are copied, with the name of Seleucus instead of Alexander. There are others with a horned head of Seleucus, said to refer to his extraordinary effort of strength in holding a bull by the horns; and we are told by Appian ('Syriaca') that his statues in consequence were represented horned. We also find the anchor as a type, which probably refers to a prodigy at his birth, recorded by the same author, and prophetic of his future destiny.

On the coins of the later Seleucidæ we have as a very general type Apollo, either standing or seated on the cortina, holding in one hand an arrow, in the other a bow strung. Other types are winged heads, probably relating to Perseus, the great ancestor of the Macedonians; the elephant, and the prow of a vessel, in reference to the naval and military forces of the empire. All the kings bearing the name of Seleucus struck coins, with the exception of the fifth; and we may remark the long and pompous title of the last of these monarchs, ΣΕΛΕΥΚΟΥ ΕΠΙΦΑΝΟΥΣ ΝΙΚΑΤΟΡΟΣ, as contrasted with the falling fortunes of the dynasty, and with the simple inscription on the coins of the founder, ΒΑΣΙΛΕΩΣ ΣΕΛΕΥΚΟΥ. The scattered history of the Seleucidæ has been collected from Justin, Appian, Diodorus, Polybius, and others, by the authors of the 'Universal History'; Vaillant, 'Historia Seleucidarum'; Fröhlich, 'Annales Regum Syriæ'; Clinton, 'Fasti Hellenici'; iii.; and Droysen, 'Geschichte der Nachfolger Alexanders.'

British Museum. Silver.

Head of Seleucus II., with the diadem. Apollo standing leaning on a tripod; in his right hand an arrow; the inscription ΒΑΣΙΛΕΩΣ ΣΕΛΕΥΚΟΥ, and monogram.

British Museum. Silver.

Head of Seleucus IV., with the diadem, and the inscription ΒΑΣΙΛΕΩΣ ΣΕΛΕΥΚΟΥ: Apollo seated naked on the cortina, in his right hand an arrow, in the left a bow strung; below, the monogram.

#### SELEUCUS. [SELEUCIDÆ.]

SELIM I., Emperor of the Turks, was the son of Bayezid or Bayazet II. He was born under the reign of his grandfather Mohammed II., in 1467. Being governor of Trebizond in 1511, he revolted against his father, and marched to Constantinople. Though he was defeated, and obliged to seek safety in flight, the Janissaries and the spâhîs being in his favour, his father Bajazet was compelled to resign the throne to him, and he was accordingly proclaimed on the 23rd of May 1512. Selim was then about forty-six years of age. His first step after his accession was to march against his eldest brother Ahmed, who was at the head of some troops in Asia. He defeated and put him to death, as well as another brother named Korkûd, and several

of his nephews. Selim next invaded the dominions of Shah Ismail, king of Persia, who had espoused the cause of his brother Ahmed; he defeated him in a pitched battle, and took Tabriz, the capital of Persia (September 1514). After annexing Diyar-bekr to his empire, and recovering Bosnia, which had been occupied by the Hungarians, Selim, in 1517, turned his arms against Kansú-al-Ghauri, sultan of Egypt, whom he defeated and slew at Merj-Dabik, close to Aleppo (August 24, 1516). Taking the route of Hamah, Hems (the ancient Emesa), and Damascus, which cities made no resistance, and submitted to him, Selim marched his army into Egypt. Close to Cairo he was opposed by Tumán Bey, whom the Mamlúks had chosen for commander after the death of Kansú; but in the battle that ensued that prince was defeated and slain, and the dynasty to which he belonged completely overthrown. Master of Syria and Egypt, Selim returned to Constantinople, where he made a vow not to lay down his arms until he had subdued the whole of Persia. Death however prevented the execution of his project. As he was journeying from Constantinople to Adrianople, he was attacked by a disease which terminated in his death at Ogrash-Koi, a village of Thrace, on the 22nd of September 1620. Selim was one of the most able and vigorous of the Othoman sovereigns. He made greater additions than any of his predecessors to the Turkish empire. His eminent qualities were however stained by his excessive cruelty, of which he gave remarkable instances during his reign. He was succeeded by his son Suleyman, surnamed 'the Great.'

SELIM II., Emperor of the Turks, succeeded his father Suleyman in 1566. The principal events of his reign were the suppression of a formidable rebellion in Yemen (1568-70), the taking of Tunis and La Goleta from the Spaniards, and the conquest of Cyprus, which after a vigorous resistance was taken from the Venetians in 1571. In the same year was fought the celebrated naval battle of Lepanto, by which the Turkish navy was almost annihilated. Notwithstanding this splendid success, the Venetians, in 1574, were obliged to make peace with the Turks upon very disadvantageous terms. During the remainder of Selim's reign, the affairs of the Othoman empire were very prosperous. Selim died on September 12, 1574, and was succeeded by his eldest son Murád.

SELIM III., son of Sultan Mustapha III., was born December 24, 1761. Mustapha III. was succeeded by his only brother Abdul-Hamid, and Selim was shut up in the seraglio among the women and eunuchs. Abdul-Hamid died April 7, 1789, and Selim then became sultan. Selim was one of the most enlightened men of his nation and of the East. Before his accession, while confined to the seraglio, he studied Turkish and European history, and conceived the plan of becoming the regenerator of Turkey. He had a regular correspondence with distinguished Turkish statesmen, with Count de Choiseul, the French ambassador, and it is said that he exchanged letters with the king himself, Louis XVI. of France.

He resolved to put himself at the head of his armies, but he was dissuaded from it by the diwan, who were afraid of troubles in Constantinople. The war meanwhile was carried on with great loss. The Turks were beaten at Martinestie by the united Austrians and Russians; the Austrians took Belgrade; the Russians, Bender and Isma'il; and Turkey would have been overrun, but for the intervention of England, Prussia, and Sweden. Thus peace was concluded in A.H. 1205 (A.D. 1791) at Szistowa with the Emperor Leopold II., the successor of Joseph II., who restored his conquests to Turkey; and with Russia in A.H. 1206 (A.D. 1792) at Jassy. By the peace of Jassy the Porte consented to the incorporation of the Crimea with Russia, and the Dniester became the frontier between the two empires. Sultan Selim now began his work of reformation, but during a long period his efforts were checked by troubles in Syria and Egypt: by the rebellion of Paswán Oghlu, pasha of Widdin; and by the increasing power of Ali Pasha of Janina. [ALI PASHA.] The conquest of Egypt by Bonaparte led to a war with France. The grand-vizir, Yúsuf Pasha, was routed in the battle of Abukir, and his army was completely destroyed by the French, but Egypt was taken by the English, who restored it to the Porte in A.H. 1218 (A.D. 1803). Previously to this, Selim had concluded an alliance with Russia, Naples, and England, in consequence of which a united Turkish and Russian fleet took possession of the Ionian Islands, which, conformably to a treaty concluded between Selim and the Emperor Paul, were constituted into a republic, A.H. 1215 (A.D. 1800). Selim acquired the protectorship of this new republic on condition of consenting to the incorporation of the kingdom of Georgia with Russia. Peace with France was concluded in A.H. 1217 (A.D. 1802), no change taking place, except that France acquired the free navigation on the Black Sea, a privilege which was soon afterwards granted to England and to several other European powers. Having thus secured his political position, Selim at last began his reforms. His administrative division of the empire has been mentioned above. In order to regenerate his army, the discipline of which was entirely slackened, he appointed a commission, from which the troops received a new organisation, the 'Nizam Jedid,' by which they were put on a footing similar to that of European armies. He also introduced several changes into the system of taxation: he gave a new organisation to the diwan; but in order to fill the treasury he debased the money. These reforms were the pretext for many rebellions. In the meantime the jealousy of

England and Russia was excited by the increasing influence of the French ambassador, Count Sebastiani; and Selim, as well as the Emperor Alexander, having both violated the treaty of Kuchuk Kainarji by arbitrarily interfering in the domestic affairs of Moldavia and Wallachia, a war broke out between Turkey and Russia, assisted by England (December 1806). Admiral Duckworth forced the passage of the Dardanelles, and threatened to bombard Constantinople. Sultan Selim displayed the greatest activity in preparing for resistance, and Admiral Duckworth, fearing that his retreat would be cut off, sailed back to the Mediterranean. Constantinople was saved but the Russians made continual progress on the Danube. The defeats of the army were considered by the people as a consequence of the 'Nizam Jedid;' they manifested their dissatisfaction, and the Janissaries, who saw their ruin in the new organisation, broke out in rebellion. To the number of 15,000 men, they occupied Pera, and directed their ordnance against the Seraglio. The Mufti joined their party, and by a fetwá declared "that Sultan Selim III. had forfeited the throne because he had procreated no heir, and introduced the Nizam Jedid and several other innovations." He was deposed May 29, 1807, and Mustapha IV., son of Abdul-Hamid, was elected in his place. Selim was put in confinement, and strangled by order of Mustapha, July 28, 1808. Mustapha was deposed, and was succeeded by Mahmud II. [MAHMUD II.; MUSTAPHA IV.]

SELJUKIDES, or SELJUCIANS, a dynasty originally Tartar, and descended from a captain named Seljuk; they settled first in Transoxiana, whence they made their way into Khorassan; and afterwards under the name of the Iranian, Kermanian, and Rumi dynasties, governed great part of the south of Asia.

The oriental account of the origin of this family, as far as can be gathered from somewhat conflicting statements, is as follows:—Seljuk was the son of Dekak, one of the bravest and most trusted officers of Bigú, chief or khan of the Kipchak Tartars, who inhabited the plain north of the Caspian. This prince, expecting from Seljuk the valour and fidelity of his father, brought him up from his boyhood, and found all his expectations fulfilled in him; but the growing influence of the favourite, and some insolence towards his master, provoked the latter to banish him from his territories; and Seljuk in consequence settled in the neighbourhood of Samarkhand and Bokhara, where he laid the foundation of a small state. He also embraced Mohammedanism, and is said to have been killed at the age of 107, in a skirmish with the pagan Tartars on the frontiers of the Mohammedan empire. Seljuk left three, or according to others, four sons; but the most influential members of his family were his two grandsons, Mohammed or Toghrul Beg, and Daoud or Gíafar Beg, who sent their uncle Israel to make terms of alliance with Mahmoud of Ghizni, the then ruler of Khorassan. Mahmoud is said to have questioned Israel on the resources of his family, and to have received for answer, in the quaint style of the East, that if Israel were to send to his camp one of two arrows which he carried in his hand, fifty thousand horsemen would be despatched to his orders; on sending the other arrow, fifty thousand more; and that if he despatched the bow, it would be answered by sending to him two hundred thousand horsemen; information which so startled Mahmoud that he confined the ambassador till his death in one of the castles of Khorassan. Oriental historians differ as to the passage of the Seljuk family into Khorassan, some of them placing this event under the reign of Mahmoud, and others under that of his son Massoud. It appears certain however that Abu Taleb Mohammed Roneddin (the pillar of the true religion), named also Toghrul Beg, or, as the Greeks have corrupted it, Tangralopex, was crowned at Nishapour, A.H. 429 (A.D. 1038), being the first of the Iranian dynasty of the Seljukides. The conquest of Nishapour was followed by that of Herat and Meru, and shortly after of nearly the whole of Khorassan. The whole of his reign of twenty-six years was occupied in wars with the sultans of the Gaznevite dynasty, and in successive conquests of the provinces of Persia; and on his death, and that of his brother Jafar Beg, the whole conquests of the two devolved upon the son of the latter, Alp Arslan, who during the life of his father and uncle had distinguished himself for his bravery and generalship.

Alp Arslan, signifying the 'courageous lion,' is the Turkish surname of this prince, whose original surname was Israel, and who received, on his embracing Mohammedanism, the name of Azzoddin, or 'strength of religion,' from the kalif Kaim Bimrillah. The beginning of his reign was chiefly occupied in the suppression of revolts which were raised in various parts of the empire; and many singular stories are told of the uniform and almost miraculous good fortune which attended him. In A.D. 1070 he signally defeated the Greeks at Akhat, a city near Lake Van; and in 1071 again encountered a larger army of this nation, commanded by the emperor Romanus Diogenes in person, completely routed his army, and took the emperor himself prisoner. The generosity with which Alp Arslan restored to liberty his illustrious captive, is a frequent theme of praise with the oriental writers, who are fond of adducing this conqueror as an example of bravery, generosity, and the instability of greatness. Alp Arslan, after many important conquests in Georgia, set out on his long-projected expedition for the conquest of Turkestan, and in this he ended his life. Incensed at the obstinate defence of a fortress which he had taken, he bitterly reproached the governor of

it, and ordered him to be cruelly put to death. The captive, taking a concealed knife from his boot, rushed upon the sultan; the latter, confiding in his own strength and unerring archery, bade his guards leave to him the punishment of the rebel; the arrow of the unrivalled bowman for this once missed its aim, and Alp Arslan received a mortal wound. He died a few hours after, in the tenth year of his reign (A.D. 1073), confessing with his dying breath the presumption which had been the cause of his fate.

Malek Shah, surnamed Moezzeddin Abulfatah, son of Alp Arslan, succeeded his father in 1073, and in the beginning of his reign defeated his two uncles, who had rebelled against him; one of these he afterwards poisoned in prison, as he found that his own troops were growing mutinous in the idea of making the captive their leader. In 1075 Aftis, one of the generals of Malek Shah, took Damascus, and subdued the greater part of Syria, but was unsuccessful in an attempt to possess himself of Egypt. Malek Shah himself reduced Mawarannahr (the country beyond the Jihun) in 1078, and two years afterwards made preparations to invade the dominions of Ibrahim, the ninth Gaznevide sultan. This intention however he was prevailed upon to relinquish, and he received in marriage the daughter of Ibrahim. In 1090 the successes of the Batanians, or Assassins, made Malek Shah send them an embassy, requiring obedience in a somewhat threatening tone; but the singular proof which the ambassador received of the devotion that these men bore their master (three of them having slain themselves successively at his command), induced the sultan to suspend his proceedings against them. Shortly after, the vizir Nizam-al-Mulk, who had been disgraced a little time before, was murdered by an emissary of this fraternity. Malek Shah died at Baghdad in 1092, leaving behind him the reputation of being the greatest of the Seljukian princes.

Barkiarok, the elder son of Malek Shah, was the virtual successor of his father, though the latter had left his kingdom to his younger son Mahmud, then only six years old, under the guardianship of his widow Turkan Khatun. The queen-regent fixed herself in Isfahan, where she was besieged by Barkiarok; but fearing a revolt of the citizens, she consented to divide the government with her stepson, taking for Mahmud the province of Isfahan and its dependencies, while she left to Barkiarok the rest of his father's dominions. The death of the infant prince shortly after however devolved the separated province again upon Barkiarok. His next opponent was his uncle Tajaddowlat Tataah, governor of all Syria, who was defeated and slain in 1095; and this revolt was followed three years after by that of Mohammed, younger brother of Barkiarok, who, by the mutiny of the troops of the latter, gained possession of Irak without striking a blow. From this date till 1104 the brothers were engaged in perpetual skirmishes, which were ended by a treaty in the year last mentioned, giving to Mohammed Syria, Mesopotamia, Mousul, Azerbaijan, Armenia, and Georgia, and leaving Barkiarok in possession of the rest. He died however in the year when this treaty was concluded, appointing as his successor his son Malek Shah. During this reign the Crusaders entered Syria.

Mohammed, the brother of the late king, was too powerful to permit the succession of an infant prince; and on the death of his brother he marched to Baghdad, where he was invested with the sovereignty. He conquered part of India, and refused an immense ransom for an idol, which he ordered to be placed as the threshold of a magnificent college built at Isfahan, that the feet of the faithful might perpetually trample on it. He died in 1117, appointing his son Mahmud Abulcassem his successor.

Sanjar however, brother of the late king, who had held the government of Khorassan under him and his predecessor during twenty years, took advantage of his power to claim the succession, leaving to Mahmud the province of Irak. In 1127 died Kothboddin, the Kharezm Shah, or king of Karazm. This dominion, originally dependent upon the office of chief cupbearer, to which the revenues of Kharezm were annexed, had grown into a virtual sovereignty, and though Kothboddin and his son Atsiz had actually performed alternately the office by which they held their land, the latter harassed the sultan Sanjar with perpetual hostilities, and is generally considered as the first actual sovereign of a dynasty which eventually overturned that of the Iranian Seljuks. In 1153, Sanjar, after gaining a signal victory over the Sultan of Gaur, was taken prisoner by the Turkmans, whom he had attempted to chastise for non-payment of their tribute, and detained by them for four years. He escaped by a stratagem, but died the year after his restoration to liberty, of grief, it is said, at the ravages committed by the Turkmans during his captivity. He died in 1157, after a reign of forty years. He was succeeded by Mahmud, the son of his sister, who governed for five years in Khorassan, after which he was defeated and deprived of his sight by a rebel, who shared with the sultan of Kharezm the province of Khorassan, and thus put an end to the Seljukian dominion there. Between Sanjar however and Mahmud, the eastern historians count three Seljukian sultans—

Mahmud Abulcassem, already mentioned as sultan of Irak, and his two successors in that dignity,

Togrul and

Massoud. The reign of these sultans, the last of whom died before the close of Sanjar's reign, are chiefly remarkable for their dissensions with the kalifs of Baghdad, and for the establishment of a new dynasty,

that of the Atabegs of Irak. With the death of Massoud, in 1152, ended the domination of the Seljuks in Irak. Of his successors,

Malek Shah II., who is variously represented as the grandson or great-grandson of Malek Shah I.,

Mohammed II., brother of Malek Shah, and

Suleyman Shah, son of Mohammed I., and

Malek Arslan, his nephew, little is recorded but their mutual dissensions and alternate depositions one of the other. The last-named of these died in 1175, and was succeeded by

Togrul II., the last sultan of this dynasty, reigned eighteen years, perpetually insulted and harassed by the Atabegs of Baghdad, and was at last slain in a contest with them in 1193.

The Seljuks of Kerman, or Karamania, beginning their empire with this province, extended it afterwards to Fars, Mekran, part of Segestan and Zabulistan, and perhaps part of India. The first of this line was

Kader, nephew of Togrul Beg, who appointed him governor of Kerman, in 1041. He was poisoned in 1072, by his nephew Malek Shah I., who had taken him prisoner in an attempt to invade his dominions. He left his dominions to his son,

Soltan Shah, who was permitted by the conqueror of his father to assume the government of them. He died in 1074, or, according to other authorities, in 1084. The remaining princes of this dynasty are—

Turan Shah, died in 1095.

Iran Shah, his son, slain by his subjects for his cruelty in 1100.

Arslan Shah, nephew of the last mentioned, reigned in peace 42 years, leaving his crown in 1141 to his son

Mohammed, who died in 1156.

Togrol Shah, son of Mohammed, died in 1167, leaving three sons, Arslan Shah,

Baharam Shah, and

Turan Shah, who reigned alternately as each could wrest the kingdom from the others, until Turan Shah left the kingdom to

Mohammed Shah, from whom it was taken by Malek Dinar, who conquered Kerman in 1187, thus terminating this dynasty.

The Seljuks of Rum (a name somewhat loosely applied to the dominions of the Greek emperors in Asia, but here including Asia Minor and part of the rest of what is now Turkey in Asia) take their origin from Kotolmish, nephew and general of Togrul Beg, who being sent by his uncle against the Greeks, and failing in his enterprise, rebelled from fear of his sovereign's displeasure. After long hostilities, which outlasted the life of Togrul Beg, his successor Alp Arslan concluded a treaty with Kotolmish, in which it was agreed that the latter and his heirs should hold all the territory he could take from the Greeks, and that the sultan should furnish him with assistance for that purpose. In consequence of this arrangement, Kotolmish and his sons gained possession of Persarmenia, Lycaonia, Cappadocia, and Bithynia; these conquests were left to

Suleyman, one of the five sons of Kotolmish, who is considered to have begun his reign as the first Seljuk sultan of Rum in 1087. There is however some discrepancy between Oriental and Greek historians as to the source of Suleyman's power, the latter deriving it from an independent grant made to him by Alp Arslan, and not from his father Kotolmish. Suleyman took Nice and Antioch, and was slain in 1085, under the walls of Aleppo, by the governor of Damascus, Tajoddowlat, having been engaged during the greater part of his reign in assisting one competitor for the Greek throne against another, and in taking advantage of their quarrels for his own aggrandisement. After an interregnum of nine years, he was succeeded by his son

Kilij Arslan, of whom little is recorded by the Oriental historians, and who is mentioned by the Greeks only in connection with their own history. He repaired Nice, and fixed his government there, but was driven from it by the Greeks and Norman crusaders. After a reign troubled by perpetual assaults of the two powers just mentioned, he was drowned in an action against the general of Mohammed, sultan of Irak, after taking possession of Mosul at the invitation of the inhabitants. The Greek writers introduce after him a sultan not mentioned by the Oriental historians, whom they call

Saysan, who, they say, after suffering several defeats from the Greeks, made with them a treaty greatly to the advantage of the latter, but was treacherously blinded and afterwards murdered, in 1116, by

Massoud, his brother, who reigned till 1152, when he was succeeded by his son

Kilij Arslan II., an active and prudent prince, who dispossessed his two brothers of their share of the kingdom left by his father, availed himself of the friendship or folly of the emperor Manuel to procure supplies of money for raising soldiers, and in a contest with Manuel, originating in the building of two forts by the latter, he defeated the Emperor in a sanguinary battle, and obtained as an article of peace the destruction of the forts. This treaty, being only partially fulfilled on the emperor's side, gave occasion to fresh hostilities, in the course of which Manuel died, and which ended in the aggrandisement of Kilij Arslan. In his old age, having divided his kingdom among his sons, he was treated by them with great unkindness; and Kothboddin, to whom Iconium had fallen, with the possession of which the succession to the empire was usually connected, imprisoned his father. The latter

however contrived to make his escape, and was reinstated in his kingdom by his son Kai Khosrou. In consequence of this, Kai Khosrou was invested with the government of Iconium, which had been taken by him from his brother; and he succeeded his father in the kingdom. At the death of the latter, in 1192,

Kai Khosrou, surnamed Gaiathoddin, obtained several successes in the beginning of his reign against the emperor Alexis; but in 1198 he was dispossessed by his brother

Roknoddin, who, taking advantage of the death of his brother Kothoddin, seized not only upon his dominions, but also on those of his other brothers. He died in 1203, leaving his son

Kilij Arslan III., a minor, from whom however the throne was wrested almost immediately on his accession by his uncle, the deposed sultan Kai Khosrou, who thus recovered his lost dignity. He reigned after this, says the Oriental history, with great power and dignity; he was afterwards concerned in the disputes of the pretenders to the Greek empire, and in one of these he perished in a personal encounter with Lascaris, one of the competitors. He left two sons, Azzoddin Kai Kaus, who died after a reign of a year, in 1219, and Alaoddin Kaikobad, who succeeded his brother. He is the Aladdin of the writers on the Crusades; and was one of the greatest princes of this dynasty. He extended the dominions of his family in the East, and governed with extraordinary prudence and firmness. He died in 1236. His son

Gaiathoddin Kai Khosrou II. was a voluptuous and uxorious prince, during whose reign the dominions of his house became tributary to the Mogols. He died in 1244. His son

Azzoddin succeeded him, and being required by Oktay, the khan of the Mogols, to come to do him homage, he sent his brother Roknoddin in his stead. The result of this was, that when a Tartar lieutenant or viceroy was sent into Rum, it was with the commission to put Roknoddin in the place of his brother. A division was afterwards effected, Azzoddin receiving the Western and Roknoddin the Eastern provinces. Azzoddin however was again deposed, and Roknoddin, whom he had attempted to murder, was placed in his room by the Tartars. On this occasion Azzoddin fled to the Greek emperor (1261), who for some time amused him with promises; but at length Azzoddin, perceiving or fearing the emperor's intention to make him prisoner, intrigued to bring the Tartars upon the emperor, and thus escaped. After this his name does not appear again in history. Of the remaining sultans,

Kai Khosrou III., son of Roknoddin, slain in 1283;

Gaiathoddin Massoud II., son of Azzoddin Kai Kaus, who died in 1288; and

Kai Kobad, the nephew of Massoud, who was put to death in 1300, little is on record beyond the dates annexed to their names. From the time of Gaiathoddin Kai Khosrou, the Seljuk sultans had been in fact mere pageants under the actual government of the Mogols, who summoned them to do the most servile homage, deposed and set them up, and even put them to death at their pleasure. Out of the wrecks of this empire arose that of the Othmans, or Turks, founded by Othman, a Seljuk captain.

SELKIRK, ALEXANDER, was born at Largo, on the coast of Fife, in 1676, and bred to the sea. Having engaged in the half-piratical half-exploring voyages in the American seas, into which the spirit of adventure then led so many of our countrymen, he quarrelled with his captain, one Straddling, by whom he was set on shore on the uninhabited island of Juan Fernandez, with a few books, his nautical instruments, a knife, boiler, axe, gun, powder and ball, for his whole equipment, in September 1704. After four years and four months' residence, he was taken off by two English vessels, commanded by Captain Woods Rogers, in February 1709, in the account of whose voyage we find the following passage.—"At first the terror and loneliness of the place sunk deeply on his spirits; but in time he became inured to it, and got the better of his melancholy. He had erected two huts, one of which served him for a kitchen, the other for a dining-room and bed-chamber; they were made of pimento wood, which supplied him also with fire and candle, burning very clear, and yielding a most refreshing fragrant smell; the roof was of long grass, and his wainscoting the skins of goats, near five hundred whereof he had killed during his residence here, and caught above five hundred more, which he marked on the ears, and then set at liberty. When his ammunition was exhausted, he caught them by running; and so practised was he in that exercise, that the swiftest goat on the island was scarcely a match for him. On his being first abandoned here, he relished his food, which was boiled goat's flesh and crawfish, but indifferently, for want of salt; however, in time he got the better of the nicety of his palate, and was well enough pleased with the seasoning of the pimento fruit. When his clothes were worn out, he made himself a covering of goat-skin, joined together with thongs which he had cut with his knife, and which he run through holes made with a nail instead of a needle: he had a piece of linen by him, of which he had made a sort of shirt, and this was sewn in the same manner. He had no shoes left in a month's time: his feet, having been so long bare, were now become quite callous; and he was some time on board before he could wear a shoe. The rats at first plagued him very much, growing so bold as to gnaw his feet and clothes while he slept: however, he soon taught them to keep at greater distance, with the

assistance of some cats that had been left ashore by the ships; of these and a few kids he made pets, and used to divert himself by teaching them a thousand tricks." He had one narrow escape, having fallen over a precipice while in the act of catching a goat: on recovering his senses, he found the animal dead under him. Thirty years after, the first goat shot by Anson's crew was found to be marked as above described. After his knife was worn out, he managed to forge others from old iron hoops. He had some difficulty in returning to the use of speech, and in reconciling himself to the ship's provisions and to spirits. Rogers made him his mate, and he returned to England in 1711. It is said that he gave his papers to Defoe, who stole from them the story of 'Robinson Crusoe;' but the above extract, which on that account we have given at full length, shows that whatever communications may have passed between Defoe and Selkirk, the former can have borrowed little beyond the mere idea of a man being left alone on a desert isle, there being scarcely anything common to the adventures of the real and the fictitious solitary. (*Voyage of Capt. Rogers, in Collect. of Voyages, 12mo, Lond., 1756; Chalmers, Biog.*)

\*SELLON, PRISCILLA LYDIA, a daughter of Captain W. E. Sellon, R.N., was born about the year 1820. She was led by the public appeals of the Bishop of Exeter to devote herself, in co-operation with the clergy of Devonport, to the visiting of the sick and poor of that place and of Plymouth, and especially in the endeavour to seek out and bring under educational influence the wretched and neglected children of those towns. Her name however first attracted public attention in 1849, when, in conjunction with the Rev. Dr. Pusey of Oxford [PUSEY, E. B.], she commenced the experiment of establishing an order of religious ladies at Devonport as a Protestant sisterhood, in imitation or emulation of the religious orders of the Roman Catholic Church. Their chief duties were to nurse the sick, and to carry on schools for the education of poor children in the three towns of Plymouth, Stonehouse, and Devonport. The institution at first was placed under the superintendence and control of the Bishop of Exeter, Dr. Phillpotts; and the sisterhood gained great applause for their efficiency in acting as nurses during the prevalence of cholera in 1848-49. A violent agitation however was raised at Plymouth against Miss Sellon and her community, who were accused of being emissaries of Rome in disguise; and on finding that some of the practices adopted in the sisterhood were not in accordance with the spirit of the Established Church, the Bishop of Exeter withdrew from them his episcopal sanction and patronage. As with the institutions whose general system she has imitated, Miss Sellon's Protestant Sisters of Mercy are divided into classes, and such of them as reside in the establishment live in community and wear a peculiar garb, their time being given either to the active duties of benevolence, or to reading, prayer, and religious meditation or quiet occupation. The chief difference between this Protestant and the Roman Catholic institutions would indeed seem to be in the fact that in Miss Sellon's community the vows are not irrevocable; but of course there are other differences arising from the peculiarities of the Romish discipline, which could only be distantly imitated in any Protestant establishment. Miss Sellon afterwards established branches of her community at Bristol, in London, and in other places, over which she exercises a general inspection in conjunction with Dr. Pusey. Her community however having lost the sanction of the Bishop of Exeter, has not succeeded in obtaining the formal approval of any other member of the episcopal bench, and occupies accordingly a very anomalous position in the Established Church.

SELVA, GIANNANTONIO, was born of respectable parents, at Venice, June 13, 1753, and had for his earliest instructor his uncle the Abbatte Gianmaria Selva, a man of considerable literary and scientific attainments. His inclination leading him to make choice of art as his future profession, he was placed under Pietro Antonio Novelli (a painter who died in 1804, aged seventy-five); but after he had grounded himself in drawing and the elements of painting, he passed to the study of architecture, and became a pupil of Temanza [TEMANZA, TOMASSO]. In 1778 he set out for Rome, where besides studying the various architectural monuments of that capital, he became intimately acquainted with Pindemonte, Piranesi, Battoni, Quarenghi, and others, who either then were, or afterwards became distinguished, for among them was Canova, with whom he visited Naples, Pompeii, Caserta, and Pastum. While at Rome, he also obtained the notice and favour of his countryman the noble Girolamo Zulian, who was there in quality of ambassador from the republic, and who was a liberal encourager of art. By him Selva was commissioned to embellish and fit up a saloon in his palace expressly for an entertainment given to the Archduke Ferdinand of Austria and his bride; before which he had been similarly employed by the Senator Rezzonico to decorate an apartment for him, which was to have been done by Quarenghi, but that architect was then obliged to depart for Russia. [QUARENGLI, GIACOMO.] On quitting Rome Selva visited France and England, in both which countries he diligently collected information of every kind bearing upon architecture and building; and returned to Venice at the close of 1780. There, as opportunity offered, he introduced various practical improvements, and among them greater attention to internal convenience and disposition of plan, setting also the example of a more sober taste in design. Among the private

mansions on which he was employed, are the Casa Mangilli, that of Count Guido Frizzo, and the Palazzo Manin, which last, however (a work of Sansovino's), he only restored and altered in the interior. He also rebuilt the Palazzo Pisani at Padua. The public work to which he owes his chief reputation is the celebrated Teatro della Fenice, erected in 1790-91, his design for which was selected from among those sent in by twenty-nine other architects. Another structure of the same class designed by him was the theatre at Trieste, but in the execution of the work very great liberties were taken. A third theatre planned by him was never executed, but when he was some years afterwards at Florence, he found that parts of his design had been adopted for a theatre then lately erected there. To the above may be added the façade of the Casa Vigo d'Arzeri, and a Casino at Padua; the Casa Vela at Verona; the façade of the church Spirito Santo at Udine; the façade of San Maurizio at Venice, begun by Zogari, and left unfinished by Selva, after whose death it was completed with some modifications by Diedo. The same fate attended his last and most favourite work, the small church Del Gesù, which was finished after his death by Diedo (author of many of the architectural descriptions in Cicognara's *Fabbriche più cospicue di Venezia*), and Giuseppe Borsato. Selva died rather unexpectedly, at the beginning of 1819, and therefore could not have erected, as Nagler says he did, Canova's church at Possagno, the first stone of which was not laid till July 11th in that year. Selva was also a writer upon subjects of his art; he as well as Diedo contributed to Cicognara's work above-mentioned; and also translated Perrault's treatise on the orders, and Chambers's *Civil Architecture*.

SEMI'RAMIS, a queen of Assyria, who, according to some, reigned about B.C. 2000, or, according to others, about B.C. 1250, while the account of Herodotus i. 184, still further confuses the chronology. Her whole history, as it has come down to us, is however a mere mass of fables. She is said to have been the daughter of the goddess Dereto, and of extraordinary beauty and wisdom. (Diod., ii. 4.) She became the wife of Onnes, who served in the army of Ninus, first king of Assyria, and followed her husband in the expedition of the king against Bactra. Semiramis showed the king how he might gain possession of the town. He followed her advice, and was victorious, and, being no less charmed with her beauty than with her judgment, he made her his wife, whereupon her former husband, in despair, put an end to his life. (Diod., ii. 6.) After a reign of fifty-two years, Ninus died, or, according to others, he was murdered by his own wife Semiramis (Aelian, *Var. Hist.*, vii. 1.), and left a son Ninyas. According to some writers Semiramis took possession of the throne by the right of succession; according to others, she assumed the dress and appearance of her son Ninyas, and deceived her subjects, in this disguise, until she had accomplished such wonderful deeds that she thought it superfluous to conceal herself. She is said to have built Babylon and to have adorned it with the most extraordinary splendour, and all this in a very short time. She also built several other towns on the Euphrates and Tigris, to promote commerce among her subjects. (Diod., ii. 7-11.) On the main road of her dominions she erected an obelisk, 130 feet high, and laid out a magnificent park near Mount Bagistanum, in Media, and at the foot of the mountain she caused to be cut on the face of the rock her own figure and those of a hundred of her attendants, with Assyrian inscriptions. She is moreover said to have formed a large lake to receive the overflowing of the Euphrates, to have laid out several other parks near the town of Chauon, to have embellished Ecbatana, to have provided that town with water from Mount Orontes, and to have cut a high road through Mount Zarcæum. All these things were done at her command, while she was traversing her own dominions with a numerous army. She left monuments of her greatness and power in every place that she visited. (Diod., ii. 14; Zonar., *Lex.*, ii. 1637.) From Persia she turned to the west, and conquered the greater part of Libya and Ethiopia. She also made war against an Indian king, Stabrobates, with a great army and a fleet on the river Indus. (Diod., ii. 16, &c.) Semiramis was at first successful, and numerous towns submitted to her, but at last she was wounded by the king, and entirely defeated in battle. According to some traditions she escaped to her own country, with scarcely the third part of her army; according to others, she fell in the battle: and a third tradition states that soon after her return she was murdered by her own son Ninyas. Some also believed that she had suddenly disappeared from the earth, and returned to heaven. (Diod., ii. 20.) As we have said the accounts given of her must be regarded as mere myths; but her name occurs among the cuneiform inscriptions which have been recovered and placed in the British Museum, and which are being deciphered by Sir Henry Rawlinson for publication by the trustees of the British Museum. [SARDANAPALUS.]

SEMLER, JOHANN SALOMO, one of the most influential German writers on theology, was born at Saalfeld, now a dependency of Saxe-Meiningen, on December 18, 1725. His father was archdeacon of Saalfeld, and he was early initiated into the doctrine of the Pietists, whose opinions were predominant at the court of the then reigning Duke of Saalfeld. Soon after his removal to the University of Halle, to which he was sent in 1742, he abandoned the doctrinal views in which he had been brought up, but retained much of their devotional feeling. By a defence of some passages in Scripture which had been controverted by Whiston he made himself a reputation, and in

1749 was called to Coburg as professor. In 1750 he became editor of the *'Coburg Zeitung'*, his writing in which procured him the commission to prepare a state-paper on the contests of the Duke of Würtemberg with his vassals. In the same year he was made professor of history and poetry at Altdorf, and in 1751 professor of theology at Halle, where his lectures were numerous attended, exciting attention by their acuteness, their philological penetration, and the vast amount of reading they displayed; but he was deficient in systematic order and in style. In 1757 he was made director of the theological seminary. He was one of the earliest adherents and supporters of what is styled in Germany Rationalism. The Rationalists combated the Deists, but they treated the Scriptures as any other secular book; most of them denied their divine origin, explained away the miracles and prophecies, but considered the doctrines as true, and capable of being proved by reason. They advocated the Protestant principle of the right of private judgment, and their critical investigations of the genuine texts of Scripture were frequently valuable. Semler's tenets and his merits may be seen in his remarks on Wetstein's *'Prolegomena'*, which he republished; as also in his *'Abhandlung von der Untersuchung des Kanons'*, in 1771, in 4 vols.; and in his *'Apparatus ad liberalem Veteris Testamenti Interpretationem'*, published in 1773. He attacked with much zeal Basedow, who had advocated some of the theories of Rousseau, and Bahrdt, who professed deism. In 1777 he was induced to consent to the application of a part of the funds of the theological seminary to the establishment of a philanthropic institution, of which also he had the direction; but was dismissed from both in 1779 by the minister Zedlitz, who had prevailed on him to sanction the new establishment. In 1778 his adoption of the Prussian edict respecting the national religion exposed him to the reproach of inconsistency, and occasioned attacks on his moral character that embittered the latter years of his life. He died on March 14, 1794. Among other works published by him we may mention *'De Demoniacis'*, 1760; *'Umständliche Untersuchung der dämonischen Laute'*, 1762; *'Versuch einer biblischen Dämonologie'*, 1776; *'Selecta Capita Historiæ Ecclesiasticæ'*, 3 vols., 1767-69; the uncompleted *'Commentationes historice de antiquo Christianorum Statu'*, 2 vols., 1771-72; *'Versuch Christlicher Jahrbücher, oder ausführliche Tabellen über die Kirchengeschichte bis aufs Jahr 1500'*, 2 vols., 1783-86; and *'Observationes novæ, quibus historia Christianorum usque ad Constantinum magnum illustratur'*, 1784. He also wrote an account of himself under the title of *'Semlers Lebensbeschreibung von ihm selbst verfasst'*, published in 2 vols. in 1781-82.

SENAC, JEAN, was born at Lombez in 1693, and obtained the diploma of Doctor of Medicine at Rheims. He was appointed first physician to the king in 1752, and was a member of the Royal Academy of Sciences of Paris. He died in 1770. The present reputation of Senac is due to his great work on the structure of the heart, its action, and its diseases, which was first published at Paris in 1749 in two quarto volumes, and was afterwards re-edited by Portal, and translated into English and other languages. At the time of its publication this work was justly regarded as the best anatomical monograph ever written in France; and although recent investigations have detected in it numerous errors, and have deprived it of much of its intrinsic value, it will always remain an admirable monument of the learning and the industry of its author. The other writings of Senac are unimportant; a complete list of them may be found in Haller's *'Bibliotheca Anatomica'*, t. ii., p. 169.

SENAN, a Sabian physician, astronomer, and mathematician, whose names, as given at full length by Ibn Abi Osaibia (*'Oloün al-Ambā fi Tabacāt al-Atebbā'*, *'Fontes Relationum de Classibus Medicorum'*, cap. 10, sec. 4), are ABU SAÏD SENÂN BEN THÂBET BEN CORRAH. He was born at Harran in Mesopotamia, and his father, his brother, and his son were among the most celebrated physicians of their time. [THÂBET.] He was physician-in-ordinary to Moctader and Cäher, the eighteenth and nineteenth of the Abbasside kalifs of Baghdad, who reigned from A.H. 295 to A.H. 322 (A.D. 903-934). By the former of these princes he was advanced to the dignity of the *'Rais alai 'l-Atebbā'* (*'chief of the physicians'* or *'archiater'*). He was also appointed public examiner, A.H. 319 (A.D. 931); and the kalif, in consequence of an ignorant practitioner's having killed one of his patients, ordered that no one for the future should be allowed to practise as a physician until he had been licensed to do so by Senân: the number of persons in Baghdad who underwent this examination is said to have amounted to 830. (*'Arab. Philosoph. Biblioth.'*, apud Casiri, *'Biblioth. Arabico-Hisp. Escur.'* tom. i., pp. 437-439). The anonymous author of this work relates, as Gibbon says, "a pleasant tale of an ignorant but harmless practitioner," who presented himself before Senân for a licence to practise; which anecdote is told also with additional circumstances by Abul-Faraj, *'Chron. Syr.'*, p. 187; and *'Hist. Dynast.'*, p. 197. The kalif Cäher showed his favour to him by wishing him to embrace Islâm. This he refused for some time, but was at last terrified by threats into compliance. As however the kalif still continued to behave with great severity towards him, and at the same time transferred his favour to another physician, Isa Ben Yusuf, he fled to Khorasân: he afterwards returned to Baghdad, and died A.H. 331 (A.D. 942). The titles of several of his works are preserved in Casiri ( *loco cit.*), relating chiefly to astronomy and geometry. Like his father Thabet, he appears

to have written also several works relating to the religious doctrines, rites, and ceremonies of the Sabians.

SENECA, LUCIUS ANNÆUS, was probably born a few years before the Christian era, at Cordoba in Spain, and was brought to Rome while quite a child for the prosecution of his studies and for his health. ('Con. ad Helv.,' 16.) He was the second son of Marcus Annæus Seneca, the rhetorician, and the author of 'Suasoriae, Controversiae, Declamationumque Excerpta,' whose memory was so strong that he could repeat two thousand words in the same order as he heard them. He had the reputation of being a man of taste, but when we consider that his taste was so comprehensive as to admit a hundred to the rank of orators in a century whose orators fame limits to five or six, we may reasonably doubt its value and delicacy. As was natural with such a man, he assiduously directed the studies of his son to rhetoric, a preference which Lucius soon rebelled against, and, placing himself under Papirius Fabianus, Attalus, and Sotion, devoted himself to philosophy. In common with many others who aspired to wisdom, young Seneca travelled into Greece and Egypt, and in his 'Questiones Naturales' (a remarkable work, which shows him to have been master of the scientific knowledge of his time), he has judicious and accurate remarks on Egypt and on the Nile. But his father at length succeeded in convincing him that worldly interests ought not to be sacrificed to philosophy, and he undertook the business of an advocate. He became quaestor, and under the emperor Claudius rose to distinction; but the particulars of his life are at this period nowhere traceable with any degree of certainty, and we must therefore suspend our judgment as to the truth of Messalina's accusation against him of adultery with Julia, daughter of Germanicus. (Tacit., 'Ann.,' xiii. 42.) His intimacy and connection with her were certainly very equivocal, and the manners of the time still more so; but then Messalina, who was humbled by the pride of the princess, and who nowhere manifested any nice sense of right and wrong, is not worthy of much credit. The result however was Julia's exile and subsequent assassination, and Seneca's banishment to Corsica. Here, according to his account, he spent his time in the study of philosophy, and writing his treatise on 'Consolation.' The stoicism looks very well on paper, but, unfortunately for his credit, we find him courting the emperor in a servile strain of adulation, and begging to be restored to favour.

On the death of Messalina Claudius married Agrippina, who prevailed on him to recall Seneca, and to bestow on him the office of prætor (Tacit., 'Ann.,' xii. 8), and she afterwards made him, with Afranius Burrhus, tutor to her son Nero. To Seneca's lot fell the instructing of the young prince in the principles of philosophy and the precepts of wisdom and virtue; with what success all the world knows. In fact an impartial scrutiny of the events of that period, and of Seneca's connection with Nero, leads to the probable conclusion of his being a pander to Nero's worst vices. Not to repeat the many stories current at Rome of his particular acts (which if not fully attested, are yet equally so with those of his virtue and decorum), we will only insist on his immense wealth, and demand whether Nero was a man likely to have bestowed such munificent presents (avaricious as he was known to be) upon one who had no other claim upon him than the instruction of precepts and axioms which he must have laughed at in supreme contempt? Juvenal speaks of "the gardens of the wealthy Seneca." He possessed, besides these gardens and country villas, a superb palace in Rome, sumptuously furnished, containing five hundred cedar-tables with feet of ivory, and of exquisite workmanship. His hard cash amounted to 300,000 sesteria, or 2,421,870*l.* of our money; a sum, the magnitude of which might well excite the sarcastic inquiry of Silius, by what wisdom or precepts of philosophy Seneca had been enabled in the short space of four years to accumulate it? (Tacit., xiii. 42, &c.) We will not affirm with his enemies that he instigated or abetted Nero in the murder of his mother, though we know that Seneca became the foe of his former protectress, and Seneca was the author of the letter which Nero sent in his own name to the senate, in which she was charged with conspiring against her son, and with having committed suicide on the discovery of her guilt.

Seneca however soon found that the tyrant who had made such singular use of his precepts, and whose vices had so enriched his philosophical abode, had cast jealous eyes upon this very wealth. He therefore with consummate address offered to surrender the immense treasures which he had accumulated, and begged permission to retire on a small competency. Nero would not accept this. Seneca then shut himself up, "kept no more levees, declined the usual civilities which had been paid to him, and under pretence of indisposition avoided appearing in public." (Tacit., 'Ann.,' xiv. 53, &c.) Nero now attempted to poison him by means of Cleonice, but he failed in the attempt. Shortly after Antonius Natalis, when on his trial for his share in the conspiracy of Piso, mentioned Seneca as one of the conspirators. All Seneca's biographers loudly deny this. Wishing to keep their Stoic free from the slightest taint, they adopt the most absurd conjectures, assert the most puerile motives, and suppose anything and everything that could clear him of the charge. One says Natalis wished to curry favour with Nero by implicating Seneca. But was Nero a man to need such roundabout measures? Another confidently asserts (upon a 'perhaps' of Brucker) that Nero himself instigated the charge. Upon what authority is this said? These are the most reasonable of the suppositions. We dissent from them all,

and we dissent from nearly every judgment of Seneca that we have hitherto seen. Seneca, by confession of every authority, dreaded Nero, had cause to dread him, and therefore even to save his life from impending danger would have strong reason for joining the conspiracy. Piso and Seneca were intimate friends. Natalis had said that he had been sent by Piso to visit Seneca during his illness, and to complain of his having refused to see Piso, and that Seneca, in reply, had said that frequent conversations could be of no service to either party, but that he considered his own safety as involved in that of Piso. (Tacit., 'Ann.,' xv. 60.) Granius Sylvanus, tribune of the prætorian cohort, was sent to ask Seneca whether he recollected what passed between Natalis and himself. Sylvanus proceeded to his country-house near Rome, to which Seneca had either accidentally or purposely (Tacitus does not decide which) returned from Campania on that day; and he there delivered his message. Seneca replied, that he had received a complaint from Piso of his having refused to see him, and that the state of his health, which required repose, had been his apology. He added that he saw no reason why he should prefer the safety of another person to his own. We do not see in Seneca's life anything contradictory to the supposition of his being implicated in any conspiracy whatever: certainly not in one against Nero.

Nero, satisfied of his treason, ordered him to put himself to death. He bore this fate with Stoic fortitude, and opened a vein in each arm. His advanced age however caused the blood to flow so slowly that it was found necessary to open also the veins in his legs. This still not succeeding, Statius Annæus gave him a dose of poison, but, owing to the feeble state of his vital powers, it produced little effect. He then ordered his attendants to carry him to a warm bath, and, plunging into it, he was speedily suffocated. His wife Paulina is asserted by his biographers to have "refused every consolation except that of dying with her husband, and earnestly solicited the friendly hand of the executioner." Dion Cassius asserts that Paulina, who was considerably younger, was forced to have her veins opened owing to the stoical exhortations of her husband, and to fulfil her frequent promise of never surviving him. Tacitus says (xv. 63) that her veins were opened in compliance with her own wish, and that the blood was stopped by her attendants at the command of Nero: he adds that it is doubtful whether she was conscious of her veins being tied up.

The death of Seneca has been loudly applauded—has sometimes been called sublime; but this is owing to an ignorance of the time and inattention to Seneca's own doctrines. With the Stoics death is nothing ("mors est non esse," 'Ep.,' liv.); it is not an evil, but the absence of all evil ("mors adeo extra omne malum est, ut sit extra omnem malorum metum," 'Ep.,' xxx.). There is nothing after death—death itself is nothing:

"Post mortem nihil est, ipsaque mors nihil." ('Troades,' act. i.)

With such a doctrine there could be no fear of death, and consequently we find that courage to die was common in Seneca's time. In fact his death was like his writings—pompous, inflated, epigrammatic, and striking to common judgments, but bearing no inspection. His terse aphoristic style has rendered him one of the most frequently-quoted authors of antiquity; and it was Scaliger, we believe, who remarked that he did more honour to the works of others than to his own.

Besides his 'Physical Questions,' 'Epistles,' and various moral treatises, he is the supposed author of ten tragedies. On this matter however there is much dispute, some declaring these tragedies to be the composition of five or six Senecas; but Quintilian, whose authority is superior to every one on the matter, speaks of Seneca without surname or qualification, and in quoting a verse from the 'Medea,' cites it as a verse of Seneca, and not of one of the Senecas. ('Inst. Orat.,' ix. 2.) Further, Quintilian, in his list of the Roman poets (x. 1) (in which each name is accompanied by a distinguishing epithet), makes no mention of any author of these ten tragedies; but he says of Seneca that he wrote orations, poems, epistles, and dialogues, thus appearing to include the tragedies under the term poems. The argument drawn from Seneca's own silence respecting them, or respecting any poetry of his whatever, is but negative, and is nullified by Tacitus, who distinctly asserts him to have written verses ever since Nero had taken to write them. ('Ann.,' xiv. 52.) But apart from these historical evidences, we believe internal evidence to be quite sufficient to convince the most sceptical—evidence not only of style and epigram, but of uniform coincidence in thought and expression.

Of the intrinsic merit of these tragedies there is as much difference of opinion as of their authorship. They have been lauded by commentators and abused by critics. They have been judged from a false point of view. They have been considered as imitations of the Greek dramas, and have been considered as dramas. Both these points of view are erroneous. They were never written for representation, but for reading aloud. This simple fact overturns all criticisms. Not being intended for the stage, any dramatic objection must be unfounded; nor could they for the same reason have been imitations of the Greek, which were written for representation. The proof of this fact is to be seen in the history of the Roman drama and literature by any one who looks attentively, and is to be seen also by a scrutiny of the pieces themselves. The plot is often concluded in the first act, but still he goes on through the other four with great patience. The

scenes are not linked together; the incidents are not prepared. Now Seneca could not have been ignorant of the common rules of tragedy, known universally in his day; and if he has not attended to them, we are forced to conclude it is with intention that he has done so.

His tragedies were written to be read, and they were read with great applause. They have not the rudest attempts at dramatic delineation. A story is chosen, always a well-known one, on which to string descriptions, declamations, and epigrams. The dialogue is the most appropriate form for such exhibitions, and consequently he has told his story in dialogue. This seems to us the whole matter. Considered in this point of view, they possess great merits of a certain order. Their delineations are uniformly Stoical; their sentiments elaborated from philosophy, with very little poetry in them; their epigrams admirable. Seneca was not a poet. There was no poetry possible at his time, and if it had been, Seneca's mind was of a reflective, not of an emotive cast. And although most of the poetry in these tragedies is critical, conscious, and reflective—although we seldom see that spontaneity of thought and feeling which in true poets springs up from the simplest reflection—yet we cannot but be struck with certain passages of unquestioned power and freshness both of thought and expression. There is a magnificent flash of dramatic feeling and expression in his 'Edipus,' which is worthy of Sophocles or Shakspeare, and not borrowed from the former, as so many of his beauties were. It is when Edipus has put out his own eyes, on learning that his wife Jocasta was also his mother (Jocasta has killed herself, and her corpse is before him on the ground), and determining to wander, blind as he is, from Thebes, the birthplace of his woes, he makes two steps in advance, but arrests himself *for fear of stumbling against his mother*:

"Siste, ne in matrem incidas."

This is very pathetic, and shows an intensity of dramatic consciousness which we find nowhere else in Seneca. It is in his 'Medea' that the celebrated prediction occurs which is generally applied to the discovery of America; with what critical propriety, any one may judge who will take the trouble of turning to it. ('Venient annis,' &c.)

The tragedies of Seneca were translated into English by Jasper Heywood, son of the epigrammatist; by Alexander Neyle, by John Studely, by Thomas Nuce, and by Thomas Newton; and there appeared a complete edition in 1581, entitled 'Seneca his Tenne Tragedies, translated into English, Mercurii nutrices horæ' (Collier, 'Hist. Dram. Poet.' iii, p. 14); but the translators by no means adhered to the original, interpolating lines, speeches, and choruses, as they thought fit. The editions of Seneca are very numerous. The most recent edition of all his works is that of C. F. Fickert, 3 vols. 8vo, Lips, 1842-45; the Bipont, 1809, and that of Ruhkopf, Lips., 1797-1811, are each in 5 vols. 8vo.

SENEFELDER or SENNEFELDER, ALOIS, the son of a performer at the Theatre Royal, Munich, was born about 1771 or 1772. The history of this persevering inventor, and of the difficulties with which he had to struggle in bringing the art of lithography into successful and profitable operation, supplies an interesting illustration of the power of genius to overcome the most adverse circumstances. When young, Senefelder was inclined to follow the profession of his father, who preferred placing him at the University of Ingolstadt, where he devoted himself to the study of jurisprudence, occasionally indulging his predilection for the stage by performing at private theatres, and by employing his leisure time in dramatic composition. In 1789 he wrote a comedy, called 'Die Mädchenkenner,' which was published, and by which he cleared fifty florins. Losing his father soon after, he was compelled from want of pecuniary means to discontinue his studies; and he tried for some time to devote himself to the stage. Disappointed in his hopes of success as a performer, he resolved to try his fortune as an author, and published a second play, which did not pay his expenses. While this was passing through the press, Senefelder made himself acquainted with the process of printing, and became desirous of procuring the necessary apparatus for printing his own works. Being too poor to gratify this desire, he endeavoured to discover some other mode of printing, but was defeated in several plans by want of means. One of the projects he abandoned from this cause was a kind of stereotyping. He then tried etching on copper, but found difficulties arising from his want of practical knowledge, and still more from the expense of the copper-plates, which he ground and polished after using, to make them available for more than one operation. To diminish this difficulty, he used a piece of fine Kellheim stone for his exercises in writing backwards; and subsequently tried printing from it instead of copper, though without much success. Of this use of stone, merely as a substitute for copper, Senefelder disclaims the invention; but his experiments upon it were important, as leading to the discovery of chemical lithography. The next step towards this discovery was occasioned by an incident which curiously illustrates the situation of the needy inventor. Being unacquainted with the composition, used by engravers for covering defective places in their etching-ground, or enabling them to rectify mistakes, he had invented a kind of chemical ink for the purpose, consisting of wax, soap, and lamp-black. One day, when he had polished a stone-plate for etching, his mother entered the room, requesting him to write a bill for the washerwoman, who was waiting for the linen. He found that he had not even a slip of paper for the purpose, having used all in taking

proof-impressions, and that the inkstand was dry; and as the matter was urgent, he wrote the list on the prepared stone with his chemical ink, intending to copy it at leisure. Some time afterwards, when about to clean off this writing, it occurred to him that, by the application of aquafortis and water, he might etch the stone so as to leave the writing in sufficient relief for printing from. The experiment succeeded; and as soon as he had brought this new invention into a practical form, he applied himself to the means of bringing it into operation, so as to gain a livelihood by it.

Being unable otherwise to raise the necessary capital for the construction of a press, the purchase of stones, paper, &c., Senefelder enlisted as a private in the artillery, as substitute for a friend, who promised him a premium of two hundred florins, with which he hoped to procure the means for carrying on his operations in his leisure hours, until he could procure his discharge. With these views he went to Ingolstadt with a party of recruits. But he was doomed to disappointment; for it was discovered that he was not a native of Bavaria, and therefore could not serve without a special licence. While at Ingolstadt, he was led to conceive the peculiar fitness of his new process for printing music; and he suggested it to a musician of the Elector's band, named Gleisner, who was preparing some music for publication. In connection with this person a few works were published, which proved the capabilities of the art. The Elector Charles Theodore sent a present of a hundred florins to the printers, and promised an exclusive privilege for the exercise of their art; but the Electoral Academy of Sciences, before which Senefelder laid a copy of the first work, with an account of the process, acted very differently. He had mentioned the small cost of the press as an illustration of the economy of his invention, and was grievously disappointed when, instead of an honourable mention in the 'Transactions' of the Society, he received a present of twelve florins, with an intimation from the vice-president that his memoir had been favourably received; and that, as the expense of the press did not, according to his own statement, exceed six florins, he hoped a double compensation would satisfy his expectations.

The promising aspect of affairs at this time, about 1796, was clouded by the difficulty of constructing a more efficient press than had been used in the first operations. A rolling-press had been used in the first instance; but owing to a circumstance which escaped the notice of Senefelder, he failed in his attempt to make a new one. He therefore made a machine, in which the pressure was obtained by a stone of three hundred pounds weight falling from a height of ten feet; a plan which produced good prints, but broke the stones after a few impressions. Having a narrow escape from being killed by the falling stone in this press, Senefelder abandoned it, and constructed another on a different principle. Such obstacles, and the difficulty of finding suitable persons to employ in the new process, brought the establishment into discredit, and prevented the proprietors from obtaining their expected exclusive privilege during the life of Charles Theodore.

The lithographic printing here alluded to appears to have been mechanical, as Senefelder informs us that he discovered chemical printing—the art which has since attained so high a degree of excellence and utility—in 1798. Some of the earliest specimens of the art, as applied to pictorial subjects, were executed under the superintendence of the Rev. Mr. Steiner, director of the Royal School establishments. In 1799 Senefelder obtained an exclusive privilege for Bavaria for fifteen years, and carried on a considerable business, employing his two brothers and two apprentices. As the process was no longer kept secret, many persons visited the offices, among whom was Mr. André of Offenbach. With this gentleman Senefelder entered into partnership, and commenced arrangements for obtaining patents and establishing presses in Vienna, London, Paris, and Berlin. While engaged in this project, he visited London, but without succeeding in his object. Unfortunate circumstances led to a hasty dissolution of this promising partnership, in 1800. For some time afterwards, Mr. Von Hartl, who is described as imperial court agent, took an active part in promoting the invention, the application of which to cotton-printing then excited much attention. A fair prospect which now appeared opening for Senefelder was destroyed by the derangement in the cotton manufacture caused by the suspension of commercial intercourse between England and the Continent, by Bonaparte; and some improvements which he had effected in calico-printing became useless to him by being divulged by a person employed, before a patent was secured for them. In 1806 an extensive lithographic establishment was formed at Munich, by Senefelder, in connection with Baron Aretin and others. This partnership lasted about four years, during which period a great variety of works were executed; some of them for the government. Several other lithographic establishments were also in successful operation in 1809, when Senefelder obtained an engagement which rewarded him for the vicissitudes of the early part of his career, and placed him in comfortable circumstances for the remainder of his life. A lithographic office was formed about that time for printing the plans of a new survey of the kingdom, of which a great number were required. Owing to an intrigue, the superintendence of this work was not, in the first instance, given to Senefelder; but in October 1809, he was appointed to the office of inspector of the Royal Lithographic Establishment, with a salary

of fifteen hundred florins per annum, and with permission to carry on his private business also. The subsequent improvements effected by Senefelder were attributed by himself to the ease and independence which this honourable engagement afforded.

As early as 1809 Senefelder had commenced a collection of specimens to illustrate an account of his invention; but circumstances impeded the completion of the work, which might probably never have been finished but for the exertions of Mr. Von Schlichtegroll, director of the Royal Academy of Munich, who, in 1816 and 1817, published several letters on the subject, urging the publication of a work that should perpetuate the memory of the invention, and set at rest the erroneous rumours then prevalent on the subject. Senefelder therefore wrote and published an account of his inventions and discoveries, with a preface by Von Schlichtegroll, and a dedication to the king of Bavaria. This work was shortly translated both into French and English, the latter in 1819, in a quarto volume, entitled 'A Complete Course of Lithography,' &c. It has no pretension to literary merit, but cannot fail to prove interesting as a simple and circumstantial record of the experiments and difficulties attending the invention of a highly important art. The illustrations of various styles, some of which are curious, add to the value of the work, to which is prefixed a portrait of Senefelder.

The rapid extension of lithography, even before the publishing of this book, must have been highly gratifying to the inventor, who observed on this subject, "I esteem myself happy in seeing, in my own lifetime, the value of my invention so universally appreciated; and in having myself been able to attain in it a degree of perfection which, in a thousand other inventions, has not been reached till long after the death of the first inventor." In 1819 the Society for the Encouragement of Arts, &c., in London, voted their gold medal to Senefelder, as the inventor of lithography. Senefelder married about the time of his appointment to the office in which, we believe, he spent the remainder of his life. He died at Munich, February 26, 1834, in his sixty-third year.

SENNERTUS, DANIEL, was born at Breslau in 1572. In 1601 he took the degree of Doctor of Medicine at Württemberg, and in the following year was elected professor there. He died of the plague in 1637. During his life, and for many years after, Sennertus enjoyed the highest possible reputation as a learned and skilful physician. His works, which are very numerous and long, prove him to have been a skilful compiler from those of others. He was the first to endeavour to reconcile the then modern doctrines of Paracelsus with the ancient ones of Galen, which they had well nigh overturned; and he appears to have been much less credulous than most of his contemporaries on the subjects of alchemy, the universal remedy, and others of the like kind. The whole works of Sennertus were published in folio at Venice in 1645, and in subsequent years at Paris and Lyon.

SEPPINGS, SIR ROBERT, F.R.S. the distinguished naval architect, received his education as a shipwright under Sir John Henslow, surveyor of the navy, and continued in connection with the important service of our dock-yards during a period of fifty years. He was the author of many improvements of the first order in our naval architecture, including the system of diagonal bracing and trussing, which he devised while he was master shipwright of Chatham Dockyard. This system formed the subject of two memorable papers in the 'Philosophical Transactions' of the Royal Society, for the years 1814 and 1818, one by Sir R. Seppings in each of those years, and one by the celebrated Dr. T. Young, For. Sec. R.S. [YOUNG, THOMAS.] in the former, and which attracted an unusual amount of public attention. The great principle of this method was such an arrangement of the principal timbers as would oppose a powerful mechanical action to every change of position of the ribs and other timbers in every part of the ship, thus firmly compacting together the entire fabric, and preventing that perpetual racking of beams and working of joints which in the ancient system of ship-building, produced hogging, creaking, leakage, and rapid decay; and filling up likewise every vacuity between the timbers, which are occasionally the unavoidable receptacles for foul air, filth, vermin, and various other sources of rotteness and disease. These important improvements, though opposed to the inveterate prejudices of the older shipwrights, a body of men who have not sufficiently valued and understood, in this country at least, the just principles of mechanical action, in the practical operation of ship-building, were universally adopted in the navy under the enlightened administration of Mr. Charles York, and the powerful advocacy of Sir John Barrow in the 'Quarterly Review;' and the merit of their author was acknowledged by his appointment as surveyor of the navy, and by the award of the Copley Medal of the Royal Society, of which he became a Fellow on the 10th of November 1814.

While the claims of Sir R. Seppings to the invention of the system of diagonal bracing in naval architecture is indubitable, it may not be out of place to record here the following point of information. It can be no derogation to the merits of discoverers or inventors to show that their progress is a portion of the general advance of the human mind. Sir John F. W. Herschel has stated in a letter to Mr. C. R. Weld, Assist. Sec., R.S., inserted in the 'History of the Royal Society' by the latter, that he is "disposed to think that the system of triangular arrangement adopted by Sir W. Herschel in the wood-work of his great telescope being a perfect system of diagonal bracing," or rather

that principle to which the "diagonal bracing" system owes its strength, was original with his father at the time of its construction, that is about the year 1786.

Sir Robert Seppings introduced other improvements into our system of naval architecture. The admiralty presented him with 1000*l.* as a reward for his simple yet most useful invention of an improved block for supporting vessels, by which their keels and lower timbers were much more easily and promptly examined and repaired. It was produced while he filled the office of master-shipwright assistant in Plymouth dockyard, and is described in the 'Transactions of the Society of Arts' vol. xxii. p. 275-292, the Society having awarded him their gold medal for it in the year 1804. His plan for lifting masts out of the steps, which superseded the employment of sheer hulks for that purpose, has been the means of saving much expense and labour. His new mode of framing ships has led to a much more extensive use of short and small timbers, which were formerly of little value; but the most valuable of all the reforms of construction for which the navy of England is indebted to him was the substitution of round for flat sterns, which afford increased strength to the framework of the ship, greater protection against pooping in heavy seas, an almost equal power of anchoring by the stern and by the bow, a more secure and effective position for the rudder, and a stout platform for a powerful battery, embracing a sweep of more than 180°. This capital improvement was strenuously opposed by many distinguished naval officers, who regretted the loss of those magnificent cabins, which were better suited for their purposes of state than of service, but the good sense of less prejudiced judges happily prevailed, and secured for our ships of war an additional claim upon the respect of our enemies. The select committee on finance of the House of Commons on several occasions bore testimony to his official merits, and he received the marked approbation of both houses of parliament.

Foreign nations were not tardy in acknowledging the value of the improvements in ship-building originated by Sir R. Seppings, and their author received many substantial proofs of their sense of his merits; the Emperor Alexander of Russia, and the kings of Denmark and Holland, presented him with memorials of their appreciation of what he had effected. We may safely affirm, that in the national record of the great benefactors of their country, there are few names which will deserve more grateful commemoration than that of the object of this notice. In addition to the papers on the diagonal bracing already alluded to, Sir R. Seppings communicated to the Royal Society a paper 'On a new principle of constructing ships in the mercantile navy,' which was inserted in the 'Philosophical Transactions,' for 1820. Dr. Young's paper, also referred to above, though not communicated to the Royal Society till 1814, had been presented in the form of a report to the Board of Admiralty in 1811. It will be found reprinted in Dr. Peacock's edition of the 'Miscellaneous Works' of Young, (vol. i. p. 535-562) together with the official correspondence relative to it between the latter and Sir J. Barrow. Sir R. Seppings was an honorary member of the Cambridge University Philosophical Society, and a corresponding member of the Philosophical Society of Rotterdam. It had been proposed by the University of Oxford to confer upon him the honorary degree of D.C.L., at the commemoration of 1836, but severe indisposition compelled him to decline it. He died at his house at Taunton in Somersetshire, on the 25th of April 1840, aged seventy-two, leaving several children; his wife's decease had taken place a few years before.

SEPULVEDA, JUAN GINES DE, an eminent Spanish scholar and historian, was born at Pozoblanco near Cordova, in 1490. After pursuing his studies, first in Cordova and then at the university of Alcalá, he embarked for Italy in June, in 1515, and reached Bologna, where he obtained admission into the college founded by Cardinal Albornoz. There he made rapid progress in theology and the learned languages under the guidance of the celebrated Pomponazzi (Peter), translated part of Aristotle, and wrote the life of Cardinal Albornoz: 'De Vita et Rebus Gestis Ægidii Cardinalis Albornotii,' lib. iii, fol., Rome, 1521. Sepulveda afterwards went to Rome, where he found a protector in Cardinal Carpi, who gave him a lodging in his palace. Thence he passed to Naples, where he assisted Cardinal Caetano in revising the Greek text of the New Testament. In 1529 Sepulveda returned to Rome and entered the service of Cardinal Quiñones; but in 1536, having been appointed chaplain and historiographer to Charles V., he quitted Italy and arrived in Spain, where he was entrusted with the education of the eldest son of that emperor, afterwards Philip II. About this time, Bartholomé de las Casas, bishop of Chiapa, so celebrated for his endeavours to alleviate the sufferings of the Indians, was pleading their cause at court with all the zeal and fervour of a true philanthropist. Sepulveda, having been prevailed upon by the enemies of Las Casas to refute his arguments, wrote a book, entitled 'Democrates Secundus, seu de Justis Belli Causis,' &c., in which he undertook to prove that the wars of the Spaniards in America were just, and founded on their right to subdue the inhabitants of a world discovered by them; that it was the duty of the Americans to submit to be governed by the Spaniards on account of their superior knowledge and wisdom; and that if they would not voluntarily acquiesce in the Spanish yoke, they might and ought to be compelled to do so by force of arms. He further declared that his only object in writing that work was to establish the rights of the kings

of Castile and Leon over America. This work however was never printed, for when Sepulveda applied to the Royal Council for permission to print it, it was refused, and the book itself was condemned by the universities of Alcalá and Salamanca, to which the case was afterwards referred. Upon this Sepulveda wrote his 'Apologia pro Libro de Justis Belli Causis contra Indos suscepti,' which appeared at Rome, 8vo, 1550: but the edition was seized by order of Charles V., and but few copies were saved. Sepulveda died in 1574, at the age of eighty-three.

Sepulveda was a man of great learning. Erasmus speaks of him in the 'Ciceronianus,' and classes him among the best writers of his time. Besides his Latin translation of part of Aristotle, which appeared at Paris, fol., 1531, and that of the Commentary of Alexander of Aphrodisias upon the same, which he had previously printed at Rome, fol., 1527, Sepulveda left the following works:—'De Fato et Libero Arbitrio Libri Tres,' 4to, Rome, 1526, being a refutation of Luther's opinions on fate; 'Ad Carolum V. Cohortatio ut facta cum omnibus Christianis Pace, Bellum suscipiat in Turcas,' 4to, Bologna, 1529; 'Antapologia pro Alberto Pio in Erasmus,' 4to, Paris, 1531 (this was written in defence of Cardinal Carpi); 'De Ritu Nuptiarum et Dispensatione Libri Tres,' 4to, Rome, 1531, and London, 1553; 'De Convenientia Militaris Disciplinæ cum Christiana Religione.' In this work, written in the form of a dialogue, and dedicated to the celebrated Duke of Alba, the author undertakes to prove that the profession of arms is in harmony with the doctrines of Christianity. It was translated into Spanish by Barba, 4to, Sev., 1541. 'De Appetenda Gloria,' 'De Ratione dicendi Testimonium in Causis Occultorum Criminum,' 4to, Vallad., 1538; 'De Regno et Regis Officio,' 8vo, Lerida, 1571. A history of the reign of Charles V., another of that of Philip II., and a narrative of the conquests of the Spaniards in Mexico, all three works in Latin, are still inedited. Sepulveda's works were collected and published, with the exception only of his translations, at Cologne in 1602. They have since been reprinted, in 1780, at Madrid, by the Royal Academy of History, in four volumes, folio, with a portrait of the author and an account of his life and writings.

There is another Spanish writer named SEPULVEDA LORENZO, who flourished about the same time, and gained considerable reputation as a writer of romances. He published 'Romances sacados de Historias Antiguas,' 8vo, Antw., 1551 and 1580; 'Romances sacados de la Historia de España del Rey Don Alonso,' 8vo, Medina, 1562; 8vo, Antw., 1580; 'Otros Romances sacados de la Historia y de los Quarenta Cantos de Alonso de Fuentes,' 12mo, Burgos, 1579; 'Cancionero de Romances,' 12mo, Vallad., 1577.

SERAPION (Σεραπίων), an eminent physician of Alexandria, in the 3rd century B.C., who belonged to the sect of the Empirici, and who so much extended and improved the system of Philinus, that the invention of it is by some authors attributed to him. (Celsus, 'De Medic.' lib. i., præfat.)

Dr. Mead, in his 'Dissert. de Numis quibusdam à Smyrnis in Medicorum Honorem cunis' (p. 51), believes that he was a pupil of Erasistratus, because his name appears upon a medal discovered at Smyrna, and because the followers of that celebrated anatomist lived in that town; but as the Empress Eudocia (Violar. apud Villosion, 'Anecd. Græc.,' tom. i., p. 381) mentions a rhetorician of Ælia Capitolina (Jerusalem) in Palestine who bore the same name, one would have quite as much right (says Sprengel) to reckon Serapion among the rhetoricians, if Hadrian, the founder of the town of Ælia, had not lived much later than the time of Serapion.

Serapion wrote against Hippocrates with much vehemence, and occupied himself almost exclusively with researches into the nature of drugs. (Galen, 'De Subfigur. Empiricæ,' cap. 13, p. 68, ed. Bas.) Cœlius Aurelianus ('De Morb. Acut.,' lib. ii., cap. 6, p. 84) quotes his book 'Ad Sectas,' finds fault with the severe remedies that he prescribed in Angina Pectoris, and reproaches him with having neglected dietetics. ('Ibid.,' lib. iii., cap. 4, p. 195.) One may presume that in those early times a great many superstitious remedies were used for epilepsy; for Serapion, besides castoreum, recommended also the 'brain of the camel,' the rennet of the sea-calf, *πρωιά φάκος*, the excrements of the crocodile, the heart of the hare, the blood of the tortoise, and the testicles of the wild boar. (Cœl. Aurel., 'De Morb. Chron.,' lib. i., cap. 4, p. 322.) Several authors make mention of some other preparations and antidotes, which bear his name, and which are scarcely worth more than those above mentioned. (Celsus, 'De Medic.,' lib. v., cap. 28, sect. 17, p. 307; Aëtius, tetrab. ii., serm. ii., cap. 96, col. 296; Nicolaus Myrepsus, 'Antidot.,' sect. i., cap. 66, col. 375.)

SERAPION, a Syrian physician, called by Wüstenfeld ('Gesch. der Arab. Aerzte'), YAHIA IBN SERAPION BEN IBRAHIM, and commonly called Serapion Senior, to distinguish him from another physician of the same name, with whom he is sometimes confounded. Nothing is known of the events of his life, and the century in which he lived is only to be calculated from his being quoted by Rhazes, who died probably A.H. 320 (A.D. 932). We are told by the anonymous author of the 'Arab. Philosoph. Biblioth.,' quoted by Casiri ('Biblioth. Arabico-Hisp. Escur.,' tom. i., p. 261), that "duo de Re Medica edidit volumina, id est *Collectionem Magnam Libris XII., et Collectionem Parvam Libris VII. comprehensam, utramque Syriacè: quam in Arabicum Sermonem convertere Musa Ben Abraham Alhodaithi, et Ben Bahul.*" We possess two works that bear his name; one still in

manuscript, called 'Aphorismi Magni Momenti de Medicina Practica' (Uri, 'Catal. Codd. MSS. Orient., Biblioth. Bodl.,' No. 598); the other, entitled 'Kunnāsh' (a word probably derived from a Syrian one, which means to collect), has been translated into Latin, and published under the various names, 'Pandectæ,' 'Aggregator,' 'Breviarium,' 'Practica,' and 'Therapeutica Methodus.' Dr. Russell (Append. to 'Nat. Hist. of Aleppo') says that the only manuscript of this work that he had seen in the European catalogues was that of the Escorial (Cod. 814), which however contains only a small part of it; and that he had never met with any of this author's works in the East. The object of the work is to collect and put together in an abridged form the opinions of the Greek and Arabic physicians concerning diseases and their treatment. "As Haly Abbas ('Lib. Reg.,' Prol.) remarks," says Mr. Adams (Appendix to Barker's ed. of Lempiere, London, 1838), "he treats of the cure of diseases solely as practicable by medicine and diet, and has entirely omitted hygiene and operative surgery. The list of the complaints of which he treats is far less complete than those of Rhases, Haly, and Avicenna, and in particular it is remarkable that he makes no mention of elephantiasis, aneurism, and diseases of the chest and genital organs; his description of Small-Pox, as further stated by Haly, is very incomplete." Dr. Freind remarks ('Hist. of Physic,' vol. ii., p. 42), that he "often transcribes out of Alexander Trallianus, an author with whom few of the other Arabic writers seem to have been much acquainted." A fuller account of Serapion's medical opinions may be seen in Freind (*loc. cit.*), Haller ('Biblioth. Med. Pract.,' tom. i., p. 443), and Sprengel ('Hist. de la Med.,' tom. ii., p. 277).

The first edition of his work mentioned by Choulant ('Handbuch der Bücherkunde für die Aeltere Medicin') is the translation by Gerardus Cremonensis, printed in black letter in double columns, folio, Venet., 1479, by Rainaldus Noviomagensis Alemannus, with the title, 'Jo. fil. Serapionis Opera, s. Breviarium etc. et (Serapionis Junioris) Liber Aggregator in Medicinis Simplicibus ex transl. Sim. Januensis interprete Abraam Judæo Tortuosiensis, etc.' The last edition mentioned by Choulant is a reprint of the translation of Andreas Alpagus (which was first published in folio, Ferrar., 1488), Venet., folio, 1550, with the title, 'Jo. fil. Serapionis Practica, &c., and with the work of the younger Serapion in the same volume. Albanus Torinus published an edition (Basil., folio, 1543), with the title, 'Jani Damasceni Therapeutica Methodi Lib. VII., &c.,' which alteration of the author's name has increased the confusion that already existed respecting him. An extract from his work is printed in Fernel's Collection of the Greek, Latin, and Arabic writers 'De Febribus,' Venet., fol., 1576.

SERAPION, commonly called Serapion Junior, to distinguish him from the preceding, an Arabian physician of whom nothing is known. He must certainly have lived after Ibn Wafid (commonly called Albengneft or Abengueft), since he quotes him, and as that author died A.H. 460 (A.D. 1068), Serapion may perhaps be placed at the end of the 5th century after the Hegira, or the 11th after Christ. There remains a work by him, 'De Simplicibus Medicamentis,' of which there is an Arabic manuscript in the Bodleian Library at Oxford (Uri, 'Catal. MSS. Orient.,' No. 597), but which has only been published in a Latin translation. "This is," says Mr. Adams (Appendix to Barker's Lempiere, London, 1838), "one of the most important works of Arabic medical literature, and contains a useful compendium of all the most interesting information on this head in the writings of Dioscorides and Galen, with some additional remarks by himself and the older Arabic authorities; the most original part of it is the 'Introduction,' in which he classifies substances according to their medicinal properties, and gives an ingenious dissertation on their actions. On the whole, he has made very few additions to the articles in the *Materia Medica* of the Greeks, and indeed sometimes gives to his Grecian masters credit for the discovery of certain medicinal substances, for which it would rather appear that we are indebted to his countrymen. Thus, in his chapter on *Serina*, he quotes Paulus Ægineta, but seemingly by mistake, for no account of this purgative is now to be found in the works of the latter. Where all is mostly unexceptionable, and there is nothing remarkably original, it is difficult to point out any subject which it handled in a more interesting manner than the others. I would refer however to his account of squills: he says that the *Vinum scilliticum* is given as a laxative in fevers, and in dropsy as a diuretic, to remedy indigestion, for jaundice and 'tormina' of the belly, for an old cough, asthma, and spitting of blood, and for cleansing the breast of gross humours; and forbids the use of it when there is an ulcer in an internal organ." There are however abundant proofs of his credulity and love of the marvellous in his accounts of the bezoar (cap. 396, p. 188, a.), diamond (cap. 391, p. 187, b.), asphaltus (cap. 177, p. 147, a.), &c. "Amber," says he (cap. 196, p. 150), "grows in the sea like mushrooms on land. In China there are some persons solely engaged in fishing for this substance. That which floats on the sea is swallowed by the whale, and quickly causes its death. When the animal's body is opened, the best amber is found near the vertebral column, and the worst in the stomach."

The first edition of this work mentioned by Choulant ('Handbuch der Bücherkunde für die Aeltere Medicin') was published at Milan, folio, 1473, in black letter, with the title 'Liber Serapionis aggregator in Medicinis Simplicibus, translatio Simonis Januensis interprete Abraham Judæo Tortuosiensis de Arabico in Latinum.' The last edition mentioned by him was published at Venice, folio, 1552, with the title

'Serapion de Simplic. Medicam. Historia Libri VII., Nicol. Mutozo interprete.' It has been often printed in the same volume with the work of the elder Serapion, as for a long time they were supposed to be written by the same person.

SERENUS, AULUS SEPTIMIUS, a Roman poet. Some of the ancients call him merely Serenus, and others merely Septimius; and from this circumstance it has been inferred by some modern scholars that these two names belong to two individuals (Wernsdorf, 'Poet. Lat. Min.', ii., p. 247, &c.); but Marius Victorinus, Terentianus Maurus, and Sidonius Apollinarius, frequently call him by his two names, Septimius Serenus, and therefore decide the question. He was a contemporary of Terentianus Maurus and of Martial ('Epigr.', i. 87), and must consequently have lived in or shortly after the reign of Vespasian. Of the circumstances of his life nothing is known with certainty. Some modern scholars have supposed that the fifth poem in the fourth book of the 'Sylva' of Statius is addressed to Septimius Serenus, as all that is mentioned of the person addressed in that poem appears to be just what might be expected in a poet like Serenus: but the manuscript reading in Statius is not Serenus, but Severus; and consequently the whole biography of Serenus, which has been made up out of that poem, is uncertain in the highest degree. The only thing we know of him is, that he was an extreme admirer of country life; for it is the country with all its charms that forms the subject of his poems, which he published under the title of 'Opuscula Ruralia.' Of these poems only a few fragments have been preserved by the ancient grammarians. They are however sufficient to show that Serenus was a lyric poet of very great talents. The poem called 'Moretum,' which has frequently been printed together with the works of Virgil, is ascribed by Wernsdorf to Serenus; and 'Copa,' another work of the same kind, has likewise been attributed to Serenus by some modern scholars. Terentianus Maurus ('De Metris,' p. 2423, Putsch.) mentions another poem of Serenus, which is called 'Faliscus,' and which probably contained a description of the country life in the district of the Faliscans. In this poem he used a peculiar kind of verse, consisting of three dactyls and one pyrrhic; and this metre is by Terentianus called 'metrum Faliscum,' and the poet himself Faliscus.

Compare the 'Essay' of Wernsdorf on Serenus, in his 'Poet. Lat. Minores,' ii. p. 247, &c.; and the collection of fragments, including the 'Moretum' and the 'Copa,' in the same vol., pp. 264-298.

SERENUS SAMONICUS (QUINTUS), sometimes called SAMONICUS SERENUS, the name of two persons, father and son, who lived in the 3rd century of the Christian era. The father wrote a number of works in verse, which Geta and Alexander Severus read with pleasure (Spartian., 'Vit. Ant. Get.', 4to, p. 136, ed. Paris, 1603; Lamprid., 'Vita Sever.', p. 186); but he was put to death by order of Caracalla. (Spartian., 'Vit. Caracall.', p. 123. Compare Casaub., in 'Script. Hist. Aug.', pp. 290, 423.) The son was tutor to the younger Gordian, to whom he left in legacy his father's rich library, consisting of 62,000 volumes. (Jul. Capitolin., 'Vit. Gordian II.', p. 235.) We have no means of deciding which of the two is the author of the Latin poem that we possess under this name, entitled 'De Medicina Præcepta Saluberrima;' for while the more ancient writers ascribe it to the father, the more modern (e.g., Morgagni and Ackermann) consider it to be the work of the son. It consists of 1115 hexameter lines, divided into 65 chapters, which treat of various diseases, with their remedies. Now and then, but very rarely (says Sprengel), does Serenus show that he had reflected on the nature and more remote causes of diseases, as for example when he attributes dropsy to obstructions of the spleen and liver (cap. 27, v. 498). He sometimes gives sound advice upon the treatment of diseases, and even gives his opinion against the incantations employed in the cure of fevers (cap. 51, v. 938). Notwithstanding this, he everywhere shows himself a zealous defender of the prejudices of his time; he affects a particular veneration for the numbers three, seven, and nine, and recommends the use of magical characters. For the cure of the species of intermittent fever called *ἡμικριτικός*, or double tertian, he recommends the use of the famous 'Abracadabra,' of which he gives the following description (cap. 52, v. 944, et seq.):—

"Inscribis chartæ, quod dicitur ABRACADABRA,  
Sæpius: et subter repetis, sed detrahe summæ,  
Et magis atque magis desint elementa figuris  
Singula, quæ semper rapies, et cetera figes,  
Donec in angustum redigatur litera conum.  
His lino nexis collum redimire memento."

Thus forming an equilateral triangle in this manner:—

For further information respecting this magical word, see Du Cange,

'Glossar. Med. et Inf. Latin.', ed. Paris, 1840; Hofmann, 'Lex. Univ.,' Sprengel, 'Hist. de la Méd.', tom. ii., p. 147; C. Steph. 'Dict. Hist.', &c., p. 8, edit. N. Lloyd; Ger. Jo. Voss., 'Op.', t. 5, p. 24.

The first edition of the Poem of Serenus, according to Choulant ('Handbuch,' &c.), was printed, *sine loco et anno*, in 4to, or large 8vo, at Milan, in black letter, before the year 1484. This edition is very scarce, and is said by Panzer ('Annal. Typogr.', vol. ii., p. 555) to have been printed at Rome. The next edition (containing also Rhemnius Fannius, 'De Ponderibus et Mensuris') is that of Leipzig, 4to, 1515; the two best are that by Keuchenius, 8vo, Amstel., 1662 (reprinted 1706, 8vo); and that by Ackermann, 8vo, Lips., 1786. The poem has also been frequently printed with Celsus, and is contained in several collections of medical works, e.g. the 'Aldine,' fol., Venet., 1547; that of H. Stephens, fol., Paris, 1567; and that of Rivinus, 8vo, Lips., 1754: it is also inserted with copious notes in P. Burmann's 'Poëta Latini Minores,' 4to, Leid., 1731. Much historical and critical information is to be found in 'J. Bapt. Morgagni Epistolæ in Serenum Samonicum,' 8vo, Patav., 1721, which are reprinted in several editions of Celsus, and also in 'Morgagni Opuscula Miscellanea,' fol., Venet., 1763. See also C. G. Gruner, 'Varia Lectiones in Q. Serenum Samonicum, e Codice Vratislaviensi decerpæ,' 4to, pp. 32, Jenæ, 1782; C. G. Gruner, 'Var. Lect. in Q. Ser. Sam., ex Nicol. Marescalci Enchiridio excerptæ,' 4to, Jenæ, 1803; and Reuss, 'Lectiones Sammonice,' 4to, Wirceb., 1837.

SERGELL, JOHANN TOBIAS, a Swedish sculptor of great merit, was born at Stockholm, on the 8th of September 1740, and was the son of a gold-lace maker and embroiderer. He himself was at first apprenticed to a stone-mason, and worked as such at the royal palace at Stockholm, which was then in progress; but his quickness and cleverness attracting the notice of the sculptor Larchevêque, he was taken by him as a pupil. After assisting him in modelling the two statues of Gustava Wasa and Gustavus Adolphus, Sergell obtained a travelling pension in 1767, and went to Rome, where he remained nearly twelve years, and produced many works that excited general admiration among the professors and patrons of art. On quitting Italy he visited Paris, where his 'Othryades,' a figure of a wounded Greek soldier, half life size (afterwards placed in the Luxembourg) gained him his admission into the Academy of Fine Arts. From Paris he proceeded to London, whence he was almost immediately summoned by Gustavus III., who conferred upon him the appointment of court sculptor. In 1784 he accompanied that monarch in his visit to Rome, and it was by his advice that Gustavus there purchased, among many other valuable works of art, the celebrated 'Endymion,' for the royal museum at Stockholm.

Catherine II. was afterwards desirous of securing his talents in her service, and made him the most flattering offers; but though wealth as well as distinction awaited him at St. Petersburg, Sergell's attachment to his sovereign and his native land, and his indifference to riches, induced him to remain in Sweden with the comparatively trifling pension of 600 rix-dollars. The untimely end of Gustavus, whom he regarded rather as his friend than his master and patron, so affected him that he fell into a deep melancholy, and was for a length of time wholly incapable of doing anything in his profession. It was not till a few years before his death that he regained something like his wonted composure of mind, but it was then almost too late for him to think of retrieving the time that had been lost to art. He died at Stockholm, on the 26th of February 1814, in his seventy-fourth year.

Sergell's works are distinguished by vigour of conception, by energy and grace of style, and by perfect freedom from that mannerism and sickly affectation into which sculpture had fallen in the hands of his immediate predecessors and contemporaries. Among his principal statues are the group of 'Cupid and Venus,' 'Diomedes carrying off the Palladium,' 'Othryades,' a Faun, Gustavus III., 'Oxenstierna dictating to the Muse of History the Deeds of Gustavus Adolphus,' 'Mars and Venus,' a Venus Callipyge, most of which are in the royal museum. One of his finest productions, 'The Resurrection,' a composition in alto-rilievo for the Adolph-Frederick Church at Stockholm, exists only in the model, having never been executed in marble; as was the case with a number of other subjects. His busts and portrait medallions were highly esteemed, both for fidelity of likeness and for artistic merit.

SERGIUS I., a Syrian by birth, succeeded Conon in the see of Rome, A.D. 687. Two candidates for the see, a priest called Theodore and also the Archdeacon Paschal, each of whom had numerous partisans, were on the point of coming to blows, when the principal citizens and officers of the garrison, in order to avoid a tumult, proposed to elect Sergius, who had acquired a reputation for piety and learning. The proposal being adopted by many of the clergy, Sergius, escorted by a numerous retinue, was taken to the Lateran church, the doors of which were broken open, and those of the opposite or Theodore's faction, who had fortified themselves in it, being driven out, Sergius was chaired, and Theodore was one of the first to salute him as pontiff. Paschal did the same afterwards, being forced to it by the multitude. Before Conon's death Paschal had promised a sum of money to the Exarch of Ravenna, who, as the representative of the Byzantine emperor in Italy, had the right of giving or withholding his sanction to the election, and the money had been given for the purpose

of securing his consent. The Exarch John came to Rome, and finding that Sergius had been elected by the majority, requested him to pay him what Paschal had promised, and upon Sergius demurring, the Exarch took several valuables from the church of St. Peter. Paschal was accused of sorcery, tried, and sentenced to be degraded and confined in a monastery, where he died. One of the first transactions of Sergius was to baptise Cedwalla, king of the West Saxons, who had come to Rome for that purpose. He also contributed to the diffusion of Christianity in Saxony and other countries by means of missionaries. In 691 the Emperor Justinian II. assembled a general council at Constantinople, which being held in a hall of the palace which was surmounted by a dome ('trulleum'), has been styled 'Concilium in Trullo.' It has also been called Quini-sexturn, as being supplementary to the fifth and sixth oecumenic councils, which had published no canons of discipline or religious ceremonies. The council 'in trullo' was purposely assembled to supply this deficiency; one hundred and fifty bishops were present at it, and it passed more than one hundred canons on matters of discipline and ceremonies, six of which being in opposition to the practice of the Western or Roman Church, the council was not approved of by Sergius, although his legate who attended the council had concurred in it. One of these canons enacted that married candidates for the priesthood might retain their wives after their ordination. There were also some points of dogma concerning the two natures of Christ and the Virgin Mary, in which the council and the pope did not agree. Justinian, irritated at the opposition of Sergius, sent Zacharias, his protospatarius, or general-in-chief, to Rome with orders to arrest Sergius and bring him prisoner to Constantinople. But the garrison of the Exarch at Rome took the pope's part, and Zacharias was obliged to take refuge in the pope's apartments, whence he was sent back safely to Greece. A revolution, headed by Leontius, one of his generals, took place at Constantinople soon after, when Justinian was seized, mutilated, and banished to the Crimea, in 695. Leontius did not long enjoy the fruits of his crime, for he was seized himself, and mutilated by Tiberius Apsimerus, who became emperor, and allowed the Church of Rome and the pope to remain undisturbed. Sergius occupied himself in restoring the church of St. Peter, which had been greatly dilapidated. He died in 701, and was succeeded by John VI.

SERGIUS II., a native of Rome, was elected to succeed Gregory IV., in 844, and was consecrated without waiting for the approbation of the Emperor Lotharius, who sent his son and colleague Louis into Italy with an army. Louis came to Rome, where he was received by the pope and clergy in a friendly manner, and was crowned king of Italy. The soldiers of Louis however committed great devastation in the surrounding country and in the suburbs of the city, but the pope at last induced Louis to withdraw his troops to the north. Soon after the Saracens from Africa came up the Tiber and ravaged the country, plundering the churches of St. Peter and St. Paul, which were outside of the walls, but they could not enter Rome. They then proceeded by the Via Appia to Fondi, which they sacked. Sergius died in 847.

SERGIUS III. was elected in 904, by the Tuscan party, as it was called, because it was headed by Adelbert, marquis of Tuscany, and of which two Roman ladies of licentious character, Marozia and her mother Theodora, were the most influential leaders. They had deposed and imprisoned Christopher, who had imprisoned the preceding pope Leo V., and had forced him to resign his see to him. Sergius had had a son by Marozia, who was afterwards pope by the name of John X. Sergius seems to have been a man of some abilities; his character has been variously represented by different writers. The history of Rome, during the 10th century, is extremely obscure, though it is evident by all concurrent testimonies that it was a most profligate age, and Sergius was certainly not free from the prevalent profligacy. He died in 913, and was succeeded by Anastasius IV.

SERGIUS IV., a native of Rome, succeeded John XVIII. in 1009. He encouraged the princes of Italy to unite in order to drive away the Saracens, who had occupied several parts of the peninsula. It was in his time that the Normans began to muster in South Italy. Sergius died in 1012, and was succeeded by Benedict VIII.

SERLIO, SEBASTIANO, an Italian architect, whose writings were long considered of authority in matters of art, was born at Bologna in 1475. The study of Vitruvius inspired him with an eager desire of obtaining greater insight into the practice of the ancients, by examining and making drawings of what remained of their structures,—at that time the only method by which any knowledge of them could be acquired; there being no accurate delineations published for the instruction of those who could not visit the edifices themselves. After staying some time at Pesaro, Serlio proceeded to the Venetian States, where he employed himself in examining and measuring the amphitheatre and bridges at Verona. He subsequently visited Vicenza, where he erected a theatre, and Venice, where he made designs for the church of San Francesco delle Vigne. During his residence in Venice, he became acquainted with Sansovino, and other architects of note; and he himself would doubtless have found employment there, being noticed by the Doge Andrea Gritti, if his passion for exploring antiquities had not induced him to pass over to Pola, of whose amphitheatre and other Roman remains he was the first to publish any architectural account. On his return he examined those of Ancona, Spoleto, &c., and afterwards those of Rome, many of which

are introduced as illustrations, but certainly not as embellishments, in his work on architecture, they being there represented in most coarsely drawn and executed woodcuts. It was while he was at Rome that he composed his treatise on the five orders, for a copy of which he was complimented by Francis I. with three hundred gold crowns. Invited to France by that monarch in 1541, he was there appointed architect at the palace of Fontainebleau, and was also commissioned to undertake the court of the Louvre, but generously declined in favour of Lesot, whose designs he recommended to be adopted as being superior to his own. After the death of his royal patron he retired to Lyon, where he remained for some time in exceedingly straitened if not in indigent circumstances; but he returned again to Fontainebleau, and died there in 1552. His reputation rests chiefly upon his writings, 'Opere di Architettura, Libri Sei,' which display more study and learning than taste; and which, highly as they were at one time esteemed, possess little real value at the present day.

SERTORIUS, QUINTUS, was a native of Nursia, in the country of the Sabines. He lost his father very early, but his mother bestowed great care upon his education, and the son in return for her kindness entertained for her through life the most tender affection. After his education was completed, he tried his fortune at Rome as an orator, and thereby acquired considerable influence. (Plut., 'Sert.', 2; Cic., 'Brut.', 48.) But he soon turned his attention to military affairs, and the first time that he distinguished himself was during the campaign of Marius against the Cimbric and Teutones. At the end of this campaign he was sent to Spain as tribune under the prætor Didius, and spent the winter in the Celtiberian town of Castulo. Here again he attracted much attention by his courage and prudence. After his return to Rome, when the Marius war was breaking out, he was made quæstor of Gallia Circumpadana and commissioned to levy troops, which he (Plut., 'Sert.', 4) accomplished with the greatest success, but his exertions caused him the loss of one of his eyes. (Plut. and Sallust., 'ap. Gell.', ii. 27.) On his return to Rome he was a candidate for the tribuneship of the people, but was defeated by the party of Sulla. Sertorius now joined the party of Cinna and Marius, not because he approved of their proceedings, but because he detested the ruling aristocrats. After the Marian party was defeated and Marius himself driven from Italy, Cinna and Sertorius raised fresh troops in Italy and held out against their opponents. When Marius returned from Africa (B.C. 87) and took bloody vengeance upon his enemies, Sertorius was the only one of the party who showed moderation; how much he was in earnest in this matter is evident from the fact that after the death of Marius he put to death 4000 slaves who had been the body-guard of Marius and had perpetrated every possible crime against the citizens. (Plut., 'Sert.', 5.) When Sulla returned to Italy in B.C. 83, and Sertorius saw that all would be lost, and that the consuls Scipio and Norbanus paid no regard to his advice, he contrived to be made proconsul of Spain, and went to his province, where he hoped to prepare a refuge for his friends if they should be defeated in Italy. (Plut., 'Sert.', 6; Appian, 'Civil.', i. 103.)

In Spain he began his new career, in which he displayed prudence and courage tempered with humanity. Spain had hitherto, with few exceptions, been preyed upon by avaricious governors. Sertorius listened to the just complaints of the natives, whom he attempted to blend with the Romans as much as possible. The great among the Spaniards were gained by his affability, and the poor by his reduction of taxes. At the same time he carried on his preparations for the approaching war with the utmost energy, and kept both Romans and Spaniards in constant exercise. When he heard that Sulla was in possession of Rome, and that his own party was defeated, he sent Julius Salinator with 6000 heavy-armed troops to take possession of the passes in the Pyrenees. About the same time C. Annius, a Sullanian general, arrived at the Pyrenees, but tried in vain to effect a passage. Salinator was treacherously slain and his army dispersed, and Annus now crossed the Pyrenees. Sertorius, who was too much weakened by this event to offer any resistance, retreated to New Carthage, and, accompanied by a few faithful followers, he cruised for a time in the Mediterranean. He made a landing in Africa, where he aided one of the native princes, and defeated Paccianus, one of the generals of Sulla. After having had an encounter with a large fleet of Annus, and after having escaped from a heavy storm, he again landed in Spain near the mouth of the river Bæticus. Here he heard an account of the delightful climate of the Insulæ Fortunatæ (the Canary Islands), and was greatly inclined to withdraw thither and to spend the remainder of his life in quiet. (Plut., 'Sert.', 8, 9.) His men however involved him in another military undertaking in Africa, and his great success induced the Lusitanians, who were oppressed by cruel and rapacious governors of the Sullanian party to invite Sertorius to the supreme command among them. This invitation came just at the moment when he was considering whether he should retire. (Plut., 'Sert.', 10.) Sulla was now dead, and Sertorius, being at such a distance from Rome and little acquainted with the real state of affairs there, conceived new hopes of ultimate success, and gladly accepted the invitation. On his appearance in Lusitania, the Romans as well as the Spaniards immediately declared for him. He now began to make war upon four Roman generals who were in possession of the greater part of Spain, and had great armies at their command. Sertorius defeated Cotta near Mellaria in a sea-fight, and Aufidius in Bætica,

while his legate conquered Domitius and L. Manlius. Thoranius, a legate of Metellus, was likewise defeated. About this time Sertorius was joined by Perperna with the numerous remains of the Marian party, and Metellus Pius, who had the command in Baetica, was gradually driven to such extremities [METELLUS], that L. Lollius came to his assistance from Gaul, and the senate at Rome thought it necessary to send Pompey with a large force to support Metellus. [POMPEIUS.]

As soon as Sertorius had firmly established himself in Spain, he formed the design of uniting the Romans and Spaniards in such a manner that the Spaniards should have all the advantages of Roman civilisation without losing their national character. At Osca, the modern Huesca in Catalonia, he established a kind of academy, into which he received the sons of distinguished Spaniards, and had them instructed in Greek and Roman literature. The admirable discipline of this establishment, the manner in which the youths were dressed, for he gave them the Roman 'bulla' and the 'prætexta' (which only the sons of noble Romans used to wear), the prizes which were distributed among them, and the promise that these young men should one day be Roman citizens and be invested with high honours—all these things were in the highest degree flattering to the parents of the youths, and could not fail to gain for Sertorius the affections of the nation. It was a custom of the young warriors among the Spaniards to gather around a favourite general, to accompany him everywhere, and to vow not to survive him. The number of men who became in this manner attached to Sertorius was greater than had ever been known before. (Plut., 'Sert.', 14.) Sertorius also worked upon the imagination of the Spaniards: he had a tame white fawn which accompanied him everywhere, and which he said was the gift of Diana. The Spaniards thus looked up to him almost as a being of a higher order, who had intercourse with the gods. It may be that this was, as Plutarch thinks, a piece of imposition upon the credulous Spaniards, but we have no reason to suppose that Sertorius himself did not share the belief of the Spaniards on this subject. (Comp. 'Gellius', xv. 22.) His object was to establish an independent power, or to raise a new Roman republic in Spain. For this purpose he formed a senate of 300 members, consisting partly of exiled Romans, and partly of distinguished Spaniards (Appian, 'Civ.', i. 108; Plut., 'Sert.', 22), and also appointed several officers analogous to those of Rome. Sertorius was with the Romans and Spaniards the object of love and admiration. Perperna had observed this state of things, ever since his arrival in Spain, with secret jealousy and envy. He would have liked to carry on the war against Metellus in his own name; but when the news came that Pompey was advancing, his own soldiers compelled him to join Sertorius, and to submit to him.

On the arrival of Pompey in Spain, many towns declared for him, and among others Lauron, though it was at the time besieged by Sertorius. Pompey hastened to its assistance, but could do nothing, and was obliged to look on while Sertorius razed the town to the ground. (Plut., 'Sert.', 18; Appian, 'Civ.', i. 109.) The first great battle with Pompey was near Sucro. Metellus here defeated that part of the army which was commanded by Perperna, and put him to flight; but Sertorius, who commanded another division of the army, wounded Pompey, and compelled him to retreat. A second battle was fought in the plains of Saguntum, in which Pompey was again defeated, and compelled to withdraw to the Pyrenees. It was in the summer of the year B.C. 74 that Mithridates sent ambassadors to Sertorius, to propose an alliance, and to offer money and ships, on condition that all the countries of Asia which he had been obliged to surrender should be restored to him. Sertorius concluded the alliance, and encouraged the king again to take up arms against Rome, but he scrupulously avoided doing his own country more harm than his own safety required. (Plut., 'Sert.', 23; Appian, 'De Bell. Mithrid.', 68.) This alliance, owing to the events which followed it, had few or no results.

Pompey, in the meanwhile, was reinforced by two legions from Italy; and he and Metellus again advanced from the Pyrenees towards the Iberus. In this campaign, though many of the soldiers of Sertorius began to desert, no great advantages were gained by Pompey or Metellus, and the former was no more successful in the siege of Pallantia, than both together in that of Calaguris. Metellus, despairing of victory over Sertorius in an honourable way, offered to any Roman citizen who should kill Sertorius one hundred talents and 20,000 acres of land. If the murderer should be an exile, Metellus promised that he should be allowed to return to Rome. The whole summer of the year B.C. 73 passed without any great battle, though the Roman party seems to have gained some advantages.

The dishonourable conduct on the part of the Romans, and the increasing desertion in the army of Sertorius, as well as the manifest envy of others about his own person, produced a change in the conduct of Sertorius also; he lost his confidence in those who surrounded him, and punished severely wherever he found reason for suspicion. While he was in this state of mind, he committed one act which will ever be a stain on his otherwise blameless character: the young Spaniards assembled at Osca, who were in some measure his hostages, were one day partly put to death, and partly sold as slaves. The immediate cause of this is unknown, but the effect produced on the Spaniards may easily be conceived. In addition to all this, Perperna now found an opportunity of giving vent to his hostile feelings. He formed a

conspiracy of some Romans who served under Sertorius, and in order to gain associates among the Spaniards, and provoke them still more against Sertorius, the conspirators inflicted severe punishments for slight offences, and exacted heavy taxes, pretending that they were only executing the commands of Sertorius. Desertion and insurrection among the Spaniards were the natural results. According to Appian, several of the conspirators were discovered and put to death, but Plutarch does not mention this circumstance. Perperna at last, seeing no possibility of attacking Sertorius, as he never appeared without an armed body-guard, invited him to a repast, ostensibly given on account of some victory gained by one of his lieutenants. At this repast he was treacherously murdered by the conspirators (B.C. 72), and Perperna placed himself at the head of his army.

Such was the end of one of the noblest characters that appear in the pages of Roman history during the last century of the republic. The war which he had carried on in Spain was not directed against his country, but only against a party who wished to annihilate him. How little he was actuated by any hostile feeling towards the republic itself may be seen from the statement of Plutarch ('Sert.', 22), that after every victory which Sertorius gained, he sent to Metellus and Pompey, offering to lay down his arms, if they would but allow him to return to Rome, and to live there in peace and retirement, declaring that he would rather be the obscure person at home than a monarch in exile. As long as his mother lived, it was principally in order to comfort her old age that he wished to return to Italy; but she died a few years before her son, to his great grief. If we regard Sertorius as a general, it was surely no vulgar flattery that his contemporaries compared him with Hannibal. The details of his wars in Spain are very little known, for the account of Appian ('Civ.', i. 108-114) is excessively meagre and incoherent; and Plutarch, in writing the life of Sertorius, had other objects in view than to present to his readers a clear description of his military operations. Appian says that the war in Spain lasted eight years, which is incorrect, whether we date the commencement of the war from the time when Sertorius left Italy in the consulship of Scipio and Norbanus (B.C. 83), or from the time that he was invited by the Lusitanians to take the command (B.C. 78).

SERVANDO'NI, JEAN JÉRÔME, was born at Florence in 1695, but he may be reckoned among the artists and architects of France, as he established himself in that country, where he signalled himself by his extraordinary talents. His first instructor in painting was Panini, under whom he became an expert artist in landscape and architectural scenery, and many of his productions of that period are preserved in various collections. He afterwards applied himself to architecture under De Rossi. After passing some time at Lisbon, where he was employed as scene-painter and in getting up the performances of the Italian opera, he proceeded to Paris in 1724, and was engaged in a similar capacity. He had now opportunities of exercising his talents on the most extensive and even prodigal scale, and he not merely improved the former system of theatrical decoration, but produced an entirely new species of it, in which the scenic illusion and effect were aided by machinery, and heightened by every possible artifice. The fame of his achievements of this class is now of course merely traditional, but if we may believe the testimony of contemporaries, they must have been most extraordinary. Among the most celebrated of them was the representation of the fable of Pandora (at the Tuileries in 1738), and of the 'Descent of Æneas into the Infernal Regions.' These and other scenic exhibitions, as they may properly be denominated, were received with enthusiasm by the public, nor were they least of all admired by those who were capable of appreciating the poetical invention, the just taste, and the profound classical study displayed by the artist.

As may be supposed, his talents were greatly in request upon all extraordinary public festivities, and he directed those which took place at Paris, in 1739, in honour of the marriage of Philip V. of Spain with the Princess Elizabeth. Unfortunately such triumphs are so exceedingly fugitive and ephemeral, that however much they may contribute to an artist's fame, they are attended with no benefit to art itself. It would have been more to the advantage of art, if Servandoni had been afforded the opportunity of realising some of his projects for the improvement or embellishment of various parts of the capital, including one for an extensive place or amphitheatre for public festivals, surrounded with arcades and galleries capable of containing twenty-five thousand persons. The chief structure executed by him is the façade which he added to the church of St. Sulpice at Paris, erected by Oppenord. Although not altogether unexceptionable, this work, begun about 1732, is superior to almost every other of its kind of the same period. The arrangement of the loggia formed by the Doric order below, where the columns are coupled, not in front, but one behind the other, is good, and combines lightness with solidity; but this merit is in a great measure counteracted by the inter-columns of the second order being filled in with arcades and piers, whereby that portion is rendered more solid and heavier in appearance than the one below.

Servandoni died at Paris in 1766, leaving, instead of a splendid fortune, as was expected, scarcely any property at all behind him; for though he might easily have amassed wealth, he was too great a votary of pleasure to put any restraint upon his habits of profusion.

SERVETUS, MICHAEL (whose family name was Reves), was born at Villanueva in Aragon, in the year 1509. He was the son of a notary, who sent him while young to the university of Toulouse in order to study the law, instead of which however he appears to have devoted his attention principally to theology during the three years which he spent in that city.

In his twenty-first year he quitted Toulouse, and journeying into Italy in the suite of Quintana, confessor to the Emperor Charles V., was present at the coronation of that monarch at Bologna, in February 1530. The death of Quintana soon left him at liberty to travel into Switzerland and Germany, where he became acquainted with many of the reformers. In the course of 1530 he took up his residence at Basel, and there he first broached those opinions which afterwards drew down upon him the persecution of Calvin. He probably met with few persons who were disposed to embrace his notions, for, in the course of the same year, or early in 1531, he left Basel and went to Strasbourg. His stay in Strasbourg however was short, since he lived at Hagenau in Alsace during the printing of his treatise on the doctrine of the Trinity. This, his first work, was published by a bookseller of Basel in 1531, but the opinions which it contained were so contrary to those usually received, that the man feared to print it at Basel, and procured its publication at Hagenau, the name of which place appears on the title-page. In the following year Servetus wrote a second treatise, in the form of dialogues, on the same subject; in which he corrected some errors in his former work, but without retracting any of the opinions.

We are unacquainted with the exact time when Servetus quitted Hagenau, but we next find him at Lyon, where he remained three years, occupying himself principally with the study of medicine. It is probable that during this time he supported himself by correcting the press, and by other literary labours, among which was the publication of an improved edition of Pirkheimer's translation of Ptolemy's Geography, which appeared in the year 1535. On leaving Lyon he visited Paris, where he took the degree of M.A., and afterwards of Doctor of Medicine. He was likewise admitted a professor of the university, and delivered lectures on the mathematics. He was in Paris in 1537, in which year he published an essay on syrups, the only medical work that he wrote, but his ungovernable temper involved him in disputes with the medical faculty, which compelled him to leave the city. It is most likely that he again returned to Lyon, for in 1540 we find mention of him as practising medicine, in the immediate neighbourhood, at the village of Charlieu. His attempt to obtain practice there seems to have been unsuccessful, and taking up his abode once more in Lyon, he supported himself by correcting the press for the Frelons, the printers. He likewise superintended a new edition of the Bible, which was published in 1542, and the notes which he added afforded materials to strengthen the charge of heresy afterwards brought against him.

In the year 1543 Pierre Palmier, archbishop of Vienne in Dauphiné, meeting with Servetus at Lyon, induced him to return with him to his see. Servetus devoted himself to the practice of medicine in this place, where he remained until his trial for heresy ten years afterwards. Theology however was still a favourite pursuit with him, and for many years he carried on a controversial correspondence with Calvin, in the course of which he sent him a portion of a manuscript containing many of the opinions which subsequently appeared in his 'Christianismi Restitutio.' Their private correspondence, never very friendly, degenerated by degrees into quarrelling, and at length into scurrility; and Servetus having replied to a violent letter of Calvin concerning his own opinions, by sending a list of what he called errors and absurdities in Calvin's 'Institutes,' the latter angrily broke off all communication with him. In the same year, 1546, Calvin wrote to Farel and Viret, saying that, if ever Servetus came to Geneva, he would take care that he should not escape in safety. He is stated by Bolsec even to have denounced Servetus to Cardinal Tournon as a heretic, and the same authority adds that the cardinal laughed heartily at one heretic accusing another.

Servetus, in a letter to one of his friends, had expressed the presentiment that he should suffer death for his opinions; and he did not publish the 'Christianismi Restitutio' without taking every precaution to conceal the fact of his being the author. He had endeavoured to get the work published at Basel, but no bookseller would undertake the dangerous engagement; and he eventually had it printed at Vienne in 1553, but without his own name or that of the printer, or even the date or name of the place.

The work caused a great sensation; but the author would have remained unknown, had not Calvin recognised in the style, and in the abuse of himself, the hand of Servetus. He immediately procured one William Trie, a citizen of Lyon, but a recent convert to the reformed religion, and then resident at Geneva, to write letters to the authorities of the former city, containing many serious imputations against Servetus, and charging him with having written the 'Christianismi Restitutio.' The Archbishop of Lyon, Cardinal Tournon, whose diocese, from its proximity to Geneva, was peculiarly exposed to the influence of heresy, no sooner received this intelligence than he wrote to the governor-general of Dauphiné, acquainting him with what he had heard concerning Servetus. In consequence of the suspicion thus thrown upon him, Servetus was arrested and imprisoned; but he would

in all probability have been acquitted for want of evidence against him, had not Calvin, through the medium of Trie, forwarded to the Inquisition at Vienne a portion of manuscript and several private letters which he had received from Servetus. By some writers, who would extenuate the guilt of the reformer, it has been doubted or denied that these letters were produced on the trial; but in the condemnation of Servetus by the Inquisition of Vienne, "letters and writings addressed to Mr. J. Calvin" are especially mentioned.

Servetus escaped from prison, where he had not been strictly guarded, but was burnt in effigy at Vienne on June 17, 1553. He fled to Geneva, in which town he kept himself closely concealed, but was arrested, through Calvin's influence, on the day before that on which he was about to start for Zürich on his way to Italy. He was arrested contrary to law, the city of Geneva having no authority over him, who was merely journeying through it: when in prison he was treated with the greatest cruelty, and he was denied the assistance of counsel. His private papers, and a volume of Calvin's 'Institutes,' in which he had made some notes with his own hand, were brought in evidence against him. Calvin's own servant, one La Fontaine, appeared as the accuser, Calvin not caring to submit to the 'lex talionis' of Geneva, which imprisoned the accuser as well as the accused; though, in direct opposition to this law, La Fontaine was released after being only one day in prison. Servetus was brought to trial on August 14, 1553; and on that day, and on several days following, he was examined publicly before his judges. Calvin drew up the articles of accusation, in which the calumnies against himself are alleged as part of the crime of Servetus; and further, he reserved to himself the office of disputant upon theological subjects with the prisoner. Many of the charges against him were frivolous and vexatious in the extreme, but it is certain that he did not anticipate so severe a sentence as was passed upon him; for when, on August 26, the vice-bailiff of Vienne, having come to Geneva, requested that Servetus might be given up to him in order to undergo the sentence passed upon him by the Inquisition, he threw himself at the feet of his judges, begging that they would rather try him, and pass on him whatever sentence they might think fit.

On September 1 Servetus was called before his judges, and ordered to be ready to reply in writing to a set of written charges which Calvin was instructed to draw up. On September 15 he wrote a touching letter, complaining of the harsh treatment he had undergone, begging that his case might speedily be decided, since he had been already detained five weeks in prison, and appealing from the private hatred of Calvin to the decision of the council of two hundred. This appeal however was rejected, and Servetus was furnished with a copy of the charges against him drawn up by Calvin. To these he sent in a brief written answer, and it does not appear that after September 15 he defended himself in open court, where he was much inferior to Calvin as a disputant. Calvin's refutation of Servetus's reply greatly exasperated him; he did not attempt any regular answer to it, but contented himself with adding a few notes in the margin grossly abusive of Calvin.

It was now secretly determined in the council of Geneva to put Servetus to death: but the matter being one of great importance, and Servetus having appealed to the judgment of others, it was thought advisable to send copies of his works and of the evidence against him to the clergy of the four Protestant cantons of Zürich, Basel, Berne, and Schaffhausen, and to ask their opinion concerning his guilt. These letters were despatched about the end of September: the reply from Zürich was received on October 2; that from Basel and from Schaffhausen on October 18; and the date of the arrival of the answer from Berne is not stated. They all concurred in condemning the writings of Servetus, but did not recommend that the author should be put to death, though Calvin chose to put that construction on their replies. As soon as these answers had arrived the council was once more convened, and sentenced Servetus to be burned to death by a slow fire. Servetus had one friend in the council, Amadeus Gorrius by name, who in vain endeavoured to obtain a pardon for him, or at least that his case should be brought before the council of two hundred; but the violence of Calvin and his party prevailed. Calvin however did attempt to obtain for him the favour of a less painful death, though without success. Accordingly, on October 27, 1553, Servetus was brought to the stake, and his sufferings are stated to have been unusually severe and protracted. No act of barbarity perpetrated by the Roman Catholics ever surpassed the burning of Servetus, in which Calvin appears to have been actuated by private hatred almost as much as by religious fanaticism, and in which he filled all the parts of informer, prosecutor, and judge.

The works of Servetus have had an adventitious value imparted to them by their extreme rarity. With the exception of the short essay on 'Syrups,' published while Servetus was at Paris, they are theological and metaphysical treatises on the most abstruse subjects, such as the doctrine of the Trinity. Mr. Hallam is of opinion that the notions of Servetus concerning the Trinity were not Arian, but rather what are called Sabellian. The 'Christianismi Restitutio' contains a passage which has led some to say that Servetus well nigh discovered the circulation of the blood, and that consequently the merits of our illustrious countryman Harvey are small. Such however is by no means the case. Servetus knew that the septum of the heart is not

perforated, but that the blood in the right ventricle communicates with that in the left through the medium of the pulmonary artery, and the circulation through the lungs. But though he formed a perfectly correct conception of the pulmonary circulation, he was quite ignorant of the greater circulation, or of the existence of any means by which blood from the left ventricle is returned to the right; nor does he appear to have seen the necessity for any such provision.

SERVIVS, MAVRVS HONORATVS, a Roman grammarian. The time at which he lived is not quite certain, for some writers place him in the reign of Valentinian, and others in that of Hadrian; but it is almost beyond doubt that he lived towards the close of the 4th century, perhaps in the reign of Theodosius I. (Macrob., 'Sat.,' i. 2.)

The principal works of Servius are his Commentaries on the *Æneid*, the *Georgics*, and the *Eclogues* of Virgil. These commentaries are not only useful for a correct understanding of the poems of Virgil, but they are rendered still more valuable to us by the vast stores of learning which their author possessed; they contain information on a variety of subjects connected with the history, antiquities, and religion of the Romans, and of which we should otherwise be totally ignorant. Many valuable fragments of other writings, whose works are now lost, are preserved in the commentaries of Servius. It is however to be lamented that these commentaries have come down to us in a very interpolated condition, so that they cannot be used without great caution. Besides these commentaries, we possess of Servius three smaller grammatical works: 'In Secundam Donati Editionem Interpretatio,' 'De Ratione Ultimorum Syllabarum Liber ad Aquilinum,' and 'Ars de Pedibus Versuum, sive de Centum Metris.'

The commentaries on Virgil are printed in several of the early editions of this poet; but the best modern editions are that of Burmann, in his edition of Virgil, and a separate one by H. A. Lion, under the title 'Servii Mauri Commentarii in Virgilium; ad fidem cod. guelferbyti. aliorumque recens. et potior. var. lect. indicibusque copiosis. inbstruit, &c.,' 2 vols. 8vo, Göttingen, 1825-26. Compare Burmann, 'Præfat. ad Virg.,' p. \*\*\*\*\*; Heyne, 'De Antiquis Virg. Interpret.,' p. 536, &c.; Fabricius, 'Biblioth. Lat.,' i. p. 319. The three smaller works of Servius are printed in 'Putschii Grammatici Latini.'

SERVIVS SLPICIVS RVFVS. [SULPICIVS.]

SERVIVS TULLIVS, the sixth king of Rome, reigned from B.C. 578 to 534. The history of his birth was handed down by tradition in three different ways. The most marvellous and probably the most ancient legend represents him as the son of Ocrisia, a slave of Queen Tanaquil, and of a god, who according to some was Vulcan, but according to others, one of the household gods of the royal family. (Ovid, 'Fast.,' vi. 625, &c.; Dionys., iv. p. 207; Sylburg.) A second legend describes his mother as a slave of the Etruscan town of Tarquinii, and his father as a client of Tarquinius Priscus; and Servius himself, according to the same account, was in his youth a slave. (Cic., 'De Republ.,' ii. 21.) The third account, which however seems to be merely an arbitrary interpretation of the second, made with the intention of giving to the story a somewhat more probable appearance, represents Servius Tullius as the son of a man of the same name, who was of royal descent, lived at Corniculum, one of the Latin towns, and was slain when his native place was taken by the Romans. His wife Ocrisia, then in a state of pregnancy, was conveyed to Rome and assigned to Queen Tanaquil, who, considering her rank, soon restored her to liberty and treated her with great regard. (Liv., i. 39; Dionys., iv. p. 206.) Ocrisia was delivered of a son, whom she called Servius Tullius, after the name of her husband. One day, continues the story, when the boy was asleep, his head was seen surrounded with flames. The queen, being informed of the wondrous sight, said that the child was destined to do great things, and forbade the flames to be extinguished; when the child awoke the flame disappeared. He was henceforth brought up and educated as the king's own child. If in the course of his education he became, as Cicero supposes, acquainted with the affairs of Greece, this would in some measure account for the analogy between the constitution of Solon and that which Servius afterwards gave to the Romans. Fortune, who had so signally favoured Servius in his childhood, continued her partiality for him, raised him to the highest honours that man can attain, and even made him the object of her love. (Ovid, 'Fast.,' vi. 570, &c.) He made a grateful return by dedicating to her a temple outside of the city. (Varro, 'De Ling. Lat.,' v., p. 56, ed Bipont.)

When Servius Tullius had grown up to manhood, he distinguished himself in several battles against the Etruscans and Sabines, and he was also a useful counsellor in the affairs of the administration. The king not only rewarded his services with the hand of one of his daughters, but in his old age frequently entrusted him with the management of his private as well as public affairs, and in the discharge of these duties Servius evinced such wisdom and justice that he soon became the favourite of the people. When the king was murdered by the sons of Ancus Marcius, and Tanaquil concealed his death from the people, they willingly submitted to the regency of Servius, whom the king was said to have appointed to govern in his stead until his recovery, which probably means that he was appointed *custos urbis* (*præfectus urbi*), in which capacity he had a right to hold the comitia for a new election, as he afterwards did (*populum consuluit de se*). When the death of the king became known, Servius was, as Livy (i. 41) says, made king by the senate, but without a decree of

the populus; but, according to Cicero and Dionysius (iv., p. 218), he found his chief support in the populus, who gave him the imperium by a *lex curiata*. The sons of Ancus Marcius, seeing their hopes frustrated, went into exile, and Servius Tullius, to prevent any hostile feeling on the part of Lucius and Aruns Tarquinius, the sons of his predecessor, gave them his two daughters in marriage. The inconsistency of this part of the legend with chronology has been pointed out by Niebuhr.

After Servius had thus established himself on the throne, he made a successful war against the Veientes and some other Etruscan towns, which Dionysius represents as a war with all Etruria. This is the only war which is said to have occurred during his reign, which, like that of Numa Pompilius, was a reign of peace. The most memorable events of the reign of Servius Tullius are his fortification and extension of the city, and the new constitution which he is said to have given to the Roman state. Several of the Latin towns already belonged to Rome, and had grown up with it into one nation, and this nation was leagued with the other independent Latins. Servius effected a federal union among these nations, and induced the Latins, who had hitherto held their general meetings at the fountain of Feren-tina, to build at Rome, on the Aventine, a temple of Diana, as the common property of the Latins and Romans. The Latins agreed, and this was on their part a tacit acknowledgment of the supremacy of Rome. (Liv., i. 45; Dionys., iv., p. 230.) The Sabines appear to have likewise been included in this confederacy, and to have joined the Latins and Romans in the worship at the common sanctuary of Diana; for the story is, that a Sabine attempted to gain the supremacy for his own nation: he possessed among his cattle a cow of extraordinary size, and the soothsayers declared that the government should belong to that nation whose citizen should sacrifice this cow to Diana on the Aventine. He therefore took the animal at an opportune time to Rome. But the Roman priest, who had been informed of the prophecy, reprimanded the Sabine for attempting to sacrifice with unclean hands, and bade him go down to the Tiber and wash them. The Sabine obeyed, and the Roman in the meanwhile sacrificed the cow to Diana. According to Livy it was not until this time that the populus unanimously declared Servius their king.

But although Servius was a favourite of the people, a storm was gathering over his head, which ultimately terminated his life in the tragic manner so inimitably described by Livy (i. 47). Lucius Tarquinius, the son of Tarquinius Priscus, had never given up the hope of occupying the throne of his father; and stimulated by Tullia, the wife of his brother Aruns, he agreed with her to murder his wife and his brother, and to unite himself with her, that thus they might be able the more energetically to prosecute their ambitious and criminal designs. Lucius, now urged on by his unnatural wife, one day appeared in the senate with the badges of royalty. As soon as the aged king heard of the rebellious act, he hastened to the curia, and rebuked the traitor, but he was thrown down the stone steps of the curia, and on his way home he was murdered by the servants of his son-in-law. His body was left lying in its blood. Tullia, the wife of Lucius, anxious to learn the issue of his undertaking, rode in her chariot to the curia; but her more than brutal joy at his success induced even Tarquin to send her home. On her way thither she found the corpse of her father, and ordered her servant to drive over it. The place where this took place was ever after termed the *Vicus Sceleratus*. (Ovid, 'Fast.,' vi. 598; Dionys., iv. p. 242; Varro, 'De Ling. Lat.,' iv., p. 44.)

Such are the legends which were current among the Romans about Servius Tullius; and although they may be based on some historical groundwork, yet in the form in which they are handed down they are little more than fiction. The existence of a king, Servius Tullius, cannot however be denied. The Etruscan traditions, as we learn from an ancient inscription (ap. Gruter, p. DL.) which contained a speech of the Emperor Claudius, stated that Servius, originally called by the Etruscan name of Mastarna, was a follower of Cæles Vivenna; and that after being overwhelmed by disasters, he quitted Etruria with the remains of the army of Cæles, and went to Rome, where he occupied the Cælian hill, and afterwards obtained the kingly power, (See Niebuhr, 'Hist. of Rome,' i. p. 381, &c.) But it is not improbable that this version of the story merely arose from the circumstance of Servius being received at Rome among the Luceres or Etruscans (Göttling, 'Gesch. d. Röm. Staats,' p. 231), for two other legends describe him as a Latin; and the whole spirit of his legislation seems to warrant the conclusion that the man who devised the constitution ascribed to him could not have been an Etruscan, but must have been a Latin. How much of the tragic story of his death may be historical cannot be decided, nor is it of great importance. This however seems to be clear, that at the end of the career of Servius a counter-revolution took place, which frustrated all the beneficial workings of his new constitution, and showed its fruits in the tyrannical rule of his successor.

The constitution of Servius Tullius was always looked upon by the Romans as the basis of their civil and political institutions, and there is no doubt that in subsequent ages much more was attributed to him than he actually did, and that the plebeians in particular considered him as the great protector of their order, who had granted them almost all the rights which they afterwards regained one by one in

their unwearied struggles with the patricians. What Servius actually did for the Romans has been the subject of much discussion among the continental scholars ever since the time that Niebuhr's work appeared. We shall only give a sketch of the constitution of Servius, and refer our readers to the best modern works on the subject.

Servius is said to have commenced his legislation by dividing the public land which was taken from the Latins among those citizens (of course plebeians) who, owing to their poverty, were compelled to work for wages; and by sanctioning, through the *Comitia Curiata*, about fifty laws relating to contracts and injuries, (Dionys., iv. p. 218.), which were probably intended to regulate the relations between the two estates. He divided the city, with the exclusion of the Capitoline and Aventine, into four regions, three of which answered to the three original townships or tribes of which Rome consisted. All the plebeians who dwelled in any of these regions formed a *tribus*; so that all the plebeians of the city were divided into four local tribes (*tribus urbanae*). Their names were *Tribus Suburana*, *Palatina*, *Esquilina*, and *Collina*; and these tribes continued to the time of Augustus. The plebeians who inhabited the country around and subject to Rome, were divided into twenty-six local tribes (*tribus rusticae*), which are sometimes also called *regiones*. This division of the country plebeians is not mentioned by Livy at all; and Dionysius found different and contradictory accounts of it, but he preferred the statement of Fabius Pictor, who mentioned the twenty-six rustic tribes. The subject however might still seem to be involved in difficulties, inasmuch as Livy (ii. 16) states that, in the year B.C. 495, the whole number of tribes was only twenty-one. This difficulty however is removed by the plausible conjecture of Niebuhr (i. p. 416, &c.), that in the war against Porsenna Rome lost a third of its territory—that is, ten regions or tribes; so that there remained only twenty, to which, after the immigration of the gens *Claudia* with its numerous clients, the twenty-first tribe (*tribus Claudia*, afterwards *tribus Crustumina*) was added. The names of the sixteen rustic tribes which continued to exist after the war with Porsenna are: *tribus Æmilia*, *Camilia*, *Cluentia*, *Cornelia*, *Fabia*, *Galeria*, *Horatia*, *Lemonia*, *Menenia*, *Papiria*, *Politia* or *Publilia*, *Pupinia*, *Romilia*, *Sergia*, *Veturia*, and *Voltinia*. (Niebuhr, i. p. 419; Götting, p. 238.) To these were added, in B.C. 387, the *tribus Stellatina*, *Tromentina*, *Sabatina*, and *Arniensis*; in B.C. 357, the *tribus Scaptia*; in B.C. 318, the *tribus Ufentina* and *Falerina*; in B.C. 301, the *tribus Terentina* and *Aniensis*; and lastly, in B.C. 241, the *tribus Velina* and *Quirina*. The number of tribes thus amounted to thirty-five, and it was never increased. The number of thirty tribes instituted by Servius Tullus was equal to that of the patrician *curiæ*; both divisions however existed independent of each other, the one comprehending only the patricians, and the other the plebeians. The clients were probably not contained in the Servian tribes. (Niebuhr, i. p. 241; Walter, 'Gesch. d. Röm. Rechts,' p. 30. note 5.) Götting (p. 236) assumes the contrary, but his arguments are not convincing. The division of the plebeians into a number of local tribes was nothing beyond a regular organisation of the body of the plebes, of which they had indeed been in need; but it did not confer any other rights upon them than what they possessed before. At the head of each tribe, in the city as well as in the country, was a *tribune* (*φύλαρχος*), who was appointed by the members of his tribe. He had to keep a register of all his tribesmen, and he levied the troops and taxes in his tribe. The plebeians now held their own meetings according to their tribes, as the patricians held theirs according to their *curiæ*. The tribes had also their common festivals: those of the city were called the *Compitalia*, and those of the country the *Paganalia*.

The first step by which Servius promoted the liberty of the people was the institution of *judices* for private actions, which had formerly been part of the jurisdiction of the kings. (Dionys., iv. p. 223, &c.) These *judices* were, according to the supposition of Niebuhr (i. p. 428; comp. Götting, p. 241, &c.), the court of the *Centumviri*, for which three members were chosen from every tribe. The number of the court however would then be only ninety. But see 'Dict. of Greek and Roman Antiq., Centumviri,' by Prof. Long.

But the chief part of the Servian constitution was his census, according to which he divided the whole body of Roman citizens, both the patricians, with their clients, and the plebeians, into five classes. The first class comprised those whose property amounted to at least 100,000, or, according to others, at least to 110,000, 120,000, or 125,000 asses. (Livy, i. 43; Dionys., iv. p. 221; Plin., 'Hist. Nat.', xxxiii. 13; Gellius, vii. 13; Cic., 'De Republ.', ii. 22.) The second class included those who had at least 75,000 asses; the third, those who had at least 50,000; the fourth class, those who had at least 25,000; and the fifth class, those who had at least 12,500 or, according to Livy, 11,000 asses. The members of each of these classes were divided into *juniores*, or men from seventeen to forty-five years old; and *seniores*, or men from forty-five to sixty years. The latter, though they had still to perform military service, remained at Rome for the protection of the city; while the former went out into the field, and served in the regular armies. All had, according to their higher or lower census, to equip themselves with a more or less complete suit of armour. All public burdens for the maintenance of the state and the armies were distributed among these classes, in such a manner that the heaviest duties fell upon the wealthiest, who had at the same time practically the greatest influence in public affairs.

All Romans whose property did not come up to that of the fifth class were kept apart from the classes. Dionysius indeed says that they were formed into a separate class. They were however subdivided into *capite censi* and *proletarii*; among the former were reckoned all those who possessed no more than 375 asses, and among the latter those who possessed from 375 to 1500 asses. These two divisions were exempt from the *tributum*, and, with few exceptions, also from service in the army; but they had to pay a head-tax. It is a very ingenious supposition of Niebuhr, that all those who possessed more than 1500 asses, but less than the census of the fifth class, formed the *accensi* and *velati* in the Roman army, that is, a class of reserves who went into the field without arms, and stepped into the places of those who had fallen, whose armour they also took. All the citizens who were comprised in the classes were called *assidui* or *locupletes*, in contradistinction to the rest. (Cic., 'De Republ.', ii. 22; Gellius, xvi. 10.)

After the taxation and the military duties of the Romans were thus regulated by the census, Servius proceeded to determine their rights by the same standard. For this purpose he subdivided each of the five classes into *centuries*, each of which was to have a vote (*suffragium*) in the great national assembly which they were to form (*comitia centuriata*, or *comitatus maximus*). The number of centuries however was not the same in all classes: the first class, though the smallest in numbers, received the greatest number of centuries or suffrages, in order that those who had to bear the heaviest burdens might also have the greatest influence in public affairs. The first class was thus divided into eighty centuries; the second, third, and fourth classes into twenty centuries each; and the fifth class into thirty centuries. The whole number of centuries thus amounted to one hundred and seventy. This division was made with a view to form the Roman army, and the whole number of centuries represented the Roman citizens as a military body. Hence half the number of centuries in each class consisted of the *seniores*, and half of the *juniores*. The *seniores*, though fewer in numbers, had thus equal influence with the *juniores*, so that all political power was distributed with a due regard to age as well as to property. (Gellius, xv. 27.) But to these one hundred and seventy centuries, five others were added, independent of the census, partly to give them a compensation for the active part which their members took in the army; partly, perhaps, that they might be the means of forming a majority in cases where opinions were equally divided between the *seniores* and *juniores*. The first two additional centuries were the *centuriæ fabrorum*, which Livy describes as being assigned to the eighty centuries of the first class, and Dionysius as belonging to those of the second class. Cicero assigns the *fabri* to the first class, but only as one century. The difficulty arising from these different accounts may be removed by the supposition that of the two centuries of the *fabri*, one was assigned to each of the first two classes; and if this supposition be correct, it is highly probably that the three other additional centuries, viz., those of the *accensi*, *cornicines*, and *liticines* or *tubicines*, were likewise assigned one to each of the three last classes. Dionysius says that the five additional centuries were, like the one hundred and seventy others, divided into *seniores* and *juniores*.

These one hundred and seventy-five centuries formed the whole body of infantry in the Roman army. The cavalry was likewise represented by a number of centuries. Twelve centuries of equites existed before the time of Servius, and to these he added six new ones. Dionysius speaks as if Servius had created eighteen new centuries of equites; and Livy (provided the reading in i. 43, be correct), forgetting the six centuries of equites made by Tarquinius Priscus, states that Servius made twelve new centuries in addition to the existing six. The twelve centuries of equites which existed previous to the legislation of Servius, belonged to the patricians, and had their dignity as equites independent of the census, though they naturally belonged to the wealthiest class. The six new centuries of Servius were formed of the wealthiest plebeians of the first class, and were called the *sex suffragia*, as they had six votes in the assembly of the centuries. (Götting, p. 253, &c.) Cicero reckons all the eighteen centuries of equites as belonging to the class which had the highest census, whereas Dionysius seems to distinguish between those equites who belonged to the first class, and the patrician equites. The only distinction between these two classes of equites in the *comitia centuriata* was that the patricians gave their vote before the plebeian equites. We do not know whether there were any other distinctions. They were however in so far placed on a footing of equality, that all of them received a horse from the state (*equus publicus*), or money to purchase one, together with an annual sum for its support, which sum was raised by a tax on the unmarried women, widows, and orphans (*as hordearium*).

The whole body of the Roman people who performed service in the army, and had a right to vote in the great assembly, was thus contained in one hundred and ninety-three centuries, of which one hundred and eighty-one had been newly created. The eighty centuries of the first class, together with the six *suffragia* of plebeian equites and one century of *fabri*, formed a decided majority in the *comitia centuriata*, for they amounted to eighty-seven centuries; whereas all the other classes together had only eighty-four centuries. The votes in the great *comitia*, which were always held in the *Campus Martius*, were

first given by the twelve centuries of patrician equites; next came the six suffragia of plebeian equites; and then the centuries of the several classes, beginning with those of the first class. If therefore the equites and the centuries of the first class agreed among themselves in the comitia, a question was decided at once, without being put to the vote of the remaining centuries. The centuries of the last classes thus had in theory equal rights in their comitia with those of the first class; but practically they seldom exercised these rights, as in most cases the majority was manifest, before a question came to be put to their vote. The comitia of the centuries now received the rights which, until then, had been the exclusive possession of the curiae, that is, to decide on peace and war, to elect the kings, and subsequently the chief magistrates of the republic; and to pass new laws or abolish old ones. (Dionysius, iv., p. 224.) But the assemblies of the curiae still existed. New laws were not often brought before the centuries, on account of the firm adherence to ancient usages; and whenever they were brought before them, it could only be done after they had obtained the sanction of the senate. The election of a king was confined to those candidates who were proposed by the senate through an interrex; and such an event could not happen frequently, as the office of the king was for life. It was a further check upon the comitia centuriata, that when a question was decided by them, it still required the sanction of the comitia curiata; so that in point of fact the patricians, in the senate and their comitia curiata, possessed a very great preponderance over the commonalty. The only advantage therefore which Servius had given to the plebeians was, that the wealthy members of their order had an opportunity of meeting the patricians on a footing of equality, and the way to this honour was of course open to every plebeian. As we are not informed that Servius Tullius admitted any of the plebeians into the senate, it seems to have been his intention to exclude them from all the offices which were in the exclusive possession of the patricians. This shows at the same time the improbability of the story according to which Servius intended to resign his royal dignity, and to appoint two consuls, one of whom should be a plebeian. Niebuhr is inclined to think that almost all the rights which the plebeians acquired in the course of time, had been originally granted to them by the constitution of Servius Tullius, and that they had been deprived of them during the reign of Tarquinius Superbus. But this theory seems to be supported rather by the stories which in subsequent ages became current of the good King Servius, than by what must be considered as historically established in regard to his constitution. Nothing is more natural than that the benefits which Servius actually conferred upon the plebeians should in after-times, when they were abolished, have been greatly magnified, as if he had placed the plebes on a footing of perfect equality with the patricians.

Respecting the reign and constitution of Servius Tullius, the reader may, besides the work of Niebuhr, consult Huschke, 'Die Verfassung des Königs Servius Tullius, als Grundlage zu einer Römischen Verfassungsgeschichte entwickelt,' Heidelberg, 8vo, 1838, a work which is more based on speculation than on an accurate examination of the ancient authorities; Zumpt, 'Ueber Abstimmung des Römischen Volkes in Centuriat Comitien,' Berlin, 4to, 1837; Götting, 'Geschichte der Römischen Staatsv.,' pp. 230-267; Walter, 'Gesch. d. Röm. Rechts,' pp. 29-37; Rubino, 'Ueber den Entwicklungsgang der Römisch. Verf. bis zum Höhepunkt der Republik,' vol. i., Marburg, 8vo, 1839; Hüllmann, 'Römische Grundverfassung,' Bonn, 8vo, 1832; and, by the same author, 'Ursprünge der Römischen Verfassung durch Vergleichen erläutert,' Bonn, 8vo, 1837.

SESOSTRIS (Diodorus calls him SESOOSIS, sometimes he is called RAMSES THE GREAT), the greatest of the early kings of Egypt. He is the third king of the twelfth dynasty of Manetho, and, according to Herodotus (ii. 102), the successor of Moeris; but Diodorus (i. 53) places him seven generations after Moeris. The exact time of his reign is uncertain, but the most common opinion is that it was about the year B.C. 1500. What has been handed down to us as the history of Sesostris, contains such exaggerated accounts of his military exploits, that we must suppose the achievements of several kings, who perhaps bore the same name, to be ascribed to one. There is however no reason to doubt his personal existence, and as his history serves to explain many of the remains of Egyptian art and architecture, it will be necessary to relate the ancient traditions.

The father of Sesostris had all the male children who were born in Egypt on the same day with Sesostris educated with his son, and gave them a regular military training, that they might become attached to their king and be enabled to endure with him all the hardships to which they might be exposed during his career as a conqueror. (Diod., i. 53.) His first expedition was during the lifetime of his father, into Arabia, which he conquered. Hereupon, though still a young man, he was sent by his father into the countries west of Egypt, and made himself master of the greater part of Libya. After the death of his father, when he came to the throne, he determined to realise a prophecy according to which he was to become master of the whole inhabited earth. But before he set out, he endeavoured to secure the good will of the Egyptians, for he is represented as king of all Egypt. He divided the country into 36 districts (*νομοί*), each under the government of a nomarch. He then raised an army of 600,000 foot, 24,000 horse, and 27,000 beasts of burden, giving the command of its

numerous subdivisions to those warriors who had been educated with him, and whose number was above 1700. To these men he also assigned the best portions of the land (Diod., i. 54), for he is said to have divided the whole country into equal parts, and to have assigned one to every Egyptian. (Herod., ii. 109.) His first attack was directed against the Ethiopians, who were subdued, and compelled to pay annual tribute, consisting of ebony, gold, and ivory. He then sent out a large fleet of 400 long ships, the first that were built in Egypt. This fleet sailed down the Red Sea, and round the whole coast of Asia as far as India, and all the nations on the coasts were conquered. Sesostris in the meanwhile traversed Asia with an army, and penetrated as far as the eastern bank of the Ganges, nay, even to the coasts of the eastern ocean. (Comp. Plin., 'Hist. Nat.,' vi. 34.) When all Asia was thus rendered subject to him, he returned in a north-western direction, and reached Scythia on the banks of the Tanais. Traces of the conquests of Egyptian kings in India are still visible on some Egyptian monuments. Prosecuting his plan, the king crossed the Tanais, and marched through Thrace, where however he met with great difficulties, partly from want of provisions and partly from the difficult nature of the country, and he therefore ceased carrying his conquests any farther. In all countries where he had conquered he is said to have erected columns with Egyptian inscriptions recording his conquests; in some places he erected his own statue, four cubits and one foot high, for such was his own natural stature. The columns erected in Palestine, and two figures of the king cut into the rocks in Ionia, were seen by Herodotus (ii. 106) himself, and in Ethiopia they appear to have been known in the days of Strabo (xvii. c. 1, p. 420; xvi. p. 386, ed. Tauchnitz).

This vast campaign had lasted nine years, and the king, after having settled the tributes to be paid to him, collected his prisoners and spoils, and returned to Egypt. On his arrival at Pelusium he was nearly burned in his tent with his wife and children, through the treachery of his brother, whom he had intrusted with the regency of Egypt during his absence. The happy escape of the king and four of his children, for two were burnt, was ascribed to Hephaestus, the great god of Memphis, and the king afterwards dedicated in the temple of that city statues of his wife and himself, each 30 cubits high, and statues of his children, each 20 cubits high; and each of these statues was made of one solid block of stone. (Herod., ii. 107 and 110; Diod., i. 57.) After he had punished his brother, he adorned the temples of the gods with magnificent presents, and rewarded his warriors according to their desert. At this time Egypt was in a state of the highest prosperity, and the inhabitants enjoyed a kind of golden age. The king himself however continued in his restless activity. In each town of Egypt he raised a temple to the greatest local divinity. But in the execution of these, as well as his other great works, he did not employ his Egyptians, but the prisoners of war whom he had brought with him to Egypt. The Babylonian captives, unable to endure the hardships imposed upon them, gathered together and took possession of a fortified place on the Nile, from whence they carried on a war with the Egyptians: at last however the Babylonians were not only pardoned, but received the place which they occupied as their settlement, and henceforth they called it Babylon. Sesostris surrounded many cities of his kingdom with high mounds to protect them against the inundations of the Nile, and many traces of such mounds are still visible; he also intersected Egypt north of Memphis with numerous canals, which carried off the superfluous water of the Nile, facilitated the intercourse of his subjects, and were a protection against foreign invaders. Another protection of Egypt, especially against the Syrians and Arabs was a wall, 1500 stadia in length (according to Diod., i. 57), which extended from Pelusium to Heliopolis; but the actual distance is only about seventy-five geographical miles in a straight line, and modern travellers have found that the wall runs past Heliopolis. To the principal divinity of the city of Thebes Sesostris dedicated a magnificent ship of cedar-wood, 230 yards long. The last of his great works were two obelisks of hard stone, each 120 cubits high, on which he recorded the greatness of his power, the amount of tribute which he received, and the number of conquered nations. In the reign of Augustus an obelisk 116 feet high, and said to have been erected under Sesostris, was conveyed to Rome and set up in the Campus Martius. (Plin., 'Hist. Nat.,' xxxvi. 14.)

All the subject kings and princes appeared every year at stated times in Egypt before Sesostris with presents, and he travelled with them in a sort of triumph through his country. On all other occasions he treated them with great respect, but when they approached a temple or a city, he made them, four at a time, draw his chariot. (Diod., i. 58; Plin., 'Hist. Nat.,' xxxiii. 15.) After Sesostris had reigned thirty-three years, or, according to Manetho, sixty-six years, he was seized with blindness, and put an end to his life. (Compare Wilkinson's 'Manners and Customs of the Ancient Egyptians,' i., p. 63, &c. and 99, &c., who places the epoch of Sesostris about the year B.C. 1355.

SESTINI, DOMENICO, was born at Florence about 1750. He studied classical literature, and applied himself chiefly to archaeology. About 1774 he went to Sicily, where the Prince of Biscari retained him for his librarian and keeper of his rich cabinet of antiquities at Catania. In 1778 Sestini proceeded to Constantinople, where he became tutor to the sons of Count Ludolf, the Neapolitan ambassador at the Porte. He made several journeys with his pupils through various provinces of

the Ottoman empire. He was afterwards employed by Sir Robert Ainslie, the English ambassador at the Porte, to collect medals for him. Subsequently he went with Mr. Sullivan as far as Bushire, and returned to Constantinople in 1782. The published narratives of his journeys are:—1, 'Lettere scritte dalla Sicilia e dalla Turchia a diversi amici in Toscana,' 7 vols. 12mo, translated into French at Paris in 1809; 2, 'Lettere Odeporiche,' 1785, translated into French under the title of 'Voyage dans la Grece Asiatique, à la Péninsule de Cyzique, à Brusse et à Nicée,' with a Flora of Mount Olympus, Paris, 1789; 3, 'Viaggio da Costantinopoli à Bucharest,' Rome, 1794; 4, 'Viaggio da Costantinopoli à Bassora e ritorno,' also translated into French; 5, 'Viaggi ed Opuscoli Diversi,' 8vo, Berlin, 1807 (this work contains the account of a journey made by the author in 1781 from Vienna to Rukschuk by the Danube, and thence by Varna to Constantinople; an account of the sect of the Yezidis, which was afterwards inserted by Sylvestre de Sacy in his 'Description du Pachalik de Bagdad,' a treatise on the 'murex' of the ancients, &c.); 6, 'Viaggio Curioso, Scientifico, Antiquario, per la Valachia, Transilvania, ed Ungheria sino à Vienna,' Florence, 1815; 7, 'Agricoltura Prodotti e Commercio della Sicilia,' of which only one volume was published at Florence, 1777.

From Constantinople Sestini returned to Italy, where he published several of his works. He sailed again for the Levant in 1793, and went to Salonichi, where he became acquainted with Cousinry, the French consul and antiquarian; he thence returned to Tuscany, and from Tuscany to Germany. He resided many years at Berlin, which he left after the battle of Jena. He then repaired to Paris, and in 1810 he returned to Florence, where he was appointed antiquarian to the Grand Duchess Elise, Napoleon's sister. After the restoration in 1814 he was appointed by the Grand Duke Ferdinand honorary professor in the University of Pisa. He afterwards repaired to Hungary, where he remained some time occupied in arranging the rich collection of medals of Count Wiczay at Hederwar, of which Father Caronni, a Barnabite and an antiquarian, who went over part of the same ground as Sestini, but was inferior to him in judgment and experience, had published an imperfect catalogue in 1812. The present Grand Duke of Tuscany, Leopold II., appointed Sestini to the office of royal antiquarian; and after his death, which took place at Florence in 1832, he purchased his valuable library and numerous manuscripts, among the rest his great work on numismatics, 'Sistema Numismatico,' 14 vols. fol.

Among the published works of Sestini on his favourite science of numismatics, which he illustrated by means of geography, and vice versa, the following deserve especial mention:—1, 'Classes generales Geographiæ Numismaticæ, seu Monetæ Urbium, Populorum, et Regum, ordine geographico et chronologico dispositæ secundum systema Eckelianum,' 4to, Leipzig, 1797, a work more complete than those of Eckel, Lipsius, and Pinkerton (in the first part Sestini gives a series of medals of more than 1000 cities, and of 240 sovereigns; and in the second is a list of cities to which Goltz and Ligorio have attributed apocryphal medals, and of many more to which medals have been erroneously distributed and misapplied); 2, 'Considerazioni sulla Confederazione degli Achei,' with plates of all the medals of the confederate cities; 3, 'Relazione su i Moderni Falsificatori,' in which he exposes the tricks of those who coin medals which they pass for ancient; 4, 'Descriptio Nummorum Veterum ex Museis Ainslie, Bellini, Bonducea, Borgia, Casoli, Cousinry, Gradenigo, San Clemente, Von Schellersheim, Verità,' &c., fol., Leipzig, 1796; 5, 'Descrizione degli Stateri Antichi, illustrati colle Medaglie,' 4to, Florence, 1817; 6, 'Lettere Numismatiche,' 9 vols., published at different periods, and containing many valuable dissertations, such as upon Armenian coins, upon the era of the Arsacidae, upon a rare set of medals of Ptolemy, son of Juba II., upon a medal of Aëropus III., king of Macedonia, &c.; 7, 'Descrizione di alcune Medaglie Greche del Museo Fontana,' 3 vols. 4to, Florence, 1822-29; 8, 'Descrizione di alcune Medaglie Greche del Museo del Barone di Chaudoir,' 4to, 1831; 9, 'Catalogus Nummorum Veterum Musei Arigoniani, dispositus secundum systema geographicum,' fol.; 10, 'Descrizione delle Medaglie Greche e Romane del fù Benkowitz'; 11, 'Illustrazione d'un Vaso di Vetro con edifiçi e leggende' (the vase was found at Populonia, near Piombino); 12, 'Dissertazione intorno al Virgilio di Aproniano, codice prezioso della Laurenziana' (this is an account of a manuscript copy of Virgil on parchment, which exists in the Laurentian or Medici library at Florence, written by a certain Apronianus, who is supposed to be Turcius Rufius Asterius Apronianus, who was consul A.D. 494); 13, 'A Catalogue, with Illustrations, of the valuable Museum Hederwar in Hungary,' 3 vols.

Sestini ranks among the first numismatists of any age or country. He was in correspondence with the most learned of his contemporaries, and was intimate with Eckel, Neuman, Cardinal Borgia, Cousinry, and others; and was a member of the academies of Paris, St. Petersburg, Munich, &c.

(*Necrologia di Domenico Sestini, in the Antologia di Florence, July, 1832.*)

SETTLE, ELKANAH, is remembered, not for his literary merits, but for the extraordinary fact that he, a person of very small talents, was for a time the successful rival of one of the greatest poets of the nation. The particulars of his history, with specimens of his works, may be gathered from various parts of Scott's edition of the works of Dryden. Settle, born in 1648 at Dunstable, was entered a commoner

of Trinity College, Oxford, in 1666; but left the university without a degree, and came to London as a literary adventurer. He first rose into reputation in 1671 by the success of his tragedy of 'Cambyases,' and the profligate Rochester, desirous to humble Dryden, eagerly adopted the new dramatist as his instrument. Settle's next tragedy, 'The Empress of Morocco,' introduced by its unscrupulous patron, enjoyed the honour (never vouchsafed to Dryden, the laureate) of being first acted at Whitehall by the lords and ladies of the court: on being transferred to the theatre it was acted to full houses for a month successively; the printed copies of it were sold for double the usual price; and the author, intoxicated by his undeserved success, prefixed to it a vaunting preface, animadverting severely upon Dryden. Dryden, alarmed and jealous, assisted Shadwell and Crowne in writing scurrilous 'Notes and Observations' on the play, which the author answered in the same strain. Political differences embittered the quarrel thus begun. But poor Settle's fame was short-lived; and Dryden had little cause to fear him when he was so ill-advised as to advocate the cause of his Whig patrons by publishing, in answer to the 'Absalom and Achitophel,' a poem entitled 'Absalom Senior, or Achitophel Transposed.' Nevertheless, the new offence was thought worthy of punishment; and, under the name of Doeg, Elkanah became the victim of some of those contemptuous verses which Dryden contributed to the second part of 'Absalom and Achitophel.' Three of these stanzas, commemorating his smoothness of versification, his bombast, and his real poverty, both of thought and fancy, may be accepted as no unfair criticism on his works in general:—

Doeg, though without knowing how or why,  
Made still a blundering kind of melody;  
Spurred boldly on, and dashed through thick and thin,  
Through sense and nonsense, never out nor in;  
Free from all meaning, whether good or bad,  
And, in one word, heroically mad.

Down to this time Settle had been a trusted servant and pamphleteer of Shaftesbury and the other Whig leaders, and in November 1680 he superintended with much approbation the burning of the pope in effigy. Soon afterwards however he suddenly changed his party, recanting his political heresies in a narrative which he published in 1683. By this change he perhaps preserved for the time his place as poet-laureate for the city, and writer of verses for pageants and other civic festivities; but with the revolution his prospects were completely blighted. Although he retained his place as city-poet, he was reduced to great poverty. He had literally to suffer the fate satirically prophesied for him by Dryden, of writing plays for shows at Bartholomew fair in Smithfield; and in one of these he actually performed in person the part of the Dragon slaughtered by St. George, a fact which Pope has chronicled in the 'Dunciad.' At length, in his desolate old age, he was received into the Charter-House, and died there in 1723. He was the author of sixteen original plays that were printed, and of a good many occasional and political pieces both in verse and in prose.

SEVAJEE, surnamed BOSLA, the founder of the Mahratta power in India, was born in May 1627 at Poonah, the 'jagheer,' or fief, of which was held by his father, Shahjee, under the kingdom of Ahmednuggur, and, after its dissolution, from the Beejapoor monarchy. His restless and ambitious character appears to have developed itself at a very early age, as in 1647 he had supplanted his father at Poonah, and in the following year possessed himself of all the Northern Concan. The Beejapoor government was then fully occupied in guarding against the aggressions of the Delhi Moguls; and Sevajee continued for several years to extend his power by progressive encroachments without coming to an open rupture, till his spoliations became so daring that in 1653 a large force was sent against him under Afzul Kahn, a leader of reputation. He succeeded however in assassinating the general at an interview; routed and dispersed his army; and maintained himself in the field till 1662, when a peace with Beejapoor left him in possession of his acquisitions. But he now came into collision with the formidable power of Aurungzebe, with whose armies in the Dekkan he was unable to cope; and though he succeeded by a sudden irruption (January, 1664) in surprising and sacking the distant emporium of Surat, from which he brought off an immense booty, he found it expedient in the following year to make his submission to the emperor, and, co-operating with the Mogul troops in their invasion of Beejapoor, did distinguished service in the campaign. He was disgusted however by the haughty reception which he met with at the court of Delhi; and having made his escape with difficulty from the capital, he re-occupied his former territories, which he greatly enlarged at the expense of the falling kingdoms of Beejapoor and Golconda, avoiding for some years to renew hostilities with the Moguls. This interval he employed in settling his dominions, and introducing a strict system of discipline into his army; and when the war with Aurungzebe broke out anew (1670), he not only ravaged the country with his light cavalry, and inflicted a second sack on Surat, but in 1672 for the first time engaged and defeated a regular Mogul force in a pitched battle. To this period is also assigned the commencement of the 'chout,' a sort of tribute, or blackmail, consisting of the fourth of the revenue, on the payment of which any province was exempted from devastation, and which long continued a principal source of Mahratta revenue.

He had for several years previous assumed the title of Raja, and the

royal prerogative of coining money; but in 1674 he was solemnly crowned at Rayghur, with all the pomp of the Mogul ceremonial, signalling his accession by an inroad in which he for the first time carried his arms north of the Nerbudda. His next exploit was in a different direction: having secured his rear by an alliance with Golconda, he boldly crossed the peninsula (1676) to the eastern coast, possessed himself of the strong forts of Vellore, Gingi, and Wandiwash, between Madras and Pondicherry, and overran great part of Mysore, to which he laid claim from his father Shahjee having held a jagheer there at the end of his life. From these conquests he was recalled (1678) by the invasion of Golconda by the Moguls; and though his plans were for a time disconcerted by the desertion of his son Sambajee to the enemy, he compelled Aurungzebe's viceroy of the Dekkan to retire from Golconda, and to raise the siege of Beejapoor, while he exacted from the latter state, as the price of his aid, the cession of all the country between the Toombuddra and the Kishna. His power was now predominant throughout Southern India, none of the shattered sovereignties of which were able to oppose any check to his progress; but his further schemes of aggrandisement were cut short by a sudden illness, of which he died, on the 5th of April 1680, aged nearly fifty-three. His son Sambajee (who had previously resumed his allegiance) succeeded him; but neither his abilities nor his fortune were equal to those of his father, and he was taken and put to death in 1689.

Sevajee (in the words of Mountstuart Elphinstone) "left a character which has never since been equalled or approached by any of his countrymen. The distracted state of the neighbouring countries presented openings by which an inferior leader might have profited; but it required a genius like his to avail himself, as he did, of the mistakes of Aurungzebe, by kindling a zeal for religion, and through that a national spirit among the Maharrattas. It was by these feelings that his government was upheld after it had passed into feeble hands, and was kept together, in spite of numerous internal disorders, until it had established its supremacy over the greater part of India."

SEVERUS, ALEXANDRINUS, a Greek rhetorician, who lived about A.D. 470. There are extant under his name six Narratives (*Διηγήματα*), and eight Ethopoeiæ (*Ἠθοποιαί*). The six narratives are mentioned by Iriarte as being among the Greek manuscripts of the Escorial. The Ethopoeiæ are printed in Gale's 'Rhetores Selecti,' which were edited by J. F. Fischer, Leipzig, 1772.

An Ethopoeia, of which *allocutio* is the Latin equivalent, is defined by Priscian to be "an imitation of a speech (*sermo*) adapted to the character and to the supposed persons; as, for instance, what Andromache might have said on the death of Hector." The Ethopoeiæ of Severus contain, among others, the following subjects:—What Æschines might say on going into banishment upon Demosthenes furnishing him with means for his journey; what Menelaus might say upon Helen being carried away by Alexander; what a painter might say on having painted a girl and fallen in love with her. The frigid commonplaces of these short pieces are merely curious as specimens of the literature of the age to which they belong.

SEVERUS, CORNELIUS, an epic poet of the time of Augustus. Respecting the circumstances of his life nothing is known, except that he died very young. Quintilian (x. l. § 89) says that he was more a versifier than a poet, though he allows that, considering the early age at which he wrote, he showed very great talents. His poems were, 'Bellum Siculum,' the first book of which was, according to Quintilian, of considerable merit. Which Sicilian war he described in this poem is not certain, but it is supposed that it was the war which Sextus Pompeius carried on after he had gained possession of Sicily. [POMPEIUS.] There is a poem still extant, called 'Ætna,' which contains, in 640 hexameters, a description of Mount Ætna, and an account of the causes of its eruptions. Now as Seneca ('Epist.' 79) calls Cornelius Severus the author of a poem 'Ætna,' it has been supposed that this poem is the work of Severus. But the language in the extant poem, as well as several allusions to events which happened in the reigns of Claudius and Nero, place it beyond doubt that the extant poem is not the work of Severus. The description of Mount Ætna to which Seneca alludes was probably only a part of the 'Bellum Siculum.' A second poem of Cornelius Severus contained a description of the death of Cicero, and a fragment of it, which proves the great talents of the young poet, has been preserved by Marcus Annals Seneca. ('Suasor,' vii. p. 49.)

(Burmman, *Antholog. Lat.*, ii. 155; Wernsdorf, *Poet. Lat. Minor.*, tom. iv., p. 33, &c., and p. 217, &c.)

SEVERUS, L. SEPTIMIUS, was a native of Leptis in Africa, where he was born, A.D. 146, of an equestrian family. It is impossible to give more than a rapid sketch of the life of this enterprising man.

After his eighteenth year Severus came to Rome for his improvement, and received the rank of senator from M. Aurelius. He studied law in company with Papinian, who was a relation of his second wife, under Q. Cervidius Scaevola; and he received from Aurelius the office of advocatus fisci, in which he was succeeded by Papinian. In his youth he was of licentious habits, and he had to defend himself against a charge of adultery, of which however he was acquitted before the proconsul Didius Julianus, whom he afterwards succeeded in the empire. After filling the quæstorship and other public offices, he was appointed proconsul of Africa, his native country. Under Aurelius he

also filled the tribunate, an office of which he scrupulously discharged the duties. About this time he married his first wife, Marcia. After the death of Aurelius, he visited Athens; and when he became emperor, he showed the citizens that he had not forgotten certain slights put upon him during his residence there. Under Commodus he held the office of legatus of the Lugdunensis Provincia. On losing his wife, he looked out for another whose nativity was favourable to his ambitious views; for Severus appears to have been a believer in astrology. He heard of a woman in Syria whose destiny it was to marry a king, and accordingly he solicited and obtained in marriage for his second wife Julia Domna, by whom he had children.

Severus was at the head of the army in Germany when news came of the death of Commodus, which was followed by the short reign of Pertinax, and the accession of Didius Julianus, who purchased the imperial title. The army proclaimed Severus emperor, and the ambitious general promptly advanced upon Rome to secure his title. Julianus, after a fruitless attempt to stop the progress of Severus by declaring him a public enemy, and an equally unsuccessful attempt to get him assassinated, caused a senatus consultum to be passed for associating Severus with him in the empire. Julianus however was shortly afterwards murdered in his palace, and Severus entered Rome with his soldiers (A.D. 193), where he was acknowledged emperor.

But Severus had a formidable rival in the East, where the legions had proclaimed Pescennius Niger. After arranging affairs at Rome, he set out to oppose Niger, whom he defeated near Cyzicus. The emperor banished the wife and children of Niger, and punished both individuals and cities that had favoured the cause of his rival. He also advanced still farther into the East, into the sandy plains of Mesopotamia, in order to secure the empire on that side and to punish the adherents of Niger. The Parthians and Adiabeni were reduced, and Severus was honoured with the titles of Arabicus, Adiabenicus, and Parthicus by the senate, who also offered him the honour of a triumph, which he refused on the ground that a triumph was not due to a victory gained in a civil war; and he also declined adopting the title of Parthicus from apprehension of provoking such formidable enemies as the Parthians.

On his road to Rome Severus heard of the revolt of Albinus in Gaul, and he directed his march to that province. After the war had been carried on for some time with various success, a great battle was fought at Trinurtium or Tinurtium, not far from Lyon, in which Albinus was defeated and lost his life. On this occasion Severus disgraced himself by that brutal ferocity which was so prominent a feature in his character. He ordered the head of Albinus to be cut off before he was quite dead, and he made his horse trample the body under his feet. Even the wife and children of Albinus, according to some accounts, were put to death, and their bodies thrown into the Rhone. Numerous partisans of Albinus were put to death, both men and women, whose property enriched the ærarium. Spartianus has filled a chapter with illustrious names, who were the victims of the emperor's cruelty, either immediately on the defeat of Albinus or shortly after.

The restless temper of the emperor led him again into the East. From Syria he marched against the Parthians, and took Ctesiphon, their capital, after a campaign in which the soldiers suffered greatly for want of proper provisions. From Parthia he returned to Syria, from which country he marched through Palestine to Alexandria in Egypt. He made many changes in the institutions of Judæa, and forbade under severe penalties the making of Jewish converts. Spartianus adds, that he made the same enactment with respect to the Christians, though we cannot certainly infer from the context that this took place at the same time with the enactment against Jewish converts. The allusion however appears to be to the edict promulgated in the time of Severus, which was followed by a persecution of the Christians. He gave the Alexandrines a kind of senate (*jus buleutarium*), and made many changes in their institutions. Severus returned to Rome A.D. 203. He declined the honour of a triumph which was offered to him, on account of his inability to stand in a chariot owing to the gout. But his victory was commemorated by the erection of a triumphal arch, which still remains and bears his name.

In the year 208, Severus, with his two sons, Caracalla and Geta, set out on their British campaign. The object was to reduce to obedience the Caledonians and other tribes in the northern part of the island, who disturbed the Roman dominion. Geta was left with an army in the command of South Britain, and the emperor undertook the campaign in the north with his son Caracalla. He made his way with great difficulty through a country covered with forests and without roads, and though the natives fled before him, the Roman army suffered greatly, and the loss of life, owing to privation of various kinds, was immense. Severus attempted to secure the limit of his conquests by constructing the great rampart, which is known by the name of the wall of Severus, across the neck of land that separates the æstuaries of the Clyde and the Forth.

The last days of Severus were embittered by the dissensions of his sons, and more particularly by the undutiful conduct of Caracalla, who is even accused of conspiring against the life of his father. He died at York (Eboracum) A.D. 211, in the eighteenth year of his reign, leaving only two children, Geta, and Caracalla, who is also called Antoninus Bassianus. His body, or, according to other accounts, the urn

which contained his ashes, was carried to Rome and placed in the tomb of the Antonini.

Severus was one of the most distinguished among the Roman emperors. He has been compared with Julius Cæsar, whom he resembled in the energy of his character and in his taste for letters. He was through life the faithful friend of the great jurist Papinian, whom he made libellorum magister and præfectus prætorio, and to whose care he recommended his two sons. He was well acquainted with Greek and Latin literature, and he left behind him memoirs of his life. His habits were plain and simple. He sought out and rewarded merit, and he loved justice. But he punished with inexorable severity, and his great qualities were sullied by cruelty, for which it seems difficult to find any apology or palliation. He embellished Rome with various works, such as the Septizonium and the Thermæ called after his name, and he repaired the public edifices which had been erected by his predecessors.

COSIILVDSAECEFC.

Commemoration of the celebration of the Ludi Saeculares.

SEVERUS, MARCUS AURELIUS ALEXANDER, a Roman emperor, was the son of Julia Mamaea, the sister of Sœmis, who was the mother of Elagabalus. He was born at Arca Cæsarea, in Phœnicia, in the temple of Alexander the Great (after whom he was called), A.D. 208. In his early years he was brought up at Rome, and during the reign of his cousin Elagabalus was, by the advice of his grandmother Julia Mæsa, bred in strict seclusion from the court. In his education his mother showed great care and discretion, and withdrew him from the temptations and perils thrown in his way by the emperor. In his twelfth year he was appointed consul with Elagabalus, and was styled Cæsar, the usual title of the successor to the empire. He became very popular with the army, who believed him to be the son of Caracalla, a notion which he appears to have afterwards encouraged. The particulars of the revolt in which Elagabalus was murdered have already been given. [ELAGABALUS.] On his death, Alexander was made emperor, A.D. 222, first by the proclamation of the army, and afterwards more formally by the senate. His reign may rather be called the regency of his mother, who conducted the chief business of government with great firmness and discretion. She made it her first care to repair the ruin caused by the excesses of Elagabalus. She restored the temples which had been profaned, selected a council of sixteen from the senate for her ministry, and appointed the jurist Ulpian prefect of the Prætorian guard. Under her guidance Alexander led a life of strict but not ascetic morality, giving free access to his friends, applying himself closely to the business of the state, and in his leisure hours to literature.

The attempts of the empress-mother to reform the dissolute army were frustrated by their turbulent spirit. The Prætorian guards revolted and murdered Ulpian, and such was the weakness of the government, that Epagathus, their ringleader, was sent to Egypt, that he might there undergo the punishment which it was not thought safe to inflict at home. Dion Cassius informs us, in the fragment of his Life of Alexander, that his own life was threatened by the troops which he commanded, but saved by the management of the emperor. In the latter part of his reign (about 231 A.D., according to Eckhel, 'Doctrina Vet. Num.' from the evidence of a coin), Alexander undertook an expedition against Artaxerxes, the founder of the dynasty of the Sassanidae, who threatened to extend his empire over Asia Minor, and treated the embassies from Rome with disdain. The accounts of this war differ. Lampridius ('Hist. Aug. Script.') in his Life of Alexander, Eutropius, and Aurelius Victor speak of the great victory obtained by Alexander, and their testimony is confirmed by a coin described by Eckhel. On the other hand, the narrative of Herodia (lib. iv., 13, &c.), more consistent throughout with itself, with the undisciplined state of the army, and the unwarlike character of the emperor, records the defeat of the Roman forces in three separate divisions, the sickness of Alexander, and his retreat to Antioch, whither however he was not followed by Artaxerxes, whose resources were so much weakened by the war that he remained quiet for several years. The emperor was shortly afterwards roused from a state of luxurious inactivity by the news of a revolt of the Germans, who had passed their boundaries.

He proceeded to quell this insurrection in person, but having recourse to bribery to buy off the rebels, he incurred the contempt of his troops. This feeling was fostered into mutiny by the arts of Maximinus, who had been entrusted with great power, and the result was a sedition, in which Alexander and his mother were both killed at a place called Sicila in Gaul, A.D. 235. As far as we can gather from a comparison of the exaggerations of Lampridius with the scanty statements of other writers, Alexander seems to have been of a gentle and peaceful disposition, ill-suited for the command of a turbulent soldiery and corrupt people, not less from his tender age and the control to which he was subjected by his mother, than from an effeminacy and want of firmness natural to his race and country. We have in Lampridius a very interesting account of his private life and of the manner in which he passed his day. He bestowed great care in adorning and improving Rome. The Thermæ Alexandrinæ were built by him. His reform in the currency is alluded to by a coin bearing the inscription 'Restituta Moneta.' His other coins record his bounties to the people, his expedition to Persia and triumph, and his consecration. He had three wives: Memmia, the daughter of Sulpicius; Orbiana, who is known by her coins; and another, who was banished by his mother, and whose name has not come down to us. (Herodian, lib. vi.; Dion Cassius lib. lxxx.; Ælius Lampridius, in the 'Historia Augusta.')

PONTIF MAX TR P COS PR.

The amphitheatre of Titus, with two gladiators fighting in it; at the side three figures standing.

SÉVIGNÉ, MADAME DE. MARIE DE RABUTIN CHANTAL was born, according to her own account, February 5, 1627, apparently at the château of Bourbilly in Burgundy. Her father, the Baron de Chantal, was killed in defending the Isle of Rhé against the English; and her mother also left her an orphan at an early age. The charge of her education then fell into the hands of a maternal uncle, the Abbé de Coulanges, an excellent and judicious person, whom she warmly loved, and to whom she owed and owned great obligation. Possessed of great personal advantages and considerable fortune, she married, August 1, 1644, the Marquis de Sévigné, of an ancient house of Brittany. This connection did not prove happy; it was dissolved in 1651, by the death of her husband in a duel, leaving her with a dilapidated fortune and the charge of a son and daughter. The fortune she soon retrieved by retirement and a judicious economy: and in 1654 she reappeared in Paris, where her beauty and talents placed her at once in the first ranks of society. The Prince of Conti, Turenne, Fouquet, superintendent of finance, and many others of less note, in vain enrolled themselves her admirers; having escaped the yoke of her first ill-assorted marriage, she was never tempted to contract a second; nor, in that gallant age, was her conduct tainted by the prevalent laxity of morals. Her children were throughout life her chief object, and especially her daughter, to her affection for whom we owe the greater part of that admirable collection of letters upon which the fame of Madame de Sévigné is raised. That daughter in 1669 married the Comte de Grignan, who held the government of Provence. Madame de Sévigné died, after a few days' illness, at the town of Grignan, in 1696.

As a letter-writer she is unsurpassed, perhaps unequalled. Unstudied, and not always correct, she possessed a natural eloquence, an ease and liveliness of expression, which will never cease to attract. The merit of her style is said by French critics to be too delicate to be readily appreciable by foreigners: nevertheless its charm cannot fail to be manifest in a greater or less degree to all her readers. "The letters of Madame de Sévigné," says La Harpe, "are the book of all hours, of the town, of the country, on travel. They are the conversation of a most agreeable woman, to which one need contribute nothing of one's own; which is a great charm to an idle person. . . . Madame de Sévigné tells a story excellently: the most perfect models of narration are to be found in her letters. Nothing comes up to the liveliness of her turns, and the happiness of her expressions: for she is always touched by what she relates; she paints things as if she saw them, and the reader believes that he sees what she paints. She seems to have had a most active and versatile imagination, which laid hold of all objects in succession."

Her letters, originally published in detached portions, by different persons, are printed collectively in numerous editions. The most com-

plete is that of M. de Monmerque, Paris, 11 vols. 8vo, and 18 vols. 12mo, 1818, containing a text corrected and restored in very numerous passages, and including ninety-four letters not before published. The edition of M. Grouvelle, 8 vols. 8vo, Paris, 1806, is also one of the best, containing memoirs of Madame de Sévigné herself, her daughter, and other persons closely connected with her history, and other auxiliary pieces. Other complete editions, including one in 6 vols. 12mo, by Didot, have since been published. These collective editions contain many letters addressed to Madame de Sévigné by her correspondents.

SEWARD, ANNA, was born in 1747, of good parents, her father being the rector of Eyam in Derbyshire, prebendary of Salisbury, and canon residentiary of Lichfield. Mr. Seward was a writer of poems, which are printed in Dodsley's collection; and in 1750 he published an edition of Beaumont and Fletcher. He encouraged the poetical indications in his daughter with all the gratified pride of a parent. Pope, Young, and Prior were her favourite authors, and she excelled also in ornamental needlework—an accomplishment she carried into her poems, which bear the same relation to poetry as needlework does to art—ingenious, pretty, and trivial.

She had the society of Dr. Darwin, Mr. Day, author of 'Sandford and Merton,' Mr. Edgeworth, and occasionally that of Dr. Johnson, whom she could not bear, and of whom she has written a good deal in a very ridiculous fashion. In 1782 she published her poetical novel of 'Louisa,' which met with great success, and rapidly exhausted three or four editions. In 1799 she published a collection of 'Sonnets,' intended to "restore the strict rules of the legitimate sonnet." They are now very little known. In 1804 she published her 'Life of Dr. Darwin,' written like all her other works, in an affected style; destitute of all requisites for biography; wanting in penetration and delineation of character; puerile in judgment and worse in criticism; nevertheless it contains some pleasant literary anecdotes, and is not without a certain sort of interest. In it she lays claim to the authorship of the first fifty lines in the 'Botanic Garden,' which she had written out of compliment to him, but of which he made no mention. She continued to pour forth little poems of questionable merit, but still maintained her popularity.

After a lingering illness, she expired in March, 1809, bequeathing to Sir Walter Scott her literary performances, and particularly the works she had herself intended for the press; and to Mr. Constable, the publisher, her 'Letters.' Scott executed his trust by the publication in 1810 of her 'Poems,' and three volumes of literary correspondence, with a biographical preface. Mr. Constable also published her 'Letters' in six volumes. They afford materials for the study of her character, but they exhibit it in no pleasing light—vanity, bad taste, affectation, and pedantry being mostly prominent.

Posterity, from whose judgments there is no appeal, and with whom the factitious causes of popularity have no weight, has consigned her poems to oblivion, and there is no ground for protesting against this judgment. Nor indeed is there anything in her prose writings to render their preservation more desirable than that of her verse.

SEXTUS EMPIRICUS, a Greek philosopher and physician of celebrity, who flourished about A.D. 200. The particulars of his life are uncertain, and the only two indications on which we can rely are those given in his own works, that he was the pupil of Herodotus of Tarsus, and that he lived about the period before mentioned. Diogenes (ix., 'Timon') simply says, "Sextus, the Empiric, was the pupil of Herodotus of Tarsus: he wrote the ten books of Sceptica, and other excellent works." Equal uncertainty exists as to the place where he lived and taught, although, from the only existing evidence of value (namely, from a passage in his own work, *Πυρρῶναι Τροπιδόσεις*, iii. 16), it appears that he taught philosophy and exercised his art, at least during one period of his life, in the same place as his master. But his very identity has been a matter of dispute. Suidas (Σέξτρος) speaks of Sextus, a native of Libya, to whom he attributes a work entitled 'Sceptica,' in ten books; but he also attributes ten books of 'Sceptica' to Sextus of Chersonesus, whom he calls a follower of Pyrrho, though it is well known that this Sextus, the nephew of Plutarch, and one of the preceptors of M. Aurelius, was a Stoic. That the philosopher of Chersonesus and Sextus Empiricus are two different persons is clearly shown by Kuster, in a note in his edition of Suidas (*in v. Σέξτρος χαρσιανέσις*).

His surname of Empiricus, prefixed to his works, and given him by Diogenes Laertius, intimates that he belonged to that school of medicine which styled itself the Empiric; and he himself confirms this in his treatise *πρὸς τοὺς μαθηματικούς Ἀνι βήητικοί*, 'Adversus Mathematicos,' lib. i., 161.

His works are among the most valuable of those extant in ancient philosophy, and have been largely consulted by all subsequent historians. The 'Pyrrhonian Hypotyposes,' in three books, contains all the celebrated arguments of the ancient sceptics. The first book is a complete analysis of scepticism. He divides philosophers into dogmatists, academics, and sceptics, and then classifies the sceptics themselves. Next follows an exposition of the nature of scepticism, its method, endeavours, and aims; with a learned and precise account of all the celebrated terms in use amongst sceptics, such as *ἐρέχω*, 'I refrain from judging;' *ὁδὲν ὀρίζω*, 'I define nothing;' and others. This book is peculiarly valuable as an exposition, but is perhaps

inferior to the two succeeding books, which are directed against the dogmatists, where, after stating every subject of belief, he opposes each of them with a string of sceptical objections. Morals, religion, logic, nothing escapes his doubt; and this is done in a manner at once peculiar and subtle, and affords an interesting exposition of the insufficiency of human reason to settle those illimitable inquiries of

"Fate, fore-knowledge, free-will absolute,"

which have ever formed the 'vexatæ quæstiones' of philosophers.

The other work of Sextus Empiricus, which is entitled 'Adversus Mathematicos,' is only another form of the Pyrrhonic Institutes above mentioned. It is directed against all who admit the possibility of a science. This discussion, though conducted on very different principles, has been much in vogue amongst the German and French metaphysicians, and indeed involves the whole philosophy of human knowledge. What science is, whether science be possible, whether science be positive or psychological, these are questions eternally renewed. M. Auguste Comte, in that vast system which he has elaborated in his 'Cours de Philosophie Positive,' denies altogether the possibility of a psychological science; while the Germans, on the other hand (led thereto by the fundamental principle common to them all, that the external universe receives its laws from the laws of the mind), contend that all science must necessarily be psychological. But Sextus Empiricus sweeps away both parties, and will admit no science whatever to be possible. The first book of his 'Adversus Mathematicos' undertakes to refute grammarians and historians; the second annihilates the rhetoricians; the third, the geometricians; the fourth, the arithmeticians; the fifth, the astrologers; and the sixth, the musicians.

There are five more books always added to the work, all directed against logicians, moralists, and physicians (*φυσικοί*, in the Greek sense); but to make them part of the same work as the first five books can only have arisen from the ignorance and carelessness of his first editors. They have no real connection with them, but may rather be regarded as a supplement to the second and third books of the 'Hypotyposes,' to which they belong in intention as well as spirit. The two works are indeed closely allied in spirit, and are only various forms of the same philosophy and the same purpose.

Such as they have come down to us, these two works form an encyclopædia of scepticism such as can be found nowhere else. They are, as M. Ancillon well observes, "a positive arsenal of every species of doubt methodically arranged, and from which the sceptics of succeeding times have armed themselves, choosing from his immense magazine the arms suitable to their minds or to the nature of their subjects."

The influence of Sextus Empiricus, except as an historian, has been very small. The Alexandrian philosophy and the Christian religion alike combined by their success to prevent his forming a sect of any consequence; and although modern sceptics have availed themselves of his arguments to prop up their own incredulity, yet there is a tendency in the human mind at variance with this barren philosophy, which no ingenuity, however subtle or plausible, has ever been able to overcome.

There are few editions of Sextus, and none which can be called critical. The first translation of the 'Hypotyposes' was by Henry Stephens, 8vo, 1562. The first edition of the Greek text of both works was published at Paris, folio, 1621. This edition is accompanied with a Latin version. An edition of the Greek text, also with the Latin version, was published by J. A. Fabricius, Leipzig, folio, 1718. There is also an edition by Bekker.

SEYMOUR, EDWARD, FIRST DUKE OF SOMERSET. [EDWARD VI.]

SEYMOUR, THOMAS, LORD SEYMOUR OF SUDLEY. [EDWARD VI.]

SFORZA, JACOPO ATTE'NDOLO, was born about the middle of the 14th century, at Cotignola, a village near Faenza, of humble parents, but forsook in early youth the occupation of a labourer to enlist in one of those companies of adventurers which were then numerous about Italy, and which served for hire the highest bidder among the petty princes and republics of that age. Jacopo, having displayed great courage and perseverance, acquired a considerable reputation in that turbulent militia. After serving under several 'condottieri,' or leaders, he attached himself to Alberico da Barbiano, a captain superior to the rest both by birth and the loftiness of his views. Alberico belonged to the family of the lords of Cuneo, and aspired to the glory of delivering Italy from the foreign mercenaries and forming a national militia. Having collected a force of 12,000 men, all natives of Italy, he gave it the name of the Company of St. George. In the year 1376, Pope Gregory XI., who was residing at Avignon, sent an order to his legate in Italy to endeavour to restore the authority of the Papal see over the towns of the Romagna, which had revolted at the instigation of the Florentines. The cardinal took into his pay a body of foreign mercenaries called the Breton Company, commanded by John Hawkwood, whom the Italians called 'Acuto,' a valiant condottiero of those times. These troops having entered Faenza without opposition, began plundering the town, and killed many of the people. In the following year the Cardinal of Geneva was sent from France by the pope with another body of foreign mercenaries, chiefly cavalry, from Brittany and other parts of France; and having attacked Bologna without success, he wintered at Cesena.

Here the soldiers, having come to blows with the citizens, were driven away with the loss of six hundred of their number; but soon after, having again got admission into the town, some say under a general amnesty granted by the legate, they set about sacking it, killing all the men, violating the women, and not sparing even the nuns. Four thousand of the unfortunate inhabitants of Cesena were killed on that day (1st of February 1377), and eight thousand escaped to beg their subsistence in the neighbouring towns and villages. The report of these enormities spread indignation all over Italy; and Alberico, supported by Barnabo Visconti, lord of Milan, the Florentines, and by the people of Bologna, Forlì, and other towns, marched to attack the foreign troops, which he met at Marino in the Papal state. Jacopo Attendolo, and Braccio da Montone, another distinguished pupil of Alberico, fought under him. After a desperate combat, the foreign mercenaries were utterly defeated and nearly annihilated. The Breton Company was entirely disbanded, and Italy, at least for a time, was freed from foreign mercenaries. Alberico was called the 'Liberator,' and he assumed on his standard the motto 'Liber. Ital. ab Exter.' Attendolo, who had greatly contributed to the victory, received from Alberico the surname of 'Sforza,' by which name, and no other, he and his descendants have become known in history.

Sforza subsequently entered the service of Gian Galeazzo Visconti, lord of Milan. Afterwards he engaged himself to the republic of Florence against the rival republic of Pisa, which had in its service Agnolo della Pergola, another celebrated condottiere. Sforza defeated his antagonist, and the Pisans were obliged to sue for peace. The Florentines made Sforza their captain-general, with an annual salary of twelve hundred golden ducats. He afterwards entered the service of the Marquis of Ferrara against Ottobuono de Terzi, tyrant of Parma, whom he defeated, and treacherously stabbed to death at an interview at Rubiera. The Marquis of Ferrara obtained by this means the dominion of Parma and of Reggio, and he rewarded Sforza by giving him the estate of Montecchio. Sforza afterwards served the Florentines against Ladislaus, king of Naples, whom he defeated near Arezzo. Ladislaus made large offers to Sforza to enter his service, which he accepted, and the king dying soon after, Sforza became great constable or commander-in-chief under his sister and successor Joanna II. At her profligate court the brave but blunt condottiere was exposed to the intrigues and cabals of worthless favourites, and he lost the good graces of his sovereign, and was imprisoned. But he was necessary to her, and he finally triumphed over his rivals. In 1417 he was sent by Joanna to Rome to recover possession of that city for the Holy See. The people of Rome, taking advantage of the schism, had risen in arms and asserted their independence, and the new pope, Martin V., who had just been elected by the council of Constance was far away. The popular party had called in the celebrated condottiere Braccio da Montone, who however left the town on the approach of Sforza. After restoring the Papal authority, Sforza returned to Naples, where he was again banished from the court by the intrigues of Gianni Caracciolo, the then favourite of Joanna II. Sforza, at the head of his trusty men, took possession of Naples, and obliged the queen to banish Caracciolo. Shortly after he was sent again to Rome to assist Pope Martin V. against his factious subjects, who were supported by Braccio da Montone, whom he defeated and obliged to ask for a truce. At this time the pope gave to Sforza his native village of Cotignola in fief, with the title of count. Having returned to Naples, he again incurred the displeasure of the fickle Joanna, upon which he took the part of Louis of Anjou, count of Provence, an hereditary claimant of the throne of Naples. The queen called to her assistance Alfonso, king of Aragon and of Sicily, whom she appointed her heir and successor. Alfonso came with a fleet and an army, defeated Sforza and occupied the city of Naples. But Alfonso abused his victory, and he treated the queen as his prisoner. Sforza came to the assistance of his mistress, and drove away Alfonso. In the meantime Braccio da Montone was ravaging the northern provinces of the kingdom. Sforza marched into the Abruzzi in the midst of winter, but in fording the river Pescara, which was swelled by heavy rains, his horse was carried along by the rapid current, and Sforza was drowned. Thus ended the restless career of this brave but illiterate soldier, whose surname, acquired on the field of battle, became that of a sovereign dynasty.

FRANCESCO SFORZA, born in 1401, son of Jacopo, learnt the art of war under his father. He received from Queen Joanna the title of count, and several domains in the kingdom of Naples. He afterwards entered the service of Filippo Maria Visconti, duke of Milan. Being ill-rewarded by the duke, he accepted the offers of the Venetians and the Florentines, and led their allied forces against the Milanese, who were commanded by Piccinino, a celebrated condottiere, whom he defeated in several campaigns, A.D. 1438-41. The Duke of Milan, in great alarm, offered Sforza his only daughter Bianca, with the city and territory of Cremona for a dowry. Sforza assented, concluded a peace between the belligerents, and the marriage was solemnised in October 1441. But soon after the Duke Filippo Maria, again becoming suspicious of his son-in-law, excited against him Pope Eugenius IV., who sent Piccinino to deprive Sforza of his domains in the March of Ancona. Sforza repaired thither, and for several years fought against the troops both of the pope and of Alfonso, king of Naples, and conquered the greatest part of the March of Ancona. But the death of

the duke his father-in-law opened a new field to his ambition, and he aspired to the sovereignty of the duchy of Milan. There were other pretenders, who alleged that Bianca was an illegitimate child of the late duke; and the people of Milan, considering the Visconti dynasty as extinct, proclaimed the republic. But Pavia and other towns which had been subjected by Milan detached themselves from it, asserting an equal right to their independence. Sforza turned these dissensions to his own account; he accepted the command of the Milanese troops, with which he defeated the Venetians, who wished to dismember the duchy; but having refused to obey the directions of the commissioners from Milan concerning his military movements, he suddenly concluded peace with Venice, and the Venetians agreed to give him 6000 auxiliary troops to take possession of Milan. In February 1450, the people of Milan, reduced by famine, and distracted by anarchy within their walls, opened the gates to Sforza, who was solemnly proclaimed duke of Milan in the following March. In his new dignity he acted with prudence and mildness. He promised to raise no new taxes, to employ none but Milanese for civil offices, and he enforced the laws for the protection of persons and property: he made alliance with the Florentines, conciliated the pope and Alfonso of Naples, and was acknowledged by Louis XI. of France. The Venetians and the Duke of Savoy declared war against Sforza; but after a desultory warfare, peace was made, by which Brescia, Bergamo, and Crema remained to Venice, and the river Sesia was fixed as the boundary between the duchy of Milan and the states of the house of Savoy. The duchy of Milan under Duke Sforza embraced the following towns:—Milan, Pavia, Cremona, Lodi, Como, Novara, Alessandria, Tortona, Valenza, Bobbio, Piacenza, Parma, Vigevano, Genoa, and Savona. The last two cities were conquered by Sforza.

Duke Sforza restored and embellished the ducal palace, raised the castle of Porta Giovia, terminated the magnificent structure of the great hospital, one of the most interesting buildings of Milan, and constructed the navigable canal, or naviglio della Martesana, which communicates between Milan and the river Adda. The reign of Sforza lasted sixteen years. He died of dropsy, in March, 1466, at the age of sixty-five, generally regretted. In his private life he was frugal, sober and continent, affable and humane. His Life has been written by Simonetta, and Corio and the other historians of Milan record his virtues.

GALEAZZO MARIA SFORZA, son of Francesco, who succeeded him on the ducal throne, was very unlike his father: he was suspicious, cowardly, licentious, and cruel. He quarrelled with his mother the duchess Bianca, a most meritorious woman, who retired to Marignano, where she died after a short illness, not without some rumours of poison. He put to a cruel death several innocent persons, and dishonoured many women of all classes. At last a conspiracy was formed against him, and on the day after Christmas-day, 1476, he was stabbed whilst on his way to church. The people took no part with the conspirators, who were put to death. His infant son Giovanni Galeazzo was proclaimed duke, under the guardianship of his mother Bona of Savoy. But Ludovico Sforza, styled 'il Moro,' on account of his dark complexion, and brother of the deceased duke, took possession of the regency, arrested the dowager duchess, put to death her faithful minister Simonetta, and at length usurped the sovereign authority, confining his nephew and his wife to their apartments. The young duke had married a granddaughter of Ferdinand, king of Naples, who remonstrated with Ludovico on his conduct, but to no effect. Ferdinand armed against him, and Ludovico, to avoid the storm, invited Charles VIII. of France to undertake the conquest of the kingdom of Naples. This was the origin of all the wars and calamities of Italy in the 16th century, and of the loss of its political independence. Charles came into Italy assisted by Ludovico, and took Naples, but was soon obliged to retire in consequence of the general hatred of the people to the French for their insolence, rapacity, and oppression. Meantime the duke of Orleans seized upon Novara, and laid some hereditary claims to the duchy of Milan. Ludovico, who now saw the danger of having introduced the foreigners into Italy, formed a league with the Venetians and the pope, and drove away the French out of Italy.

After the suspicious death of Duke Giovanni Galeazzo, which happened in 1494, at the early age of five-and-twenty years, Ludovico was proclaimed the Duke of Milan, and confirmed by a diploma of the emperor Maximilian I. But the Duke of Orleans, having become king of France by the name of Louis XII., sent an army to the conquest of the duchy of Milan, under Trivulzio, a Milanese noble, and a personal enemy of Ludovico Sforza. The Venetians and pope Alexander VI. having joined the French, Sforza was obliged to yield to the storm, and he took refuge in Germany.

The French entered Milan in 1499, without opposition, and Louis XII. was proclaimed Duke of Milan. The French however soon became as odious in Lombardy as they had been at Naples, and insurrections took place in several towns. In January 1500 the people of Milan revolted, and in the following February Ludovico Sforza re-entered his capital. The French however kept their ground in the fortresses, and new reinforcements coming from France, Ludovico marched against them to Novara, but being forsaken by a body of Swiss in his pay, who, through an intrigue of the French, had received orders from their government not to fight against their countrymen

who were in the opposite army, he was defeated and taken prisoner, and sent to France, where he was imprisoned in the castle of Loches till 1508, when he died.

Ludovico had several good qualities; he was generous, fond of the arts and of learned men; he was the friend of Bramante and Leonardo da Vinci, with whose assistance he embellished Milan, built the lazaretto, instituted the public schools, protected Merula, Calcondylas, and other distinguished scholars, and founded chairs of Greek, geometry, and astronomy. Ludovico's policy was artful and crooked; he had obtained the ducal throne by unfair means, but it was unfortunate for Milan that he lost it to make room for strangers. After many years of war in Italy between French, Germans, and Spaniards, during which his two sons Maximilian and Francis Sforza were for short periods seated on the ducal chair, being puppets in the hands of their Swiss or German auxiliaries, Lombardy became finally an Austrian dependency, and the house of Sforza became extinct.

'SGRAVESANDE, WILLIAM JACOB, a Dutch mathematician and philosopher, whose family name was Storm van 's Gravesande, was born at Hertogenbosch (Bois-le-Duc), September 27, 1688. On the side of his grandmother he was descended from the celebrated physician Jean Heurnius, and some of his ancestors had been magistrates of Delft in the beginning of the 15th century.

He received his earliest education in his father's house, and while very young he showed a decided predilection for scientific researches. When sixteen years old he was sent to the University of Leyden to study the law, and before the end of 1707 he took the degree of doctor. His legal studies did not however prevent him from applying himself to mathematical subjects, and before he was nineteen years of age he published his 'Essai sur la Perspective,' a work which was favourably noticed by John Bernoulli, and contains a development of the ingenious idea, that if a horizontal or an equatorial dial be viewed through a plane inclined in any manner, by an eye at the extremity of the gnomon, the perspective representation of the dial on that plane will constitute a dial for the same plane. (Montucla, 'Hist. des Mathématiques,' tom. i., p. 733.) 'SGRAVESANDE, on his return to the Hague, followed for a time the profession of a barrister; but in 1713, a society of young men of talent having undertaken a work entitled 'Le Journal Littéraire,' he became one of its most zealous contributors, and furnished for it numerous extracts from works relating to mathematics and natural philosophy. He also published in the journal a paper on the construction of the air-pump (in which machine he had made some improvements), one on the theory of the collision of bodies, and several other original dissertations. The work was afterwards carried on at Leyden under the title of 'Journal de la République des Lettres,' and it terminated in the year 1733.

'SGRAVESANDE accompanied as secretary the deputies of the States-General when they came to London in 1715, in order to congratulate George I. on his accession to the throne of England. Here he became acquainted with Dr. Burnet, bishop of Salisbury, and was made a Fellow of the Royal Society; and after his return to the Hague he was made in 1717 professor of mathematics and astronomy in the University of Leyden. During the vacations of the years 1721 and 1722 he made two journeys to Cassel, in consequence of invitations from the Landgrave of Hesse, who wished to have the benefit of his advice respecting a machine which was supposed to be capable of perpetual motion, and who besides had manifested an enlightened taste for experimental philosophy.

In 1724 'SGRAVESANDE, on quitting the chair of mathematics at Leyden, delivered an oration which, under the title 'De Evidentia,' he afterwards printed at the head of the third edition of his 'Éléments de Physique.' In this he ascribes the pre-eminence to mathematical evidence, considering it as the only criterion of truth; and he makes the sanction of moral evidence consist in the will of the Deity, by whose law he supposes that man believes the testimony of his senses, and trusts in the conclusions drawn from analogy.

In 1730 'SGRAVESANDE added civil and military architecture to the subjects which he taught, and four years afterwards he undertook to give instructions in a course which comprehended logic, metaphysics, and moral philosophy. From attachment to his country, 'SGRAVESANDE declined in 1724 an invitation from Peter the Great, who wished him to become a member of the Royal Academy, then recently formed at St. Petersburg; and in 1740 a similar invitation from the King of Prussia. He was occasionally employed as an engineer in superintending the hydraulic operations which were executed in Holland. He was also consulted by the ministers of the States when measures relating to finance were in contemplation; and having a great facility in discovering the key to secret writing, he was of great service during the war of the Succession in deciphering such of the enemy's despatches as happened to be intercepted.

This distinguished professor was the first who on the Continent publicly taught the philosophy of Newton, and he thus contributed to bring about a revolution in the physical sciences; but he is said to have been more skilful in making observations and experiments than in conducting transcendental researches; and falling into an error respecting the nature of force, by confounding what is called living or active force, which is represented by the product of a body's mass multiplied into the square of its velocity, with simple force, which is proportional to the velocity merely, he was led to adopt the opinion

BIOG. DIV. VOL. V.

of Leibnitz on this subject, in opposition to that of Newton. "It is further observed that 'SGRAVESANDE, whose philosophical lectures are distinguished by a simplicity which is the true language of science, are not always consistent in the development of his ideas. His 'Introduction to Philosophy' is the work of a disciple of Locke, yet he neither adopted the particular doctrines of that writer, nor did he propose any system of his own, but he borrowed by turns the principles assumed by different philosophers.

He married in 1720, and had two sons, whom he had the misfortune to lose within eight days of each other, when the eldest was fourteen and the other thirteen years of age. He supported this heavy affliction with the fortitude of a Christian philosopher; and after a long sickness he died, February 28, 1742, being then in the fifty-fourth year of his age.

The principal works of 'SGRAVESANDE are the 'Essai de Perspective,' 1711; 'Physica Elementa Mathematica,' &c., of which the first edition was published at the Hague in 1720, and the sixth, which is in English, by Dr. Desaguliers in 1747; 'Philosophiæ Newtoniæ Institutiones in usus Academicos,' an abridgment of the preceding work, Leyden, 1723; 'Matheseos Universalis Elementa,' &c., Leyden, 1727; 'Introductio ad Philosophiam,' &c.: of this the first edition was published in 1736, and the last in 1756. He also edited a collection of the works of Huygens, and the 'Arithmetica Universalis' of Newton.

SHADWELL, THOMAS, a dramatic author, well known as the hero of Dryden's satire of 'Mac Flecknoe,' was born in Norfolk in 1640 of an ancient Staffordshire family. He was bred to the law, but disliking the drudgery of an office, he quitted it and travelled abroad. On his return to England he became intimate with the reigning wits, and particularly with Rochester, Otway, and Dryden. He shortly after produced his first comedy of 'The Sullen Lovers,' which was so well received that he continued in this dramatic career, and became so notable a man as to be set up by the Whigs as a rival of Dryden. In 1688, on the secession of Dryden from the poet-laureateship, Rochester recommended Shadwell to the place. He died in 1692, it is said in consequence of too large a dose of opium, which he was in the habit of taking.

Shadwell's dramatic works are:—'The Sullen Lovers,' 1668; 'The Royal Shepherdess,' 1669; 'The Humourist,' 1671; 'The Miser,' 1672; 'Epsom Wells,' 1673; 'Psyche,' 1675; 'The Libertine,' 1676; 'The Virtuoso,' 1676; 'Timon of Athens,' 1678; 'A True Widow,' 1679; 'The Woman Captain,' 1680; 'The Lancashire Witches,' 1682; 'The Squire of Alsatia,' 1688; 'Bury Fair,' 1689; 'The Amorous Bigot,' 1690; 'The Scowerers,' 1691; 'The Volunteers,' 1693. A complete edition was published in 1720 in 4 vols. 12mo.

Thomas Shadwell owes his immortality to ridicule. Dryden, his former friend, impaled him on the point of the keenest satire, and there he remains for the laughter of ages. And yet nothing could be more unjust than this satire, for of all Shadwell's faults dullness certainly was the least, and it was absurd to make him—

"Through all the realms of dullness absolute;"

or to say—

"Mature in dullness from his tender years,  
Shadwell alone, of all my sons, is he  
Who stands confirmed in full stupidity.  
The rest to some faint meaning make pretence,  
But Shadwell never deviates into sense."

This is exquisite writing, but very untrue. Shadwell was a man of much tact, observation, and liveliness, whose extreme negligence and haste in writing alone seem to have been the cause of the short-coming of his comedies. Rochester, who certainly was a good judge of wit and vivacity, said—

"Of all our modern wits none seem to me  
Once to have touched upon true comedy  
But hasty Shadwell and slow Wycherley.  
Shadwell's unfinished works do yet impart  
Great proofs of nature's force, though none of art;"

and no one who looks into his plays (which few of his critics and biographers have done) can fail being struck with the truth of this remark. The world, on Dryden's authority, laugh and vow he "never deviates into sense." He often wrote a play in a month, and thus all his works betray carelessness. It is remarkable that Pope's 'Dunciad,' which was an imitation of 'Mac Flecknoe,' also commits the very serious mistake of making a very lively pert man like Cibber the hero of dullness.

Shadwell set Ben Jonson before him as his model, and he followed him at a considerable distance both in his writings and in his personal behaviour. Sensual, given to excesses, and loose in his conversation, he had the faults of that great man, with little of his "immortal substance."

SHÁFELI is the patronymic of a celebrated Mohammedan doctor, named MOHAMMED IBN IDRIS AL SHÁFELI, who was the founder of one of the four sects which are considered orthodox by the Moslems. Sháfeli was born at Gazah, in Syria, in the year 150 of the Hejra (A.D. 767), the same year in which Abú Hanifah, the founder of the sect of Hanefis or Hanefites, died. At the age of two he was taken to Mecca by his parents, and there educated. He applied himself early to the

study of theology and law, and soon became distinguished in both those sciences. He was gifted with so wonderful a memory, that he could repeat a whole volume after reading it twice over. He is considered the first Mohammedan doctor who discoursed of jurisprudence, and methodised that science. To his attainments in all branches of theology Shāfe'i added many other literary accomplishments. He was an excellent poet, and used to deliver lectures on the works of the ancient Arabian poets, explaining the difficult passages, and astonishing his auditory with the extent of his erudition. His contemporary Ibn Hanbal used to say of him, that he was "as the sun to the world, and as health to the body." His assiduity was such, that he used to divide the night into three parts, one for study, another for prayer, and the third for sleep. Shāfe'i died in Egypt, A.H. 204 (A.D. 819). He left several works, which are held in great esteem by the Mohammedans. The principal is his treatise on the 'Ossul, or fundamental principles of Islām; his 'Sunun' and his 'Masnad,' two other works on the same subject, have found numerous commentators. The Shāfe'ites spread formerly about Mawara-nahar, or Transoxiana; they are now met with in every Mohammedan country, but chiefly in Arabia and in India.

SHAFTESBURY, ANTHONY ASHLEY COOPER, FIRST EARL OF, was the son of Sir John Cooper, of Rockborne in Hampshire, who was created a baronet in 1622, and of his wife Anne, only daughter and heiress of Sir Anthony Ashley, of Wimborne St. Giles's, in Dorsetshire, who had been secretary-at-war to Queen Elizabeth. He was born at Wimborne St. Giles's, 22nd July 1621, and inherited the estates both of his father and of his maternal grandfather, the latter especially being of great extent. His father died in 1631.

Sir Anthony Ashley Cooper (or Cowper, as the name is sometimes written) was entered of Exeter College, Oxford, in 1636; and in 1638 he became a student of law at Lincoln's Inn. While yet however only in his nineteenth year, having already excited great expectations by his talents, he was called into public life by being returned as one of the members for Tewkesbury to the parliament which met in April 1640. He did not sit in the next—the Long Parliament, which met in November that year; but he continued to adhere to the royal interest till he was deprived, in 1643, of the government of Weymouth, upon which says Clarendon, "he gave himself up, body and soul, to the service of the parliament, with an implacable animosity against the royal interest." The next year, having raised a force in Dorsetshire under a parliamentary commission, he stormed the town of Wareham, and reduced all the surrounding country. But he appears to have been afterwards suspected of still retaining a secret attachment to the royal cause. Nevertheless he was called upon to sit as one of the members for Wiltshire in the first (Barebone's) parliament assembled by Cromwell after his dissolution of the Long Parliament, 23th April 1653; and by this parliament or convention he was repeatedly appointed one of the Protector's council of state, in which capacity however it is affirmed that he gave a strenuous opposition to Cromwell's designs. He represented the town of Poole in the next parliament, which met 3rd September 1654; and he was also a member of Oliver's last parliament, which assembled 17th September 1656, and of that convened by Richard, 27th January 1659.

Notes of many of his speeches during this part of his life are preserved by Burton; and he is said, by Anthony Wood, to be the person by whom a very long and remarkable one was delivered in March, 1659, which was published soon after in a pamphlet under the title of 'A reasonable Speech made by a worthy Member of Parliament in the House of Commons concerning the other House.' It handles the memory of the deceased Protector with great severity.

After the deposition of Richard Cromwell, Sir Anthony, although he did not enter into any direct correspondence with the king, incurred the suspicion of the council of state, and was for a time in some danger. He continued however to pursue his object with equal perseverance and address, and his vigilance and activity in watching and taking advantage of every turn in the progress of events were undoubtedly of great service in helping to bring about the Restoration. In the Convention Parliament, which met 20th April 1660, Sir Anthony was one of the select committee appointed to draw up the invitation to the king; and he was also one of the commissioners sent over to Breda. Monk indeed, the apparent author of the Restoration, appeared to have been almost wholly in the hands of Sir Anthony, and to have acted under his direction.

As soon as Charles had come over, Sir Anthony, besides being appointed governor of the Isle of Wight, colonel of a regiment of horse, and lord-lieutenant of the county of Dorset, was made chancellor of the exchequer and a privy councillor; and the following year he was raised to the peerage as Baron Ashley of Wimborne St. Giles. In the patent it was acknowledged that the Restoration was chiefly owing to him, and that the nation had been delivered from the evils in which it was involved "by his wisdom and counsels, in concert with General Monk." He also sat as one of the commissioners of oyer and terminer on the trial of the regicides, in October 1670, a display of zeal which, all things considered, was thought not to argue much delicacy of feeling.

As chancellor of the exchequer, serving under his relation and intimate friend the Earl of Southampton, lord treasurer, who was in bad health, Lord Ashley is said to have had almost the entire management

of the treasury in his own hands. But both in council and in parliament, so long as Clarendon retained his influence, he was found acting with what we may call the opposition section of the ministry. He did what he could to resist the Uniformity Bill, and the other similar measures directed against the dissenters (actuated, as Clarendon affirms, by his indifference to all religion); and he also opposed the French connection, the sale of Dunkirk, and the war with the Dutch. Clarendon, to whom Ashley appeared to have no principle, admits that he spoke "with great sharpness of wit, and had a cadence in his words and pronunciation that drew attention." On the death of Southampton, in May 1667, Ashley, retaining his office of chancellor of the exchequer, was appointed one of the commissioners for executing the office of lord treasurer. A treaty of commerce was concluded with Spain in the same month, the instructions for which were drawn up by Ashley; and the peace with Holland and the fall of Clarendon followed in August of the same year.

But when Charles's natural inclinations, and the influence of the Duke of York, brought about a renewal of the old connection with France, Ashley, after very little hesitation, yielded to the current; and his name is one of those immortalised under the comprehensive designation of the Cabal Ministry, which, in 1670, concluded the new French treaty, began the establishment of a system of arbitrary domestic government, and, within two years, involved the country again in a war with Holland. Ashley however is not accused of having received any of the French gold with which some of his associates were bribed on this occasion, and he appears to have resisted, though ineffectually, some of the worst proceedings of the government, particularly the shutting up of the exchequer in January 1672, of which he has been charged by some writers with being the adviser. It was by his advice that Charles published the celebrated declaration for suspending the execution of the penal laws against the Nonconformists and Recusants, in March 1672; but Ashley seems to have regarded this act as no illegal stretch of authority: he afterwards maintained, in a warm argument on the subject with Locke, who enjoyed much of his intimacy and confidence, not only that the king's supremacy entitled him to do many things in ecclesiastical which he could not do in civil matters, but further, "that a government could not be supposed, whether monarchical or of any other sort, without a standing supreme executive power, fully enabled to mitigate or wholly to suspend the execution of any penal law in the intervals of the legislative power." To attempt to cure the occasional inconveniences of particular laws by means of a legislative power always in being, he contended was, "when considered, no other than a perfect tyranny."

In April 1672 Ashley was created Earl of Shaftesbury; and in November following, on the resignation of Sir Orlando Bridgman, who is said to have refused to put the great seal to the declaration of indulgence, he was raised to the place of lord chancellor. His conduct in this office has been represented in very opposite lights; but it appears that, without much knowledge of law, his natural sagacity enabled him to do substantial justice in most cases that came before him, and to acquit himself to the satisfaction both of the public and the profession. Roger North, in his 'Examen,' asserts that he began by tramping on all the forms of his court, and cutting and slashing after his own fancy; but the bar, he adds, "soon found his humour, and let him have his caprice, and after, upon notice, moved him to discharge his orders; and thereupon, having the advantage, upon the opening, to be heard at large, they showed him his face, and that what he did was against common justice and sense; and this speculum of his own ignorance and presumption, coming to be laid before him every motionday, did so intricate and embarrass his understanding, that in a short time, like any haggard hawk that is not let sleep, he was entirely reclaimed." So that, as Roger expresses it, in the Life of his brother, the Lord Keeper Guilford, he came, as is said of the month of March, "in like a lion and out like a lamb." It is asserted however that none of his decrees were reversed. The tribute which Dryden pays to both his integrity and his ability as a judge in the otherwise severe character he has drawn of him in his 'Absalom and Achitophel,' is well known:—

"In Israel's courts ne'er sat an Abethdin  
With more discerning eyes, or hands more clean;  
Unbribed, unsought, the wretched to redress,  
Swift of despatch, and easy of access."

Shaftesbury retained the seals till November 1673, when he was dismissed from office, no doubt by the influence of the Duke of York and the Romish party in the cabinet, whose confidence or good-will he had never been able to conciliate, although the ready and cordial manner in which he had lent his support to some of the most unpopular measures of the court had at the same time gone far to deprive him of the favour of the public. Among the most remarkable parts of his political conduct while chancellor are his compliance with the king's command to issue writs for supplying vacancies in the House of Commons during the prorogation of parliament; his strenuous advocacy of the war with Holland, to which in his speech delivered at the opening of the session in February 1673, he applied the famous expression of Cato, 'Delenda est Carthago,' calling further upon his hearers to remember that the states of Holland were England's eternal enemy both by interest and inclination; and his

eager and effectual support of the Test Act, which was passed in that session. Of the Corporation Act, passed twelve years before, he had been a decided opponent.

On his dismissal from office, Shaftesbury at once openly joined the ranks of opposition, and applied all his activity and talent of intrigue to thwart the measures of the court. His grandson, the third Earl of Shaftesbury, says in a letter addressed to M. Le Clerc (and noticed further in the next article), that his "turning short upon the court, as Sir William Temple expresses it, had only this plain reason for it;—that he discovered the king to be a papist, through that disguise of an *esprit fort*, which was a character his vices and over-fondness of wit made him affect and act very naturally. Whatever compliances my grandfather, as a statesman, might make before this discovery, to gain the king from his brother and the French party, he broke off all, when by the Duke of Buckingham's means, he had gained this secret." By taking up the cry of No Popery, and holding himself up as the martyr of his zeal for Protestantism, he speedily regained his old popularity; and in the session which began in January 1674, the House of Commons showed from the first day of its re-assembling what a powerful party his friends constituted there. Indeed they proved to be the majority of the House, the proceedings of which the ministers could find no way of checking except by resorting to a prorogation, which they continued from time to time till it lasted for no less than fourteen months. And when the House was found to be in no better humour after parliament had at length been suffered to meet again in April 1675, it was prorogued again in June, and then, after another short session, which began on the 13th of October, was at once prorogued to the 15th of February 1677, or for above fifteen months. When it re-assembled, Shaftesbury contended in his place that the parliament had been actually dissolved by being so long kept in a state of suspension; upon which it was voted that he should acknowledge his error and beg the king's pardon on his knees at the bar, and when he refused to do this, he was committed to the Tower. He applied to the Court of King's Bench, and repeatedly petitioned both the king and the House of Lords; but he was not released until he at length consented, after an imprisonment of above a year, to make the submission originally required. In November 1680, the House of Lords resolved that these proceedings were "unparliamentary from the beginning and in the whole progress thereof," and ordered them all to be obliterated from the journals of the House. The Earl of Salisbury, Lord Wharton, and the Duke of Buckingham, who had committed the same offence in the debate on the prorogation, had been all sent to the Tower along with Shaftesbury; but they were liberated on petitioning his majesty after a few months' detention.

The oppressive usage he had been subjected to at once embittered Shaftesbury's hostility to the court and made him more formidable than ever by the accession of public favour which it procured him. Soon after his release occurred the strange affair of Titus Oates and the alleged Popish Plot; when Shaftesbury took so eager a part in maintaining the truth of the story, that some writers have been inclined to suspect it was all a contrivance of his own. But even those who acquit him of this charge are far from unanimous in holding that he actually believed in the existence of the plot, although he turned it much to account in the promotion of his party or personal objects. When the new council, consisting of thirty members—fifteen the existing chief officers of state and of the household, ten other members of the House of Lords, and five selected from the House of Commons—was established in the early part of 1679, Shaftesbury was made its president. It was immediately after being placed in this position that he drew up and carried through parliament the famous act for the better securing the liberty of the subject, now known as the Habeas Corpus Act, but in those days commonly called Lord Shaftesbury's Act. In October following however he was dismissed from his office of president of the council; and soon after, by his advice, Lord Russell, Lord Cavendish, and two others of his friends resigned their seats at the board. Shaftesbury now, on the 26th of June, 1680, took the bold step of appearing at the bar of the Court of King's Bench, and formally presenting the Duke of York to the grand jury as a Popish recusant. The grand jury were sent for by the court, and dismissed while they were considering the indictment; but when the king found it expedient to allow the parliament to meet again in October, after having been prorogued since July of the preceding year, the bill for excluding the Duke from the throne, which had been brought forward in the last session, was again passed by the Commons; and a new prorogation was had recourse to in January 1681. Then followed the Oxford parliament, which was found equally intractable with its predecessors, and was put an end to in the same manner. For some time before this, Shaftesbury had been in close alliance with the Duke of Monmouth; and it is said to have been by his advice that Monmouth had recently returned from Holland, in defiance of his father's injunctions. It is supposed that Shaftesbury, in his hatred of the Duke of York, or his conviction of the dangers to be dreaded from his accession, had made up his mind to support the pretensions of Monmouth to the throne, on the ground of an alleged marriage between his mother and Charles. Alarmed by these designs, the court resolved to make a bold effort to destroy the powerful demagogue; and on the 2nd of July, 1681, Shaftesbury was seized by an order of Council at Thanet House, in

Aldersgate Street, and, being brought before the king and council, was committed to the Tower on a charge of high treason. But when the bill of indictment was preferred against him at the Old Bailey, on the 24th of November, the grand-jury ignored it. It is said that the applause in the court upon this announcement lasted a full hour. Dryden, who had a short time before celebrated the union of Monmouth and Shaftesbury, in his 'Absalom and Achitophel,' now wrote his much more acrimonious satire of 'The Medal,' in reference to a medal which was struck in honour of his lordship's deliverance.

Shaftesbury however seems now to have felt that there was no safety for him under the present system of things in England—that he had involved himself too deeply in the contest with the government to hope that they would ever rest till they had effected his destruction. In these circumstances he attempted to prevail upon his friends to join him in an armed insurrection; and upon their refusal he fled to Holland, on the 18th of November 1682. Here he took up his residence in Amsterdam, where an attack of the gout in his stomach put an end to his life, on the 21st of June 1683.

Lord Shaftesbury was three times married, and left a son, who succeeded him in his titles, by his second wife Frances, daughter of David Cecil, third earl of Exeter.

Few losses of the kind are more to be regretted than that of the Memoirs of his own time, which Shaftesbury is said to have written, and Locke, to whom he had committed the manuscript, to have destroyed in the fright into which he was thrown by the execution of Algernon Sydney. There is a short biographical account of Shaftesbury in Locke's works; but the most complete Life of him is that drawn up under the direction of his great-grandson, the fourth earl, by Mr. Benjamin Martin and Dr. Kippis, an impression of which was printed towards the end of the last century, all the copies of which are said to have been destroyed except two, from one of which the work was reprinted in 1836, in 2 vols. 8vo, under the superintendence of Mr. C. W. Cooke, by whose name it sometimes passes.

SHAFTESBURY, ANTHONY COOPER, THIRD EARL OF, born at Exeter House, London, in February 1671, was the son of Anthony Cooper, second earl, and consequently the grandson of the subject of the preceding article, whose favourite he was from childhood, and who, according to the received accounts, himself superintended his education in his earliest years: the method he took to instruct him in Greek and Latin being to place him while yet very young under the charge of a female of the name of Birch, who is affirmed to have had so great a knowledge of these languages that she spoke both with considerable fluency, and enabled the boy to read them with ease by the time he was eleven years old. His own account of his education is however somewhat different, at least in so far as it ascribes to the celebrated John Locke, whom he calls his "friend and foster-father," the chief share in his training. In the very curious letter (dated February 1705) to M. le Clerc, referred to in the preceding article (which was first printed in 'Notes and Queries,' vol. iii., p. 97, &c., from the original in the Remonstrant Library of Amsterdam), Lord Shaftesbury, after mentioning how entirely his grandfather was guided by the advice of Locke in all that concerned the education and marriage of his son, goes on to say that to him was afterwards in like manner entrusted the direction of his grandchildren, "in whose education Mr. Locke governed according to his own principles (since published by him) and with such success that we all of us came to full years, with strong and healthy constitutions: my own the worst; though never faulty till of late. I was his more particular charge: being an eldest son taken by grandfather and bred under his immediate care: Mr. Locke having the absolute direction of my education." He was afterwards sent to Winchester, and then spent some years in travelling on the Continent, whence he returned to England in 1689. In 1693 he entered parliament as one of the members for Poole, and took a considerable share in the business of the house on the Whig side; but his health suffering from his close attendance, he resigned his seat in 1698, and went over to Holland, where, assuming the character of a student of medicine, he made the acquaintance of Bayle, Le Clerc, and other distinguished literary persons. His father dying the following year, he returned home; and he made a considerable figure in the House of Lords during the short remainder of the reign of King William. Soon after the accession of Anne however he again retired to Holland; and, although he came back to his native country after an absence of two years, he never again took any part in public life. His last years were entirely dedicated to literature. In 1708 he published his 'Letter on Enthusiasm;' in 1709, his 'Moralists, a Philosophical Rhapsody;' the same year his 'Sensus Communis, or Essay on Wit and Humour,' in which he announced his famous doctrine of ridicule being the test of truth; in 1710, his 'Soliloquy, or Advice to an Author;' in 1711, a collected edition of all these works. The state of his health had now become so alarming that he was induced once more to leave England for a milder climate; he proceeded to Naples, and was enabled for some time to resume his pen, but at last sunk and died there on the 15th of February 1713. A complete collection of his various pieces, which he had employed his last days in preparing, appeared soon after his death, in three volumes, under the title of 'Characteristics of Men, Manners, Opinions, and Times.'

Lord Shaftesbury's writings excited great attention and admiration

in his own day; and his name still remains a considerable one in the history both of English philosophy and English eloquence. He appears to have bestowed unwearied pains upon his diction; but although he abounds in ingenious, forcible, and even brilliant passages, he failed to attain the crowning art of concealing his art, and his composition has for the most part an air both of effort and affectation. His philosophy as a system has little claim to originality; but it is animated by a lofty spirit of ancient wisdom and beauty; and is full of glimpses and hints of important and sometimes new truths. "The noble author of the 'Characteristics,'" Warburton has said, while expressing his repugnance to the general character of Shaftesbury's philosophy, "had many excellent qualities both as a man and a writer. He was temperate, chaste, honest, and a lover of his country. In his writings he has shown how much he has imbibed the deep sense and how naturally he could copy the gracious manner of Plato."

Lord Shaftesbury married, in 1709, his relation Jane, daughter of Thomas Ewer, Esq., of Lea in Hertfordshire; and by this lady, who survived till 1751, he left one son, Anthony, the fourth earl. His own mother was Lady Dorothy Manners, daughter of John, first duke of Rutland.

\*SHAFTESBURY, ANTHONY ASHLEY COOPER, SEVENTH EARL OF, eldest son of the 6th Earl, who was for many years Chairman of Committees in the House of Lords, was born on the 28th of April 1801. He received his early education at Harrow, and proceeded thence to Christchurch, Oxford, where he graduated B.A. in 1822 as a first class in classics. He entered parliament in 1826 as M.P. for Woodstock, and was a Commissioner of the Board of Control from 1828 to 1830. In 1831 he was elected for Dorset, and became a lord of the Admiralty under Sir Robert Peel's administration of 1834-35. On the death of Mr. Michael Thomas Sadler, Lord Ashley (for such was the courtesy title which he bore) took charge of the Ten Hours' Bill in the House of Commons, the object of which was to limit the hours of work for children employed in factories. On the restoration of Sir Robert Peel to power in 1841, a post was offered to Lord Ashley, who declined to take office under a ministry which would not adopt the Ten Hours' Bill. In 1846 Lord Ashley supported the changes proposed in the Corn Laws by Sir Robert Peel, and finding his views at variance with those of his constituents, he resigned his seat for Dorsetshire. In 1847 he was returned to parliament for the city of Bath, which he continued to represent till his accession to the peerage on the death of his father in 1851.

Meanwhile as Lord Ashley he had acquired a remarkable amount of popularity and influence in what is commonly known as "the religious world," by his earnest advocacy in parliament and in public meetings of the views of the "evangelical party" in the Church of England, and his untiring support of almost every society and every movement which had for its object the extension of Protestant doctrine, the amelioration of the condition of the suffering and neglected classes, or the reformation of the erring, without regard to sect or party. This influence he has, as Earl of Shaftesbury, extended and strengthened, and his position has been not inaptly compared with that formerly held by Mr. Wilberforce. He is president of the Bible Society, of the Church Pastoral Aid Society, of the London Society for promoting Christianity among the Jews, and either president or a leading member of the Church Missionary Society, the Protestant Alliance, the Labourers' Friend Society, and various others, including the Ragged School Society, which has engaged during the last few years a considerable share of his time and care, in endeavouring to procure for destitute children a certain amount of education, and for providing the youth with employment as shoeblacks, a project that has been eminently successful.

It has been stated, without being contradicted, that on the accession of Viscount Palmerston to office in 1855, the chancellorship of the duchy of Lancaster was offered to the Earl of Shaftesbury (who is connected with Lord Palmerston by marriage) and accepted by him, but that the strong repulsion between him and some "high church" members of the cabinet, on account of the wide difference in their religious sentiments, prevented the arrangement being carried out.

SHAH-ALIM I. (also called SULTAN MOAZIM and BAHADUR SHAH, succeeded as emperor of India on the death of Aurungzebe, of whom he was the eldest surviving son, A.D. 1707 (A.H. 1119). During the life of his father he had been entrusted with various important commands; but his uniformly unassuming deportment failed to disarm the jealous suspicions with which Aurungzebe habitually regarded his sons, and he was at one period, for nearly seven years, kept under restraint. At the outset of his reign he had to sustain a contest with his two brothers, Azim and Cambakhsh, who were dissatisfied with the splendid appanages, the kingdoms of Beejapoor and the Dekkan, bequeathed them by their father; but these ambitious princes were successively defeated and slain, leaving Shah-Alim without a rival. The remainder of his short reign presents few events of importance, being chiefly occupied by operations against the Sikhs, who had lately exchanged the character of peaceful devotees for that of armed fanatics, and had overrun the Punjab and adjoining provinces. He died in a fit, in his camp before Lahore, at the age of seventy (lunar) years, on the 16th of February 1712 (A.H. 1124), and was succeeded after a short civil war, by his eldest son Jehandar-Shah. His character is summed up by an able native historian, Meer Hussein-Khan, with a

frankness which singularly contrasts with the adulation usual in eastern writers: "This emperor was extremely good natured, and mild even to a fault; but very deficient in firmness, for which quality indeed the princes of the house of Timour have never been remarkable in later times."

SHAH-ALIM II. succeeded to the nominal rank of emperor on the murder of his father Alimgir by the vizier Ghazi-ed-deen, November 1759 (A.H. 1173), a fate which he himself had only escaped by flying from Delhi some time previous. He spent several years in the vain attempt to establish his authority in some of the provinces of the distracted empire, and is often mentioned by English writers of that period under the name of the Shahzadeh, or prince; but in 1765 he was compelled to throw himself on the protection of the British, who assigned him the city and district of Allahabad for his maintenance, receiving in return a formal grant of Bengal, Bahar, and Orissa, the original *title-deed* of the Anglo-Indian empire. His impatience to return to Delhi however led him to unite himself with the Mahrattas in 1771; but he quickly found that he had merely made himself the tool of his new allies, and after various vicissitudes he was seized and blinded (1788) by a Rohilla chief named Gholam Khadir, who had taken Delhi. The recovery of the capital by Madajee Sindiah restored him to liberty, but he continued virtually a captive of the Mahrattas till the capture of Delhi by Lord Lake in 1803, when he was rescued from the miserable and degraded state to which he had been reduced, and assigned an annual pension of 120,000*l.* for his support. He died in 1806, aged eighty-seven, and was succeeded by his son Akbar Shah II., who continued an English state pensioner all his life, and never exercised authority beyond the palace walls. Akbar died at the age of eighty-two, on the 28th of September 1837.

SHAHJEHAN, or 'King of the World,' the title assumed by Khurram-Shah, the fifth of the Mogul emperors of India, who succeeded his father Jehanghir Selim Shah, in 1627 (A.H. 1037). He had borne a distinguished part in the transactions of his father's reign, and had the glory (1614) of first reducing the Rana of Oodipoor, the chief of the Rajpoots, to submission; and in 1616 he was declared heir to the throne, though he had then two elder brothers living, both of whom however died before Jehanghir. He was afterwards employed against Candahar and the Dekkan, and distinguished himself by his bravery and military skill; but the intrigues of the famous empress Noor-Jehan, who favoured the pretensions of a younger prince named Shahriyar, led to his disgrace and recall. He was even driven for a time (1623) into open rebellion, and was never entirely reconciled to his father. On the death of Jehanghir however the succession was secured to Shahjehan by the fidelity of the vizir Azof-Jah, and Shahriyar was taken and put to death. The revolt in the following year (1628) of a powerful chief named Khan-Jehan Lodi, who took refuge with the independent Moslem kings in the Dekkan, gave rise to a war in that quarter which lasted several years, and ended in the total subjugation of the kingdom of Ahmednuggur (1631), while the more powerful states of Beejapoor and Golconda were compelled (1636) to pay tribute to the court of Delhi. A war with the Uzbeks in Balkh (1644-47) was attended with little result; and Candahar (which, after falling into the hands of the Moguls in 1637, had been recovered ten years later by the Persians), defied all the efforts of two successive armaments, led by the princes Dara-Sheko and Aurungzebe, to retake it. The war in the Dekkan was renewed in 1655; and Aurungzebe, who was viceroy in the south, gained great advantages over the two kingdoms which remained, Beejapoor and Golconda. But a dangerous illness, which seized Shahjehan in 1657, led to a premature civil war between his four sons for the succession. The eldest, Dara-Sheko, had been destined by his father for the heir; but he was overthrown by the united forces of Aurungzebe and Morad, who entered Agra (1658), and deposed their father, while Aurungzebe, speedily getting rid of Mourad, proclaimed himself emperor. Shoojah, the fourth brother, was shortly after defeated and driven out of India; and Dara, being taken prisoner the next year in a fresh attempt, was put to death by order of Aurungzebe. From this period Shahjehan was confined by his ungrateful son to the citadel of Agra, though constantly treated with respect and allowed an ample establishment. He died there, December 1666 (A.H. 1076), in the seventy-fourth year of his age. The reign of Shahjehan was the epoch of the greatest splendour and prosperity of the Mogul dynasty, though its territory was afterwards greatly extended by Aurungzebe. The wise regulations introduced by Akbar for securing impartial justice to all classes of his subjects, Hindoo as well as Moslem, were still in full force; and Tavernier, who visited India during this reign, says that Shahjehan "reigned not so much as a king over his subjects, but rather as a father over his family and children." The magnificence of his court was unequalled even in the tales of Oriental pomp. The famous 'peacock throne,' the jewels composing which were valued at 6,500,000*l.*, was constructed by his orders; but the most durable monuments of his greatness are the numerous and splendid public buildings which he erected. The city of New Delhi, or Shahjehana-bad, with its fortified imperial palace and noble mosque, was built under his direction; but the superb mausoleum of the Taj-Mahal, near Agra, which he built for the sepulchre of his favourite queen, and in which he himself lies interred, is unsurpassed perhaps by any edifice either in Europe or Asia for chaste elegance of design and

beauty of execution. Notwithstanding this vast expenditure, his finances were so well regulated, that after defraying the cost of his military expeditions, and maintaining an army of 200,000 men, he left the treasure of 24,000,000*l.* (Khañ-Khan), the savings of an annual revenue of from 25,000,000*l.* to 30,000,000*l.* But all this prosperity greatly declined under Aurungzebe, whose bigotry led him to renew the oppression of the Hindoos, and whose resources were exhausted by the civil wars to which this gave rise, and by his insatiable thirst for conquest.

SHAH ROKH BEHADIR, called also SHAHROKH MIRZA ('Behadir' signifying 'a champion,' and 'Mirza' 'a prince'), was the fourth son of Tamerlane. The news of his birth was brought to his father, it is said, while he was playing at chess, and when he had just given check to the king (Shah) with his castle (Rokh): from these two words the name of the son was formed. He succeeded his father A.H. 807 (A.D. 1405), and was engaged during the greater part of his life in wars with Cara Yousuf, a Turcoman prince of the dynasty of the Black Sheep, and with the sons of this potentate. He defeated the father in three different battles, and was equally successful against his two sons Jehanshah and Iskender. He however restored the province of Azerbaijan to Jehanshah, whom he made his tributary, and left Iskender to wander from province to province. In A.H. 818 (A.D. 1416), Shah Rokh restored the famous fortress of the city of Herat, which his father had laid in ruins, employing upon this work 7000 men. He also rebuilt the walls of Herat itself, as well as those of Merou; the latter had been in ruins since the irruption of Gengis Khan.

The children of Shah Rokh were: Uleg Beg, who governed Mawarannahar, or the country beyond the Oxus; Abul-fatha Ibrahim, who governed Persia during the lifetime of his father, and died twelve years before him, leaving behind him many public works, amongst others a college; he had deservedly the reputation of a liberal patron of literature; Mirza Baisankar, or Baisangor, who also died in his father's lifetime, a year before his brother just mentioned, leaving three children, who reigned separately or jointly, and waged the most bloody wars with one another; Soyurgatmish, who commanded under his father in India and the country of Gazneh, and died A.H. 830 (A.D. 1427); and Mirza Mohammed Jouki, who died A.H. 848 (A.D. 1445). The Transoxian provinces given to Ulug Bey had been previously held by Mirza Khalil Sultan, grandson of Tamerlane and nephew of Shah Rokh, who confirmed him in this government. But of this he was despoiled by a rebel courtier, who kept him prisoner; and on the death of the rebel, the provinces of Persian Irak and Azerbaijan were given to the restored prince in lieu of his original territory. Shah Rokh himself died after an illustrious reign of forty-three years, at the age of seventy-one, at Ray in Persia.

SHAH-ZEMAUN ('King of the Age') became king of Cabul and Afghanistan on the death of his father Timour Shah A.D. 1793 (A.H. 1208), in spite of the opposition of his elder brother Humayoon: another brother, Mahmood, was also defeated in battle and driven into Persia. The Doorauni kingdom had fallen into great disorder during the indolent reign of Timour; but instead of bending his efforts to re-establish subordination in his dominions, he became possessed with the ambition of emulating the Indian conquests of his grandfather Ahmed Shah, expelling the Mahrattas from Delhi, and restoring the ascendancy of the Moslems. With these views, and encouraged by the invitation of the Rohillas, he three times (in 1795-96-98) invaded the Punjab and occupied Lahore; but though his movements occasioned considerable alarm to the Mahrattas (who remembered their former defeats by the Afghans), and even to the British in Bengal, who assembled a force on their frontier to check his progress in case of need, he was in each instance recalled by the attacks of the Persians and Uzbeks on the north and west, and by the renewed attempts of his brother Mahmood on the crown. The unpopularity of the vizir Wuffadar Khan detached many nobles from the king's party; and the desertion of Futteh Khan, the powerful chief of the Barukzyes, enabled Mahmood, in 1800, to possess himself of Candahar. A force sent against him was dispersed; and Shah-Zemaun, flying towards Cabul, was treacherously seized and given up to his brother, by whom he was blinded and imprisoned. Mahmood now became king, but was dethroned in his turn, after two years, by Shah-Shoojah-al-Mulk (the lately restored prince), who was full brother to Shah-Zemaun. The latter was now released and treated with kindness; but when Shoojah was driven from his throne in 1809, the blind Shah-Zemaun accompanied his flight, and died in exile.

SHAKHOVSKY, PRINCE ALEXANDER ALEXANDROVICH, a prolific and popular Russian dramatic author, was born in 1777, at a village in the government of Smolensk. He entered the army in 1793, but in 1801 obtained the more congenial appointment of one of the directors of the theatre. The war of 1812 recalled him to the army and to the command of a regiment of Cossaks, but after its conclusion he resumed the duties of management. He retired with a pension in 1818, and died in 1846. During his lifetime Prince Shakhovsky, was the most conspicuous of Russian dramatic authors, and was sometimes styled the Russian Kotzebue. The number of his plays is loosely said to have approached a hundred; many of them were translations and adaptations chiefly from the French. Among them may be found a refashionment of Shakspeare's 'Tempest,' and a drama founded on Walter Scott's 'Black Dwarf.' The original play

which is considered his best, bears the title of 'Aristophanes,' and is founded on the history of the great Athenian dramatist; another, a comedy, 'What you don't like don't listen to' ('Ne lyubo ne slushay'), and a third, 'A lesson to Coquettes,' are also of unusual merit. His vaudevilles and light comedies are considered his most successful efforts.

SHAKSPERE, WILLIAM. The controversies about the greatest poet of England begin with the spelling of his name. The three signatures of his will are so obscure that it is difficult to determine whether he wrote his name SHAKSPERE or SHAKSPEARE. The autograph in the copy of Florio's Montaigne, purchased by the British Museum, is decidedly SHAKSPERE. In a mortgage deed purchased by the Corporation of London it is SHAKSPER. In the Stratford Registers of his own baptism and burial, and of the baptism of his children, it is SHAKSPERE. In the folio of 1623 it is SHAKSPEARE. The most usual mode in which the name was written appears to have been SHAKSPERE.

Steevens, one of the editors of his works, says "All that is known with any degree of certainty concerning Shakspeare is—that he was born at Stratford-upon-Avon—married and had children there—went to London, where he commenced actor, and wrote poems and plays—returned to Stratford, made his will, died, and was buried." This is not "all that is known with any degree of certainty." There is indeed a lamentable deficiency in the materials for Shakspeare's life, such as perhaps exists in no similar instance of a man so eminent amongst his contemporaries. Mr. Hallam has justly observed "All that insatiable curiosity and unwearied diligence have detected about Shakspeare serves rather to disappoint and perplex us than to furnish the slightest illustration of his character. It is not the register of his baptism, or the draft of his will, or the orthography of his name, that we seek. No letter of his writing, no record of his conversation, no character of him drawn with any fulness by a contemporary, can be produced." But if we have nothing but registers, and title-deeds, and pedigrees, and wills, we must be content with these 'spoils of time,' in the absence of matters which bring us nearer to the individual. We have however the possibility left of throwing some light upon the obscurity, by grouping the records, amidst the mass of circumstances of which they form so small a part. We have the 'tombstone information,' as such facts have been called; but we have something more. The life of Shakspeare has to us the value above that of all other values in connection with his writings. Whatever difference of opinion there may be as to the dates of particular works, there is, upon the whole, sufficient evidence to enable us to class those works in cycles. This species of inquiry forms no unimportant part of the biography of Shakspeare; and new views may, without impropriety, be based upon the new circumstances connected with the poet's literary history which have been opened to us by diligent inquirers during recent years.

In the register of baptisms of the parish church of Stratford-upon-Avon we find, under the date of April 26, 1564, the entry of the baptism of William, the son of John Shakspeare. The entry is in Latin—"Gulielmus filius Johannes Shakspeare." The date of William Shakspeare's birth has always been taken as three days before his baptism; but there is certainly no evidence of this fact. Who was John Shakspeare, the father of William? The same register of baptism shows, it is reasonably conjectured, that he had two daughters baptised in previous years—Jone, September 15th, 1558; Margaret, December 2nd, 1562. Another brief entry in another book closes the record of Margaret Shakspeare; she was buried on the 30th of April, 1563. There is very little doubt that the elder daughter, Jone, died also in infancy; for another daughter of John Shakspeare, also called Jone, was baptised in 1569. William was in all probability the first of the family who lived beyond the period of childhood. From these records, then, we collect, that John Shakspeare was married and living in the parish of Stratford in 1558. He was no doubt settled there earlier; for in the archives of the town, by which his course may be traced for some years, we find that he was, in 1556, one of the jury of the Court-leet; in 1557 one of the ale-tasters; at Michaelmas of that year, or very soon afterwards, he was elected a Burgess or junior member of the corporation; in 1558 and 1559 he served the office of constable, which duty appears then to have been imposed upon the younger members of the corporate body; lastly, in 1561, he was elected one of the chamberlains. Here then, previous to the birth of William Shakspeare, we find his father passing through the regular gradations of those municipal offices which were filled by the most respectable inhabitants of a country town.

There have been endless theories, old and new, as to the worldly calling of John Shakspeare. There are ancient registers in Stratford, minutes of the Common Hall, proceedings of the Court-leet, pleas of the Court of Record, writs, which have been hunted over with unwearied diligence, and yet they tell us little of John Shakspeare; and what they tell us is too often obscure. When he was elected an alderman in 1565, we can trace out the occupations of his brother aldermen, and readily come to the conclusion that the municipal authority of Stratford was vested, as we may naturally suppose it to have been, in the hands of substantial tradesmen, brewers, bakers, butchers, grocers, victuallers, mercers, woollen-drappers. On rare occasions, the aldermen and burgesses constituting the town-council affixed their signatures, for greater solemnity, to some order of the

court; and on the 29th of September, in the seventh of Elizabeth, we have nineteen names subscribed, aldermen and burgesses. There is something in this document which suggests a motive higher than mere curiosity for calling up these dignitaries from their happy oblivion, saying to each, "Dost thou use to write thy name? or hast thou a mark to thyself like an honest, plain-dealing man?" Out of the nineteen, six only can answer, "I thank God I have been so well brought up that I can write my name." We were reluctant to yield our assent to Malone's assertion that Shakspeare's father had a mark to himself. The marks are not distinctly affixed to each name in this document; but subsequent discoveries establish the fact that he used two marks—one, something like an open pair of compasses; the other, the common cross. Even half a century later, to write was not held indispensable by persons of some pretension. One of the aldermen of Stratford in 1565, John Wheeler, is described in the town-records as a yeoman. He must have been dwelling in Stratford, for we have seen that he was ordered to take the office of high bailiff, an office demanding a near and constant residence. We can imagine a moderate landed proprietor cultivating his own soil, renting perhaps other land, seated in a house in the town of Stratford, such as it was in the middle of the 16th century, as conveniently as in a solitary grange several miles away from it. Such a proprietor, cultivator, yeoman, we consider John Shakspeare to have been. In 1556 John Shakspeare was admitted at the Court-leet to two copyhold estates in Stratford. Here then is John Shakspeare, before his marriage, the purchaser of two copyholds in Stratford, both with gardens, and one with a croft, or small inclosed field. In 1570 John Shakspeare is holding, as tenant under William Clopton, a meadow of fourteen acres, with its appurtenances, called Ingon, at the annual rent of eight pounds. When he married, the estate of Asbies, within a short ride of Stratford, came also into his possession; and so did some landed property at Snitterfield. With these facts before us, scanty as they are, can we reasonably doubt that John Shakspeare was living upon his own land, renting the land of others, actively engaged in the business of cultivation, in an age when men of substance very often thought it better to take the profits direct than to share them with the tenant? The belief that the father of Shakspeare was a small landed proprietor and cultivator, employing his labour and capital in various modes which grew out of the occupation of land, offers a better, because a more natural, explanation of the circumstances connected with the early life of the great poet, than those stories which would make him of obscure birth and servile employments. Take old Aubrey's story, the shrewd learned gossip and antiquary, who survived Shakspeare some eighty years:—"Mr. William Shakspeare was born at Stratford-upon-Avon, in the county of Warwick. His father was a butcher, and I have been told heretofore by some of the neighbours that when he was a boy he exercised his father's trade; but when he killed a calf he would do it in high style, and make a speech. There was at that time another butcher's son in this town that was held not at all inferior to him for a natural wit, his acquaintance and coetanean, but died young." The story, however, has a variation. There was at Stratford, in the year 1693, a clerk of the parish church, eighty years old,—that is, he was three years old when William Shakspeare died,—and he, pointing to the monument of the poet with the pithy remark that he was the "best of his family," proclaimed to a member of one of the Inns of Court that "this Shakspeare was formerly in this town bound apprentice to a butcher, but that he ran from his master to London." His father was a butcher, says Aubrey; he was apprenticed to a butcher, says the parish clerk. Akin to the butcher's trade is that of the dealer in wool. It is upon the authority of Betterton, the actor, who, in the beginning of the last century, made a journey into Warwickshire to collect anecdotes relating to Shakspeare, that Rowe tells us that John Shakspeare was a dealer in wool:—"His family, as appears by the register and the public writings relating to that town, were of good figure and fashion there, and are mentioned as gentlemen. His father, who was a considerable dealer in wool, had so large a family, ten children in all, that though he was his eldest son, he could give him no better education than his own employment." Malone was a believer in Rowe's account; and he was confirmed in his belief by possessing a piece of stained glass, bearing the arms of the merchants of the staple, which had been removed from a window of John Shakspeare's house in Henley Street. But, unfortunately for the credibility of Rowe, as then held, Malone made a discovery, as it is usual to term such glimpses of the past: "I began to despair of ever being able to obtain any certain intelligence concerning his trade; when, at length, I met with the following entry, in a very ancient manuscript, containing an account of the proceedings in the bailiff's court, which furnished me with the long-sought-for information, and ascertains that the trade of our great poet's father was that of a *glover*;" "Thomas Siche de Arscotte in com. Wigorn. querit' versus John Shakspeare de Stretford, in com. Warwic. Glover, in plac. quod reddat ei oct. libras, &c." This Malone held to be decisive. Mr. Collier and Mr. Halliwell affirm that the word *Glo*, with the second syllable contracted, is *glover*: and we accept their interpretation. But we still hold to the belief that he was, in 1556, a landed proprietor and an occupier of land; one who, although sued as a glover on the 17th June of that year, was a suitor in the same court on the 19th November, in a plea against a neighbour for unjustly detaining eighteen quarters of barley. We think, that

butcher, dealer in wool, glover, may all be reconciled with our position, that he was a landed proprietor, occupying land. Harrison, who mingles laments at the increasing luxury of the farmer, with somewhat contradictory denunciations of the oppression of the tenant by the landlord, holds that the landlord is monopolising the tenant's profits.—"Most sorrowful of all to understand, that men of great port and countenance are so far from suffering their farmers to have any gain at all, that they themselves become GRAZERS, BUTCHERS, TANNERS, SHEEP-MASTERS, WOODMEN, and denique quid non, thereby to enrich themselves, and bring all the wealth of the country into their own hands, leaving the commonality weak, or as an idol with broken or feeble arms, which may in time of peace have a plausible show, but, when necessity shall enforce, have an heavy and bitter sequel." Has not Harrison solved the mystery of the 'butcher'; explained the tradition of the 'wool-merchant'; shown how John Shakspeare, the 'woodman,' naturally sold a piece of timber to the corporation, which we find recorded; and, what is most difficult of credence, indicated how the 'glover' is reconcileable with all these employments? We open an authentic record of this very period, and the solution of the difficulty is palpable: In John Strype's 'Memorials Ecclesiastical under Queen Mary I.,' under the date of 1558, we find this passage: "It is certain that one Edward Horne suffered at Newent, where this Deighton had been, and spake with one or two of the same parish that did see him there burn, and did testify that they knew the two persons that made the fire to burn him; they were two *glowers* or *FELLMONGERS*." A fellmonger and a glover appear from this passage to have been one and the same. The fellmonger is he who prepares skins for the use of the leather-dresser, by separating the wool from the hide—the natural coadjutor of the sheep-master and the woolman.

We have now to inquire who was the mother of William Shakspeare? His father died in 1601. On the 9th of September 1608, we have an entry in the Stratford register of burial, "Mary Shakspeare, widow." It is stated in a bill of chancery, of the date of November 24th, 1597, that John Shakspeare and Mary his wife were "lawfully seised in their demesne as of fee as in the right of the said Mary of and in one messuage and one yard land, with the appurtenances, lying and being in Wylneote." In the will of Robert Arden, dated November 24th 1556, we find, "I give and bequeath to my youngest daughter Mary all my land in Wylmeote, called Asbies, and the crop upon the ground," &c. We shall presently have occasion more particularly to refer to a grant of arms made to John Shakspeare in 1569, and confirmed in 1599. In the latter document it is recited that he "had married the daughter and one of the heirs of Robert Arden, of Wellingeote." The grandfather of Mary Arden was groom of the chamber to Henry VII., and he was the nephew of Sir John Arden, squire of the body to the same king. Sir John Arden was a son of Walter Arden, and of Eleanor, the daughter of John Hampden of Buckinghamshire. There were thus the ties of common blood between William Shakspeare and one of the most distinguished men of the next generation—John Hampden, who was a student in the Inner Temple when the poet died. Mary Arden's property has been computed to be worth some hundred and ten pounds of the money of her time. It is probable that Mary Arden became the wife of John Shakspeare soon after her father's death, which was in 1556.

Of these parents, then, was William Shakspeare born, in 1564, in the town of Stratford. But in what part of Stratford dwelt his parents in the year 1564? It was ten years after this that his father became the purchaser of two freehold houses in Henley-street—houses that still exist—houses which the people of England have agreed to preserve as a precious relic of their greatest brother. William Shakspeare, then, might have been born at either of his father's copyhold houses, in Greenhill-street, or in Henley-street; he might have been born at Ingon; or his father might have occupied one of the two freehold houses in Henley-street at the time of the birth of his eldest son. Tradition says, that William Shakspeare was born in one of these houses; tradition points out the very room in which he was born. Whether Shakspeare were born here, or not, there can be no doubt that this property was the home of his boyhood.

At the time when Shakspeare's father bought this house, it was, no doubt, a mansion as compared with the majority of houses in Stratford. There is an order from the Privy Council to the bailiff of Stratford, after a great fire which happened there in 1614, pointing out that fires had been very frequently occasioned there "by means of thatched cottages, stacks of straw, furzes, and such-like combustible stuff, which are suffered to be erected and made confusedly in most of the principal parts of the town without restraint." Stratford, like nearly every other town of England in that day, closely built, imperfectly drained, was subject to periodical visitations of the plague. From the average annual number of births and burials we may infer that the usual number of the inhabitants was about 1200. When William Shakspeare was about two months old, the plague broke out in this town, and, in the short space of six months, 238 persons, a fifth of the population, fell victims. The average annual mortality was about forty. No one of the family of Shakspeare appears to have died during the visitation. In 1566 another son, Gilbert, was born. The head of this growing family was actively engaged, no doubt, in private and public duties. In 1568 John Shakspeare became the

balliff, or chief magistrate, of Stratford. This office, during the period in which he held it, would confer rank upon him, in an age when the titles and degrees of men were attended to with great exactness. Malone says that, from the year 1569, the entries, either in the corporation books or the parochial registers, referring to the father of the poet, bear the addition of master, and that this honourable distinction was in consequence of his having served the office of balliff. We doubt this inference exceedingly. John Shakspeare would not have acquired a permanent rank by having filled an annual office. But he did acquire that permanent rank in the year 1569, in the only way in which it could be legally acquired. A grant of arms was then made to him by Robert Cooke, Clarencieux. The grant itself is lost, but it was confirmed by Dethick, Garter King at Arms, and Camden, in 1599. That confirmation contains the following preamble: "Being solicited, and by credible report informed, that John Shakspeare, now of Stratford-upon-Avon, in the county of Warwick, gent., whose parent and great-grandfather, late antecessor, for his faithful and approved service to the late most prudent prince, King Henry VII., of famous memory, was advanced and rewarded with lands and tenements, given to him in those parts of Warwickshire where they have continued by some descents in good reputation and credit: and for that the said John Shakspeare having married the daughter and one of the heirs of Robert Arden of Wellingcote, in the said county, and also produced this his ancient coat-of-arms, heretofore assigned to him whilst he was her majesty's officer and balliff of that town: in consideration of the premises," &c. Nothing, we should imagine, could be clearer than this. John Shakspeare produces his ancient coat-of-arms, assigned to him whilst he was balliff of Stratford; and he recites also that he married one of the heirs of Arden of Wellingcote. Garter and Clarencieux, in consequence, allow him to impale the arms of Shakspeare with the ancient arms of Arden and Wellingcote. The Shakspeare arms were actually derived from the family name, and the united arms were used in the seal of William Shakspeare's daughter.

The free-school of Stratford was founded in the reign of Henry VI., and received a charter from Edward VI. It was open to all boys, natives of the borough; and, like all the grammar-schools of that age, was under the direction of men who, as graduates of the universities, were qualified to diffuse that sound scholarship which was once the boast of England. We have no record of Shakspeare having been at this school; but there can be no rational doubt that he was educated there. His father could not have procured for him a better education anywhere. It is perfectly clear to those who have studied his works (without being influenced by prejudices, which have been most carefully cherished, implying that he had received a very narrow education) that they abound with evidences that he must have been solidly grounded in the learning—properly so called—which was taught in grammar-schools. As he did not adopt any one of the learned professions, he probably, like many others who have been forced into busy life, cultivated his early scholarship only so far as he found it practically useful, and had little leisure for unnecessary display. His mind was too large to make a display of anything. But what professed scholar has ever engrafted Latin words upon our vernacular English with more facility and correctness? And what scholar has ever shown a better comprehension of the spirit of antiquity than Shakspeare in his Roman plays? The masters of the Stratford school, from 1572 to 1587, were Thomas Hunt and Thomas Jenkins. They are unknown to fame. They were no doubt humble and pious men, satisfied with the duties of life that were assigned to them. Hunt was the curate of a neighbouring village, Luddington. It is most probable that they did their duty to Shakspeare. At any rate they did not spoil his marvellous intellect.

There are local associations connected with Stratford which could not be without their influence in the formation of Shakspeare's mind. Within the range of such a boy's curiosity were the fine old historic towns of Warwick and Coventry, the sumptuous palace of Kenilworth, the grand monastic ruins of Evesham. His own Avon abounded with spots of singular beauty, quiet hamlets, solitary woods. Nor was Stratford shut out from the general world, as many country towns are; it was a great highway, and dealers with every variety of merchandise resorted to its fairs. The eyes of Shakspeare must always have been open for observation. When he was eleven years old Elizabeth made her celebrated progress to Lord Leicester's castle of Kenilworth; and there he might even have been a witness to some of the 'princely pleasures' of masques and mummeries which were the imperfect utterance of the early drama. At Coventry too the ancient mysteries and pageants were still exhibited in the streets, the last sounds of those popular exhibitions which, dramatic in their form, were amongst the most tasteless and revolting appeals to the senses. More than all, the players sometimes even came to Stratford: what they played, and with what degree of excellence, we shall presently have occasion to mention.

The first who attempted to write 'Some Account of the Life of William Shakspeare,' Rowe, says, "His father, who was a considerable dealer in wool, had so large a family, ten children in all, that, though he was his eldest son, he could give him no better education than his own employment. He had bred him, it is true, for some time at a free-school, where it is probable he acquired what Latin he was master

of; but the narrowness of his circumstances, and the want of his assistance at home, forced his father to withdraw him from thence, and unhappily prevented his further proficiency in that language." This statement, be it remembered, was written one hundred and thirty years after the event which it professes to record—the early removal of William Shakspeare from the free-school to which he had been sent by his father. It is manifestly based upon two assumptions, both of which are incorrect: the first, that his father had a large family of ten children, and was so narrowed in his circumstances that he could not spare even the time of his eldest son, he being taught for nothing; and, secondly, that the son, by his early removal from the school where he acquired "what Latin he was master of," was prevented attaining "a proficiency in that language," his works manifesting "an ignorance of the ancients." The family of John Shakspeare did not consist of ten children. In the year 1578, when the school education of William may be reasonably supposed to have terminated, and before which period his "assistance at home" would rather have been embarrassing than useful to his father, the family consisted of five children: William, aged fourteen; Gilbert, twelve; Joan, nine; Anne, seven; and Richard, four. Anne died early in the following year; and in 1580, Edmund, the youngest child, was born; so that the family never exceeded five living at the same time. But still the circumstances of John Shakspeare, even with five children, might have been straitened. The assertion of Rowe excited the persevering diligence of Malone; and he collected together a series of documents from which he infers, or leaves the reader to infer, that John Shakspeare and his family gradually sunk from their station of respectability at Stratford into the depths of poverty and ruin. These documents, we believe, were all capable of another interpretation. The rise however of the poet's father must have been as rapid as his fall—if he had fallen; for there is a memorandum affixed to the grant of arms in 1596, "he hath lands and tenements, of good wealth and substance, 500*l*." Malone assumes that this is a fiction of the Heralds' Office.

Inquiries such as these would be worse than useless, unless they had some distinct bearing on the probable career of William Shakspeare. Of the earlier part of that career nothing can, probably, ever be known with certainty. His father added to his independent means, we have no doubt, by combining several occupations in the principal one of looking after a little land; exactly in the way which Harrison has described. Shakspeare's youth was, in all probability, one of very desultory employment, which afforded him leisure to make those extraordinary acquisitions of general knowledge which could scarcely have been made, or rather the foundation of which could not have been established, during the active life which we believe he led from about his twentieth year. It is in this manner we are inclined to think, that we must reconcile the contradictory traditions of his early employment. As his father, carrying on various occupations connected with his little property, might, after the lapse of years, have been a woolman in the imperfect recollection of some, and a butcher in that of others, so his illustrious son, having no very settled employment, may have been either reputed an assistant to his father, a lawyer's clerk, a schoolmaster, or a wild scape-grace, according to the imperfect chronicles of a country-town, who, after he returned amongst them a rich man, would rejoice in gossiping over the wondrous doings of the boy. It is thus, we believe, that old Aubrey, having been amongst the parish-clerks and barbers of Stratford some fifty years after Shakspeare was dead, tells us, from Mr. Beeston,—"though, as Ben Jonson says of him, that he had but little Latin, and less Greek, he understood Latin pretty well, for he had been in his younger years a schoolmaster in the country." His precocious gravity as a schoolmaster must have been as wonderful as his poetical power; for Aubrey also tells us, "this William, being naturally inclined to poetry and acting, came to London, I guess about eighteen, and did act exceedingly well. . . . He began early to make essays at dramatic poetry, which at that time was very low, and his plays took well." Here, we think, is a statement not very far from the truth,—a statement derived from Aubrey's London information. The stories of the butcher and the schoolmaster were Stratford traditions, perhaps also with some shadow of reality about them.

The earliest connected narrative of Shakspeare's life, that of Rowe, thus briefly continues the history of the boy:—"Upon his leaving school he seems to have given entirely into that way of living which his father proposed to him; and in order to settle in the world after a family manner, he thought fit to marry while he was yet very young. His wife was the daughter of one Hathaway, said to have been a substantial yeoman in the neighbourhood of Stratford." The information which Betterton thus collected as to Shakspeare's early marriage was perfectly accurate. He did marry "the daughter of one Hathaway," and he was no doubt "a substantial yeoman in the neighbourhood of Stratford." Shakspeare's marriage-bond, which was discovered in 1836, has set at rest all doubt as to the name and residence of his wife. She is there described as Anne Hathaway, of Stratford, in the diocese of Worcester, maiden. At the hamlet of Shottery, which is in the parish of Stratford, the Hathaways had been settled forty years before the period of Shakspeare's marriage; for in the Warwickshire Surveys, in the time of Philip and Mary, it is recited that John Hathaway held property at Shottery, by copy of Court-Roll, dated 20th of April, 34th of Henry VIII.

(1545). The Hathaway of Shakspeare's time was named Richard; and the intimacy between him and John Shakspeare is shown by a precept in an action against Richard Hathaway, dated 1566, in which John Shakspeare is his bondman. The description in the marriage-bond of Anne Hathaway, as of Stratford, is no proof that she was not of Shottery; for such a document would necessarily have regard only to the parish of the persons described. Tradition, always valuable when it is not opposed to evidence, has associated for many years the cottage of the Hathaways of Shottery with the wife of Shakspeare. Garrick purchased relics out of it at the time of the Stratford Jubilee; Samuel Ireland afterwards carried off what was called Shakspeare's courting-chair; and there is still in the house a very ancient carved bedstead, which has been handed down from descendant to descendant as an heirloom. The house was no doubt once adequate to form a comfortable residence for a substantial and even wealthy yeoman. It is still a pretty cottage, embosomed by trees, and surrounded by pleasant pastures; and here the young poet might have surrendered his prudence to his affections. The very early marriage of the young man, with one more than seven years his elder, has been supposed to have been a rash and passionate proceeding. William Shakspeare was married to Anne Hathaway before the close of the year 1582. He was then eighteen years and a half old. His wife was considerably older than himself. Her tombstone states that she died "on the 6th day of August 1623, being at the age of sixty-seven years." In 1623 Shakspeare would have been fifty-nine years old. The marriage-bond and licence were published, by Mr. Wheeler of Stratford, in the 'Gentleman's Magazine.' The bondsmen are, Fulk Sandels, of Stratford, farmer, and John Richardson, of the same place, farmer, and they are held and bound in the sum of 40*l.*, &c. This bond is dated the 28th of November, in the 25th year of Elizabeth—that is, in 1582. The bondsmen subscribe their marks. The licence is affixed to the bond, and the remarkable part of this document is, that they were to be married "with once asking of the bans;" they were not to be married "without the consent" of Anne's friends. There is no record where they were married. In 1583 an entry of the baptism of "Susanna, daughter to William Shakspeare" is found in the Stratford register. The entry is the fourth of the month, the word 'May' being attached to the first entry of the month. A comparison of the dates of the marriage licence and the baptism of Shakspeare's first child pointed to the conclusion that the same fault into which the courtly Raleigh and the high-born Elizabeth Throgmorton had fallen had disturbed the peace of the humble family of the Hathaways, and had no doubt made the mother of the imprudent boy-poet weep bitter tears. We hold a different opinion. We consider that the licence for matrimony, obtained from the Consistorial Court at Worcester, was a permission sought for under no extraordinary circumstances;—still less that the young man who was about to marry was compelled to urge on the marriage as a consequence of previous imprudence. We believe, on the contrary, that the course pursued was strictly in accordance with the customs of the time, and of the class to which Shakspeare belonged. The espousals before witnesses, we have no doubt, were then considered as constituting a valid marriage, if followed up within a limited time by the marriage of the Church. However the Reformed Church might have endeavoured to abrogate this practice, it was unquestionably the ancient habit of the people. It was derived from the Roman law, the foundation of many of our institutions. It prevailed for a long period without offence. It still prevails in the Lutheran Church. We are not to judge of the customs of those days by our own, especially if our inferences have the effect of imputing criminality where the most perfect innocence existed. Because Shakspeare's marriage-bond is dated in November 1582, and his daughter is born in May 1583, we are not to believe that here was "haste and secrecy." Mr. Halliwell has brought sound documentary evidence to bear upon this question; he has shown that the two bondsmen, Sandels and Richardson, were respectable neighbours of the Hathaways of Shottery, although, like Anne herself, they are described as of Stratford. This disposes of the "secrecy." In the same year that Shakspeare was married, Mr. Halliwell has shown that there were two entries in the Stratford Register, recording the church rite of marriage to have preceded the baptism of a child, by shorter periods than indicated by Shakspeare's marriage-bond; and that in cases where the sacredness of the marriage has been kept out of view, illegitimacy is invariably noted in these registers. The "haste" was evidently not required in fear of the scandal at Stratford. We believe that the course pursued was strictly in accordance with the custom of the time, and of the class to which the Shakspeares and Hathaways belonged.

The cause which *drove* Shakspeare from Stratford is thus stated by Rowe:—"He had, by a misfortune common enough to young fellows, fallen into ill company; and, amongst them, some that made a frequent practice of deer-stealing, engaged him more than once in robbing a park that belonged to Sir Thomas Lucy, of Charlecote, near Stratford. For this he was prosecuted by that gentleman, as he thought, somewhat too severely; and in order to avenge that ill usage, he made a ballad upon him. And though this, probably the first essay of his poetry, be lost, yet it is said to have been so very bitter, that it redoubled the prosecution against him to that degree that he was obliged to leave his business and family in Warwickshire for some time, and shelter himself in London." All this, amongst a great deal of

falsehood, probably contained some tissue of the truth—such as the truth appeared to the good old folks of Stratford in Betterton's time, who had heard stories from their grandfathers of what a wild young fellow the rich man was who bought the largest house in Stratford. Malone gravely undertakes to get rid of the deer-stealing tradition, by telling us that there was no *park*, properly so called, at Charlecote. It is more material that the statute of the 5th of Elizabeth, which Malone also recites, shows clearly enough that the hunting, killing, or driving out deer from any park, was a trespass punished at the most with three months' imprisonment and treble damages. Sir Thomas Lucy, who was on terms of intimacy with the respectable inhabitants of Stratford, acting as arbitrator in their disputes, was not very likely to have punished the son of an alderman of that town with any extraordinary severity, even if his deer had been taken away. To kill a buck was then an offence not quite so formidable as the shooting of a partridge in our own times. But we may judge of the value of the tradition from some papers, originally the manuscripts of Mr. Fulman, an antiquary of the 17th century, which, with additions of his own, were given to Corpus Christi College, Oxford, on the decease of the Rev. Richard Davies, rector of Sandford, Oxfordshire, in 1707. The gossip of Stratford had no doubt travelled to the worthy rector's locality, and rare gossip it is:—"He (Shakspeare) was much given to all unluckiness, in stealing venison and rabbits, particularly from Sir Lucy, who had him oft whipt, and sometimes imprisoned, and at last made him fly his native country, to his great advancement. But his revenge was so great that he is his Justice *Clodpate*; and calls him a great man, and that, in allusion to his name, bore three *lowes* rampant for his arms." Is it necessary to do more than recite such legends to furnish the best answer to them?

Although John Shakspeare, at the time of his son's early marriage, was not, as we think, "in distressed circumstances," his means were not such probably, at any time, as to have allowed him to have borne the charge of his son's family. That William Shakspeare maintained them by some honourable course of industry we cannot doubt. Scrivener or schoolmaster, he was employed. It is on every account to be believed that the altered circumstances in which he had placed himself, in connection with the natural ambition which a young man, a husband and a father, would entertain, led him to London not very long after his marriage. There, it is said, the author of 'Venus and Adonis' obtained a subsistence after the following ingenious fashion:—"Many came on horseback to the play, and when Shakspeare fled to London from the terror of a criminal prosecution, his first expedient was to wait at the door of the playhouse, and hold the horses of those who had no servants, that they might be ready again after the performance. In this office he became so conspicuous for his care and readiness, that in a short time every man as he alighted called for Will Shakspeare, and scarcely any other waiter was trusted with a horse while Will Shakspeare could be had." Steevens objects to this surpassing anecdote of the horse-holding, that the practice of 'riding' to the playhouse never began, and was never continued, and that Shakspeare could not have held horses at the playhouse-door because people went thither by water. We believe there is a stronger objection still: until 'Will Shakspeare' converted the English drama from a rude, tasteless, semi-barbarous entertainment, into a high intellectual feast for men of education and refinement, those who kept horses did not go to the public theatres at all. There were representations in the private houses of the great, which men of some wit and scholarship wrote, with a most tiresome profusion of unmeaning words, pointless incidents, and vague characterisation,—and these were called plays; and there were 'storial shows' in the public theatres, to which the coarsest melo-drama that was exhibited at Bartholomew Fair would be as superior as Shakspeare is superior to the highest among his contemporaries. But from 1580 to 1585, when Shakspeare and Shakspeare's boys are described as holding horses at the playhouse-door, it may be affirmed that the English 'drama,' such as we now understand by the term, had to be created. We believe that Shakspeare was in the most eminent degree its creator. He had, as we think, written his 'Venus and Adonis,' perhaps in a fragmentary shape, before he left Stratford. It was first printed in 1593, and is dedicated to Lord Southampton. The dedication is one of the few examples of Shakspeare mentioning a word of himself or his works:—"I know not how I shall offend in dedicating my unpolished lines to your lordship, nor how the world will censure me for choosing so strong a prop to support so weak a burden; only if your honour seem but pleased, I account myself highly praised, and vow to take advantage of all idle hours till I have honoured you with some graver labour. But if the first heir of my invention prove deformed, I shall be sorry it had so noble a godfather, and never after ear so barren a land, for fear it yield me still so bad a harvest. I leave it to your honourable survey, and your honour to your heart's content, which I wish may always answer your own wish and the world's hopeful expectation." The dedication is simple and manly. In 1593 then Shakspeare had an employment—a recognised one—for he speaks of "idle hours" to be devoted to poetry. He calls this poem too "the first heir of my invention." If it "prove deformed," he will never after "ear (plough) so barren a land." Will he give up writing for the stage then? It is a remarkable proof of the low reputation of the drama that even the dramatic works which Shakspeare had unquestionably

produced in 1593 were not here alluded to. The drama scarcely then aspired to the character of poetry. The 'some graver labour' which he contemplated was another poem; and he did produce another next year, which he also dedicated to the same friend. This was the 'Rape of Lucrece.' Perhaps these poems were published to vindicate his reputation as a writer against the jealousies of some of the contemporary dramatists. But we still think that he used the term 'first heir of my invention' in its literal sense; and that 'Venus and Adonis'—or at least a sketch of it—was the first production of his imagination, his invention. It bears every mark of a youthful composition; it would have been more easily produced by the Shakspeare of eighteen or twenty than any of his earliest dramas. He had models of such writing as the 'Venus and Adonis' before him. Chaucer he must have diligently studied; Spenser had published his 'Shepherd's Calendar,' his Hymns to Love and Beauty, and other poems, when Shakspeare's genius was budding amidst his native fields. But when he wrote 'Henry VI.' or the first 'Hamlet,' where could he seek for models of dramatic blank verse, of natural dialogue, of strong and consistent character? He had to work without models; and this was the real 'graver labour' of his early manhood. It has been discovered by Mr. Collier that in 1589, when Shakspeare was only twenty-five, he was a joint proprietor in the Blackfriars theatre, with a fourth of the other proprietors below him in the list. He had, at twenty-five, a standing in society; he had the means, without doubt, of maintaining his family; as he advanced in the proprietorship of the same theatre, he realised a fortune. How had he been principally occupied from the time he left Stratford, to have become somewhat rapidly a person of importance among his 'friends and fellows'? We think, by making himself useful to them, beyond all comparison with others, by his writings. It appears to us not improbable that even before Shakspeare left Stratford, he had attempted some play or plays which had become known to the London players. Thomas Greene, who in 1586 was the fourth on the list of the Blackfriars shareholders, was said to be Shakspeare's fellow townsman. But the young poet might have found another and more important friend in the Blackfriars company:—Richard Burbage, the great actor, who in his own day was called 'the English Roscius,' was also of Shakspeare's county. In a Letter of Lord Southampton to the Lord Chancellor Ellesmere (written about 1608), introducing Burbage and Shakspeare to the chancellor, it is said:—"They are both of one county, and indeed almost of one town." It is perfectly clear, therefore, that Shakspeare, from the easy access that he might have procured to these men, would have received inviting offers to join them in London, provided he had manifested any ability which would be useful to them. That ability, we have no doubt, was manifested by the production of original plays (as well as by acting) some time before he had attained the rank and profit of a shareholder in the Blackfriars company.

The theory that Shakspeare had not produced any of his dramas till several years after he was a shareholder in the Blackfriars theatre, is generally upheld by the assertion that he is not noticed by any contemporary writer till after the period usually assigned to the commencement of his career as a dramatic author; that is, about 1592. There is an allusion to 'Hamlet' by Nashe, in 1589; and the most reasonable belief is, that this was Shakspeare's 'Hamlet'—an earlier sketch than the early one which exists. We believe with Dryden and Rowe, that a remarkable passage in Spenser's 'Thalia' applies to Shakspeare, and that poem was published in 1591. The application of these passages to Shakspeare is strongly disputed by those who assign the first of his plays to 1593. In an age when there were no newspapers and no reviews, it must be extremely difficult to trace the course of any man, however eminent, by the notices of the writers of his times. An author's fame then was not borne through every quarter of the land in the very hour in which it was won. More than all, the reputation of a dramatic writer could scarcely be known, except to a resident in London, until his works were committed to the press. The first play of Shakspeare's, which was printed was 'The First Part of the Contention' ('Henry VI., Part II.'), and that did not appear till 1594. Now Malone says, "In Webbe's 'Discourse of English Poetry,' published in 1586, we meet with the name of most of the celebrated poets of that time; particularly those of George Whetstone and Anthony Munday, who were dramatic writers; but we find no trace of our author, or any of his works." But Malone does not tell us that in Webbe's 'Discourse of Poetry' we meet with the following passage:—"I am humbly to desire pardon of the learned company of gentlemen scholars, and students of the universities and inns of court, if I omit their several commendations in this place, which I know a great number of them have worthily deserved, in many rare devices and singular inventions of poetry; for neither hath it been my good hap to have seen all which I have heard of, neither is my abiding in such place where I can with facility get knowledge of their works." "Three years afterwards," continues Malone, "Puttenham printed his 'Art of English Poesy,' and in that work also we look in vain for the name of Shakspeare." The book speaks of the one-and-thirty years' space of Elizabeth's reign; and thus puts the date of the writing a year earlier than the printing. But we here look in vain for some other illustrious names besides those of Shakspeare. Malone has not told us that not one of Shakspeare's early dramatic contemporaries is mentioned—neither Marlowe, nor Greene, nor Peele, nor Kyd,

nor Lyly. The author evidently derives his knowledge of 'poets and poesy' from a much earlier period than that in which he publishes. He does not mention Spenser by name, but he does "that other gentleman who wrote the late 'Shepherd's Calendar.'" The 'Shepherd's Calendar' of Spenser was published in the year 1579. Malone goes on to argue that the omission of Shakspeare's name, or any other notice of his works, in Sir John Harrington's 'Apology of Poetry,' printed in 1591, in which he takes occasion to speak of the theatre, and mentions some of the celebrated dramas of that time, is a proof that none of Shakspeare's dramatic compositions had then appeared. Does he mention 'Tamburlaine,' or 'Faustus,' or 'The Massacre of Paris,' or 'The Jew of Malta'? As he does not, it may be assumed with equal justice that none of Marlowe's compositions had appeared in 1591, and yet we know that he died in 1593. So of Lyly's 'Galathea,' 'Alexander and Campaspe,' 'Endymion,' &c. So of Greene's 'Orlando Furioso,' 'Friar Bacon,' and 'James IV.' So of the 'Spanish Tragedy' of Kyd. The truth is, that Harrington, in his notice of celebrated dramas was even more antiquated than Puttenham; and his evidence therefore in this matter is utterly worthless. But Malone has given his crowning proof that Shakspeare had not written before 1591, in the following words:—"Sir Philip Sidney, in his 'Defence of Poesie,' speaks at some length of the low state of dramatic literature at the time he composed his treatise, but has not the slightest allusion to Shakspeare, whose plays, had they then appeared, would doubtless have rescued the English stage from the contempt which is thrown upon it by the accomplished writer, and to which it was justly exposed by the wretched compositions of those who preceded our poet. 'The Defence of Poesie' was not published till 1595, but must have been written some years before." There is one slight objection to this argument: Sir Philip Sidney was killed at the battle of Zutphen, in the year 1586; and it would really have been somewhat surprising if the illustrious author of the 'Defence of Poesy' could have included Shakspeare in his account "of the low state of dramatic literature at the time he composed this treatise."

If the instances of the mention of Shakspeare by his contemporaries during his lifetime be not numerous, we are compensated by the fulness and explicitness of one notice—that of Francis Meres, in 1598. Short as his notice is, it is by far the most valuable contribution which we possess towards the 'Life' of Shakspeare. Meres was a master of arts of Cambridge, and subsequently entered the church. In 1558 he published a book called 'Palladis Tamia, Wit's Treasury.' It is a collection of moral sentences from ancient writers, and it is described by Anthony Wood as 'a noted school-book.' Prefixed to it is 'A Comparative Discourse of our English Poets.' Nothing can be more decisive than this 'Comparative Discourse,' as to the rank which, in 1598, Shakspeare had taken amongst the most eminent of his contemporaries.

"As the Greek tongue is made famous and eloquent by Homer, Hesiod, Euripides, Æschylus, Sophocles, Pindarus, Phocylides, and Aristophanes; and the Latin tongue by Virgil, Ovid, Horace, Silius Italicus, Lucanus, Lucretius, Ausonius, and Claudianus; so the English tongue is mightily enriched, and gorgeously invested in rare ornaments and resplendent habiliments, by Sir Philip Sidney, Spenser, Daniel, Drayton, Warner, Shakspeare, Marlow and Chapman.

"As the soul of Euphorbus was thought to live in Pythagoras, so the sweet witty soul of Ovid lives in mellifluous and honey-tongued Shakspeare; witness his 'Venus and Adonis,' his 'Lucrece,' his sugared sonnets among his private friends, &c.

"As Plautus and Seneca are accounted the best for comedy and tragedy among the Latins, so Shakspeare, among the English, is the most excellent in both kinds for the stage; for comedy, witness his 'Gentlemen of Verona,' his 'Errors,' his 'Love Labours Lost,' his 'Love Labours Won,' his 'Midsummer's Night Dream,' and his 'Merchant of Venice'; for tragedy, his 'Richard II.,' 'Richard III.,' 'Henry IV.,' 'King John,' 'Titus Andronicus,' and his 'Romeo and Juliet.'

"As Epilus Stolo said that the Muses would speak with Plautus's tongue, if they would speak Latin; so I say that the Muses would speak with Shakspeare's fine filed phrase if they would speak English."

The list of Shakspeare's plays which Meres gives in 1598 can scarcely be supposed to be a complete one. Previous to 1598 there had been only printed the two Parts of the 'Contention' (now known as the 'Second and Third Parts of Henry VI.'), 'Richard III.,' 'Richard II.,' and 'Romeo and Juliet.' Of the six comedies mentioned by Meres, not one had been published; neither had 'Henry IV.,' 'King John,' nor 'Titus Andronicus;' but, in 1597, 'Love's Labour's Lost,' and the 'First Part of Henry IV.,' had been entered in Stationers' Hall. Without the list of Meres therefore we could not have absolutely shown that the 'Two Gentlemen of Verona,' the 'Comedy of Errors,' the 'All's Well that Ends Well' (which we have every reason to think was designated as 'Love Labours Won') the 'Midsummer Night's Dream,' the 'Merchant of Venice,' the 'King John,' and the 'Titus Andronicus,' were written and produced before 1598. The list of Meres omits the original 'Hamlet' and the 'Taming of the Shrew,' which we may believe were produced before 1598; but, looking at Meres' list alone, how gloriously had Shakspeare earned that reputation which he had thus acquired in 1598! He was then thirty-four years of age, but he had produced all his great historical plays, with the exception of 'Henry V.' and 'Henry VIII.' He had given us 'Romeo

and Juliet,' and had even 'corrected and augmented' it; the stage was in possession, and the fame acknowledged, of six of his most delicious comedies. Before the close of that century we have little doubt that he had also produced 'Henry V.,' 'The Merry Wives of Windsor,' and 'Much Ado about Nothing.'

Of the plays thus produced before the close of the 16th century, we would assign several (not fewer than nine, including the doubtful plays) to the period from Shakspeare's early manhood to 1591. Some of those dramas may possibly then have been created in an imperfect state, very different from that in which we have received them. If the 'Titus Andronicus' and 'Pericles' are Shakspeare's, they belong to this epoch in their first state, whatever it might have been. We have no doubt that the three plays, in their original form, which we now call the three Parts of 'Henry VI.,' were his; and they also belong to this epoch. That 'Hamlet,' in a very imperfect state, probably more imperfect even than the sketch in the possession of the Duke of Devonshire, is the play alluded to by Nashe in 1589, we have little doubt. In the Duke of Devonshire's copy, dated 1602, there are passages, afterwards omitted, which decidedly refer to an early state of the stage. Amongst the comedies, 'The Two Gentlemen of Verona,' 'Love's Labour's Lost,' 'The Comedy of Errors,' and 'The Taming of the Shrew,' contain very strong external evidence, especially in the structure of their versification, that they belong to the poet's earliest period. When the time arrived that he had fully dedicated himself to the great work of his life, he rarely ventured upon cultivating the offshoots of his early versification. The doggerel was entirely rejected—the alternate rhymes no longer tempted him by their music to introduce a measure which is scarcely akin with the dramatic spirit—the couplet was adopted more and more sparingly—and he finally adheres to the blank verse which he may almost be said to have created—in his hands certainly the grandest as well as the sweetest form in which the highest thoughts were ever unfolded to listening humanity. We have only one drama to add to this cycle, and that, we believe, was 'Romeo and Juliet' in its original form.

The 'Midsummer Night's Dream' may be taken, we apprehend, as a connecting link between the dramas which belong to the first cycle and those which may be assigned to the remaining years of the 16th century.

We have little difficulty in determining the plays which belong to Shakspeare's middle period. The list of Meres, and the dates of the original editions of those plays, are our best guides. The exact years in which they first appeared can only be determined in one or two cases; and it is of little consequence if they could be determined. The earliest of the historical plays of this cycle were those which completed the great story of the wars of the Roses. 'Richard III.' naturally terminated the eventful history of the house of York; 'Richard II.' commenced the more magnificent exhibition of the fortunes of the house of Lancaster. Both these plays were printed in 1597. The two great historical plays of 'Henry IV.' which succeeded them were, no doubt, produced before 1599. 'Henry V.' undoubtedly belongs to that year; and this great song of national triumph grew out of the earlier history of the 'madcap Prince of Wales.' The three latter histories are most remarkable for the exhibition of the greatest comic power that the world has ever seen. When the genius of Shakspeare produced Falstaff, its most distinguishing characteristics, his wit and humour, had attained their extremest perfection. There is much of the same high comedy in 'King John.' This was the period which also produced those comic dramas which are most distinguished for their brilliancy of dialogue—the "fine filed phrase" which Meres describes—'The Merry Wives of Windsor,' 'Much Ado about Nothing,' and 'Twelfth Night.' The 'Merchant of Venice,' and 'All's Well that Ends Well,' belong to the more romantic class. The 'Twelfth Night' was originally thought to have been one of Shakspeare's latest plays; but it is now proved, beyond a doubt, that it was acted in the Middle Temple Hall in the Christmas of 1601.

The close of the 16th century brings us to Shakspeare's thirty-fifth year. He had then been about fifteen years in London. We are not willing to believe that his whole time was passed in the capital. It is not necessary to believe it; for the evidence, such as it is, partly gossip and partly documentary, makes for the contrary opinion. Aubrey tells us "the humour of the constable in 'A Midsummer Night's Dream' he happened to take at Grendon in Bucks, which is the road from London to Stratford, and there was living that constable about 1642, when I first came to Oxon." The honest antiquary makes a slight mistake here. There is no constable in 'A Midsummer Night's Dream;' but he probably refers to the ever-famous Dogberry or Verges. In the same paper Aubrey says, "he was wont to go to his native country once a year."

But we have more trustworthy evidence than that of John Aubrey for believing that Shakspeare, however indispensable a protracted residence in London might be to his interests and those of his family, never cast aside the link which bound him to his native town. In 1596 his only son died, and in Stratford he was buried. The parochial register gives us the melancholy record of this loss. This event, afflicting as it must have been, did not render the great poet's native town less dear to him. There his father and mother, there his wife and daughters, there his sister still lived. In 1597 he purchased the principal house in Stratford. It was built by Sir Hugh Clopton, in

the reign of Henry VII., and was devised by him under the name of the great house. Dugdale describes it as "a fair house built of brick and timber." It appears to have been sold out of the Clopton family before it was purchased by Shakspeare. In the poet's will it is described as "all that capital message or tenement, with the appurtenances, in Stratford aforesaid, called the New Place." The London residence of Shakspeare at this period is stated to have been in Southwark, near the Bear Garden. It is now incontestably proved that in the year previous to 1596 Shakspeare held a much more important rank as a sharer in the Blackfriars theatre than in 1589; and that the Globe theatre also belonged to the body of proprietors of which he was one. A petition to the privy council, presented in 1596, was found in the State Paper Office a few years ago, in which the names of the petitioners stand as follows:—

"The humble petition of Thomas Pope, Richard Burbage, John Hemmings, Augustine Phillips, William Shakespeare, William Kempe, William Sly, Nicholas Tooley, and others, servants to the Right Honourable the Lord Chamberlain to her Majesty."

There is a tradition that the valuable estate of New Place was purchased by Shakspeare through the munificent assistance of Lord Southampton. It is pleasant to believe such a tradition; but it is not necessary to account for Shakspeare's property in the theatres, or even for his purchase of New Place at Stratford, that we should imagine that some extraordinary prodigality of bounty had been lavished on him. He obtained his property in the theatre by his honest labours, steadily exerted, though with unequalled facility, from his earliest manhood. The profits which he received not only enabled him to maintain his family, but to create an estate; and his was not a solitary case. Edward Alleyn, who was a contemporary of Shakspeare, a player and a theatrical proprietor, realised a fortune; and he founded Dulwich College.

It has been held, especially by the German critics, that the 'Sonnets' of Shakspeare have not been sufficiently regarded as a store of materials for his biography; and it has been very ingeniously attempted by a recent writer, Mr. Brown, to show that the whole of these, with a few slight exceptions, are to be taken as a continuous poem or poems. He calls them Shakspeare's 'Autobiographical Poems.' But we would ask, can these 154 Sonnets be received as a continuous poem upon any other principle than that the author had written them continuously? If there are some parts which are acknowledged interpolations, may there not be other parts that are open to the same belief? If there are parts entirely different in their tone from the bulk of these Sonnets, may we not consider that one portion was meant to be artificial and another real—that the poet sometimes spoke in an assumed character, sometimes in a natural one? This theory we know could not hold if the poet had himself arranged the sequence of these verses; but as it is manifest that two stanzas have been introduced from a poem printed ten years earlier—that others are acknowledged to be out of order—and others positively dragged in without the slightest connection—may we not carry the separation still further, and believing that the 'begetter' (by which name some W. H. is honoured by the bookseller in a dedication)—the *getter-up*—of these sonnets had levied contributions upon all Shakspeare's "private friends"—assume that he was indifferent to any arrangement which might make each portion of the poem tell its own history? We do not therefore take up these poems to "seize a clue which innumerable passages give us, and suppose that they allude to a youth of high rank as well as personal beauty and accomplishment, in whose favour and intimacy, according to the base prejudices of the world, a player and a poet, though he were the author of 'Macbeth,' might be thought honoured;" and we do not feel "the strangeness of Shakspeare's humiliation in addressing him as a being before whose feet he crouched—whose frown he feared—whose injuries, and those of the most insulting kind, he felt and bewailed without resentment." (Hallam's 'Hist. of Europe.')

The view which we take of the probable admixture of the artificial and the real in the Sonnets, arising from their supposed original fragmentary state, necessarily leads to the belief that some are accurate illustrations of the poet's situation and feelings. It is collected from these Sonnets, for example, that his profession as a player was disagreeable to him; and this complaint, be it observed, might be addressed to any one of his family, or some honoured friend, such as Lord Southampton, as well as to the principal object of so many of those lyrics which contain a "leading idea, with variations:—"

"O, for my sake do you with Fortune chide  
The guilty goddess of my harmful deeds,  
That did not better for my life provide  
Than public means, which public manners breeds.  
Thence comes it that my name receives a brand,  
And almost thence my nature is subdued  
To what it works in, like the dyer's hand."

But if from his professional occupation his nature was felt by him to be subdued to what it worked in—if thence his name received a brand—if vulgar scandal sometimes assailed him—he had high thoughts to console him, such as were never before imparted to mortal. This was probably written in some period of dejection, when his heart was ill at ease, and he looked upon the world with a slight tinge of indifference, if not of dislike. Every man of high genius has felt something

of this. It was reserved for the highest to throw it off, "like dew-drops from the lion's mane." After a very full consideration of Shakspeare's dramatic works, we are come to the conclusion that he possessed, above all other men, so complete a mastery over the tendency to colour general representations of life and character with personal views and circumstances, that he invariably went out of himself—that he saw nothing through his own individual feelings—and that thus none of his portraits are alike, because none are personifications of his own nature—his own life—his own self-consciousness. If there are some portions of his Sonnets which are conceived in an entirely different spirit, we think they are not very numerous, and must be received as evidences of personal character, habits, and feelings, with great scrupulousness.

Shakspeare during the last year or two of the 16th century, and the opening years of the 17th, was for the most part in London. In 1598 we find his townsman, Richard Quiney, writing him a letter, requesting the loan of thirty pounds. Mr. Alderman Sturley, with reference to some public business of the period, not only says in a letter that "our countryman, Mr. William Shakspeare, would procure us money," but speaks "of the friends he can make." Such notices are decisive as to the position Shakspeare then held in the estimation of the world. In 1601 his father died; and his burial is registered at Stratford. He appears then to have had three brothers living—Gilbert, Richard, and Edmund. Gilbert, the next to himself, resided at Stratford, and probably managed William's affairs there while he was in London; for in 1602, when the prosperous poet bought a considerable quantity of land near Stratford, of William and John Combe (107 acres), the counterpart of the conveyance (which we have seen) contains an acknowledgment of possession being given to Gilbert Shakspeare, to the use of William. It is probable that Gilbert died before William; for no mention is made of him in the poet's will. The younger son of the family, Edmund, born in 1580, followed the fortunes of his illustrious brother. It was probably intended that he should succeed him in his proprietorship of the theatres; but the register of the burials of St. Mary Overies, in Southwark, closes his history in 1607: "Edmund Shakspeare, player, in the church." Richard Shakspeare died in 1613.

In 1603 James I. ascended the throne of England. Lord Southampton, who had so imprudently participated in the conspiracy of Essex, was a favourite of the new king; and one almost of the first acts of the reign was a grant of a patent to the proprietors of the Blackfriars and Globe theatres. In this patent the name of Shakspeare stands the second; the names mentioned being "Lawrence Fletcher, William Shakspeare, Richard Burbage, Augustine Phillips, John Hemmings, Henry Condell, William Sly, Robert Armin, Richard Cowley."

It would appear that at this period Shakspeare was desirous of retiring from the more laborious duties of his profession as an actor. He desired to be appointed, there is little doubt, to the office of Master of the Queen's Revels. Daniel, a brother poet, was appointed; and in a letter to the Lord Keeper, Sir Thomas Egerton, he thus speaks of one of the competitors for the office:—"It seemeth to my humble judgment that one who is the author of plays now daily presented on the public stages of London, and the possessor of no small gains, and moreover himself an actor in the King's company of comedians, could not with reason pretend to be master of the Queen's Majesty's revels, forasmuch as he would sometimes be asked to approve and allow of his own writings."

But Shakspeare continued to hold his property in the theatre. In 1608 the Corporation of London again attempted to interfere with the actors of the Blackfriars; and there being little chance of ejecting them despotically, a negotiation was set on foot for the purchase of their property. A document found by Mr. Collier amongst the Egerton papers at once determines Shakspeare's position in regard to his theatrical proprietorship. It is a valuation, containing the following item:—

"Item. W. Shakspeare asketh for the wardrobe and properties of the same playhouse 500*l*., and for his four shares, the same as his fellows Burbidge and Fletcher, viz. 93*l* 6*s* 8*d*. . . 1433 6 8"

With this document was found another—unquestionably the most interesting paper ever published relating to Shakspeare: it is a letter from Lord Southampton to Lord Ellesmere, the lord chancellor; and it contains the following passage:—

"These bearers are two of the chief of the company; one of them by name Richard Burbidge, who humbly sueth for your Lordship's kind help, for that he is a man famous as our English Roscius, one who fitteth the action to the word and the word to the action most admirably. By the exercise of his quality, industry, and good behaviour, he hath become possessed of the Black Friars playhouse, which hath been employed for plays since it was built by his father, now near fifty years ago. The other is a man no whit less deserving favour, and my especial friend, till of late an actor of good account in the company, now a sharer in the same, and writer of some of our best English plays, which, as your Lordship knoweth, were most singularly liked of Queen Elizabeth, when the company was called upon to perform before her Majesty at court, at Christmas and Shrovetide. His most gracious Majesty King James also, since his coming to the crown, hath extended his royal favour to the company in divers ways and at sundry times.

This other hath to name William Shakspeare, and they are both of one county, and indeed almost of one town: both are right famous in their qualities, though it longeth not to your Lordship's gravity and wisdom to resort unto the places where they are wont to delight the public ear. Their trust and suit now is, not to be molested in their way of life whereby they maintain themselves and their wives and families (being both married and of good reputation), as well as the widows and orphans of some of their dead fellows."

We may now suppose that the great poet, honoured and esteemed, had retired to Stratford, retaining a property in the theatre—regularly writing for it. There is an opinion that he ceased to act after 1603. In that year his name is found amongst the performers of one of Ben Jonson's plays. But the years from 1604 to his death, in the April of 1616 were not idly spent. He was a practical farmer, we have little doubt. In 1605 he bought a moiety of the tithes of Stratford, which he would then probably collect in kind. He occupied the best house of the place; he had there his 'curious knotted garden' to amuse him; and his orchard had many a pippin of his 'own grafting.' James I. recommended the cultivation of mulberry-trees in England; and who has not heard of Shakspeare's mulberry-tree? Vulgar tradition at this time represents him as writing a bitter epitaph upon his friend and neighbour John Combe, as he had satirised Sir Thomas Lucy. He was doing something better. To the first half of the period between 1604 and his death may be assigned—'Lear,' 'Macbeth,' 'Cymbeline,' 'The Winter's Tale,' and 'The Tempest.' The very recital of the names of these glorious works, associated as they are with that quiet country town, its beautiful Avon, its meadows, and its woodlands, is enough to make Stratford a name dear and venerable in every age. But there are others to be added to the wondrous list; and these probably belong to the latter half of the period:—'Troilus and Cressida,' 'Henry VIII.,' 'Coriolanus,' 'Julius Cæsar,' 'Antony and Cleopatra.' The direction of Shakspeare's mind to Roman subjects, in his closing period, and the marvellous accuracy, the real substantial learning, with which he has treated them, would lead us to believe that he had renewed the studies of his boyhood in the last years of his retirement. Alfieri learned Greek after he was fifty. It is our opinion that Shakspeare continued to write till he was removed by death; and that the Roman plays were the beginning of a series. Who will finish that series?

In 1607 Susanna, the eldest daughter of Shakspeare, married a physician resident at Stratford—a man of high professional eminence—Dr. Hall. In 1608 his grand-daughter Elizabeth was born. To this child he bequeathed a sum of money, and all his plate, "except my broad silver and gilt bowl." Shakspeare was a grandfather at forty-three. In 1608 his mother died—the mother, doubtless, of his ardent love. There is a curious record of Shakspeare's later years, which was recently discovered in the library of the Medical Society of London, contained in the 'Diary of the Rev. John Ward, Vicar of Stratford-upon-Avon.' The diary extends from 1648 to 1679; and it contains the following very characteristic entry:—

"I have heard that Mr. Shakspeare was a natural wit, without any art at all; he frequented the plays all his younger time, but in his elder days lived at Stratford, and supplied the stage with two plays every year: and for it had an allowance so large, that he spent at the rate of 1000*l*. a year, as I have heard.

"Shakspeare, Drayton, and Ben Jonson had a merry meeting; and, it seems, drank too hard, for Shakspeare died of a fever there contracted."

Shakspeare's annual expenditure, and the merry meeting, and the hard drinking, are probably exaggerations. They however show that our opinion that Shakspeare continued to write for the stage after he had ceased to be an actor has some foundation; and that his residence in comfort and affluence at Stratford did not necessarily imply an abandonment of all his former pursuits. 'Henry VIII.,' upon every rational construction of evidence, was produced at the Globe theatre in 1613, and was then a new play.

We approach the end. Shakspeare, according to the register of Stratford, was buried on the 25th of April 1616.

He survived the marriage of his daughter Judith to Thomas Quiney only two months, and he made his will probably upon the occasion of that marriage. It is dated the 25th of March, but in the document *February* was first written, and afterwards struck out. By this will which is long, he gives his real estate to his eldest daughter. According to the received interpretation of his will, Shakspeare treats his wife with neglect and "bitter sarcasm," for which estranged affections would have been no warranty; and consigns her, with a solemn avowal of contempt and hatred, to a miserable dependence, not even recommended or implied, upon the bounty of their common children. According to the dictum of Malone, who first dragged this part of his will into notice sixty years ago, "His wife had not wholly escaped his memory—he had forgot her,—he had recollected her,—but so recollected her as more strongly to mark how little he esteemed her; he had already (as it is vulgarly expressed) *cut her off, not indeed with a shilling, but with an old bed.*" It was the object of Shakspeare by this will to perpetuate a family estate. In doing so did he neglect the duty and affection which he owed to his wife? He did not. His estates, with the exception of a copyhold tenement, expressly mentioned in his will, were *freehold*. His wife was entitled to *dower*. She

was provided for amply, by the clear and undeniable operation of the *English law*.

SHAMOUL, or SAMOUL, called by Abul Faraj ('Hist. Dynast.,' p. 408) Samoul Ben Yehouda al-Magrebî al-Andalousi; by Ibn Abi Osaibia (Oioûn al-Ambâ fi Tabacât-Attebbâ, 'Fontes Relationum de Classicis Medicorum,' cap. xi., § 18) Samoul Ben Yahia Ben Abbâs al-Magrebî; and by the anonymous author of the 'Arab. Philosph. Biblioth.' (quoted by Casiri, 'Biblioth. Arabico-Hisp. Escur.' tom. i., p. 440) Shamoul Ben Yehoudâ al-Andalousi, an eminent Jewish physician, who (as his name implies) was born in Spain, and was descended from an African family. He came with his father (who was also a great philosopher) to Azerbijân, and settled himself at Marâgha, a place afterwards famous in oriental geography for the observatory of the celebrated astronomer Nasirreddin (born A.H. 598, A.D. 1200; died A.H. 673, A.D. 1273). He particularly studied astronomy, geometry, mathematics, and medicine, and wrote several works on those sciences, of which one exists in MS. in the Bodleian Library at Oxford (Uri, 'Catal.' p. 209; Nicoll and Pusey, 'Catal.' p. 603). He was for some time attached to the service of the Pehlewanides, an Atabek dynasty of Azerbijân, founded by Il d-ghiz about the middle of the 6th century after the Hejra, or the twelfth of our era (see De Guignes, 'Hist. des Huns,' &c., liv. 13, tom. ii. p. 247). He embraced the religion of Mohammed, and wrote a work against the Jews, in which he accused them of having interpolated the Mosaic Scriptures. His children belonged also to the medical profession. He died at an advanced age at Marâgha, according to Abul Faraj and the anonymous author quoted above, about A.H. 570 (A.D. 1174-5); according to Hajji Khalfa (and more probably), A.H. 598 (A.D. 1201-2).

SHANFARAH, an Arabian poet, who lived before Mohammed. He was a very swift runner, and his name became proverbial in Arabia. Having sworn vengeance against the family of another Arab called Salman, he surprised and killed many of its members, but was at last taken himself and put to death. A beautiful poem of Shanfarah is extant, which is entitled 'Lamiyat-ul-arab.' It has been translated by De Sacy, and published in his 'Chrestomathie Arabe' (Paris, 1806), with excellent remarks. It is one of the oldest poems extant in Arabic. Lamiyat means any poem rhyming in the letter lam; and it was called Lamiyat of the Arab, to distinguish it from a later poem by Toghrâi, a Persian poet who wrote another poem, which bears the title 'Lamiyat-ul-ajem,' or that of the Persian.

SHARP, ABRAHAM, an ingenious mechanist and a laborious calculator, was born at Little Horton, near Bradford in Yorkshire, in 1651. After having received the best education which a country school afforded, he was placed as an apprentice with a merchant or tradesman at Manchester; but feeling little inclination for commerce, and being strongly disposed to scientific pursuits, he prevailed on his master to cancel his indentures before the term of his service was expired. He then established himself at Liverpool, and there, while in order to obtain the means of subsistence he kept a school for the instruction of persons in humble life, he applied himself to the study of mathematics, particularly of astronomy, and to the formation of instruments for purposes connected with the sciences. It is probable that the school was soon given up, for Ramsden, the celebrated optician, who was his grand-nephew, relates that in his youth he held the post of an exciseman, and that he quitted that employment on obtaining possession of a small patrimonial estate.

Being thus enabled to consult his own taste in the choice of an occupation, Sharp came to London, where he at first hired himself as a book-keeper to a merchant; but, having procured an introduction to Flamsteed, this astronomer engaged him, in August, 1688, in mounting the instruments which had been provided for the Royal Observatory at Greenwich. He afterwards constructed and graduated for the observatory a mural sector whose radius was six feet seven inches and a half, and whose arc contained 140 degrees: the degrees were subdivided by means of diagonal lines, according to the method in use at that time, and by a micrometer screw; and Flamsteed states, in the prolegomena to his 'Historia Cælestis,' that the zenith point was determined by observing the zenith distances of stars with the instrument in direct and in reversed positions: in order to accomplish the reversion, it was made capable of being placed alternately on the eastern and on the western side of the wall. Sharp also assisted his friend in observing the right-ascensions and declinations of the sun, moon, and planets, and in forming the famous catalogue (the British) of 2884 fixed stars.

Finding that frequent exposure to the cold air by night injured his health, he resigned his post at the Royal Observatory, and retired to his native town, where on his recovery, he fitted up an observatory for himself, for which, with his own hands, he formed the lenses of the telescopes and graduated the arcs of the instruments for measuring angles. Sharp is considered by Smeaton as the first who brought hand-graduation far on the way to perfection; the art was subsequently improved by Smeaton and Bird, but it has since been superseded by the use of dividing-engines, the invention of which is due to Ramsden.

It is however as an accurate calculator that Sharp is particularly distinguished: after his retirement to Horton he continued to assist Flamsteed in his labours, and he computed for him most of the tables

in the second volume of the 'Historia Cælestis;' he was also employed frequently in making intricate calculations for Sir Jonas Moore, Dr. Halley, and other mathematicians. In 1717 he published a treatise in 4to entitled 'Geometry Improved,' which contains an extensive and accurate table of circular segments, with an account of its use in the solution of problems; also a table of the logarithms of numbers from 1 to 100, and of the prime numbers to 1100 (all computed to the extent of sixty-one decimal places), together with subsidiary tables to be used in forming from them the logarithms of other numbers. The process of computing logarithms was then far more laborious than it would be now, the formulæ by which the operations may be greatly facilitated not having been discovered; and it is worthy of remark that those formulæ were not known till after the labour which they would have spared had been undergone. Their utility for the purposes of computation consists therefore chiefly in their being the means by which the numbers given in the earliest tables may easily be verified.

Mr. Sharp calculated, besides, a table of natural and logarithmic sines, tangents, and secants to every second in the first minute of a degree; and he determined to seventy-four places of decimals the length of the circumference of a circle by means of the series expressing that of an arc in terms of its tangent, which had been discovered by James Gregory in 1671. The series, when the arc = 30°, gives (after being multiplied by 6) for the length of the half-circumference, when the semidiameter is equal to unity,

$$2\sqrt{3}\left\{1 - \frac{1}{3.3} + \frac{1}{5.3^2} - \frac{1}{7.3^3} + \&c.\right\};$$

and in this state it was employed by Mr. Sharp, who underwent the immense labour of computing the values, and taking the sum of 150 of the terms within the braces, besides that of extracting the square root of 3 to 76 decimal places.

The health of this ingenious man had always been delicate; and after he quitted London he lived in a very retired manner, receiving only the occasional visits of two friends from Bradford; even his servant had seldom access to him, and the food for his meals was placed, through a hole in the wall, in a closet adjoining his study. It is stated that often during a whole day, when deeply engaged in calculations, he took no refreshment; yet he found time to keep up an extensive correspondence with the great mathematicians of that age, and he regularly attended the services of religion at a chapel for dissenters in the town. He was never married, and he died July 18, 1742, at the age of ninety-one years.

SHARP, GRANVILLE, was the son of Dr. Thomas Sharp, who held a prebend in Durham cathedral, and was archdeacon of Northumberland. Dr. Thomas Sharp was the author of several works, philological, antiquarian, and religious, which were collected and published in 6 vols. 8vo, London, 1763. He was born about 1693, and died in 1758.

Granville Sharp was born in 1734. He was educated for the bar, but he never practised, and quitted the study of the law for a situation in the Ordnance-office, which however he resigned on the breaking out of the American war, being opposed to those principles and measures of the British government which led to that war. He then took chambers in the Temple, with the intention of pursuing his studies as a private gentleman.

Granville Sharp, though a man of considerable literary acquirements, and the author of several works in philology, law, theology, and politics, is chiefly known for the boldness, the ability, and the effect with which he stood forward as the opponent of negro slavery. In 1769 he published 'A Representation of the Injustice and Dangerous Tendency of Tolerating Slavery in England, with Remarks on the Opinions given in 1729 by the then Attorney- and Solicitor-General,' 8vo, London, with an Appendix, 1772. His conduct however in a case of individual oppression first brought him conspicuously before the public. A negro of the name of Somerset had been brought to London, and, falling ill, was turned out of doors by his master. Sharp found him in the street in a state of the utmost destitution, and took him to St. Bartholomew's Hospital, where he was restored to health, and Sharp then procured him a situation as a servant. About two years afterwards Somerset was arrested by his old master, and imprisoned in the Poultry Compter as a runaway slave. Somerset applied to his former friend Sharp, who brought the case before the lord mayor, by whom it was decided that Somerset should be set at liberty. The master however, in defiance of this decision, seized Somerset in the presence of the lord mayor and of Sharp, and insisted upon his right to his slave. Sharp then brought an action against the master for assault; the case was tried, and was finally referred as a question of law to the twelve judges; it was argued at three sittings, in January, in February, and in May 1772, and by an unanimous decision the law of England was declared to be that as soon as a slave sets foot on English territory he becomes free.

Sharp continued to exert himself in behalf of the negroes. He wrote four pamphlets against slavery in 1776. At length the Association for the Abolition of Negro Slavery was formed, the first meeting of which was held in London on the 22nd of May 1787, when Granville Sharp was appointed chairman of the twelve persons of whom it consisted, most of whom were London merchants, and all but two were Quakers. In this great cause Sharp continued to labour, as well as in others favourable to popular rights and political freedom. He was opposed

to the impressment of seamen, and a citizen of London having been seized and carried to the Nore, Sharp had him brought back by a writ of habeas corpus from the Court of King's Bench, and he was set at liberty. He sent out a number of negroes whom he found in the streets of London to Sierra Leone at his own expense, and also drew up a 'Sketch of Temporary Regulations for the intended Settlement on the Grain Coast of Africa, near Sierra Leone,' and thus may be said to have been the founder of the settlement there. He was an advocate of parliamentary reform, having as early as 1778 published 'A Declaration of the People's Natural Rights to a share in the Legislature, which is the Fundamental Principle of the British Constitution of State; also a Declaration of Defence of the same Doctrine when applied particularly to the People of Ireland,' 8vo, London. Granville Sharp continued to pass his time in these and similar benevolent labours till July 1813, when he died at the age of seventy-nine.

Sharp's writings were numerous, and had many readers at the time when they appeared; but as most of them are pamphlets, and were written for temporary purposes, they are not much referred to now. Among them however are some laborious and useful investigations into the great principles of the English constitution, particularly his 'Account of the Ancient Divisions of the English Nation into Hundreds and Tithings,' 8vo, London, 1784; and his 'Account of the English Polity of Congregational Courts, more particularly of the great Annual Court of the People, called Frank Pledge,' 8vo, London, 1786. He was a zealous member of the Established Church, and had a great dislike to the Roman Catholic religion, but was liberal to Protestant dissenters of all classes.

(*Memoirs of Granville Sharp, Esq., composed from his own Manuscripts and other authentic Documents*, 4to, 1820.)

SHARP, JAMES, archbishop of St. Andrews, was born in May, 1618, in the castle of Banff, where his father, Mr. William Sharp, resided in his quality of sheriff-clerk of the county. Sharp's paternal grandfather had been a merchant of considerable eminence in the town of Aberdeen, and was the younger son of a gentleman of landed property in Perthshire. Sharp was educated at the University of Aberdeen, where he is said to have distinguished himself in the studies then in vogue. On leaving college he paid a visit to England, but soon after returned to his native country on being chosen one of the regents, or professors of philosophy, in St. Leonard's College, St. Andrews, an appointment for which he is said to have been indebted to the interest of his relation the Earl of Rothes, to whom he had got himself introduced while in the South. His whole history evinces the great talent he had in insinuating himself into the favour of the great. After a short time he exchanged his professorship for the office of minister of the parish of Crail, no doubt a better living, to which he was appointed by his friend John, earl of Crawford and Lindesay.

These facts are given on the authority of a tract entitled 'A true and Impartial Account of the Life of the most Reverend Father in God, Dr. James Sharp, Archbishop of St. Andrews,' which is usually quoted as printed in 1723, although, according to Watt's 'Bibliotheca,' it was first published in 1719. The object of the writer is to make it appear that Sharp was disinclined to Presbytery, or at least opposed to the Solemn League and Covenant, from the beginning; but he must at any rate have complied with both when he accepted his professorship and his living in the church. Indeed it is evident that he assumed the appearance of great zeal for the ecclesiastical system now, after the commencement of the civil war, established in Scotland, and with such success as to take in its firmest and ablest friends, so that he enjoyed the full confidence and took part in all the councils of the leaders of the church. His affability and pleasing manners also, we are told, made him a favourite among his parishioners.

In August 1651, according to Sir James Balfour's 'Annals,' Sharp was one of a number of ministers who were seized and put on board ship at Broughty, on the Tay, and carried off prisoners to England, by order of General Monk, who was then overrunning the country. This remarkable passage in his history is not noticed in the common accounts of Sharp; but frequent allusions occur in the Presbyterian invectives to certain base compliances, by which he is asserted to have purchased the favour of Cromwell on some occasion, and to have obtained his liberty, while his companions were left in bondage. He appears, at all events, to have, after some time, found his way back to his charge at Crail.

Some years after this we hear of him being sent up to London with a commission from the party in the church called the Resolutioners, to plead their cause before the Protector against Mr. James Guthrie, minister of Stirling, the deputy of the opposing faction, called the Protestors or Remonstrators; on which occasion he is said to have so distinguished himself by his management and address that Cromwell remarked to the bystanders, "That gentleman, after the Scotch way, ought to be styled Sharp of that ilk." He was no doubt selected for this mission partly on account of the connections he had formed in England. According to Burnet, Sharp at this time "seemed more than ordinary zealous for Presbytery."

It is characteristic of Sharp that, although thus the agent of the Resolutioners, he always, according to his friendly biographer, kept a good understanding with the chiefs of their opponents, the Protestors. While ingratiating himself with Cromwell also, it seems, he maintained a correspondence with Charles II. during all the time of

his exile. General Monk was exactly the character for such a man to get into his hands at the critical moment of the Restoration. It is certain that, whatever may have afterwards been thought or said of the acts by which he had obtained his release from Cromwell when his companions were left in confinement, he had either never lost or had completely regained the confidence of his brethren in the church, five of whom, ministers of Edinburgh, and the leading men of their party, when Monk began his march from the North of England upon London, in January 1660, applied to him to receive Sharp as their representative, and as a person fully instructed in their views.

The seven months that followed form the portion of Sharp's history which is of the most importance to the appreciation of his character. He proceeded to London, where he arrived 13th February, set out for Breda 4th May, returned to London 26th May, and appears to have remained there till about the middle of August. During all this time he was in close communication with all the leading persons and parties of the day; with Monk and the chief of the English and Scottish nobility then in London; with both the Presbyterian and the Episcopalian ministers there; with Charles himself and the members of his court; and he also kept up an active correspondence with Douglas and the other ministers in Scotland by whom he had been deputed. The numerous letters which passed between him and Douglas have been preserved; they are now deposited in the library of the University of Glasgow, and a very full abstract of them has been given by Wodrow in the Introduction to his 'History of the Sufferings of the Church of Scotland from the Restoration to the Revolution.' Mr. C. Kirkpatrick Sharpe, in a note to Kirkton's 'Secret and true History of the Church of Scotland from the Restoration to the year 1678,' observes that "Wodrow is accused of gross injustice in garbling Sharp's letters to Douglas;" but that writer, whose partisanship is very decided, neither ventures to warrant the truth of this accusation, nor professes to have examined the original letters. On the other hand, the Rev. Dr. Burns, late of Paisley, now of Toronto in Canada, the modern editor of Wodrow's History, having compared, as he tells us, the letters with the abstract, asserts, "without hesitation, as a general result of the inquiry, that, while the historian does by no means conceal his design of exposing Sharp's treachery, he had it in his power from these documents to have held him up to detestation in still blacker colours, had he quoted all the expressions of affected devotion—all the solemn protestation of attachment to Presbytery—all the specimens of mean adulation, and all the bitter vituperations against his opponents, which these letters contain." Dr. Burns probably would not wish to be considered a less zealous partisan than Mr. Sharp; but, besides the authority his statement derives from his having actually seen and read the original letters, it appears to us to be probable in itself. Wodrow, though not a critically exact historian, had a most minute as well as extensive acquaintance with the times of which he writes, and is a very careful compiler from the vast store of original documents on which his work is almost exclusively founded; and, although not a person of much enlargement of mind, he cannot with justice be called either a violent or an unfair writer. His abstract certainly leaves a strong impression of Sharp's thorough dissimulation and treachery. The opinion which Douglas afterwards formed was, it seems, that he had been corrupted and gained over to the Episcopalian side during his visit to Breda, where he was probably much with Hyde, and where Charles himself treated him with the most flattering favour and familiarity; and in this view of the matter Wodrow also appears to coincide. To us his conduct has the air of intrigue and dishonesty from the commencement of his mission; he may not have made up his mind when he left home to support the restoration of Episcopacy in Scotland, but we believe he set out fully determined to take the course as to that matter which promised most for his own advancement, and that what he saw of the current in which things were running after he got to London very soon determined him as to the part he should act.

Some of Sharp's defenders however take up other ground, and, without disputing the correctness of Wodrow's abstract of the letters, deny that they afford any evidence of his insincerity, or that we have any other reason for believing that he was unfaithful to the cause of Presbytery so long as he was employed on this mission. When he returned to Scotland, he brought with him a letter from the King, directed, "to Mr. Robert Douglas, to be communicated to the Presbytery of Edinburgh," in which his Majesty declared his resolution "to protect and preserve the government of the church of Scotland, as it is settled by law, without violation." This letter Sharp's enemies will have to have been of his composition; its mode of expression was at least ingenious. The Scottish parliament, which met 1st January 1661, passed an act—suggested, according to Burnet, at the council table in a drunken bout—rescinding or repealing all acts passed since the year 1633; and this at once abolished any legal establishment that Presbytery had ever received, and made "the church as it is settled by law" to mean the old Episcopal church which had been overthrown in 1638. During his late absence from Scotland, Sharp had been elected professor of divinity in St. Mary's college, St. Andrews; he was also appointed his Majesty's chaplain for Scotland, with an annual salary of 200*l.* sterling; and now, having gone up again to London, on the rising of parliament, along with Glencairn,

the chancellor, and Rothes, the president of the council, he was, in a council held at Whitehall, nominated Archbishop of St. Andrews. He returned to Scotland with the same two noblemen on August 31st, and left again for England on October 18th; and about the middle of December he and three of his brethren were consecrated with great pomp at Westminster by the bishops of London and Worcester.

The history of Sharp's government of the Scottish Church cannot be here detailed. He certainly did not allow any recollections of his own very recent renouncement of Presbyterianism, or of the extreme zeal he had been wont to profess for that system of ecclesiastical government, to check his activity and ardour in the maintenance of the opposite order of things that had been now set up. The party he had deserted charge him with an unrelenting persecution of his old associates, of all who would not apostatise like himself, as well as with the most overbearing deportment even to those of his own communion who were his inferiors in station, and with an insatiable ambition; and it cannot be denied that many well-authenticated facts lend strong countenance to these imputations. He may have conscientiously believed such a policy to be necessary, or to be the wisest and best; but whatever were his views or motives, it is certain that we find him on all occasions the advocate for measures of rigour and severity, and constantly clamouring for the more strict execution of the laws against nonconformists.

In 1663 he left the declining interest of the Earl of Middleton, to whose support he had been mainly indebted for his nomination to the primacy, and attached himself to his old adversary the Earl of Lauderdale; but their association scarcely lasted two years.

In 1664, on the death of the Earl of Glencairn, he made strong application for the office of Lord Chancellor, but without success. In the beginning of the year 1667 he was commanded to come no more to the council-table, but to remain within his diocese; but this restraint was taken off before the end of the year. On Saturday, the 9th of July 1668, he was shot at as he was entering his coach in the streets of Edinburgh, by one James Mitchell, a conventicle preacher; but the ball was intercepted by the arm of the Bishop of Orkney, who was following him into the coach. The bishop's arm was shattered, but nobody attempted to apprehend the assassin, who was discovered, however, five years afterwards, and executed in January 1678, after a series of proceedings which, at least according to one version of the story, are little creditable to Sharp's magnanimity. At last, on Saturday, the 3rd of May 1679, the archbishop, while travelling with his eldest daughter from Kennoway, where he had passed the night, to St. Andrews, was attacked by a band of nine enthusiasts on Magnus Muir, within three miles of that city, dragged from his coach, and slaughtered on the spot with circumstances of the most ferocious and pitiless barbarity. Various narratives of this murder have been collected by Wodrow, and one has been added by Dr Burns, in his late edition of that historian's work (4 vols. 8vo. Glasgow, 1829); but the most detailed and in all respects remarkable account of the affair is that drawn up by James Russell, one of the actors in it, which was for the first time printed by Mr. Sharpe at the end of his edition of Kirkton's History. The same volume also contains a letter from Sir William Sharp, the archbishop's son, giving an account of his father's murder, dated St. Andrews, the 10th of May.

By his wife Helen Moncrief, daughter of the laird of Randerston, Archbishop Sharp left a son, Sir William Sharp, and two daughters, both of whom were married, the youngest, Margaret, to William, eleventh Lord Saltoun, the ancestor of the present lord. His portrait, from a painting by Lely, is engraved in Sharpe's Kirkton, and also in the last edition of Wodrow. The spot where he was murdered on Magnus Muir is still marked by a stone erected to the memory of Andrew Guilan, one of the only two of the party who were brought to justice, whose body was there hung in chains. A magnificent marble monument was erected to the archbishop by his son over the place where his remains were interred in the parish-church of St. Andrews, exhibiting, besides a representation of the murder, a long and highly laudatory inscription, a copy of which, with a short account of the archbishop, may be found in the 'Reliquiæ Divi Andrew' of Mr. George Martine, who is supposed to have been his secretary (4to. St. Andrews, 1797).

SHARP, JOHN, Archbishop of York, was born at Bradford, 16th February 1644; his father, Mr. Thomas Sharp, was engaged in trade there, but is said to have been descended from the Sharps of Little Norton, a family of great antiquity in Bradford Dale. In 1660 he was admitted of Christ's College, Cambridge; in July 1667, he was ordained deacon and priest; and in October of the same year he became domestic chaplain to Sir Heneage Finch (then attorney-general, afterwards chancellor), and tutor to his sons. Having taken his master's degree at Oxford in 1669, he was in 1672, on the recommendation of Finch, nominated by the crown to the archdeaconry of Berkshire. When Finch was appointed the same year lord-keeper, he devolved the exercise of his church patronage upon Sharp, "whose conscience," says Nelson, in his 'Life of Dr. Bull,' "he charged with an impartial scrutiny in this matter; adding withal, that he would prefer none but those who came recommended from him; and that if he led him wrong, the blame should fall upon his own soul." In 1676 Sharp was installed a prebendary of Norwich; and in 1677 he was instituted to the rectory of St. Giles-in-the-Fields, London, on which he

ceased to reside with his patron the chancellor, and took a house for himself. In 1679 he commenced D.D. at Cambridge, and that year also he accepted the lectureship at St. Lawrence, Jewry, which he held till 1683. In 1681 he was made dean of Norwich, an appointment for which he was again indebted to the interest of his steady friend the chancellor.

Having been chaplain to Charles II., he was re-appointed to the same office on the accession of James II., but gave great offence and involved himself in some trouble by a sermon which he soon after preached in his own church against popery. Sharp seems to have had no intention of provoking the royal displeasure; his sermon was preached in reply to a written argument in support of the right of the Church of Rome to the style and title of the only visible catholic church, which had been put into his hands as he was descending from the pulpit on the preceding Sunday; and he showed every disposition to make up for any offence he might have given. On the 14th of June 1686, James addressed a letter to Compton, bishop of London, in which he observed, that notwithstanding the late royal letter to the two archbishops, and the directions concerning preachers issued on the 15th of March 1685, yet Sharp had in some of the sermons he had since preached, "presumed to make unbecoming reflections, and to utter such expressions as were not fit or proper for him; endeavouring thereby," continued his majesty, "to beget in the minds of his hearers an evil opinion of us and our government, by insinuating fears and jealousies, to dispose them to discontent, and to lead them into disobedience and rebellion." And the bishop was commanded immediately to suspend Sharp from further preaching within the diocese of London, until he should have given satisfaction to his majesty, and his majesty's further pleasure should be known. Compton replied, that he should always count it his duty to obey the king in whatever he could perform with a safe conscience; but that in this case he humbly conceived he was obliged to proceed according to law, and therefore it was impossible for him to comply. His lordship however advised Sharp to abstain in the meantime from preaching; and on the 20th of June Sharp himself proceeded to Windsor with a petition to the king, in which he assured his majesty, that so far had he always been from venting in the pulpit anything tending to schism or faction, or anyway to the disturbance of his majesty's government, that he had upon all occasions in his sermons, to the utmost of his power, set himself against all sorts of doctrines and principles that looked that way. "But," the petition went on, "if in any sermon of his any words or expressions have unwarily slipped from him, that have been capable of such constructions as to give your majesty cause of offence, as he solemnly professes he had no ill intention in those words or expressions, so he is very sorry for them, and resolves for the future to be so careful in the discharge of his duty, that your majesty shall have reason to believe him to be your most faithful subject. And therefore he earnestly prayeth that your majesty, out of your royal grace and clemency, would be pleased to lay aside the displeasure you have conceived against your humble petitioner, and restore him to that favour which the rest of the clergy enjoy under your majesty's gracious government." James would not even hear this petition read; upon which Sharp left town and went down to Norwich, where he amused his leisure in collecting old British, Saxon, and English coins, till at length, in the beginning of January 1687, a letter from Sunderland informed him that he might return to his function. Kennet, in his 'Complete History,' says that he was indebted for his recall to the intercession of Pepys (the author of the 'Diary'), who was applied to "as a good-natured man, with wife and children," and who "went freely to the king, and prevailed with his majesty" to remit his displeasure.

In August 1688, Sharp drew up the reasons on which the other archdeacons and himself declined to appear before the ecclesiastical commissioners to answer for not obeying the king's orders in regard to the reading of the declaration for liberty of conscience. On the 27th of January 1689, he preached before the Prince of Orange, and on the 30th before the Convention; on both occasions praying for King James, although on the 28th the Commons had voted that the king had abdicated and that the throne was vacant. It was not till after a long debate that the House agreed to thank him for his sermon, and to request that he would print it; and he thought it best to decline complying with that request. After the settlement of the new government, Sharp was, in September 1689, promoted to the deanery of Canterbury, on the removal of Tillotson to that of St. Paul's. He was pressed to accept the place of one of the deprived bishops; but this his feelings would not allow him to do, and he ran some risk of losing the favour of King William, till his friend Tillotson put it into his head to offer to accept the archbishopric of York, on the pretext that such an arrangement would place him in his native district, as soon as it should become vacant by the death of Lamplugh, who was then very ill. He died, in fact, within a fortnight after, and Sharp was consecrated archbishop on the 5th of July 1691. Sharp acquired a very high character in this eminent office, which he retained till his death, at Bath, on the 2nd of February, 1714. He enjoyed considerable influence at court during the reign of Anne, and, among other things, is said to have had a share in preventing the elevation of Swift to the Episcopal bench. As a preacher, he had a clear, easy, correct style; and his sermons, which make seven octavo

volumes, only one of which however appeared during his lifetime, have been repeatedly printed. The last edition was published at Oxford in 1840. Mr. Speaker Onslow, in a note to Burnet's 'History of his Own Times,' says of Sharp, "He was a great reader of Shakspeare. Doctor Mangey, who had married his daughter, told me that he used to recommend to young divines the reading of the Scriptures and Shakspeare. And Doctor Lisle, bishop of Norwich, who had been chaplain at Lambeth to Archbishop Wade, told me that it was often related there, that Sharp should say that the Bible and Shakspeare made him archbishop of York." The 'Life of Archbishop Sharp,' by his son, Dr. Thomas Sharp, archdeacon of Northumberland, which had been in the hands of the compilers of the 'Biographia Britannica,' was published at London in 2 vols. 8vo, in 1829.

SHARP, WILLIAM, an eminent engraver in the line manner, was born on the 29th of January 1749, in Haydon-yard, in the Minories, where his father carried on the business of a gun-maker. He was early apprenticed to an engraver of door-plates, and other such articles, being what is termed a bright engraver. At the expiration of his indentures, Sharp married a French woman, and commenced business in the same line in Bartholomew-lane; but he soon exercised his talent in the higher branches of the art. His earliest effort was an engraving of the old lion Hector in the Tower of London, from an original drawing by himself. In 1782 he sold his shop, and removed to a private house in Vauxhall, where he began to engrave from pictures by the old masters; and soon after he was engaged, in conjunction with Angus, Heath, and Collyer, in decorating the 'Novelist's Magazine,' with plates after the designs of Stothard. Here he also completed the Landing of Charles II. after West, a work which Woollett had left unfinished; and he engraved some plates for Cook's 'Voyages,' and a beautiful oval work, after Bannall, of the Children in the Wood. The profits of his professional employment and a legacy enabled Sharp to take a larger house, and he accordingly removed to Charles-street, Middlesex Hospital. In 1814, when enjoying his highest reputation, he was elected a member of the Imperial Academy of Vienna, and of the Royal Academy of Munich. Sir Joshua Reynolds offered to propose him as an associate of the Royal Academy of London; but Sharp, coinciding in opinion with Woollett, Hall, and other engravers, that the art was slighted by the rule which precludes the election of its professors to the rank of academicians, declined the proffered compliment. From London he went to reside at Acton, and finally at Chiswick, where he died of dropsy in the chest, on the 25th July 1824. Amongst the many works of this eminent engraver may be enumerated the Doctors Disputing on the Immaculateness of the Virgin, and the Ecce Homo, after Guido; St. Cecilia, after Domenichino; the Virgin and Child, after Carlo Dolci; Diogenes, after Salvator Rosa; the Sortie from Gibraltar, after Trumbull; the Destruction of the Floating Battery at Gibraltar, after Copley; and the portrait of John Hunter, after Sir Joshua Reynolds. The last engraving is considered to be one of the finest specimens of the art. He also engraved, in some instances, figures in the landscape plates of other persons. As an instance of this may be mentioned the group of Niobe in the print by Samuel Smith, after the original picture by Wilson, now in the National Gallery.

Mr. Sharp, though in the ordinary transactions of life a man of shrewdness, was, in matters of science and religion, a visionary and an enthusiast. No imposture was too gross for his belief, and no evidence sufficiently strong to disabuse his mind. The doctrines of Measner, the rhapsodies of the notorious Richard Brothers, and the still more disgusting exhibitions of Johanna Southcott, in turn found in him a warm disciple; and, in the last case, an easy and liberal dupe. By Johanna and her confederates, Mr. Sharp was induced to part with the bulk of his savings, under the delusion that he was purchasing estates in the New Jerusalem. So confident was he in her divine mission, that although she died several years before him, he believed, up to the hour of his own dissolution, that she was only in a trance. In the case of Brothers, he had so strong an opinion of his prophetic powers, that he engraved two plates of his portrait, lest one should not be sufficient to produce the requisite number of impressions which would be called for on the arrival of the predicted Millennium. Upon these plates he inscribed, "Fully believing this to be the man appointed by God, I engrave his likeness. W. Sharp." [BROTHERS, RICHARD.]

The general style of Sharp's engraving, though undoubtedly original, was formed from a careful selection of the merits of his eminent predecessors and contemporaries. The half-tints and shadows of his best engravings are peculiarly rich; and his lines combine, with great freedom, a regularity and accuracy of position rarely attained without mechanical aid. In no quality of his art was he more distinguished than in the power which he possessed of imitating the various textures of the different parts of his subject, a circumstance which is most obvious in a fine impression of the portrait of John Hunter before alluded to.

SHARPE, DANIEL, F.R.S., at the time of his decease president of the Geological Society of London, was born in London in 1806. His mother, who died a few weeks after his birth, was sister to Samuel Rogers the poet. He was educated at Walthamstow, and as a boy early showed a taste for the study of natural history, but he did not commence seriously to work at geology till after he had been admitted a Fellow of the Geological Society in June

1829. In that year he gave his first memoir to the society, on a new species of *Ichthyosaurus*, *I. grandipes*, which however it afterwards appeared had been previously described by Conybeare, under the name of *I. tenuirostris*.

Throughout the greater part of his life, Mr. Sharpe was actively engaged as a merchant, and his business connection with the wine-growing districts of Portugal occasionally leading him there, in 1832, 1839, 1848, and 1849, he gave to the Geological Society a series of memoirs on the rocks of the neighbourhood of Lisbon and Oporto. The first is a mere sketch of the general arrangement of the tertiary and secondary rocks by a young and intelligent geologist; the second, on the same subject, is fuller and more definite, but not sufficiently complete in the determination of fossils to fix the precise age of the strata described. It contains however in an appendix some observations of great value on the comparative effects of the great earthquake of 1755 on the strata on which Lisbon stands. The destructive effects of this shock were chiefly confined to the area occupied by the soft tertiary beds, while the buildings erected on the more solid Hippurite limestone and chalk escaped entirely. The line of division between the shattered and entire buildings Mr. Sharpe found to correspond precisely with the boundaries of the strata. In his third memoir Mr. Sharpe describes the granitic, gneissic, clay-slate, and coal-bearing rocks of Vallongo near Oporto. The clay-slate he proved by its fossils to be of Lower Silurian age, and his sections show that the strata bearing anthracitic coal underlie the slate, and rest on gneiss pierced by granite. He thence concluded that the coal is of Lower Silurian age. In the obituary notice of Mr. Sharpe given in the 'Anniversary Proceedings' of the Royal Society for 1856, on which the present article is founded, but with omissions, alterations, and additions, the following just remarks occur on this subject:—"In the present state of knowledge regarding that country, it is impossible to deny that this may be the case, but it must be remembered that the few remains of plants discovered in these strata are considered by palaeontologists to present characters indicative of 'carboniferous' age; and even those geologists who most strenuously support the so-called uniformitarian doctrines, incline to attribute the peculiar position of the coal to one of those great inversions of the strata so frequent in highly disturbed districts of all ages, from palaeozoic up to tertiary times."

The fourth paper commences with a succinct sketch of the general geology of Portugal, and goes on to define the limits of the secondary rocks north of the Tagus, both by stratigraphical and palaeontological evidence. Long before this paper was read, Mr. Sharpe had acquired much critical skill and knowledge as a palaeontologist, and on palaeontological principles he now established the existence of cretaceous and Jurassic rocks in the country described. The whole formed an excellent sketch of a hitherto undescribed country, and up to this date British geologists are chiefly indebted to these memoirs for the knowledge they possess of a land where the science is almost uncultivated.

Between 1842 and 1844 Mr. Sharpe gave four memoirs to the Geological Society, on the Silurian and Old Red-sandstone rocks of Wales and the north of England, territories previously chiefly illustrated by the labours of Professor Sedgwick. [SEDGWICK, THE REV. ADAM.] The first of these is 'On the Geology of the South of West-morland.' Part of this paper describes the range of the Conistone limestone. Mr. Sharpe identified it by its fossils as forming part of the Lower Silurian series, but did not determine its actual horizon. In 1839 Mr. James Garth Marshall, F.G.S., in a paper communicated to the British Association, placed it on the parallel of the Caradoc sandstone, which determination the researches of later geologists have sustained. Mr. Sharpe also pointed out the unconformity of the Upper on the Lower Silurian rocks of the area; and in describing the passage of the Ludlow rocks into the Old Red-sandstone, he correctly infers that the tilestones of South Wales should be withdrawn from the base of the Old Red-sandstone and classified with the Ludlow rocks, to which their fossils unite them. At a later period of the same year he produced a memoir 'On the Bala Limestone, and other portions of the older Palaeozoic Rocks of North Wales.' Up to this date it was believed that at Bala and elsewhere there was a great thickness of fossiliferous 'Upper Cambrian rocks' of Sedgwick below the Lower Silurian strata. Mr. Sharpe maintained that this was an error, and that both stratigraphically and by their fossils, the Bala rocks were the equivalents of the Llandeilo flags and Caradoc sandstone. This sagacious determination has since been confirmed by Mr. J. W. Salter, F.G.S., as regards the Caradoc sandstone, the fossils of Bala and the typical Caradoc sandstone of Sir Roderick Murchison in Shropshire being the same.

The more elaborate paper of 1844 is accompanied by a geological map of North Wales, and has been considered less happy. Mr. Sharpe's genius chiefly lay in the palaeontological determination of the age of rocks, and, in this case at least, the time he allowed himself to map North Wales was too short for the satisfactory elucidation of the problems he proposed to solve.

Pursuing at intervals these subjects, Mr. Sharpe produced in 1847 an elaborate analysis and comparison of the Silurian fossils of North America, collected by Sir Charles Lyell, [LYELL, SIR CHARLES], with those of Great Britain, and confirmed the views entertained by the American geologist, Mr. Hall, that the American Silurian

strata, like the British, consist of two great divisions, namely, upper and lower.

While engaged in these investigations, Mr. Sharpe's attention was drawn to the subject of the slaty cleavage and foliation, which affects the more ancient rocks of Devonshire, Wales, the North of England, the Highlands of Scotland, and Mont Blanc. In 1846, 1848, 1852, and 1854, he produced four memoirs on these subjects, the two first and the last of which are published in the 'Quarterly Journal' of the Geological Society, and the third in the 'Philosophical Transactions' of the Royal Society. These questions had previously been made the subject of special investigation by Professor Sedgwick, Mr. Darwin, and Professor Phillips, [PHILLIPS, JOHN]. It has been said, that from imperfect data Mr. Sharpe generalised too largely; and though this may be the case, an attentive perusal of the memoir of 1846 proves that in some important points he materially advanced the subject at that date in the direction to which the labours of Mr. H. C. Sorby, F.G.S., have since tended. He attributes the cleavage of rocks, and consequent distortion of fossils, to pressure perpendicular to the planes of cleavage, and asserts that rocks are expanded along the cleavage planes in the direction of the dip of the cleavage. In the communication of 1848, the doctrine that pressure is the cause of cleavage is still more distinctly insisted on, and remarkable instances are given, in which pebbles were observed which appeared to have been compressed and elongated in the planes of cleavage. He also recognises the fact, since so beautifully explained by Mr. Sorby, in the 'New Edinburgh Philosophical Journal,' that the fine particles composing the slaty rocks are arranged lengthwise in the direction of the cleavage planes, and he attributes bends in the cleavage in its passage from one bed to another, to beds of different lithological character offering different degrees of resistance to pressure. The idea that cleavage may be due to crystalline action he altogether repudiates. It must be admitted however that no adequate investigation has yet been instituted, of the relations of crystallisation to the greater structures of rocks. We are as yet uninformed whether there are or are not jointed structures on the great scale, resulting from the coincidence of crystalline planes over comparatively large areas, as some of the phenomena exhibited by the sub-crystalline limestones and by certain serpentines, tend to indicate. The two last of the series of Mr. Sharpe's papers on these subjects, published in 1852 and 1854, describe respectively the cleaved and foliated rocks of Scotland and Mont Blanc, and are chiefly devoted to the development of his theory of the great 'cylinders' or arches, in which he asserted that the laminae of cleaved and foliated rocks lie. In these memoirs he made no advance beyond his previous ideas, for he attributed the formation of cleavage and foliation to the same cause; and though he indicated the fact, he gave no explanation of the reason of the occurrence of planes of cleavage and foliation in arched lines, a subject that has since in part been acutely treated of by Mr. Sorby, and of which the full explanation seems not far distant. In the paper on Mont Blanc however Mr. Sharpe explains and corrects for the first time, we believe, the remarkable error of Saussure, in representing the cleavage of slates, wherever they occur in the Alps, almost invariably as stratification; having mistaken the planes of cleavage for those of bedding, and regarded the latter as a series of parallel joints. But while showing that this systematic error runs throughout the whole of Saussure's volumes, he shows also that Saussure's observations, even when his conclusions are erroneous, are always accurate and instructive. He was led into the error from observing the analogy between the foliation of the schists and the cleavage of the slates, an analogy on which Mr. C. Darwin afterwards founded the correct conclusion that the foliation has no reference to stratification; other English geologists however as Mr. Sharpe points out "after correctly distinguishing cleavage planes from stratification, still continued to class the foliation of crystalline rocks with the latter instead of the former; thus proposing to unite two phenomena of totally different origin, while they separated those which are really analogous, and probably due to one and the same cause."

Besides these memoirs Mr. Sharpe contributed to the Geological Society various papers on special subjects, 'On the Quartz Rocks of Macculloch's Map of Scotland,' 'On the Southern Borders of the Highlands of Scotland,' and various palaeontological communications; 'On the genus Trematis,' 'On Tylostoma, a new genus of Gasteropods from the Cretaceous beds of Portugal,' 'On the genus Nerinea,' and a note on the fossils of Boulonnais, appended to a paper by Mr. Godwin Austen on that district. He also furnished several parts of a monograph to the splendid publications of the Palaeontographical Society, 'On the Fossil Remains of the Mollusca found in the Chalk Formation of England,' and on this important work he was still engaged when he met with the accident that caused his untimely death.

"Such is a brief outline of some of the scientific labours of Daniel Sharpe—a man whose mind alike powerful, active, and well cultivated, urged him successfully to grasp and make his own a wider range of subjects than many geologists dare to attempt. Neither should it be forgotten that all the while he was unceasingly engaged in mercantile pursuits, and it was only during brief intervals of leisure when more imperative labours were over, that he accomplished what many would consider sufficient work for their lives. And it is not in geology alone that he is known and appreciated, philologists and

ethnologists equally esteemed him. With marvellous versatility of talent he grappled with the ancient Lycian inscriptions, brought home by Fellows, Forbes, and Spratt, and revealed the secrets of an unknown tongue written in an unknown character. In debate he was clear, keen, severely critical, and at times somewhat sarcastic, occasionally alarming to an opponent unaccustomed to his style; but those who knew him best were well aware that an unvarying fund of kindly good humour lay beneath, and that if he hit his adversary hard, no man than himself more rejoiced in a harder blow in return." His private life is stated to have been full of unostentatious benevolence.

Mr. Sharpe became a Fellow of the Royal Society on June 6th, 1850; he was also a Fellow of the Linnæan, Zoological, and Geological societies. In 1853 he became treasurer of the Geological Society; and on the retirement of Mr. W. J. Hamilton, in official course in 1856, was elected its president, being, as was remarked at the time, the first person actually engaged in commercial pursuits in the city of London, who had been selected for the chair. This honourable position in the world of science however he occupied three months only; for on the 20th of May in the same year, while riding near Norwood, he was thrown from his horse, and sustained a fracture of the skull. In a few days he so far recovered as to be able to recognise the relations who were admitted to his chamber. He had actually recommenced the study of his fossils, and his numerous friends rejoiced in the prospect of his speedy restoration; when a sudden relapse succeeded, and he died on the 31st May.

(*Proceedings of the Royal Society, 1856; Anniversary Address of the President of the Geological Society, 1857; Anniversary Proceedings of the Linnæan Society, 1857.*)

\* SHARPEY, WILLIAM, a distinguished British Physiologist, was born at Arbroath in Scotland, and educated for the medical profession. He took his degree of M. D. in the University of Edinburgh, and afterwards studied in Germany. On his return from the continent he became one of the teachers in the extra-academical medical school of Edinburgh, where he obtained considerable reputation for the depth and extent of his anatomical and physiological knowledge. At this time he contributed two articles to the 'Cyclopædia of Anatomy and Physiology.' The one on 'Cilia,' the other on the family 'Echinodermata.' These articles displayed considerable knowledge of comparative anatomy, and added to his reputation as a physiologist. On the retirement of Dr. Jones Quain from the chair of Anatomy and Physiology at University College, Dr. Sharpey was invited to fill the chair. This appointment he accepted, and delivered his first course of lectures in the session 1837-8. Dr. Sharpey has never practised his profession, nor has he published exclusively on physiological subjects, so that his fame principally rests on his courses of lectures delivered at University College. He has, however, written the histological introduction to the last editions of Dr. Quain's Anatomy. [QUAIN.] Dr. Sharpey is examiner in physiology at the University of London, and secretary to the Royal Society of London.

SHAW, CUTHBERT, was born in 1738 at Ravensworth in Yorkshire. He was the son of a shoemaker, but received a good education, and became usher in a school at Darlington in Yorkshire. He afterwards came to London, and was for some time an actor, but abandoned the profession for that of an author. He contributed to the periodical literature of the day, and also wrote 'Liberty, a Poem,' 4to, 1756; 'Odes on the Four Seasons,' London, 4to, 1760; published under the name of W. Seymour; the 'Four Farthing Candles,' 4to, 1762; 'The Race,' 4to, 1766, (the two last are satires directed against contemporary writers); 'A Monody to the Memory of a Young Lady who died in Childhood, to which is added An Evening Address to a Nightingale, by an Afflicted Husband,' London, 4to, 1768, 1772; 'Corruption, a Satire,' 4to, 1769. Shaw died at London in 1771, at the early age of thirty-three, of a disease occasioned by his dissipated habits. The 'Monody' and 'Address to the Nightingale' are sometimes met with in collections of English poetry, and show that the author had some skill in versification, but little else.

SHAW, GEORGE, the younger son of the Rev. Timothy Shaw, was born at his father's vicarage at Berton, in Buckinghamshire, on the 10th of December, 1751. During his childhood he discovered much fondness for the study of natural history; in the cultivation of which science he afterwards attained great distinction. So far however were his energies ever from being engrossed by that subject, that when only thirteen years old, he was fully qualified by his general attainments to enter at the university. He was admitted at Magdalen Hall, Oxford, in 1765, where he took his bachelor's degree in 1769, and that of master of arts in 1772. In 1774 he took deacon's orders, and during a short time discharged his clerical duties at two chapelries connected with Berton.

An increasing love for the cultivation of natural science induced him to repair to Edinburgh, in order to pursue his favourite studies. He continued at Edinburgh for three years, where he studied medicine under Black and Cullen, and afterwards returning to Oxford, obtained the appointment of deputy botanical lecturer. In the discharge of the duties of that office he obtained a high reputation, and on the death of Dr. Sibthorp, was chosen professor of botany in his stead. It was discovered however that by an old statute of the university clergymen were declared ineligible for the office, and Dr. Shaw consequently lost the appointment.

In the autumn of 1787 he took the degree of Doctor of Medicine,

and in the course of the same year removed to London, where he settled as a physician. On the formation of the Linnean Society, in 1788, Dr. Shaw was appointed one of the vice-presidents, and he afterwards enriched its transactions with many valuable papers. He now began to deliver public lectures at the Leverian Museum, which were always attended by a numerous audience. Nor was he less popular as a writer than as a lecturer, and a periodical entitled the 'Naturalist's Miscellany,' which he now set on foot, was continued till his death. In 1789 he was chosen a Fellow of the Royal Society, and it was not long before he gave up the practice of his profession and devoted himself exclusively to scientific pursuits. In 1791 the occurrence of a vacancy at the British Museum induced Dr. Shaw to become a candidate for the office of a librarian; and on his receiving the appointment of assistant-keeper of natural history in that institution, he entirely gave up medical practice. His time during the last twenty years of his life was occupied with lecturing on natural history, publishing works on scientific subjects, and editing conjointly with Dr. Hutton and Dr. R. Pearson 'An Abridgment of the Philosophical Transactions.' On the death of Dr. Gray he was appointed keeper of the natural history in the British Museum, which office he held during the remaining six years of his life. In the midst of his useful labours however he was attacked by an illness which terminated fatally in the course of a few days, on July 22, 1813.

Dr. Shaw was as much beloved for his moral qualities, as respected for his intellectual acquirements, which were of a very high order. His principal works are:—'The Naturalist's Miscellany,' which had reached its 286th number when he died; 'A Catalogue of the Leverian Museum, illustrated with Coloured Plates,' which appeared between 1792 and 1796; and his well known systematic work on 'Zoology.' He furnished the letter-press to a very handsome work, containing sixty beautiful prints of plants and animals, which Miller, the editor of the 'Gardener's Dictionary,' had published, but which, from the want of an accurate description of the plates, had not met with a ready sale. The most useful of his works however was his 'General Zoology, or Natural History.' This appeared in parts, and eight volumes were published during the lifetime of the author, who left a ninth volume prepared for the press. After Dr. Shaw's death the work was continued by Mr. Stevens, and now forms fourteen 8vo volumes.

SHAW, THOMAS, was born at Kendal, in Westmorland, about the year 1692. He entered at Queen's College, Oxford, where he took the degree of Master of Arts in 1719; and, after receiving holy orders, was appointed chaplain to the English factory at Algiers. He held this post for twelve years, and did not return to England until 1734. During his absence he was chosen a Fellow of his college. In 1734 he took the degree of D.D., and was elected a Fellow of the Royal Society. In 1738 he published the first edition of his travels, and presented his collection of natural curiosities and ancient medals and busts, which he had formed when abroad, to the University of Oxford. On the death of Dr. Felton, his college nominated him principal of St. Edmund's Hall, and at the same time he was presented to the living of Bramley, in Hants. He likewise held the chair of the regius professorship of Greek in the University until his death, which took place in 1751.

The travels of Shaw extended through countries, some of which were previously little known. He traversed the whole of ancient Numidia, and visited Syria, Palestine, and the north of Egypt. His geographical details are exact and very valuable, since they furnish us with information concerning the ancient and modern condition of Numidia, and Mauritania Cæsariensis. His descriptions of manners and customs are very interesting, and like all his descriptions they are marked by extreme accuracy and strict adherence to truth; he appears indeed to have neglected nothing which could enhance the value of his work. In a supplement to his travels he published an account of 600 plants which he had collected; 140 of which were previously unknown to botanists.

The best edition of his travels was published in 1757, six years after his death, in one volume, 4to, which contains various maps and plates, and the supplement.

SHAWER, originally a Mamluke in the house of the vizir of Talai-Ebn-Razik, by whom he was appointed governor of the Said. The attempt however of Razik-al-Adel, son and successor of his benefactor, to remove him from this province, led to a civil war, in which Razik was slain; and Shawer compelled the helpless Fatimite kalif, Adhed, to appoint him vizir and commander-in-chief, A.D. 1162 (A.H. 558). He was however expelled in a few months by another chief named Dargham, and fled into Syria to the sultan, Noor-ed-deen [NOUREDDIN], whom he persuaded, by a promise of a third of the revenues of Egypt, to send a force under Shirakoh [SHIRAKOH] to reinstate him; but he broke his engagement when the service was fulfilled, and called in a French army from Palestine, which drove Shirakoh out of Egypt. A second invasion by the troops of Noor-ed-deen (1166), who was now converted into an enemy, was repulsed by the same aid. But the Christians in their turn threatened to seize on the country, and Shawer was compelled to throw himself on the mercy of the sultan for help. Shirakoh a third time entered Egypt (1168), and expelled the Franks; but becoming suspicious of the good faith of Shawer, soon seized him and put him to death, himself assuming the vacant dignity of vizir. The fall of the Fatimite dynasty followed within three years. [SALAH-ED-DEEN.]

BIOG. DIV. VOL. V.

SHEE, SIR MARTIN ARCHER, President of the Royal Academy, was born on the 23rd of December 1770, at Dublin, where his father (the descendant of an old Irish family) was a merchant. His father having, after considerable hesitation, yielded to his desire to adopt painting as his profession, he was entered, while little more than a child, as a student in the Dublin Society. Here, before he was twelve years old, he had carried off the three chief prizes for figure, landscape, and flower drawing. His father's death threw the youthful artist on his own resources, but he had prosecuted his studies to such purpose that at the age of sixteen he is said to have found ample occupation in Dublin as a portrait-painter, and his lively and polished manners gave him ready access to the best society of the Irish capital.

Anxious however to acquire a wider reputation, he, in 1788, came to London. Here he found in Edmund Burke a kind friend and adviser. Burke introduced him to Sir Joshua Reynolds, who treated him with much cordiality. Mr. Shee now entered as a student at the Royal Academy, and in 1789 became for the first time a contributor to the exhibition, sending a 'Portrait of a Gentleman,' and a 'Head of an Old Man.' Though he did not become a popular portrait-painter, nor, for some years at least, obtain many sitters from among the aristocracy or beauty of the land, Shee made his way steadily into a good and tolerably lucrative practice, towards which his geniality of manners rendered him valuable service. In 1798 he was elected an Associate of the Royal Academy, and he now deemed his position sufficiently secure to venture on taking the house in Cavendish-square, which Romney (whose successor he aspired to become) had built for himself when in the height of his celebrity. In this house Shee continued to reside until failing health compelled him to abandon his profession and remove to Brighton, some half a century later. This change of residence was attended with an improvement in his professional standing. He had painted a good many portraits of the leading actors, and of noted politicians, and other celebrities, which had attracted attention at the exhibition, and sitters readily followed him to his fashionable house. That he was fast making his way was sufficiently shown by his election as Academician in 1800, only two years after his election as Associate: his presentation picture was a 'Belisarius.'

From this time his career was marked by few changes or vicissitudes. Like most of the English painters of the time, during the short lull in the war between France and England he went to Paris to examine the art-treasures which Bonaparte had collected in the Louvre; but besides that, his biographers find little to notice until he appeared before the public in the character of a poet, by the publication, in 1805, of his 'Rhymes on Art, or the Remonstrance of a Painter,' a work which its author described as "a poem on painting, in which, more particularly, the early progress of the student is attempted to be illustrated and encouraged." A second part of it appeared in 1809. Byron praised the poem, and it was a good deal read and quoted at the time; and painters still occasionally garnish their literary essays with a stanza from it; but its vitality has long since departed, though it has an easy flow of rhyme, and is not without more substantial merit, and the notes are occasionally valuable. Again—on the occasion of a collection of the works of Sir Joshua Reynolds being exhibited at the British Institution, and a 'commemoration dinner' in honour of Sir Joshua being given by the directors of the institution in May 1803, at Willis's Rooms, the prince regent presiding—Mr. Shee invoked the muse, and published, in 1814, a small volume of poetry entitled 'The Commemoration of Sir Joshua Reynolds, and other poems.' His next appearance as an author was under, to himself, more exciting circumstances. He had written a tragedy called 'Alasco,' the principal character of which he deemed to be particularly suited to the histrionic powers of his friend Kemble; who agreed to act it. But it happened to be the first tragedy which fell under the hands of Colman, the new licenser of plays, and he regarding himself as charged with the conservation of the political as well as the moral purity of the play-going public, sternly refused to permit it to be performed so long as it contained certain bits of declamation about liberty, and denunciations of despotism, as well as one or two expletives. To the expurgation of these the author as resolutely refused to submit, and appealed to the Lord Chamberlain himself against the decision of his deputy. But the chamberlain (the Duke of Montrose) declining to examine that on which his deputy had "reported" replied, with some characteristic dislocation of grammar, "I do conclude, that at this time, without considerable omissions, the tragedy should not be acted." Shee however was not to be so silenced, and resolved to shame his censors by printing, though he could not play, his tragedy. It accordingly appeared in 1824, with a preface in which the facts were set forth with considerable warmth, while all the prohibited passages were printed in italics. The tragedy itself is forgotten now, but it will be referred to by writers of literary and political history for illustrations of what was prohibited as politically dangerous in London so late as 1824. The censor certainly did his work carefully. Treason is seen to lurk sometimes in single words—often in single lines, such as—

"Or question the high privilege of oppression."

Even the mention of—

"Some slanderous tool of state,  
Some taunting, dull, unmanner'd deputy,"

is thought to bode mischief, and is expunged accordingly. This was Shee's latest appearance as a poet, but once later he tried his hand as a novelist.

Literature however was but his amusement. During all these years he had been steadily making his way to a foremost place among the fashionable portrait-painters of his day. The mantle of Reynolds had not fallen on his successor, but Lawrence's easy gracefulness of style concealed his deficiencies from the eyes of his contemporaries, and he reigned in undisputed supremacy. But Lawrence could not alone supply the demands of the titled and wealthy claimants for the immortality of portraiture; and though among the political and literary celebrities Phillips perhaps was most in repute, his gay colour and polished manners undoubtedly rendered Shee second favourite with lords and ladies. On the death of Lawrence in 1830, he naturally aspired therefore to succeed him not only as the fashionable portrait painter, but also as president of the Royal Academy. Wilkie became his opponent, but though of course there could be no comparison between the artistic power of the two men, the academicians felt that Shee's fluency of speech and courtly address were of far more consequence in the academic chair than more eminent artistic abilities with reserved manners and a faltering tongue. Shee was elected president by a large majority, and soon afterwards received the honour of knighthood. He is said to have filled all the duties of his office with zeal and ability, and his official eloquence on those public occasions which called it forth was much admired. He continued to paint till 1845, in which year he exhibited for the last time five pictures; but his powers had been for some years evidently failing. He now, on the ground of inability to discharge its duties, resigned the presidency, but at the unanimous request of the academicians he was induced to withdraw his resignation, and he continued to hold the office till his death, which occurred on the 13th of August 1850, in his eightieth year.

Sir Martin Archer Shee will not rank among the great portrait painters of the English school. He is deficient in depth and force, in intellectual expression, and in characterisation. But his colour is often pleasing though too florid, and his figures have an air of ease and refinement; and his pencil has undoubtedly preserved the best portraits of many of the more eminent of his contemporaries. He occasionally painted historical figures and fancy subjects, but none of them won much attention. He was an accomplished gentleman, rather than a great painter.

**SHEEPSHANKS, REV. RICHARD, M.A. F.R.S. F.R.A.S.,** was born at Leeds, July 30th, 1794. His father was engaged in the cloth manufacture, and destined his son for the same pursuit. At the age of fifteen however, and after an ordinary school education, the son discovered his own preference for a learned profession, and the father accordingly placed him under the care of the Rev. James Tate, M.A., the master of the Grammar-school of Richmond in Yorkshire, well known as one of the most successful teachers of his day and subsequently as an editor of *Horace*. Here he remained until 1812, when he was removed to Trinity College, Cambridge. He took his degree with honours in 1816, obtained a fellowship in the next year, and proceeded to study for the bar, to which he was called about 1822. A weakness of sight, to which he was always subject, is supposed to have been the principal cause of his not practising law; but it must be added that his share of his father's property placed him in easy circumstances, independently of his fellowship, and his taste for science had become very decided. He took orders about 1824, and soon began to devote himself entirely to astronomy. He became a fellow of the Royal Astronomical Society in 1824, and was elected into the Royal Society on the 1st of April 1830. Of the former he was always one of the most active of the executive body. His leisure, and his desire to help the young astronomer so long as he wanted advice and guidance, gave a peculiar value to his services, and a peculiar utility to his career.

Mr. Sheepshanks resided in London till about 1842, when he removed to Reading, where he died of apoplexy, August 4th, 1855. There is much reason to suppose that his life was shortened by his laborious exertions in the restoration of the standard scale of linear measure. "Though an ardent politician of the school of opinion which had to struggle for existence during the first half of his life, but gradually became victorious in the second, he never took any public part in a political question, except that of the Reform Bill. He was one of the Boundary Commissioners appointed in 1831 to fix the boundaries of the boroughs under the new system of representation." His reading in politics and history is stated to have been extensive; and he was especially partial to military matters, with which he was very well acquainted, both ancient and modern-tactics having formed a portion, and no inconsiderable portion, of his studies. To this must be added literature and poetry, to which he was much attached. He never abandoned classical reading, and those who knew him best were often surprised at the extent to which he had cultivated modern literature.

But his subject was astronomy, and his especial part of that subject was the 'astronomical instrument.' His reputation among astronomers on this point, and the articles which he contributed to

the 'Penny Cyclopædia,' have induced an expression of regret that he did not draw up a full treatise on a matter which he had so completely fathomed.

Mr. Sheepshanks was engaged in active efforts on several special occasions, to which we make brief allusion. In 1828 he joined Mr. Airy [AIRY, GEORGE BIDDELL] in the pendulum operations in Cornwall, and suggested some of the most important plans of operation. In 1828 and 1829 he was active in the establishment of the Cambridge Observatory. In 1832 he was consulted on the part of the admiralty with reference to the edition then preparing of Groombridge's Circumpolar Catalogue: the result was the publication of that work in a much more efficient and more creditable form than it would otherwise have appeared in. In 1832 he also interfered in a matter to which, connected as it is with personal differences, we can only here allude, as eliciting much information on the subject of equatorial instruments in general, a result which is entirely due to the part taken by Mr. Sheepshanks. In 1838 he was engaged in the chronometric determination of the longitudes of Antwerp and Brussels; in 1844 in those of Valentia and Kingstown in Ireland, and Liverpool. In 1843 and 1844 the subject of the Liverpool Observatory led him into a controversy, his pamphlets on which will be useful study to those who are interested in astronomical instruments. He was always an active member of the Board of Visitors of the Royal Observatory at Greenwich.

Mr. Sheepshanks was a member of both the commissions (of 1833 and 1843) for the restoration of the standards of measure and weight, destroyed by fire in 1834. The standard of measure was placed in the hands of Francis Baily, [BAILY, FRANCIS] at whose death Mr. Sheepshanks volunteered (November 30th 1844) to continue the restoration. This matter occupied him closely during the last eleven years of his life. It would not be possible to give any detailed account of the operation, a full history of which is expected from Mr. Airy. It need only be said, that after a thorough examination of the process, beginning with the very construction of thermometers,—a point which gave no small trouble,—results were obtained which were embodied in a bill (18 & 19 Vict. cap. lxxii.) which received the royal assent on the 30th of July, 1855, the day following that on which Mr. Sheepshanks was struck by the shock which ended his life. The number of recorded micrometer observations is just five hundred short of ninety thousand. He had given a succinct but very satisfactory account of the operations for the production and verification of the new standard, in the Report of the Commissioners, for March 28, 1854, which was presented to Parliament.

It has been recorded on adequate authority that Mr. Sheepshanks was especially distinguished by the integrity of his mind and by his utter renunciation of self in all his pursuits. He did not court fame, it was enough for him that there was a useful object which could be advanced by the help of his time, his thoughts, and his purse. His consideration for others was made manifest by his active kindness to those with whom he was engaged, and no less by his ready appreciation of the merits of those against whom he had to contend in defence of truth and justice, as they appeared to his mind.

(*Proceedings of the Royal Society, 1855; Report of the Council to the Thirty-sixth Annual Meeting of the Royal Astronomical Society, 1856.*)

\*MR. JOHN SHEEPSHANKS, the brother of the Rev. Richard Sheepshanks, it may be mentioned, is the gentleman who in 1856 presented to the nation, under certain conditions, his noble collection—one of the finest yet formed—of pictures by British artists: it contains no fewer than 233 paintings in oil, and 103 drawings and sketches, many of them among the best specimens of the respective masters.

**SHEFFIELD. [BUCKINGHAM.]**

**SHEIL, RICHARD LALOR**, the son of Mr. Edward Sheil, a merchant of Cadiz, was born in Dublin in the year 1793. His father was a Roman Catholic, and he was educated in that religion at the Jesuit College of Stonyhurst, Lancashire, whence he was removed at the usual age to Trinity College, Dublin, where he graduated with distinction. He next proceeded to London, and entered himself at Lincoln's Inn to study for the English bar, which had been recently opened to Roman Catholics; but the ruin of his father's means through a disastrous partnership caused a change in his destination, and he returned to Ireland, where he was called to the bar in 1814. He defrayed the expenses of his years of study by the successful tragedy of 'Adelaide' in which Miss O'Neill performed, and by those of the 'Apostate,' 'Bellamira,' 'Evdadne,' and 'The Huguenot.' About the same time he also contributed some 'Sketches of the Irish Bar' to the 'New Monthly Magazine,' then edited by Mr. T. Campbell. It appears however that although Mr. Sheil gained great credit as a writer and a speaker, he never heartily devoted himself to a deep study of so dry a subject as the law, and that his professional income in consequence was not large. He was not a lawyer but an orator by nature, and he found the platform a more congenial stage for the display of his talents than the law courts of Dublin. As a Roman Catholic too he laboured under the civil disabilities which, though modified from what they had been, still shut the doors of the House of Commons against himself and his co-religionists. It is not surprising therefore that he turned his attention to political and religious agitation. In 1822 he became an active member of the Catholic Association; and three years later was chosen in conjunction with

the late Mr. Daniel O'Connell to plead at the bar of the House of Lords against the bill introduced for its suppression. The bill however passed; but it only served to inflame his religious zeal and to rouse his oratorical powers to such a pitch of vehement invective against the government that a prosecution was commenced against him for seditious language. The illness of Lord Liverpool however transferred the premiership to the hands of Mr. Canning, who wisely ordered the prosecution to be abandoned. In 1828 Mr. Sheil took an active part in procuring the return of Mr. O'Connell to parliament as member for the county of Clare, and also addressed the great meeting held at Penenden Heath for the purpose of resisting the Roman Catholic Emancipation Bill. In 1829, soon after the passing of the Relief Act, Mr. Sheil was returned to parliament for the since disfranchised borough of Milborne Port, by the influence of the late Marquis of Anglesea, who, while holding the lord lieutenancy of Ireland, had noticed his career, and who thus turned the restless agitator into a peaceful citizen and a useful legislator. Here his oratorical powers were appreciated, and he soon became one of the most popular and attractive speakers in St. Stephen's, though the matter of his speeches never rose to a level with the brilliancy of illustration and flow of impassioned declamation with which they were adorned. In 1830 he was again returned for Milborne Port, and in 1831 for the county of Louth. After the passing of the Reform Act, which gave much dissatisfaction in Ireland, Mr. O'Connell commenced agitating for repeal, in which Mr. Sheil at first refused to join, but subsequently consented, considering, as his biographer, Mr. T. McCullagh asserts, that it "was in point of fact but short-hand for just and equal government in Ireland." In December 1832 for the first reformed parliament he was chosen to represent the county of Tipperary, where he had acquired some extensive landed influence by his second marriage with the widow of Mr. E. Power of Gurteen, on which occasion he adopted that lady's maiden name of Lalor. In 1834 the Grey ministry introduced an Irish Coercion Bill, which was strongly opposed by most of the Irish members, among whom was Mr. Sheil, but a report became current that several of them had expressed a wish that it should be carried, "or there would be no living in Ireland." A great outcry was raised of "Who is the traitor?" and on Lord Althorp being appealed to, he replied that he had no personal knowledge of any such expression, but had heard it, and though he could not give up the names, he would tell any member who asked whether he was one. On Mr. Sheil making the inquiry, he replied he was one who had been mentioned. Mr. Sheil denied it at once; a parliamentary committee was appointed, and Mr. E. Hill, who appeared before the committee to support the allegation, confessed that he believed that he had been misinformed. In the same year Mr. Sheil was a party to the Lichfield House Compact, a term applied from a phrase of his own, in which he hoped "that no minor differences would mar their compact and cordial alliance." In 1838 he was offered office by the Melbourne administration; at first the clerkship of the ordnance was spoken of, but ultimately he became one of the commissioners of Greenwich Hospital, and never again advocated repeal. In 1839 he was made vice-president of the Board of Trade; and was also sworn a member of the Privy Council, being, we believe, the first Roman Catholic on whom that honour had been conferred since the reign of James II. In June 1841 he was appointed judge-advocate-general, when he resigned the seat for Tipperary for that of the borough of Dungarvan; but he held office only till the following September, when his party were superseded in office by the late Sir Robert Peel. On the advent of Lord John Russell to power in 1846, Mr. Sheil was appointed to the mastership of the Mint, which he filled until November 1850, when he accepted the post of British minister at the court of Tuscany. His health however had been failing for some time, and he had rarely spoken in the House of Commons for the two or three years immediately preceding his retirement from parliamentary life. Although the appointment to Florence could be regarded by himself and his friends as nothing less than expatriation and an extinction of what might have been a growing reputation, yet he submitted not so much with a feeling of philosophic indifference as in a joyous spirit, as though he felt that his diplomatic post would prove a great promotion and a dignified retirement. The melancholy death of his stepson, by his own hand, which happened in the following April, gave a shock to his feeble constitution from which he never entirely recovered, and an attack of gout in the stomach brought his life to a close at Florence on the 23rd of May 1851, in the fifty-ninth year of his age. His younger brother, Sir Justin Sheil, K.C.B., for some time held the post of envoy extraordinary and minister plenipotentiary at the court of Persia. (*Memoirs of the Right Hon. Richard Lalor Sheil*, by W. T. McCullagh.)

**SHELburne, EARL OF.** William Petty, Marquis of Lansdowne, who as Earl of Shelburne occupied so conspicuous a place among English politicians during a portion of the reign of George III., was born May 2, 1737, and was the second son of the Earl of Shelburne. Early in life he entered the army, and served with the British troops under Prince Ferdinand in Germany, giving signal proof of personal valour at the battles of Kampen and Minden. At the accession of George III., 1760, he was appointed aide-de-camp to the king with the rank of colonel of infantry, and in 1765 he became major-general.

His political career commenced with his election in 1761 as member

for Wycombe; but he only sat in the House of Commons for a few weeks, as on his father's death, May 10, 1761, he succeeded to the Earldom of Shelburne in the Irish, and the Barony of Wycombe in the English peerage. A supporter of Lord Bute he strongly defended the government in the debate on the preliminaries of peace, December 1762, and when Bute transferred the premiership to George Grenville, April 1763, Lord Shelburne, whose close attention to business and extensive knowledge of affairs had marked him out for office, was appointed, though not yet twenty-six, to the head of the Board of Trade, and sworn of the Privy Council. In this office he was called to report upon the organisation of the governments in the newly acquired Canadian territories, and the military forces requisite to be maintained in the North American Colonies. Shelburne's suggestions as to the boundaries of the respective governments ultimately prevailed though strongly opposed by the Earl of Egremont, the secretary of state within whose department the colonies were included, who wished to overawe the insubordinate colonists by forming a military colony on the North and West: he also earnestly pointed out the danger attending the plans proposed for taxing America. His opposition to the favourite notion of coercing the Americans into submission appears to have been the chief cause of the strong dislike with which he was now regarded by the king. But he had become also estranged from his chief, and he daily attached himself more to Pitt, of whom he was an ardent admirer and in whose political opinions he entirely coincided. On Grenville's modification of his cabinet in the following September by the admission of certain members of what was known as the Bedford party, Shelburne resigned his office, and thenceforth remained intimately united with Pitt. In 1766, Pitt, now Earl of Chatham, formed his second administration, and the Earl of Shelburne was made a member of the cabinet with the office of secretary of state—his being what was called the Southern department, which included the colonies. At the time of his appointment to this, in the actual state of the country, most important post, he had but just completed his twenty-ninth year. But the appointment was regarded by the country with satisfaction. Shelburne was acknowledged to be one of the very best speakers in the House of Lords—Lord Camden himself declaring that Chatham alone excelled him—and his thorough knowledge of the subject on which he spoke gave his opinions great weight. In this office in unison with his known sentiments he at once set about endeavouring to regain the goodwill of the American colonies, by putting himself in free communication with their agents in England, whom he assured of the intention of the government to adopt conciliatory measures and of his own desire to remove any well founded complaints, as well as of the scrupulous care he would exert in selecting governors of "generous principles." To the governors of the colonies he wrote desiring them to furnish him with full information on all the points in dispute, and likewise to report on the actual condition of their respective governments. But from the first he was thwarted by his colleagues, and as soon as Chatham's illness led him to withdraw himself from any active share in the government, though still its nominal head, the influence of Charles Townshend, Chancellor of the Exchequer, and the Duke of Grafton, became paramount, and Shelburne was doomed to see all his conciliatory measures cast to the winds. Whilst declaring himself opposed to sending a single additional soldier or a single ship of war to menace the colonists, Shelburne proposed a series of measures which by placing the management of their affairs more in their own hands, and by deferring, in a great degree, to their views on the subject of the episcopacy, of the army, &c., he thought would remove much of the existing ill-feeling, but he had the mortification not only to have them rejected by the cabinet, but to see the fatal Import Duties Act which the heedless Charles Townshend had brought forward apparently in a spirit of reckless defiance, adopted by Grafton who was now virtually premier, and become the law of the land. Shelburne would probably at once have resigned his office but that he felt himself bound to Chatham, who was at the time unable to converse with any one on business, and he determined to continue till his chief should himself be able to decide on the proper course of proceedings. The management of the colonies was transferred to Lord Hillsborough the other secretary. Townshend died suddenly soon after the passing of his mischievous measure; but Shelburne did not regain his influence. On the contrary the differences between him and Grafton went on increasing, until the duke, knowing that he should have the support of the king, at length (October 1768) dismissed the earl from his post. Chatham who had now somewhat recovered his health immediately sent in his resignation, and notwithstanding the repeated entreaties of the king and Grafton refused to withdraw it.

Out of office Shelburne continued the zealous follower of Chatham, with him steadily opposing Lord North's ministry on most leading questions, and with especial earnestness his American measures, though with Lord Chatham taking occasion (1778) to express his "strongest disapprobation" of the idea of American independence, a declaration that was made use of by his opponents when he himself as premier proposed its adoption. He also took a prominent part in defending Lord Camden on occasion of the proceedings connected with Wilkes. When at length the court attempted to induce Chatham to take office (April 1778), the negotiations had to be carried on entirely through

Shelburne, who put an end to them by refusing to entertain any other terms than that "Chatham must be dictator." On the death of Chatham, Shelburne joined with Rockingham, consenting to waive on his behalf, in case of office being offered to them, his title to the premiership. His opposition to Lord North increased in activity as the policy of the latter proved more and more unsuccessful, and Shelburne himself became proportionately popular. A duel which he fought with Colonel Fullerton (March 22, 1780), in consequence of a challenge for some reflections he made in a speech in the House of Lords, and in which he was wounded, was by some of the 'Corresponding Committees' suggested to have arisen from his being singled out for vengeance by the government retainers. One of the weapons which he at this time used with success against the ministry was a bill which he brought forward for Economical Reform, but the conduct of the American war continued to be the leading topic; and at length on the crowning news of the surrender of Cornwallis so strong was the excitement throughout the country that Lord North was compelled to succumb (March 20, 1782), and Lord Rockingham became his successor, with Lord Shelburne and Charles James Fox as secretaries of state. This ministry, on the whole a liberal and popular one, lasted little over three months, Rockingham's death, July 1, 1782, being the immediate cause of its dissolution; though it is certain that the mutual ill-feeling and jealousy must if Rockingham had lived have shortly led to its remodification or overthrow. As it was, Fox and his friends insisted on the Duke of Portland being made premier, but the king, who had now come to place great confidence in Lord Shelburne, entrusted him with the formation of a new ministry, and Fox and his followers seceded in a body. [FOX, CHARLES JAMES.]

Shelburne on the other hand took an early opportunity of stating in the house of peers his continued adherence to "all those constitutional ideas which for seven years he had imbibed from his master in politics, the late Earl of Chatham," and he expressed his determination not to yield to the dictation of family: "that noble earl always declared that the country ought not to be governed by any oligarchical party or family connection; and that if it was to be so governed, the constitution must of necessity expire. On these principles I have always acted." It was no doubt his assertion of these principles that obtained him the support of the king, who had for some time been labouring perseveringly to break the domination of the great aristocratic families. The most important of the appointments in the new ministry was that of William Pitt, then only in his twenty-fourth year, to a seat in the cabinet and the office of chancellor of the exchequer.

Shelburne's ministry lasted little over seven months, when it was defeated by the vote of the celebrated Fox and North coalition (February 21, 1783), but during those months had occurred the triumphant termination of the famous siege of Gibraltar, and the successes of Howe and Rodney, which had enabled the government to dictate honourable terms with France, Spain, and Holland; Shelburne had also concluded separate preliminaries of peace with America; and the result was a general pacification in which the independence of the United States of North America was acknowledged by the British government, but the ratification of this, the crowning act of his administration, he was obliged to leave to his successors.

Shelburne did not again accept office. To his younger and greater colleague [PITT, WILLIAM] was left the future direction of the party which had been built up, Shelburne himself and his personal followers giving to Pitt a steady and useful support. He was created Marquis of Lansdowne in 1784, soon after Pitt's accession to office. He did not again occupy any prominent place in public affairs, and for many years before his death he had almost wholly withdrawn into private life. His health was feeble, and he felt neither strength nor inclination again to enter upon the turmoil of party politics. He was strongly averse to commencing the war with revolutionary France, but the course of events in that country produced a very painful impression on his mind, and strengthened his desire for retirement. He came forward however as a warm supporter of the union with Ireland, counselling at the same time liberality in dealing with that country, and he shared with Pitt in his disappointment at the non-fulfilment of the implied engagements. [PITT, WILLIAM.] He died on the 2nd of May 1805.

Lord Shelburne was twice married: first, on the 3rd of February 1765, to Lady Sophia Carteret, daughter of the Earl of Granville, by whom he had two sons, John Henry, who succeeded him as second Marquis of Lansdowne, and another who died young; and, secondly, July 19, 1779, to Lady Louisa Fitzpatrick, daughter of John, earl of Upper Ossory, by whom he had likewise two children, a daughter who died young, and a son who still survives, and who succeeded his brother as the third Marquis of Lansdowne. [LANSDOWNE, HENRY PETTY, MARQUIS OF.] The Earl of Shelburne was not a great statesman, but he was a highly-cultivated and well-informed one, liberal in his general views, and possessing a wider acquaintance with foreign affairs and sounder commercial principles than most of the political men of his time. He was moreover an able debater, assiduous in his attention to business, and there can be now little doubt honest in purpose, and less swayed than many of his eminent contemporaries by mere party motives: but he was proud, unaccommodating, and wanting in frankness; so that, while he made many enemies by his assumption, he failed to secure a character for sincerity, earnestness,

or firmness. In private life he was highly esteemed. He was the friend of men of talent and genius, and his love of letters led him to form one of the noblest libraries which had ever been collected in England by a private individual. It was in his library that his last years were chiefly spent, though he continued to superintend personally as much as possible his extensive estates. On his death his collection of printed books was dispersed by auction; but his manuscripts were purchased for the British Museum, a parliamentary grant of 4925*l.* being voted for the purpose.

SHELDON, GILBERT, Archbishop of Canterbury, was born on the 19th of July 1598, at Staunton in Staffordshire. He received the name of Gilbert from his godfather Gilbert, earl of Shrewsbury, to whom his father Roger Sheldon was then a menial servant, although descended from an ancient Staffordshire family. In the latter end of the year 1613 he was admitted into Trinity College, Oxford; on the 27th of November 1617 he took the degree of Bachelor of Arts, and that of Master on the 28th of May 1620. He was elected fellow of All Souls College in 1622; and about the same time taking holy orders, he became afterwards domestic chaplain to Thomas, lord Coventry, keeper of the great seal, who gave him a prebend of Gloucester, and finding him to be a man of parts, recommended him to King Charles I. as a person well versed in political affairs. On the 2nd of May 1633 he was presented by his majesty to the vicarage of Hackney in Middlesex. He was also rector of Ickford in Buckinghamshire, and Archbishop Laud gave him the rectory of Newington in Oxfordshire. Having proceeded Bachelor of Divinity, on the 11th of November 1628, he took the degree of Doctor in Divinity on the 25th of June 1634.

In March 1635 Sheldon was elected warden of All-Souls College; and being esteemed a learned man, he was appointed chaplain in ordinary to the king; he became afterwards clerk of his closet, and was designed by him to be made master of the Savoy Hospital and dean of Westminster, but the civil wars which ensued prevented those promotions. During these he adhered firmly to the king, and was one of the chaplains whom his majesty sent for to attend his commissioners at the treaty of Uxbridge, in February 1644, where he argued so earnestly in favour of the Church of England as to draw upon him the resentment of the Parliamentarians, which they made him afterwards sufficiently feel. He attended the king at Oxford, and was witness to the following remarkable vow made there by his majesty, which was preserved by Archbishop Sheldon thirteen years underground, and first published by Echard, in the Appendix to his 'History of England,' p. 5.—"I do hereby promise and solemnly vow, in the presence and for the service of Almighty God, that if it shall please the Divine Majesty, of His infinite goodness to restore me to my just kingly rights, and to re-establish me in my throne, I will wholly give back to his church all those impropriations which are now held by the crown, and what lands soever I do now or should enjoy, which have been taken away either from any episcopal see or any cathedral or collegiate church, from any abbey or other religious house. I likewise promise for hereafter to hold them from the church, under such reasonable fines and rents as shall be set down by some conscientious persons, whom I propose to choose with all uprightness of heart to direct me in this particular. And I most humbly beseech God to accept of this my vow, and to bless me in the design I have now in hand; through Jesus Christ our Lord. Amen. Charles R., Oxford, April 13, 1646."

He also attended, in 1647, as one of his majesty's chaplains at Newmarket and other places. On the 30th of March he was ejected from his wardenship of All-Souls College by the parliamentary visitors, who forcibly took possession of his lodgings on the 18th of April, and imprisoned him, with Dr. Hammond, in Oxford and elsewhere. He remained confined above six months, and then the Reforming Committee set him at liberty, October 24, 1648, upon condition that he should never come within five miles of Oxford, that he should not go to the king in the Isle of Wight, and that he should give security to appear before them at fourteen days' warning whenever cited. Upon his release he retired to Snelston in Derbyshire, and lived among his other friends in Staffordshire and Nottinghamshire, whence, from his own purse, and from collections made by him amongst the royalists, he sent constant supplies of money to King Charles II. abroad, and followed his studies and devotions until the approach of the Restoration.

Upon the death of Dr. Palmer (March 4, 1659-60), he became again warden of All-Souls, without however taking possession, and continued so till the January following. On King Charles II.'s return, he met his majesty at Canterbury, and was soon after made dean of the Chapel Royal; he was also, upon Bishop Juxon's translation to Canterbury, advanced in his room to the bishopric of London, and consecrated on the 28th of October 1660. He likewise obtained the mastership of the Savoy, which he kept till 1663; and it was at his lodgings there that, in 1661, the famous conference was held between some of the Episcopal clergy and Presbyterian divines concerning alterations to be made in the Liturgy, which thence came to be distinguished by the name of the 'Savoy Conference.' His conduct there and afterwards is much blamed by the Presbyterians, and it certainly appears to have been anything but conciliating. As accounting for, though it will not excuse any unnecessary severity that he may have exercised

it is but fair to remember the injuries and sufferings that he had himself undergone. He rejected the proposal of an amicable conference, and told the Presbyterian divines, "That not the bishops, but *they* had been seekers of the conference, and desired alterations in the Liturgy; and that therefore there was nothing to be done till they had brought in all they had to say against it in writing, and all the additional forms and alterations which they desired." During the course of that conference he did not appear often, and did not engage in all the disputation, and yet was well known to have a principal hand in disposing of all such affairs.

In 1663 he was translated to the archbishopric of Canterbury, vacant by the death of the Archbishop Juxon. In 1665, during the time of the Great Plague, he firmly continued at Lambeth, notwithstanding the extremity of the danger, and with his diffusive charity preserved great numbers alive that would otherwise have perished. Also by his affecting letters to all the bishops he procured great sums to be returned out of all parts of his province. The same year he was one of those who promoted the Corporation or Five Mile Act. On the removal of Lord Clarendon from the chancellorship of the University of Oxford he was chosen to succeed him, on December 20, 1667, but resigned that office the 31st of July, 1669. He had before honourably lost the king's confidence by advising him to put away his mistress Barbara Villiers, and he never recovered it. He soon after retired from public business, and for the last years of his life he resided chiefly at his palace at Croydon. He died at Lambeth, November 9, 1677, in the eightieth year of his age; and, according to his own direction, was buried in Croydon church in Surrey, where a stately monument was soon after erected to his memory by his nephew and heir Sir Joseph Sheldon.

Dr. Sheldon's character has been represented with the discordance that must be expected in the reports of contending parties. Dr. Samuel Parker, bishop of Oxford, who had been his chaplain, says in his 'Commentarii de Rebus Sui Temporis,' that "he was a man of undoubted piety; though he was very assiduous at prayers, yet he did not set so great a value upon them as others did, nor regarded so much worship as the use of worship, placing the chief point of religion in the practice of a good life. . . . He had a great aversion to all pretences to extraordinary piety, which covered real dishonesty, but had a sincere affection for those whose religion was attended with integrity of manners." Bishop Burnet, in his 'History of his own Time,' does not give him so favourable a character. He says that he was a very dexterous man in business, had a great quickness of apprehension, and a very true judgment, but thinks he engaged too deeply in politics. "He had an art, that was peculiar to him, of treating all that came to him in a most obliging manner; but few depended much on his profession or friendship. He seemed not to have a deep sense of religion, if any at all; and spoke of it most commonly as of an engine of government and a matter of policy." In public spirit and munificence he sustained after an exemplary manner the character of a great prelate. He expended large sums upon the Episcopal houses of the sees of London and Canterbury, and particularly the palace at Lambeth, where he rebuilt the library and made additions to its contents. At Oxford, besides several sums given to different Colleges, he immortalised his bounty to that university by the erection at his sole expense of the celebrated theatre which bears his name. The architect employed was Sir Christopher Wren; the building was completed in about five years, and was opened with great solemnity, July 9, 1669, before the vice-chancellor, heads of houses, &c. The expense of this building was more than fourteen thousand pounds, and he bequeathed "two thousand more, to be employed," says Wood, "in buying land, whose revenue might support the fabric, and the surplusage be applied to the learned press." In this theatre are held public meetings of the university for an annual commemoration of the benefactors and the recitation of prize compositions, and occasionally for conferring degrees on distinguished personages. We are assured that from the time of Sheldon's being bishop of London to that of his death, it appeared in his book of accounts that upon public, pious, and charitable uses he had bestowed sixty-two (or according to other accounts seventy-two) thousand pounds. As a writer he is only known by 'A Sermon preached before the King, at Whitehall, upon June 28, 1660, being the day of Solemn Thanksgiving for the Happy Return of his Majesty, on Psalm xviii. 49,' London, 4to, 1660.

SHELLEY, PERCY BYSSHE, was born at Field Place, near Horsham, in Sussex, on August 4, 1792, the eldest son of Sir Timothy Shelley, the representative of a family of ancient standing in that county. His mother was a daughter of Charles Pildford of Effingham Place. He was brought up with his sisters till ten years of age, being instructed in Greek and Latin by Mr. Edwards, the clergyman of Warnham, in which parish Field Place is situated. He was next, a delicate shy boy with an almost feminine softness of manners and appearance, sent to school at Sion House near Brentford, where he suffered much from the discipline of the master and the oppression of the elder boys—"the harsh and grating strife of tyrants and of foes," as he termed such evils in the introductory stanzas of 'The Revolt of Islam.' But he was fond of reading, quick of apprehension, and amidst an apparent neglect of his tasks and the consumption of a vast amount of trashy tales and romances, contrived to secure a tolerable amount of scholarship. At thirteen he was removed to Eton, where

his refusal to fag brought upon him the anger of the other boys and the reprehension of the masters. But though a shy and diffident boy, he possessed a spirit of unconquerable boldness, and the attempts to subdue him only produced a vehement hatred of the injustice, which he did not scruple to record in his poems in after-life. He gained no distinction at Eton, though he improved his Greek and Latin, particularly Latin, in which he wrote hexameters with great facility. He voluntarily translated several books of Pliny's 'Natural History,' but stopped at the astronomy. In Greek he read the 'Symposium' of Plato, with Dr. Lind, one of the Eton masters, of whom he makes favourable exception as to his behaviour towards him, and whom he is said to have depicted in the old man who liberates Laon in the 'Revolt of Islam,' and in the hermit in 'Prince Athanasie.' He also learned French and German, and paid considerable attention to chemistry, for which he always retained a liking. In 1808 he left Eton and returned home; here he completed two romances, begun at Eton, 'Zastrozzi,' an extravagant fiction, and 'St. Irvyne, or the Rosicrucian,' a feeble imitation of Godwin's 'St. Leon;' and he fell in love with a cousin, to whom he addressed some rather pretty verses, and to whom he subsequently dedicated his 'Queen Mab.' He also in conjunction with his relation Captain Medwin, wrote a poetical romance called 'Ahasuerus, or the Wandering Jew,' which was sent to Campbell, with a view to publication, but which Campbell returned, saying there were only two good lines in it, and which was thrown aside, found, and four cantos of it ultimately published in 'Frazer's Magazine' in 1831. While at Field Place, struck with the beauty of some of the productions of Mrs. Hemans (then Felicia Browne) he opened a correspondence with her, but the subjects he chose were such that her mother requested the correspondence might cease, and it did.

At Michaelmas term 1810 he went to Oxford, and was entered at University College. He studied and wrote incessantly. Soon after his arrival he published anonymously a volume of poems entitled 'Posthumous Poems of my Aunt, Margaret Nicholson,' in which he ridiculed the sentimentality affected by many of the persons most conspicuous for their atrocities in the French revolution. It was altogether a worthless production, and he never claimed it, though it was well known to be his. Mr. Hogg, the author of a series of papers which appeared in the 'New Monthly Magazine' in 1832, under the title of 'Shelley at Oxford,' is the authority for this. In his second year at Oxford he had printed in London anonymously 'A Defence of Atheism.' It appears to have been a scholastic thesis, intended to excite discussion, rather than a serious avowal of confirmed opinions, and as such copies were forwarded to the heads of colleges. His secret was not kept; he was known as the author; and at Lady-Day in 1811 he was summoned before the master and two or three fellows of his college, a copy of the pamphlet was produced, and he was asked if he were the author. He declined acknowledging, though he would not deny it, and he was expelled. He always complained of this as a great injustice, and it embittered his feelings towards the institutions of his country and those who supported them. His father was greatly displeased, for some time refusing to receive him, the interval being passed by him in London, where he employed himself, actuated to a considerable degree by resentment, by completing his 'Queen Mab,' but which was not printed till 1812. In August he returned to his father, who, without the slightest sympathy with his pursuits, or any just appreciation of his qualities, was yet proud of his son's talents. He desired now that he should adopt politics as a pursuit, a course utterly opposed to Shelley's feelings and opinions; and he finally offended his father irreconcilably by marrying, in August 1811 at Gretna Green, Miss Harriet Westbrook, the daughter of a retired hotel-keeper. The marriage was unfortunate; the parties had not seen each other above half-a-dozen times before the match was concluded, and they soon found that they were not at all adapted for each other. Shelley's father refused to advance funds, and the newly-married pair were involved in pecuniary difficulties. Shelley seems to have always treated her with kindness, though his poems contain many allusions to his intellectual sufferings during their union. At length, in 1813, by mutual consent they separated, Shelley delivering her into the hands of her father. In 1814 he visited the Continent in company with Mary Wollstonecraft, the daughter of William Godwin and Mary Wollstonecraft, who afterwards became his wife, with whom he traversed France, Switzerland, and Germany, and returned to England in the autumn. Early in 1815 he came to an arrangement with his father, by which he secured an income of 800*l.* a year. He lived for a time in Devonshire, and then removed to Bishopsgate, near Windsor, where in 1815 he wrote his 'Alastor.' Two children had been the issue of his first marriage, who had been left with their mother, and in the care of her father. In 1816 his wife drowned herself, and he went to Bath to claim his children; but Mr. Westbrook refused to give them up, and commenced a suit in Chancery, alleging that from the atheistical doctrines propounded in 'Queen Mab,' he was not a proper person to have the custody of them. In March 1817 Lord Chancellor Eldon pronounced his judgment, committing the children to the care of the grandfather, and restraining the father from intermeddling with them, but ordering that he should pay the expense of maintaining them. After the decision he again left England for Geneva, and in passing through Switzerland met and formed an intimacy with Lord Byron.

In 1817 Shelley returned to England, and after a short sojourn with Leigh Hunt, with whom he first became intimate in 1813, he hired a house at Marlow, where he resided nearly a year, and composed his 'Revolt of Islam,' which contains many passages allusive to his sufferings from the Chancery decree which took his children from him, and much vehement declamation as to bad laws and their evil administration. While settled at Marlow he was distinguished by the most active benevolence to the poor, and experienced an attack of ophthalmia caught while attending on them. 'Rosalind and Helen' was also commenced while at Marlow, but was not completed till the following year at Lucca. In March 1818 he quitted England never to return. He was unwell and depressed, but recovered on reaching Milan; and while travelling about Italy he wrote three acts of his 'Prometheus Unbound.' In March 1819 he reached Rome, where he remained some time, and translated Plato's 'Symposium,' removing to Florence towards the end of the year, where he added a fourth act to his 'Prometheus.' In May 1819 he was again at Rome, where he wrote his tragedy of 'The Cenci,' which was offered to Mr. Harris, then manager of Covent Garden Theatre, for representation, Shelley considering that the character of Beatrice was adapted for Miss O'Neil; but Harris pronounced the subject of the tragedy to be so objectionable that he could not even submit the part to that lady for her perusal, but promised however that another tragedy, with a less offensive plot, should be accepted. While at Rome Shelley lost his eldest son by his second marriage, and he removed successively to Florence, Leghorn, and the baths of San Giuliano, near Pisa. In 1819 he wrote 'The Witch of Atlas,' after a pedestrian excursion to Monte San Pelegrino. In 1820 he wrote 'Julian and Maddalo,' in which, under those names, he has given a dialogue between himself and Lord Byron. In 1821 he produced his 'Epipsychidion,' 'Adonais,' a monody on the death of Keats; and 'Hellas,' written to promote the cause of the Greeks, whose insurrection under Ypsilanti had just commenced. He had previously written odes in favour of the efforts making for freedom in Spain and Naples; but these matters were not in his vein, and they are laboured and ineffective. On the 8th of July, in company of a Mr. Williams, who like himself was greatly attached to aquatic excursions, he left Leghorn in a small sailing-boat to return to his wife and family at St. Arengo; but they were caught in a storm, and perished. His body was washed ashore, and as the quarantine laws of Tuscany required that everything so found should be burnt, all the efforts of Mr. Dawkins, the English charge-d'affaires, could only procure permission that his ashes, when the body was consumed, should be given up to his family. The incineration was performed in the presence of Lord Byron, Leigh Hunt, and others; and his ashes were subsequently deposited in a tomb in the Protestant burying-ground at Rome, near the grave of Keats.

We have thus gone through the chief events of his life, and given the dates of his principal publications, but in addition he had written a multitude of minor poems, some of singular beauty, tales, and miscellanies in prose, and many translations, of which those from Schiller's 'Wallenstein' and from Calderon possess great excellence. His translations from the Greek are exquisite, and drew loud praises from the 'Quarterly Review.' They may be considered as the best in our language. His version of 'Faust,' a fragment of which is published, though admirable in spirit and effect, is not faultless with regard to meaning. Several of his prose productions and a selection from his letters were published by his widow in 2 vols. in 1840.

Of his character as a man and a poet there was for a considerable time much discrepancy of opinion. In a notice of his death, the 'Gentleman's Magazine' for September 1822, says he was well known by "his infamous novels and poems," and he was frequently accused of being an atheist and a blasphemer, an accusation sanctioned by the judgment of the lord chancellor in removing his children from his care. We cannot help thinking that a man so just, so honest, so benevolent, so faithful in friendship as he frequently proved himself, so bold in defence of the oppressed, so tolerant of opposition, and so amenable to the laws of society even where he disapproved of them, so thorough a hater of vice, meanness, and all sorts of tyranny, could scarcely have been an intentional blasphemer in the sense in which that term is usually accepted. The mistake has arisen we think in a misapprehension of his character, and a want of consideration of the circumstances in which he was placed. No man perhaps was more essentially a poet; "glancing from earth to heaven" he was indeed of "imagination all compact;" and the strength of his creative faculty, like that displayed in early childhood, overpowered even his experience. It is told that when fully grown he occupied himself for hours in sailing paper boats; no doubt with as true a realisation of his inward ideas as a child with a doll. His imagination gave them reality and importance, and they were bases for vast superstructures like the soap-bubbles of Sir Isaac Newton.

Brought up under a coarse, hard, immoral, and unforgiving father, he was early forced to look on the evil prevailing in life, and led to doubt the truths of a religion which his father professed but did not practise. To these doubts, before his judgment could rectify them, he gave a "local habitation and a name." The harshness he experienced aroused resentment without bringing conviction of his errors. He was blind and perverse in his notions of Christianity, but he is nowhere an atheist. He always acknowledges an over-ruling power,

and he believed in the immortality of the soul. If his works are examined impartially it will be found that what he really meant to attack were the vices, the corruptions, and the atrocities which had been committed under the name of religion. In all his poems he uniformly denounces vice and immorality in every form; and his descriptions of love, which are numerous, are always refined and delicate, with even less of sensuousness than many of our most admired writers. It is true that he decried marriage, but not in favour of libertinism; and the evils he depicts or laments are those arising from the indissolubility of the bond, or from the opinions of society as to its necessity, opinions to which he himself submitted by marrying the woman to whom he was attached. His general conduct indeed tends to show that his opinions were by no means inflexible, and it is probable that had life been spared him, he might with maturer years have worked himself free from many errors. When, in 1821, his 'Queen Mab' was piratically published, he wrote to the 'Examiner' a letter disavowing its issue, and in it he says:—"Whilst I exonerate myself from all share in having divulged opinions hostile to existing sanctions, under the form, whatever it may be, which they assume in this poem, it is scarcely necessary for me to protest against the system of inculcating the truth of Christianity or the excellence of Monarchy, however true or however excellent they may be, by such equivocal arguments as confiscation or imprisonment, and invective and slander, and the insolent violation of the most sacred ties of nature and society."

His strength of imagination is at once the source of the beauty and the defects of his poetry. The "airy nothings" which he embodies in gorgeous forms and happy similitudes, expressed in the most harmonious language, draw the reader on almost imperceptibly, until perhaps stern common sense will ask what he really means, and whether the instances of vice, misrule, and disorder, which he depicts, are not magnified by his fancy from some almost imperceptible realities. As a consequence, his poems possess but little human interest: his characters are abstractions; his scenes of felicity are Utopian; the whole seems little better than a splendid phantasmagoria. One exception may be made—'The Cenci'; here the characters are well developed, but under such horrible circumstances, that the heroic self-sacrifice and soft womanly feelings of Beatrice even under the influence of her burning revenge, with the marvellous harmony of the versification in which she expresses herself, cannot reconcile us to her, or overcome our feelings of disgust to the whole drama. Mrs. Shelley states that he fancied he had an equal fondness for poetry and for metaphysics, but that the former preponderated. She thinks that he possessed "two remarkable qualities of intellect—a brilliant imagination, and a logical exactness of reason." His logic was of that character in which imagination first laid down the premises, and his conclusions might be then admissible; but of a logical faculty in the ordinary sense he had almost none as far as exhibited in his writings. His bold and striking impersonations form a distinguishing characteristic of his poetry. He gives to inanimate objects the attributes of humanity or volition with surprising effect. But even in his best efforts there always remains an obscurity and a dreaminess which will probably ever prevent his poems being extensively read. He more than once attempted satire; but he wants point and heartiness; he is vehement, but not earnest. In many of his lyrics, where the shortness of his subject prevented his wandering into his self-formed world, his defects are in a great degree avoided, and he is often peculiarly happy. In his 'Prometheus Unbound' he has shown himself thoroughly impregnated with the spirit of the Grecian drama. It is full of the spirit of beauty; and the inexhaustible play of fancy and imagination flashing through every part of it dazzles the mind so that we see but indistinctly; and here, as in all his other poems, his command of language has been equalled but by few. His reputation as a poet has gradually widened since his death, and has not yet reached its culminating point. He was the poet of the future—of an ideal futurity—and hence it was that his own age could not entirely sympathise with him. He has been called the 'Poet of Poets'—a proud title, and in some respects deserved.

On the death of his father, Sir Timothy Shelley, in 1844, his son by his second wife, Sir Percy Florence Shelley, who was born in 1819, succeeded to the title and estates; his son by the first marriage having died young.

SHELLEY, MARY WOLLSTONECRAFT, was born in 1798. In 1816, while in Italy, she wrote her powerful and striking romance of 'Frankenstein,' which commanded an extensive popularity in England, and is still a favourite with the admirers of the wild and wonderful, while the extremely ingenious and consistent development of the character of the monster excites and sustains a human interest amidst all its improbabilities. Though her success was great in this her first effort, it did not induce Mrs. Shelley to resume her pen for some time. She devoted herself to promoting the comfort and guarding the health of her husband with affectionate solicitude, which he gratefully acknowledged and repaid. Just previous to his unfortunate death however she had finished 'Valperga,' a novel, afterwards printed in 3 vols., for which Shelley says in one of his last letters that she had been offered 400*l.*, which he designed for the relief of the necessities of his father-in-law, W. Godwin. After her husband's death she published 'Falkland,' 'The Last Man,' and 'The Fortunes of Perkin

Warbeck,' each in three volumes. She also wrote 'Rambles in Germany and Italy,' an account of her journeys with her husband. In 1839 she published an edition of his poetical works, with a few biographical notes added, in which the more offensive passages of 'Queen Mab' are omitted; and in 1840 a selection from his letters and a few specimens of his prose writings. In all these she pays a most affectionate tribute to his goodness of heart and the other amiable qualities which she states invariably secured him the love of all who knew him. She died in London, on the 1st of February 1851.

SHENSTONE, WILLIAM, an English poet, was born November, 1714, at the Leasowes, Hales Owen, Shropshire. He was sent to Pembroke College, Oxford, in the year 1732, and remained there some time, taking no degree. He amused himself in a desultory manner, travelling about and writing poetry, till 1745, when he commenced residing on his patrimony at his native place. The remainder of his life was spent in rural occupations. He took great pride and spared no expense in the cultivation of his garden, and in his latter years became much involved in consequence. He died February 11, 1763. A very beautiful Latin epitaph on his cousin, and a few stanzas like that quoted by Johnson in his Life of him, full of genuine and simple feeling, redeem his poems from the charge of utter insipidity and lifelessness. They consist of elegies, pastorals, and odes, &c. His principal poem and the best of his longer pieces is 'The Schoolmistress,' and next in rank may be placed his Elegies. Johnson has pretty accurately hit off his character in the concluding sentence of his Life of Shenstone—"The general recommendation of Shenstone is easiness and simplicity; his general defect is want of comprehension and variety. Had his mind been better stored with knowledge, whether he could have been great, I know not; he could certainly have been agreeable." A spirit of mortified ambition, ill suited to the retirement which he professed to court, appears in all his writings.

SHERARD, WILLIAM, better known as the patron and fellow-labourer of other botanists than by his own writings, was born at Bushby in Leicestershire, in the year 1659. He received his early education at Merchant Taylors' School, and was entered as a student of St. John's College, Oxford, in 1677, and became a Fellow of the same college in 1683. He was travelling tutor successively to Charles, second viscount Townshend, and to Wriothlesley, lord Howland, son of Lord Russell who was executed. During this period of his life he made two tours on the Continent, in Holland, France, Italy, &c.; and then made the acquaintance of Boerhaave, Hermann, Tournefort, Vaillant, Micheli, and of most others of the ablest botanists of the time. He is believed to have been the author of an anonymous work called 'Schola Botanica,' published at Amsterdam, in 1689, giving an account of the plants then growing in the botanic garden at Paris. In 1700 he communicated a paper to the Royal Society, on the making of Japan and Chinese varnishes, which was inserted in the 22nd volume of their 'Transactions.'

In 1702 he was appointed British consul at Smyrna, having previously been one of the commissioners for the sick and wounded at Portsmouth. Smyrna afforded him an opportunity of pursuing botany; here he laid the foundation of his great 'Herbarium,' which is still a national treasure, and cultivated with great care and attention many rare and exotic species of plants. In 1718 he returned to England, and received the degree of LL.D.

In 1721 he returned to the Continent, and Vaillant, the African traveller, being then in a dying state, Sherard succeeded in transferring the manuscripts and drawings of this great traveller to Boerhaave, who published them in the 'Botanicon Parisiense,' in 1727. In this work Boerhaave was materially assisted by Sherard. In his various visits to the Continent Sherard became intimate with Dillenius, who was professor of botany at Giessen; and in 1721 he invited him to come over to England to superintend the botanic garden of his brother Dr. James Sherard, at Eltham. This invitation was accepted by Dillenius, and forms an important point in the history of botany in this country.

Sherard was a quiet unassuming man, who loved the study of natural history for its own sake. He seemed to prefer assisting others in their labours to producing anything of his own. He was thus the fellow-labourer of Catesby, in the 'Natural History of Carolina,' and also of Dillenius, in the publication of the 'Hortus Elthamensis.' He died in 1728, at the age of sixty-nine. At his death he bequeathed his great Herbarium, containing upwards of 12,000 species of plants, to the University of Oxford, and also left 3000*l.* for the purpose of endowing a botanical chair in the same University. This was undoubtedly the greatest service done by Sherard to botany; although at present it has not perhaps produced the fruit which might have been anticipated.

DILLENIUS was the first who occupied the chair of botany founded by Sherard. He was born at Darmstadt in 1687. He came over to England in 1721. He published in this country a new edition of Ray's 'Synopsis,' illustrated with twenty-four plates, in 1724. The 'Hortus Elthamensis' appeared in 1732. His greatest work, and one which has had a most important influence on the study of botany, is the 'Historia Muscorum,' published in 1741. Although the name would indicate that the mosses were the only subjects treated on, it included observations on all the families of cryptogamic plants. It contains a

fund of original research, and many modern observers would do well to consult this volume before announcing their observations as entirely new. Sherard during his life wished to have completed or continued Bauhin's 'Pinax,' a work intended to have been a description of all the plants then known, and for this purpose he collected a great mass of materials. It was his wish at his death that this should be done by the new professor at Oxford, but either Dillenius did not feel competent to the task, or was too much occupied with his 'Historia,' for the continuation of the 'Pinax' never appeared. Dillenius died in 1747. His Herbarium is now with that of Sherard at Oxford, which, containing as it does specimens from Linnæus, Tournefort, and other eminent botanists of that day, is, next to the Herbarium of Linnæus himself, one of the most authentic and valuable botanical records that exists.

SHERBURNE, SIR EDWARD, descended from an ancient family residing at Stainhurst in Lancashire, was born in London, on the 18th of September 1618. In his younger days he had the advantage of the instructions of the celebrated Thomas Farnaby, who then taught a school in Goldsmith's Rents; but in 1636, Farnaby removed from London, and transferred his pupil to the care of Charles Aleyn, who had been one of his ushers, and who is known as the author of some very inferior historical poetry. In 1640 Sherburne set out on the grand Continental tour, from which he was suddenly recalled to solace the few remaining days of his father, who died in 1641, leaving his son in possession of the post which he had enjoyed of the clerkship of his majesty's Ordnance. The rebellion however prevented his retaining this situation for any length of time. Being indeed a Roman Catholic and firm royalist, he was ejected by a warrant from the House of Lords in April or May 1642, and harassed by a long and expensive confinement in the custody of the usher of the black rod. After his release he entered actively into the service of the king, who created him commissary-general of the royal artillery. Various fortunes now awaited him. He witnessed the memorable battle of Edge-hill; he attended the king at Oxford, where he took his Master's degree on December 20th, 1642, and pursued his studies for some time; he went to London in 1646, where he was plundered of all his property, and finally compelled to hide himself for safety in the chambers of a relation in the Middle Temple. About 1651 fortune once more smiled upon him, and he was appointed by Sir George Savile, who had then recently returned from abroad, superintendent of his affairs, and shortly afterwards was made travelling tutor to Sir John Coventry, with whom he visited different parts of the Continent between the years 1654 and 1659. On the Restoration he obtained with considerable trouble his old situation in the Ordnance, but at the revolution of 1688 was again ejected from it upon refusing to take the necessary oaths. He had received the honour of knighthood January 6th, 1682. There is every reason however to believe that his latter days were embittered by the evils of poverty, as we find him in 1696 presenting a supplicatory memorial to the Earl of Romney, then master-general of the Ordnance, and another to the king. Whether either of these applications was attended with success is not known. He continued his retirement till his death, which took place at London, on November 4th, 1702.

Sherburne was the author of poetical translations of two pieces from Seneca, the 'Medea,' and the 'Troades,' published respectively in 1648 and 1679. These works procured him considerable reputation in his time; but his fame at present principally rests on the translation of 'Manilius,' published at London in 1675, in a handsome folio volume, and enriched by an appendix containing lives of scientific men. This appendix is particularly valuable to the scientific historian as containing much information regarding Sherburne's contemporaries not to be met with elsewhere.

SHERIDAN, DR. THOMAS, translated the 'Satires of Persius' into prose, and also the 'Philoctetes' of Sophocles into verse; but neither of these translations is worthy of being rescued from the neglect into which they have fallen. His talents were more of a social nature—punning, quibbling, and fiddling, according to Lord Cork, with an incessant flow of animal spirits.

Dr. Sheridan was born in 1684 in the county of Cavan. His parents were poor; but he was placed by a friend at Trinity College, Dublin, where he made considerable progress in classical literature. He afterwards took orders, and then set up a school in Dublin. Swift, who was his friend, procured him in 1725 a living in the south of Ireland of about 150*l.* a year, but his recklessness or impudence spoiled all his expectations; for he preached a sermon on the 1st of August (the anniversary of King George's birthday) on the text, "Sufficient for the day is the evil thereof." On this being known he was struck off the list of chaplains to the lord-lieutenant and forbidden the castle. He bore this however with a light heart, and soon after changed his living for one in Dunboyne; but owing to the cheating of the farmers, and other causes, the income was lowered to 80*l.* a year. As this did not suit him, he speedily gave it up for the free school of Cavan, where he had a salary of 80*l.* a year besides his scholars. He was through life indolent, careless, slovenly, and indigent. His animal spirits seemed to supply every other deficiency, and to have preserved him cheerful amidst all his poverty and distress; but his habits as well as his temperament were careless and ill-regulated, and prevented any strict attention to his duties. His indolence or imprudence made him sell

his situation for 400*l.*, alleging as an excuse the "moist and unwholesome air of Cavan;" but we find him afterwards making no attempt to establish himself elsewhere. This 400*l.* was soon spent, and the "ill-starred, good-natured, improvident man," as Lord Cork calls him, fell into sickness and distress, which was terminated by a speedy death in 1738. Lord Cork, speaking of him, says, "Not a day passed without a rebus, an anagram, or a madrigal. His pen and fiddlestick were in continual motion."

SHERIDAN, THOMAS, M.A., the author of the 'Dictionary of the English Language,' was the son of the above, and born at Quilca, the residence of Swift, in 1721. Swift was his godfather, and treated him with uniform kindness. His education was commenced by his father, who subsequently sent him to Westminster School, where he was a king's scholar. He afterwards entered Trinity College, Dublin, where he took his degree of Master of Arts. When his father died he was without a profession, and destitute of all expectations; but having conceived that exalted and extravagant idea of oratory which haunted him through life, he determined on its restoration. To this end he devoted himself to the stage as the first qualification for understanding the art of oratory. He appeared as Richard III. in January 1743, and "met with the greatest encouragement."

In 1744 he accepted an engagement at Covent Garden Theatre, and in 1745 he played with Garrick at Drury Lane, where some of his friends, more kind than judicious, endeavoured to set him up as a rival of Garrick. The consequence was a quarrel between the two, which lasted for life. Sheridan then returned to Dublin, and became manager of the theatre there; and he effected, after a long struggle, a very praiseworthy reform in the "goings on" behind the scenes. For eight years he continued his management with success, till in 1754 he was driven from it by one of the popular tumults so common in those days. In this year, when "the rancour of political party arose to the greatest height that it had almost ever been known to do in Dublin, Mr. Sheridan unfortunately revived Miller's 'Mahomet.' In this play were many passages respecting liberty, bribery, and corruption, which pleased the anti-courtiers as expressive of their opinions in regard to certain persons at that time in power, and therefore they insisted on those passages being repeated, which the actor complied with. The absurdity however of such repetitions, merely as destroying the effect of the tragedy, having occurred to the manager, the same speeches, when again called for by the audience on the succeeding night, were refused by the actor; and he being obliged to hint the cause of his refusal, the manager became the object of their resentment. On his not appearing to mollify their rage by some kind of apology, they cut the scenery to pieces with their swords, tore up the benches and boxes, and, in a word, totally despoiled the theatre; concluding with a resolution never more to permit Mr. Sheridan to appear on that stage." (Chalmers's 'Biog. Dict.') He afterwards (1756) returned to Dublin and his management, the agitation having subsided; but though he was received with great favour by the audience, yet Barry and Woodward having erected another theatre, and decoyed some of his principal performers, as well as a London company, this with other causes quite ruined him, and he was obliged to give up all concern in the theatre.

It was then that he again relied on his indestructible faith in oratory, and the immense advantages to accrue from it. He published a plan, in which he proposed to his countrymen the establishment of an academy for the accomplishment of "youth in every qualification necessary for a gentleman." In the formation of his design, he considered the art of oratory to be one of the essentials; and to give a stronger idea of the utility of that art, he opened his plan to the public in three orations, which were also to be the proofs of his fitness for the office of superintendent of the academy, for which post he offered himself. The proposal was in some degree carried into execution; but for some reason Sheridan was excluded from any share in conducting it.

Sheridan however was not a man to be daunted, especially on the question of oratory, and we find him in 1759 lecturing in England on that subject. He had published an 8vo volume entitled 'British Education: the source of the disorders in Great Britain.' Being an essay towards proving that the immorality, ignorance, and false taste which so generally prevail, are the natural and necessary consequences of the present defective system of education; with an attempt to show that a revival of the art of speaking and the study of our own language, might contribute in a great measure to the cure of those evils. The title is amusing; but it seems to have imposed on the public, for the lectures which he composed in confirmation of it, and delivered in London, Oxford, and Cambridge, met with immense success: at the last place indeed he was honoured with the degree of Master of Arts. In 1760 he again appeared at Drury Lane, but disagreements with Garrick soon put a stop to his engagement.

On the accession of George III. a pension was granted him, which so enraged Doctor Johnson, that he exclaimed, "What, give him a pension!—then I must give up mine." This was of course repeated to Sheridan, and he never forgave it. Through the various volumes of 'Boswell' there occur many notices of Sheridan, but the Doctor's contempt is nowhere disguised. Sheridan continued to lecture, and was "himself the great sublime he drew." In Scotland he was honoured with so much attention that a society was formed, called 'The Society for Promoting the Reading and Speaking of the English

Language in Scotland.' Among the directors were the names of Drs. Blair, Ferguson, and Robertson.

But by all his discussion and lecturing, his universal panacea for the ills of moral England came to be examined, and when in 1769 he proposed his 'plan of education for the young nobility and gentry of Great Britain,' he found the public enthusiasm already cooled. This plan was addressed to the king, in which with an amusing but lofty condescension he made a tender of his services, and offered to "dedicate the remainder of his days to its execution," observing, that "if the design be not executed by myself, it never will be by any other hand." But in spite of all this heroic dedication of services, he excited no notice. This did not however damp his ardour in the least; he endeavoured to support his plan by writing, by lecturing, and by sarcasms against the taste of the times which could so neglect him; and the whole farce was wound up by his resolution, on the declaration of the American Independence, of "benefiting the new world with the advantages ungratefully neglected by his own country."

In 1769, 1770, and 1776 he performed at the Haymarket and Covent Garden, his last appearance as an actor. On the retirement of Garrick the purchasers of the share in Drury Lane, of which his son was one, agreed to make him the manager; but he held the post only three years, when he relinquished it as not tenable except on ignominious terms. He then produced his 'Pronouncing Dictionary of the English Language,' which was ridiculed by Johnson, who thought an Irishman very unfit to teach the English their own language. His 'Life of Swift' followed—a heavy and indiscriminating performance. He died in the sixty-seventh year of his age, August 14, 1788. His other works are the 'Course of Oratorical Lectures' and the farce of 'Captain O'Blunder.'

SHERIDAN, FRANCES, wife of the above, was born in Ireland 1724, but of English parentage, being the grand-daughter of Sir Oliver Chamberlayne. Her first acquaintance with Sheridan was curious enough. At one of his most embarrassing periods, when there had arisen a violent party dispute relative to the theatre in which he had newly embarked all his money and expectations, she published a well-written and forcible pamphlet, in his favour, which disinterested kindness so excited his attention that he lost no time in being introduced to her—they were mutually pleased with each other, and the orator soon proposed marriage, and was accepted. She is uniformly described as a most accomplished and amiable woman, of whom Doctor Johnson was very fond (Boswell's 'Johnson,' ii.), and whose novel of 'Sidney Biddulph' he greatly admired, addressing her the very flattering remark, that he doubted whether "upon moral principles she was at liberty to put any one to so much pain as her story had put him." Her 'Nourjahad' has delighted all readers of romance, and will continue to do so; though probably on other accounts than "the excellent moral and inculcation of a future state of retribution" which so delighted James Boswell. She also wrote two comedies, 'The Discovery' and 'The Dupe,' but they are feeble and prosy, and are now become rarities. She died at Blois, after a lingering illness, September, 1766. This date is on the authority of a letter of her husband's deploring that event, which is dated October, 1766; the 'Biographia Dramatica' and Chalmers's 'Biographical Dictionary' (which copies the former almost verbatim) place her death as late as 1767.

SHERIDAN, RICHARD BRINSLEY BUTLER (for thus was he christened after Brinsley Butler, earl of Lanesborough, though he usually dropped the Butler), was the son of Thomas and Frances Sheridan. He was born in Dorset Street, Dublin (not at Quilca as the 'Biographical Dictionaries' declare), in September, 1751. He was educated at Dublin, and subsequently at Harrow, but at both places was pronounced to be 'an impenetrable dunce,' with whom neither severity nor indulgence could avail. On leaving Harrow indeed his ignorance was so great that he could not spell, and he wrote 'think' for 'thing.' At the age of eighteen however he joined his friend Halhed in a translation of the 'Epistles of Aristænetus.'

Sheridan's life was throughout a dramatic one; not in the high or poetical sense, but in that of intriguing comedy and practical joking, and he certainly displayed throughout as perfect a contempt for principle or sincerity as any comedy hero we could desire. His first important step in this life, marriage, was of this nature, and partakes of that intriguing spirit. His own brother and his friend Halhed were both in love with Miss Linley, an accomplished singer, then only sixteen; they confided their passion to him, but he outwitted them both, and eloped with the lady to France, where they were secretly married. He then fought a duel with a "married blackguard who had worried and defamed her;" and then brought her back to England, where having extorted her father's permission, he repeated the nuptial ceremony by licence in 1773. They tell an anecdote of his driving her from the oratorios, disguised as a hackney coachman, during the interval of the two weddings, when she was residing with her angry friends and still pursuing her profession. Sheridan would not consent to his wife's employing her talents for their subsistence: it offended his pride, and this pride Dr. Johnson applauded, but very erroneously in our opinion. Yet Sheridan did not refuse to subsist, during the early part of their marriage, upon the three thousand pounds "which a good-natured old gentleman had settled upon Miss Linley in default of being able to marry her."

Necessity however soon drove him to literature, and in January

1775 he produced his first comedy of 'The Rivals.' On the first night it was damned; but this was chiefly the fault of one of the actors and of those inexperience which usually attend 'first nights,' and it soon met with the success which it so well deserved. In this comedy there is nothing new, and little that is true, but everything tells admirably. The incidents are various and bustling; the characters well opposed; though all, except the tetchy wayward Falkland, are copies of well-known originals. Mrs. Malaprop is not only a farcical exaggeration of Mrs. Slipslop (whose very jokes are easily perpetrated when once an author plunges into such a vein of impossible fun); but that mispronunciation which was natural in a housekeeper trying to be pedantic, is insupportable in the aunt of Lydia Languish. But Sheridan trusted very little to nature. Acres is quite as much a caricature; and Lydia Languish is so clumsily overdone as almost to fall pointless. Fag is a wit of the first order, dressed as a footman. Sir Anthony Absolute, though old, is nevertheless admirable, and cleverly sustained. To a severe criticism this comedy exhibits many faults, yet the same severity must admit its abundant merits of wit, animal spirits, situation, story, and selection of character.

The gaiety of success, and, as some say, gratitude to Mr. Clinch, who played Sir Lucius O'Trigger, but more probably the same pressing necessity, "who has no law," produced the farce of 'St. Patrick's Day, or the Scheming Lieutenant,' in the course of the ensuing spring. This farce turns upon the old trick of the lover deceiving the credulous father, a trick so often used by Molière, and imitated by every farce-writer since that immortal wit. The summer of that year was devoted to 'The Duenna,' which Hazlitt calls "a perfect work of art: the songs are the best that ever were written, except those in the 'Beggar's Opera;'" they have a joyous spirit of intoxication in them, and strains of the most melting tenderness." But we must observe that neither incidents nor characters are new. The dialogue however is witty, terse, and polished. "His table songs," observes Leigh Hunt, "are always admirable. When he was drinking wine he was thoroughly in earnest." He was now in the full flush of popularity and prosperity, and became one of the proprietors of Drury Lane Theatre; but how, nobody can tell, for where he got the money has ever remained an impenetrable secret. In the year 1777 he made some trivial alterations in Vanburgh's 'Relapse,' and produced it under the title of 'The Trip to Scarborough.' In 1777 also he produced 'The School for Scandal,' of which Leigh Hunt remarks, "with the exception of too great a length of dialogue without action in its earlier scenes, it is a very concentration and crystallisation of all that is sparkling, clear, and compact, in the materials of prose comedy." The characters, though not new, are generally well drawn, and inimitably selected. Selection is one of the first arts of a dramatist. Having to illustrate a moral or develop a problem, his great care should be that the characters which he selects do really of themselves go towards the building up and elucidation of the whole. Thus, Sir Peter and Sir Oliver, Charles and Joseph, Mrs. Candour and Lady Sneerwell, with Sir Benjamin, Snake, Crabtree, &c., have each a distinct part in the drama. Of these we prefer Mrs. Candour, who is exquisitely drawn, and who serves to turn the balance in favour of Sheridan's scandal-scene, in comparison with the scene in Wycherley's 'Plain Dealer' (Act II, sc. 1), from which it is imitated. Charles Surface is a very disagreeable and boasting character, and destitute of the honourable or gentlemanly feeling to which he pretends. He is not only an unprincipled spendthrift, but he attempts to carry it off with a high hand, and with maxims which may be well enough over the bottle, but are foolish sophisms when applied in life: thus, when he has money, he prefers sending it to Mr. Stanley, who has applied to him for charity, than to his lawful creditors; and swaggers off with "Justice is an old lame hobbling beldame, and I can't get her to keep pace with generosity for the soul of me." His treatment of Lady Teazle in the screen scene is still more offensive. Charles has a cant about him as well as Joseph; but he is always a favourite with the audience, because he is, or pretends to be, a dashing fellow of the very best intentions, and only addicted to cheating his tradesmen out of a little pardonable sociality. 'The School for Scandal' however remains the finest model of the wit-comedy in the language; it has not the heartiness, the flesh and blood vitality of the 'Beaux Stratagem,' nor the more elaborate wit of Congreve; its language is more polished and exquisite than Farquhar's, and more easy and less obviously elaborate than Congreve's; but all three dwindle into insignificance beside the poetic comedy of Shakspeare.

In 1779 he wrote the 'Critic,' one of the wittiest farces in the language. "In some of its most admired passages, little better than an exquisite cento of the wit of the satirists before him. Sheridan must have felt himself emphatically at home in a production of this kind; for there was every call in it upon the powers he abounded in—wit, banter, and style; and none upon his good-nature." (Leigh Hunt, 'Critical Sketch prefixed to Sheridan's works.') But indeed it has need of all its brilliant writing to support the length of the dialogue without action; and when it comes to the rehearsal of the tragedy, it soon becomes tiresome. Good acting however will always keep it on the stage.

Sheridan's political career was illuminated by a few bright flashes of eloquence and perpetual wit, but he had neither the depth nor the perseverance of a statesman; and consequently, though he sometimes

helped his party with a promising effort, "gradually degenerated into a useless though amusing speaker, familiarly joked at by the public, admired but disesteemed by his friends." He had made the acquaintance of Charles James Fox, through whose good offices he got elected for the borough of Stafford in 1780. His connection with Fox, more than any decided opinions of his own, led him to support the Whig party, to which he continued faithful to the last. Under the Rockingham administration he became under-secretary of state, but he resigned on the death of the marquis. His celebrated speech on the occasion of Warren Hastings's trial was a tremendous effort of eloquence, and will never be forgotten.

In 1792 Sheridan's wife died; and in 1795, being then in his forty-fourth year, he married Miss Ogle, the dean of Winchester's daughter—"young, accomplished, and ardently devoted to him." She brought him five thousand pounds, and with this and fifteen thousand more which he contrived to raise by the sale of Drury Lane shares, an estate was bought in Surrey, where he was to live in love and happiness till his drink and his duns could endure it no longer. After an interval of nine years since his last play, he again, in 1798, contributed to the stage the 'Stranger' and 'Pizarro,' both adaptations from the wretched pieces of Kotzebue.

Sheridan's theatrical career terminated with these pieces; and now his prospects seemed every day more lowering. His difficulties always great, became now insupportable from the want of health, youth, and animal spirits to prompt him to fresh exertions, or to enable him to bear them with better grace. He lived in a perpetual but inefficient struggle; resorting to many a degrading shift, which may tell well enough as jokes, but which preyed upon him seriously enough. His friends (among them the prince-regent, his former boon companion, whose dull pompous entertainments were enlivened by Sheridan's wit) had forsaken him now that sickness and distress had enfeebled the brilliancy and animation of his conversation. Money was no longer to be borrowed; duns were no longer to be pacified with promises; everything was indicating ruin, and he died near his dying wife, amidst the threats of bailiffs, and deserted by all but his physician Dr. Bain, and his poetical friends Mr. Rogers, Mr. Thomas Moore, and Lord Holland, on Sunday, the 7th of July 1816, in Saville Row, Burlington Gardens, in the sixty-fifth year of his age.

(Moore, *Life of Sheridan*; Leigh Hunt, *Biographical and Critical Sketch*, prefixed to Moxon's edition of *Sheridan's Works*; Boswell, *Life of Johnson*; *Biographia Dramatica*; Hazlitt, *Lectures on the Comic Writers*.)

SHERIF-ED-DEEN (MOOLLAH ALI SHERIF-ED-DEEN YEZDI), a native of Yezd in Persia, and a celebrated Persian historian, who flourished about the beginning of the 15th century of our era. Few particulars have reached us as to his parentage or personal history. He was by profession a doctor of the Moslem law, and appears to have resided principally at the court of Shiraz, under the patronage of Ibrahim Sultan, who acted as viceroy of Fars for his father Shah-Rokh, the youngest son and successor of Timour. Here Sherif-ed-deen completed, A.D. 1424 (A.H. 328), the work on which his reputation is principally based, entitled the 'Zuffer-Nameh,' or 'Book of Victories,' which gives, in the Persian language, a detailed and copious account of the life, reign, and conquests of Timour, drawn from the authentic records in the possession of his descendants. The first part, or introduction, however does not exist in any copy found in European libraries; and we are acquainted with it only through the quotations of Hadji-Khalifa, who mentions it as containing an excellent account of the geography of Zagatai, or Turkestan, with genealogical notices of the various tribes. The style of the 'Zuffer-Nameh' is characterised by Sir William Jones as "most beautiful and elegant;" and Khondemir compares the diction to "a sparkling succession of pearls, diamonds, and precious stones;" but a European reader is fatigued by the endless metaphors and profusion of laboured ornaments with which every phrase is overloaded. "His geography and chronology," says Gibbon, "are wonderfully accurate; and he may be trusted for public facts, though he servilely praises the virtue and fortune of his hero. His encomiums on Timour are indeed carried to the most fulsome extent of oriental panegyric; but both gratitude and interest would combine to produce this effect; and the bias thus shown is in some measure useful as enabling us to qualify the equally exaggerated invectives of another biographer of Timour, the Syrian Arabshah." A French version of the 'Zuffer-Nameh' was published at Paris, in four vols. 12mo, 1722, by M. Petis de la Croix, under the title of 'Histoire de Timur-Bec, connu sous le nom du grand Tamerlane, Empereur des Mogols et Tartares,' &c.; but it is far from being a close translation of the original. A Turkish version has also been printed at the imperial press of Constantinople.

SHERLEY. [SHIRLEY.]

SHERLOCK, WILLIAM, D.D., was born in Southwark about 1641, and studied at Peter House, Cambridge. At an early period of life he had the living of Saint George, Botolph-lane. In 1681 he obtained the prebend of St. Pancras, in the church of St. Paul's, London; and in 1684 or 1685 was elected master of the Temple. His political conduct at the revolution is said to have been as ambiguous as that of his son on the accession of the house of Hanover, and he exposed himself to the severe censure of the Jacobite party, who had hoped to retain him. It was on this occasion that he published his 'Case of

the Allegiance due to the Sovereign Powers.' He appears however to have been little favoured by the new government, for he remained with no other eminent preferment than that of master of the Temple till his death in 1707 at the age of sixty-six. Dr. Sherlock was much occupied in the theological controversies of the time, of which the most remarkable was that in which he and Dr. South engaged on the nature of the Trinity. His writings are very numerous; but it may be sufficient to add that he is the author of the work entitled 'A practical Discourse concerning Death,' once a very popular book, which has gone through numerous editions.

SHERLOCK, THOMAS, an eminent prelate of the English church, son of Dr. William Sherlock, was born in London in 1678. He was educated at Eton, whence he passed to Catherine Hall, Cambridge, of which college in due time he became master, and in 1714 was vice-chancellor of the university. Before this time, namely in 1704, he had been made on the resignation of his father master of the Temple, an office he held for nearly fifty years, constantly preaching and highly esteemed. His political conduct was thought to be somewhat ambiguous at the beginning of the reign of George I., but he soon gave in his adhesion to the new family, and in November 1715 began his course of preferment in the higher dignities of the church, being made dean of the cathedral church of Chichester. Yet he was always devoted to Tory politics, defended strenuously the Test and Corporation Acts, and was the most formidable opponent whom Dr. Hoadly had to encounter in what is called the Bangorian controversy. His conduct in this controversy was so offensive at court that he was removed from the list of king's chaplains in 1717. In the controversies which arose at that period respecting the proofs of the divine origin of Christianity, Dr. Sherlock distinguished himself by his valuable writings, particularly his 'Use and Intent of Prophecy,' and his 'Trial of the Witnesses of the Resurrection of Jesus,' which is a masterly reply to the objections of those who reject the evidence of miracles, and particularly to those of Woolston. In 1727 he was made Bishop of Bangor, and was translated to Salisbury in 1734. His learning and eloquence gave him considerable weight in the debates of the House of Lords, and his reputation both as a divine and a ruler in the church was so great that in 1747 the archbishopric of Canterbury was offered to his acceptance, but declined by him on account of the state of his health. In the next year however he accepted the bishopric of London, and became engaged in a dispute with the new archbishop (Herring) respecting the option, the archbishop having fixed on the church of St. George, Hanover-square. In 1753 he resigned the mastership of the Temple, being then old and infirm. In 1755 and 1756 he revised and corrected a large body of his sermons, which were published in those years, in four 8vo volumes, to which a fifth was afterwards added. Duties such as these were at that period nearly all that he was able to perform, being almost wholly deprived of speech and of the use of his limbs. When he died, in 1761, he had completed his eighty-third year. He was buried in the churchyard of Fulham.

SHERWIN, JOHN KEYSE. The history of this artist presents an example of the power of talent to make its way through all obstacles. He was born about 1751, a native of Sussex, and of very humble origin. When about eighteen or nineteen years old he was employed as a woodcutter on the estate of Mr. Mitford, near Petworth. He had occasion to enter the parlour one day on business, when he saw some members of the family engaged in drawing, and, as it was observed that he paid more than ordinary attention to the process, he was asked whether he could do anything in that way. His answer intimated a desire to make the attempt, and a port-crayon was put into his hand. It is related that his hands were so stiff and callous with hard labour, that when a penknife was offered him for the purpose of sharpening the point of his crayon he was unable to use it, and it slipped through his horny fingers. He nevertheless produced a drawing which greatly surprised Mr. Mitford, and which, being sent to the Society of Arts, probably accompanied with an account of the circumstances under which it was executed, obtained their silver pallet as a reward. He then removed to London, and became a pupil of Ashley, a painter in some repute at that time; but who shortly afterwards married a lady of title, and abandoned the arts. Upon this Sherwin placed himself under Bartolozzi, and made rapid progress in designing and engraving. The biographical notice in the 'Gentleman's Magazine' (1790 and 1791) states that he carried off both the silver and gold medals from all the students of the Royal Academy; and we learn from the records of the Society of Arts that in 1774 and 1775 he received two prizes of twenty guineas each for engravings from designs by himself, and in 1778 obtained their gold medal for excellence in engraving. On the death of Woollett in 1785, Sherwin was appointed engraver to the king. Although he displayed considerable talent in design, it is as an engraver that his reputation stands highest. He engraved both historical subjects and portraits, and attained a degree of excellence that is truly surprising when the circumstances of his early life are considered. He commenced a very large picture in oil-colours, representing the installation of the knights of St. Patrick; but as far as it was proceeded with it proved, according to Dayes (who, at best a sour critic, writes of Sherwin in a very unfriendly spirit), "a wretched daub." He died September 20, 1790, aged thirty-nine.

It is to be regretted that the extraordinary talents of Sherwin, and the great encouragement he received, were not duly improved by him.

By his vanity and assurance he disgusted his patrons, and by running into excesses he impaired his constitution and embarrassed his affairs, and died under most melancholy circumstances.

SHIELD, WILLIAM, the popular dramatic composer, was born at Smalwell, county of Durham, in 1749. When very young, having lost his father, who was a teacher of singing, the circumstances of his mother rendered it necessary that he should adopt some business as a future means of subsistence; and having had the choice of three trades offered him, he fixed on that of a boat-builder, and was apprenticed at North Shields. His master, a kind-hearted indulgent man, rather encouraged than checked him in the pursuit of music at his leisure moments; and not unfrequently assisted him in rendering his talent as a violinist profitable, by permitting him to perform at the concerts in the town and neighbourhood. At the expiration of his apprenticeship he devoted himself wholly to his favourite art, and having attracted the notice of Avison, the author of the 'Essay on Musical Expression,' obtained from that able master instructions in the principles of composition, and shortly after exhibited the fruits of these, as well as of his own zeal and indefatigable industry, by composing an anthem for the consecration of the new church at Sunderland, which was most successfully performed by the choir of Durham cathedral. This led to his being invited to the tables of the dignitaries of the latter rich church, an introduction which, combined with his ability and excellent conduct, speedily placed him on the high road to fame and preferment.

He now undertook the management of the fashionable concerts at Scarborough, where, becoming acquainted with the pastoral poet John Cunningham, then an actor in the Scarborough company, he set several of his songs to music, and thus made himself very generally known as a melodist. He soon directed his views to the metropolis, and, arriving in London with good recommendations, was immediately engaged by Signor Giardini as one of the band of the King's Theatre, in which he soon became principal viola, an appointment which, suiting his taste, he retained nearly twenty years.

Mr. Shield first made himself known to the public as a dramatic composer in 1778 by 'The Fitch of Bacon'—written by a gentleman who had contrived to make himself very conspicuous, the Rev. H. Bate, afterwards Sir H. Bate Dudley—which was performed with the most marked success at Covent Garden. Soon after he entered into an engagement at the same theatre as composer and musical manager. In 1783 appeared 'Rosina,' written by Mrs. Brook, which is almost universally considered as Shield's chef-d'œuvre, and is still listened to with as much delight as when, in addition to its intrinsic merits, it had the recommendation of novelty. The same year was produced 'The Poor Soldier,' the drama by O'Keefe, which as a melodious opera is only second to 'Rosina.' 'Robin Hood' and 'Fontainebleau' followed shortly after; 'Marian,' 'Oscar and Malvina,' 'The Woodman,' and others succeeded, and ably supported the reputation which the composer had gained. In 1791 Mr. Shield, in company with his eccentric friend Joseph Ritson, went to Paris, and then extending his continental journey, visited the chief cities of Italy, including Rome, bringing home with him valuable materials for the theoretical works which he published a few years after his return. He then renewed his labours at Covent Garden, and produced 'Hartford Bridge,' 'The Farmer,' and many other operas, nearly all of which were more or less successful. In 1807 he finally retired from all theatrical concerns, and prepared his 'Introduction to Harmony,' a most valuable work in two quarto volumes, for publication. In 1809 he printed a volume of glees, ballads, &c., under the title of 'A Cento.' In 1817 appeared a second edition of his work on 'Harmony,' and also his 'Rudiments of Thorough-Bass.' In the same year, on the death of Sir William Parsons, the Prince-Regent appointed Mr. Shield to the situation of master of the band of musicians in ordinary to the king, in which capacity he conducted the musical part of the ceremonial in Westminster Abbey at the coronation of George IV. He died in 1829, and his remains were honoured by interment in the cloisters of Westminster Abbey.

SHIRAKOH (Lion of the Mountain), son of Shadi, and brother of Ayoob, the father of the famous Salah-ed-deen, a Kurd of the tribe of Ravendooz, commenced his career in the service of the Seljukian monarchs of Persia, and is first mentioned as holding a command in the garrison of Bagdad. Both the brothers however soon became adherents of Zenghi, the famous atabek of Syria, and continued attached to his illustrious son Noor-ed-deen, under whom they rose to high distinction. In A.D. 1159 (A.H. 554) the turbulent spirit of Shirakoh had nearly led him into open revolt during a dangerous illness of the sultan; but he was restrained by the prudent admonitions of Ayoob, and the mention by Abul-Feda of his repairing to Mecca in the following year would appear to imply that he incurred temporary disgrace on the recovery of Noor-ed-deen. In 1163 he was however entrusted with the command of the force destined to reinstate the vizir Shawar [SHAWER] in Egypt: but on that occasion, as well as in the second expedition of 1166, he was compelled to evacuate the country by the perfidy of his ally, who called in the Franks of Palestine to his aid. But his military reputation was established by the generalship and bravery displayed in these unsuccessful campaigns; and his third invasion (1168) established the power of Noor-ed-deen in Egypt. Amaury, king of Jerusalem, was compelled to raise the siege of Cairo; and Shirakoh, after putting to death the perfidious

Shawer, himself assumed supreme power under the title of Vizir to the Fatimite caliph Adhed, who conferred on him the title of Assad-ed-deen (Lion of the Faith). He died a few months afterwards, and was succeeded in his dignities by his nephew, the famous Salah-ed-deen.

Shirakoh appears to have been one of the most consummate captains of his age and country; and to him was unquestionably due the foundation of the Ayoobite power, the fruits of which were reaped by his collateral relatives. His own descendants continued for four generations to occupy the petty principality of Hems or Emesa, under the suzerainty of the sultans of Egypt and Syria, till they were deprived of it, in 1263, by the Mamluke Bibars.

SHIRLEY. There were three brothers called SHIRLEY, or SHERLEY as the name was formerly spelled, all of whom were distinguished as travellers. They were sons of Thomas Shirley, an independent gentleman, who resided in Sussex.

THOMAS SHIRLEY, the eldest son, was born in 1564. After completing his studies at Oxford, he seems to have lived with his father till the reputation acquired by his brothers induced him to travel also. He appears to have been knighted, if Watt, in the 'Bibliotheca Britannica' is correct in calling him Sir Thomas. He published his 'Travels' in Turkey, 4to, black letter. We are not acquainted with the time and place of his death.

ANTHONY SHIRLEY was born in 1565. After having taken his bachelor's degree at Oxford, where he studied with his brother Thomas, he served in the English army in Holland; and in 1596 sailed to the West Indies, in a squadron fitted out for the purpose of attacking the Spanish settlements there. On his return the following year he was knighted by Queen Elizabeth, by whom he was sent to Ferrara to aid the inhabitants in a dispute which they had with the pope; but this dispute having been settled before his arrival there, he resolved to travel into Persia, and left Venice for that purpose, March 24, 1598, accompanied by his youngest brother Robert. Sir Anthony, after his arrival at Casbin, soon acquired the favour of Shah Abbas, by whom, in April, 1599, he was sent as plenipotentiary, accompanied by Hosseyn-Ali-Bey, to the various courts of Europe, for the purpose of getting them to combine with the Shah in a war against the Turks. He went first to Astrakhan, thence to Moscow, thence through Germany to Venice, and thence to Spain. The king of Spain raised him to the dignity of admiral of the Levant Seas. He died in Spain in 1630 or 1631. An account of his voyage to the West Indies is given in Hakluyt's Collection, vol. iii., edition of 1600, 'A true Relation of the Voyage undertaken by Sir Anthony Shirley, knight, in 1596, intended for the island of San Thome, but performed to San Jago, Dominica, Margarita, along the coast of Terra Firma to the Isle of Jamaica, the Bay of Honduras, thirty leagues up Rio Dolce, and Homewards by Newfoundland; with the memorable exploits achieved in all this voyage.' His travels in Persia were published in a separate form, 'Relation of Sir Anthony Shirley's Travels in Persia, with his magnificent Entertainment in Persia,' London, 4to, black letter, 1632. His travels by Astrakhan through Russia are given in Purchas's 'Pilgrimages.'

ROBERT SHIRLEY was born about 1570. When Sir Anthony Shirley left Persia on his mission, Robert remained in the service of Shah Abbas, and had a situation in the army. In 1604 the Shah granted him permission to return to England, but charged him at the same time to visit the different Christian princes of Europe, and assure them of the Shah's good will towards them, and especially to offer to the English a free commerce with his kingdom. Shirley did not reach England till 1612. Having had an audience with James I. and remained a short time in England, he returned to Persia; but in 1616 Shah Abbas sent him, as he had previously sent Sir Anthony, as ambassador to the different European powers, for the purpose of inducing them to make war on Turkey. Having, after considerable delay, reached Madrid, the king of Spain, at his suggestion, sent out four galleons to close the entrance of the Red Sea against the Turks, on condition that the Bahrein island and some other places should be given to Spain. He then passed into Holland; but his long stay in Spain had made him an object of suspicion to the Dutch states, and he was requested to leave the country. He arrived in England in 1623. His letter of credit being written in Persian, no one could be found able to read it. At length, in 1626, Nogdi-Ali-Beg arrived in England as ambassador from Persia, and at his audience with James I. affirmed that Shirley was an impostor; and the letter having been shown to him, he attempted to tear it, and struck Shirley, and in excuse for his indecent violence said that he could not restrain his anger at seeing the signature of his sovereign counterfeited. To settle the difficulty, James I. sent out Sir Dodmore Cotton as his ambassador to Shah Abbas, accompanied by Nogdi-Ali-Beg and Shirley. The Persian died on the passage. Cotton having arrived at Casbin, and obtained an audience with the Shah's first minister Mahomet-Ali-Beg, the latter refused to admit Cotton to an audience with the Shah, and requested that Shirley's letter of credit might be left with him, and promised to return it on the following day, with the Shah's answer. After waiting three days, Mahomet-Ali-Beg "came and told the ambassador that the king had looked upon it, had denied it to be his (the Shah's), and in a great rage had burnt it." These are the words of Herbert the traveller, who accompanied Sir Dodmore Cotton as his secretary; and he further remarks, "We all were verily persuaded he never showed it

to the king, nor had any way inquired of him concerning it: the truth is, he had been bribed, but by whom it is unnecessary to speak; it may be we did but conjecture it." Shirley was now old, and these indignities seem to have hastened his death, which took place at Casbin, July 13, 1628, about a fortnight after his arrival at that place. He appears to have been knighted, for Herbert calls him Sir Robert Shirley.

SHIRLEY, JAMES, was born in London about 1594. He was educated first at the Merchant Taylors' school, London; next at St. John's College, Oxford, which however he left without taking a degree; and lastly he removed to the University of Cambridge. Having taken holy orders, he obtained a curacy near St. Alban's, but resigned it in consequence of having adopted the Roman Catholic faith. He then opened a school at St. Alban's, but not being successful, came to London, and commenced his career as an author. The first work which he published was 'The Echo, or the Unfortunate Lovers,' a poem, London, 8vo, 1618. His first dramatic work was 'The Traitor,' a tragedy, London, 1625. He continued to write for the stage till about 1640, when, having been especially patronised by the Queen Henrietta Maria, on the breaking out of the civil troubles he joined the royalists, and served under the Earl of Newcastle.

In 1642 the Long Parliament enacted that the exhibition of "public stage plays shall cease and be forborne," for certain religious and moral reasons which are stated in the preamble; other subsequent acts and decrees, during the republic and protectorate, continued to enforce the first enactment; and Shirley was again obliged to try the profession of a schoolmaster: he was more successful in London than he had been at St. Alban's. In 1646 he began again to publish plays and poems. After the Restoration, the prohibition of stage performances was removed, and Shirley continued as long as he wrote to be a favourite dramatist, as indeed he was the last of the great writers who belong to the Shakspeare school. He does not appear to have published anything after 1659. He is the author of about 40 plays, in some of which he was assisted by George Chapman and others. The best edition of his 'Dramatic Works' is that by Gifford, London, 6 vols. 8vo. Besides plays and poems, he wrote 'Via ad Latinam Linguam' and 'Rudiments of Grammar.'

Shirley was burnt out of his house in Fleet-street by the great fire of London, and being obliged to retire to the suburbs, died there October 29, 1666. His wife died on the same day, and both were buried in the same grave.

Shirley belongs to the poetic class of the old English school of dramatists. He has not much inventive power; his plays are consequently somewhat meagre of incident; but this defect is in some degree compensated by frequent change of scene, and there is generally much animation in the dialogue. His characters are broad and general, not discriminated by nice shades, but well defined, distinct, and consistent. He displays the passions well; with less intensity indeed than Ford, but in a similar manner, poetically rather than naturally, without any of those sudden bursts and familiar touches by which Shakspeare displayed them. His language is pure idiomatic English. His versification resembles Massinger's. It has the same "linked sweetness long drawn out," with more melody, and more enriched with poetic ornament. His plays are no longer acted; indeed they belong to a class not well constructed for keeping possession of the stage, but they are well worth reading.

SHISHKOV, ALEXANDER SEMENOVICH, a Russian admiral, statesman, and author, was born in 1754. He entered the naval service, and as a sea-officer visited Sweden, England, Italy, Turkey, and other countries. He began his literary career when a cadet with some translations from the German, and some original poems, and as late as 1818 he published a translation into Russian prose of Tasso's 'Jerusalem Delivered.' His most eminent literary production was however his essay 'Razsuzhdenie o starom i novom Slozie Rossiiskago Yazuika' ('Opinion on the Old and New Style in the Russian Language'), St. Petersburg, 1802, a second edition in 1813, a third in 1818, in which he contended against the innovations which were being introduced into Russian to assimilate it in style with the French. Although the view which he took has proved the unsuccessful one, it has been admitted even by his antagonists that he effected some good in preventing the movement from being carried too far. He followed up his 'Opinion' by some 'Additions,' and by a 'Translation of two essays from Laharpe, with Remarks,' St. Petersburg, 1808, which led to a paper war, one of the pamphlets in which, directed against Shishkov, and entitled 'On the easiest way of answering Criticism,' is said by Grech in his 'History of Russian Literature,' to be at once the strongest and the wittiest controversial piece in the language. In 1805 he published a critical edition of the oldest monument of Russian poetry, 'The Expedition of Igor against the Polovtsians,' supposed to be written about the year 1200, and first discovered by Count Mussin-Pushkin in 1795. Some of his other works of importance are of a professional kind, 'A Marine Dictionary in three languages, English, French, and Russian,' 2 volumes, 1795; 'Historical Catalogue of all the Vessels of the Russian Fleet, from its origin, &c.' One of the most interesting of his productions is a volume of 'Memoirs of the War of 1812,' published in 1831 with a dedication to the Emperor Nicholas, and containing a description of the occurrences of which Shishkov was an eye-witness when in attendance on the Emperor Alexander I., who had

appointed him his secretary at the outbreak of the war. In that capacity Shishkov was the author of most of the ukases, manifestoes, and proclamations that were issued in the course of that remarkable contest. That which he composed on Napoleon I.'s entry into Moscow is inserted in Grech's 'Uchebnaya Kniga Russkoy Slovesnosti' or Collection of Russian Elegant Extracts, and it is in every point of view a remarkable production. "Without a doubt," one passage runs, "Napoleon's bold or rather rash interruption into the very heart of Russia, and even to its oldest capital, will gratify his ambition, and afford him an opportunity for boasting and vain-glory, but it is the end that crowns the work. He is not in a country where one bold step strikes all with terror, and brings armies and nations to his feet. Russia is not accustomed to surrender her laws, her faith, her freedom, her property; to the last drop of her blood she will defend them."

How will it be when the enemy with the remainder of his still diminishing forces, remote from his country, finds himself in the midst of a numerous nation, surrounded by our armies, of which one will be opposed to him, and the other two will endeavour to cut off his return, and to prevent the arrival of any fresh reinforcements. . . . In such a miserable condition of the human race," the manifesto concludes, "how illustrious will be that nation, which suffering all the calamities inseparably connected with war, shall at last by its patience and fortitude not only succeed in procuring for itself a durable and inviolable tranquillity, but in restoring it to other states, and even to those which against their will are waging war upon it. It belongs to a good nation to return good for evil. Almighty God, give to thy faithful people, contending in the cause of right, firmness of soul and patience. By these let it triumph, and, saving itself, save also the freedom and independence of kings and kingdoms." Shishkov stood high in the favour of the Emperor Alexander I., who appointed him in 1816 President of the Russian Academy, in 1820 a member of the council of the empire, and in 1824 Minister of Public Instruction, a post however in which he gained an unenviable reputation by his antipathy to the education of the lower classes. It would have been well also for his fame if some of the works of his old age had remained unpublished. One of the most conspicuous, the German translation of which is entitled 'Vergleichungs Wörterbuch in Zweihundert Sprachen' ('Comparative Dictionary of 200 Languages'), is in reality only a criticism on the well-known 'Vocabulary' of Professor Pallas and the Empress Catharine, and many of the remarks it contains are of an extremely futile character. Shishkov died in April 1841. An edition of his works in fourteen volumes was published in his lifetime at St. Petersburg between 1823 and 1834, and a selection from his letters was published soon after his death.

SHOKHNAH, IBN, is the surname of a celebrated Mohammedan writer named Muhibbu-d-din Abû-l-walid Mohammed Ibn Kemâli-d-din Ibn Shokhnah, who was Kâdhi-l-Kodhât, or supreme judge of the Hanefite sect in the province of Irak or Mesopotamia. Having from his early youth given proofs of great talent, and composed several works on theology and jurisprudence, he was appointed cadi of one of the mosques of Damascus, and in course of time was raised to the highest ecclesiastical office among the Mohammedans, namely, that of Sheikh-ul-Islâm, or Mufti, or, as it is otherwise called, Kâdhi-l-Kodhât, supreme Kâdhi or judge of Irak. Ibn Shokhnah died at Damascus, in A.H. 883 (A.D. 1478). He left, among other historical works, 'Raud-hatu-l-manâzîr fi akhbârî-l-awâyil wa-l-awâkhir' (the garden of the overlooking places, or the history of ancient and modern times). It is a sort of abridgment of Abû-l-fedâ's large historical work, and contains a chronological history of the world from the creation to the year 1403 of our era. It is divided into four books or sections, and contains much useful information, comprising many events which escaped that celebrated historian. Ibn Shokhnah also wrote a work on jurisprudence and canonical law, entitled 'Lisânu-l-hokhâm fi maarefati-l-akhâm' (verbal decisions of the judges, or a knowledge of law), which is in the Royal Library of Paris.

SHOVEL, ADMIRAL SIR CLOUDESLEY, was born in 1650, of poor parents. He was first noticed by Sir John Narborough, with whom he went to sea as a cabin boy, but from his great merit soon rose to the rank of an officer. In 1674, while on an expedition to Tripoli, he was sent by his patron with a message to the Dey, on which occasion he behaved with great discretion; and through some observations made by him while on shore, Sir John Narborough was enabled to enter the harbour and burn the ships of the enemy. The next year, in consequence of this service, he was appointed to the command of a ship. He continued in employ during the reign of James, who appointed him to the command of the Dovor. On the accession of William he took the side of the new king, and distinguished himself so much in the battle of Bantry Bay as to obtain the honour of knighthood. In 1692 he was appointed rear-admiral of the red, and soon after was present at the battle of La Hogue, to which victory he greatly contributed. In 1694 he served under Lord Berkeley in the expedition to Camaret as vice-admiral of the red, and on the return of the latter to England, took the chief command in the expedition against Dunkirk. In the reign of Queen Anne we find him employed till 1702, when he was sent to Vigo to bring back the prizes left by Sir George Rooke. In 1704 he reinforced the fleet of this officer in the Mediterranean with a powerful squadron, and led the van in the battle of Malaga. In 1705 he held the command of

the fleet sent to Spain jointly with the Earl of Peterborough, and had an active share in the capture of Barcelona. He returned to England the same year, and in 1706 sailed to Portugal with Lord Rivers to the relief of the young king of that country. He continued in command there till 1707, when he joined the Duke of Savoy in the siege of Toulon; after the raising of which he proceeded homewards with nine ships of the line, and was unfortunately wrecked off the Scilly Isles, October 2, 1707. The circumstances of his death were peculiar: he is said to have been thrown on shore alive, and to have been murdered by one of the islanders for the sake of a valuable ring. Shovel is called by Bishop Burnet ('History of his own Times') "one of the greatest seamen of the age;" and his whole career was as honourable to himself as it was creditable to the judgment of Sir John Narborough, who first drew him forth from an obscure condition.

SHUCKBURGH EVELYN, SIR GEORGE, BART., a gentleman distinguished as a classical scholar as well as for his attainments in mathematical and philosophical learning, was born in 1750, and represented the county of Warwickshire in three successive parliaments. In 1774 he was elected a Fellow of the Royal Society, and in the volume of its 'Transactions' for 1798 will be found the communications which he made to that body concerning the measurement of the heights of mountains by the barometer, and the adoption of a general standard of weights and measures. Together with General Roy, he made numerous experiments in order to find the effect of variations of temperature on the volumes of air and mercury; and from the labours of these experiments there has resulted a rule for obtaining the relative heights of stations, which possesses perhaps all the accuracy of which the barometrical method is susceptible, or which can be required for the purposes of geography. According to Sir George Shuckburgh, the formula expressing the required height in fathoms is

$$(10000 \div \mp 0.44 d) \{ 1 + .0023 (f - 32^\circ) \};$$

where  $l$  is the difference between the logarithms of the heights of the barometer at the two stations,  $\mp d$  is the difference between the attached thermometers (Fahrenheit's scale), the negative sign being used when the mercury is coldest at the upper station, and the positive sign in the contrary case, and  $f$  is the mean of the temperatures expressed by a detached thermometer at the stations. When the air is tranquil, and the observations are carefully made, this formula will give the required height within two or three feet in four thousand.

It has always been considered advantageous that the units of linear measure and of weight should have a relation to some invariable standard existing in nature, in order that in the event of the values of those units being lost, they may be recovered with accuracy. This was the object proposed by the government of France in 1793, when it was decided that the metre should be a certain portion of the circumference of a meridian of the earth; and to Sir George Shuckburgh belongs the merit of having determined the relation between the yard (the unit of measure in England) and the length of a pendulum which should make a certain number of vibrations in a given time. The subject had already, at intervals, during many years been recommended to the attention of the government, but the inquiry from various circumstances being deferred, it was reserved for private individuals, to whom, for the sake of obtaining accuracy and uniformity in their scientific pursuits, it was of importance to have a precise standard of length, to procure one by their own exertions. By numerous experiments Sir George found that the difference between two pendulums, one vibrating 42 times and the other 84 times in a minute (mean time) in the latitude of London, at 113 feet above the level of the sea, when the mercury in the barometer is at 30 inches, and the temperature is at 60° (Fahr.), is equal to 59.89358 inches according to the parliamentary standard; and it is evident that by repeating such experiments with all due care, the length of a rod containing the same number of inches might be obtained. From the more recent experiments of Captain Krater and Colonel Sabine, the length of a pendulum vibrating one second in London is 39.13929 inches; which gives for the difference between two such pendulums as those above mentioned, 59.90103 inches, a result agreeing with that which had been found by Sir George Shuckburgh within .00745 inch. This philosopher also ascertained from numerous experiments that a cubic inch of distilled water, when the mercury in the barometer is at 29.5 inches, and the temperature is 60°, weighs in air 252.506 grains, and in vacuo 252.806 grains; hence the exact weight of a grain, and consequently of all other weights, may at any time be obtained. ('Phil. Trans.,' 1798.)

In order that a precise standard of length might be preserved in the country, Sir George Shuckburgh employed Mr. Troughton to make for him a brass-bar, and to lay down on it with great accuracy the length of 5 feet, divided into feet, inches, and tenths of an inch; the bar was 67½ inches long, 1⅞ inch wide, and 0.4 inch thick; and besides the scale just mentioned, there were laid upon it various other measures of acknowledged or reputed authority. This scale is now in the possession of the Royal Society; and in the 'Phil. Trans.' for 1798 is a paper by Sir George, in which the scale is described, and the length of 3 feet on it is compared with the length of the old standard yard which was kept at the Exchequer (where it is supposed to have been placed in the reign of Elizabeth) and with that of another standard yard belonging to the Royal Society. The difference between

the last-mentioned standards, which was considerable, had been observed by Mr. Graham in 1742.

In 1833 the Royal Astronomical Society caused a new standard measure to be made with all possible accuracy; this is a brass tube, or rather, it consists of three brass tubes drawn within one another, and the scale, which is 5 feet long, divided into inches and tenths, is formed on the upper part of the exterior surface between two lines drawn parallel to the axis of the tube. By careful comparison it has been found that 3 feet on this scale exceeds 3 feet on the Shuckburgh scale by '000079 inch; and it may be observed here that 3 feet on the latter scale exceed the imperial yard which is at present in use by '00058 inch. ('Mem. Royal Astr. Soc.,' vol. ix.)

It is said of Sir George Shuckburgh that in matters of science no man was more cautious of making hasty inferences or of forming general conclusions from partial or inaccurate observations. He had travelled on the Continent; and being a diligent cultivator of astronomy, he fitted up an observatory with instruments which he caused to be constructed by Mr. Ramsden. He died at his seat in Warwickshire, September 1804, in the fifty-fourth year of his age, leaving the character of a man of great integrity, and, as a senator, of independent conduct.

\*SIAM, KINGS OF. MONGKUT, the present king of Siam, was born October 18, 1804, in the city of Bangkok. He signs his name S. P. P. M. MONGKUT, the initial letters representing titles of dignity, that is to say, SOMDETCH PHRA PARAMENDR MAHA MONGKUT, and these are the Sanskrit titles which he has assumed as king. His Siamese names are CHOM KLAU CHAU YU HUA. Sir John Bowring, in dedicating his book, 'The Kingdom and People of Siam,' to the king, accumulating all his titles, addresses him as "His Majesty Phra Bard Somdetch Phra Paramend Maha Mongkut Phra Chom Klau Chau yu Hua." His younger brother, who was born about 1807, is associated with him in the kingly dignity, and they are styled respectively the First King and Second King. The signature of the Second King is S. PIN KLAU CHAU YU HUA, the initial S. probably representing the title Somdetch.

Ayuthia, the former capital of Siam, which is about fifty miles higher up the river Meinam than Bangkok, is stated to have been founded about 1350, and to have been the seat of thirty-three kings of three distinct dynasties, including three or four usurpers. Ayuthia was taken and devastated in 1765-68 by the Birmans, who also put the king of Siam to death, and governed the country with despotic cruelty. At length Phya Tarksing, commonly called Phya Tāk (Tark), military governor of one of the Siamese provinces, headed a successful insurrection against the Birmans, and expelled them from the country in 1769. He then proclaimed himself king of Siam, and founded the city of Bangkok, which thenceforth became the capital of the kingdom of Siam. Phya Tāk reigned till 1782, when, in consequence of his exactions and acts of cruelty, an insurrection was organised by the Phya Chakri, or commander in chief, who belonged to the previous royal family. He marched with an army to Bangkok, put the king to death, took possession of the throne, and was crowned in May 1782. He was named Phuti Chau Luang; he reigned twenty-seven years, and then died, when he was succeeded by his son, the father of the present kings of Siam. He commenced his reign September 11, 1809, and immediately afterwards put to death more than one hundred persons of distinction, whom he suspected of being opposed to his accession to the throne. With the exception of this act of atrocity, his reign was by no means of a sanguinary or oppressive character. His popular name was Phoen Din Klang. He was the king to whom Mr. Crawford was sent on a commercial mission in 1822 by the Marquis of Hastings, then governor-general of India. ('Journal of an Embassy from the Governor-General of India to the Courts of Siam and Cochin-China,' 4to, 1828.) The king died July 20, 1824, and was succeeded by an illegitimate son, known as Krom Chiat, who had been for some time minister of foreign affairs, and was a man of intrigue and influence. The late king had only two children by his queen, namely Chau Fa Yai, or Chau Fa Mongkut, and Chau Fa Noi, the present First King and Second King. Krom Chiat was several years older than his legitimate brothers. Chau Fa Mongkut did not contest his undoubted right to the throne, but retired to a pagoda, and entered the religious order, by this means probably saving his life and securing his liberty. The regal name of Krom Chiat was Phra Nang Klau Chau yu Acca. He died April 2, 1851, and the present king was crowned on the 15th of May. The person who is now Kalahom, or prime minister, with the aid of his powerful family, was mainly instrumental in placing the two brothers in their present regal positions. He is described by Sir John Bowring as a man of extraordinary sagacity and intelligence; and it was chiefly through his exertions, aided by the Second King, that the commercial treaty, which was the object of Bowring's mission, was brought to a satisfactory conclusion.

Chau Fa Mongkut, in the quietude of the pagoda to which he had retired, devoted his time to study, became a good Pali scholar, and acquired also the Sanskrit, Cingalese, and Peguan languages. He was taught Latin chiefly by Bishop Palegoix, who was head of the French Roman Catholic Missionaries, and English by the Protestant Missionaries from the United States of America. His knowledge of the English language is very imperfect, or at least was so when Sir John

Bowring was there, as is apparent from several documents written by him, and published in 'The Kingdom and People of Siam.' Chau Fa Mongkut also occupied himself with astronomical investigations, and learned to calculate eclipses, and determine latitudes and longitudes by observing the occultations of the stars, and by the use of the chronometer.

The Second King, whose proper title is Wangna, or Junior King, is an intelligent and highly cultivated man, who lives much in the style of an opulent European nobleman. He speaks and writes English with great accuracy. He is much devoted to scientific studies, and has acquired a large amount of information. He has collections of books and philosophical instruments. His palace is nearly as extensive as that of the First King. Within it is a building in which he generally resides, and which is fitted up in the style of a handsome European edifice. He is surrounded by insignia of royalty similar to those of the First King, and receives the same prostrations. He disposes of about one-third of the state-revenue, but, except that the First King consults him on matters of importance, he does not directly interfere in the administration of the state-affairs. There have been occasionally two kings of Siam in former times; but they then occupied distinct governments, the one being king of the Southern Provinces and the other king of the Northern Provinces.

The First King's concubines amount to hundreds, but he has generally one wife who ranks much higher than the others, and has a title answering to that of Queen. She is selected from the princesses of the royal line, and has a separate palace, and a body of attendants specially devoted to her service. The last Queen was born December 21, 1834, was crowned January 2, 1852, and died October 10, 1852. The First King had twelve children before he was king, and has had as many or more since. The Second King has had about twenty children, seven of whom are by one favourite wife.

(*The Kingdom and People of Siam, with a Narrative of the Mission to that Country in 1855*, by Sir John Bowring, F.R.S., Her Majesty's Plenipotentiary in China, 2 vols. 8vo, 1857.)

SIBTHORP, JOHN, the youngest son of Dr. Humphrey Sibthorp, professor of botany at Oxford, was born in that city October 28, 1758. He took his master's degree in 1780, and afterwards obtained a Radcliffe travelling fellowship. In 1788 he took the degree of M.B.; and, leaving Oxford for a time, pursued his medical studies at Edinburgh. He next visited France and Switzerland, and made some interesting botanical discoveries at Montpellier, which he communicated to the Academy of Sciences in that city.

In 1784 he returned to England, and having taken the degree of Doctor of Medicine, was appointed to succeed his father, who had resigned the professorship of botany. Part of the same year was spent at Göttingen, where he formed the plan of his voyage to Greece, which soon after he executed. His object being to study the botany of that country, which had been so little investigated by the moderns, he engaged at Vienna Mr. Bauer, an excellent draughtsman, with whom he set out on his expedition, in March, 1786. In the autumn of that year he visited Naples and Crete, and wintered at Constantinople. In the spring of 1787 he visited Cyprus and other Greek islands, and touched at the coast of Asia Minor. In June 1787, he made some stay at Athens, in order to recover his health, which had been much impaired by the heat of the weather and by confinement on ship-board. From that city he made excursions to various parts of Greece; and embarking at Batras on Sept. 24, 1787, reached England, after a tempestuous voyage, during the first week in December.

He now enjoyed some years of learned leisure, engaged in the duties of his professorship, and in superintending the labours of his draughtsman. He was one of the first members of the Linnean Society, and became a fellow of the Royal Society in 1789. His reputation gained him an increase of his stipend, with the title of Regius professor, which was conferred on him in 1793. But nothing could deter him from attempting to accomplish his purpose of forming a complete Flora of Greece. Accordingly, in March, 1794, he set out on his second journey to that country. He now examined the Troas, paid a second visit to Mount Athos, and spent two months at Athens. He passed the winter of 1794 at Zante, where an apothecary furnished him with a complete Herbarium of the island. In February 1795, he left Zante for the Morea, where he remained for two months, and returned to Zante at the end of April. He here embarked on board a vessel bound for Otranto. The voyage, which is usually accomplished in five days, occupied more than three weeks: and the inclemency of the weather to which Dr. Sibthorp was exposed hastened the progress of a consumption, of which he had before experienced the symptoms. In the autumn of 1795 he reached England: his health now grew rapidly worse; and on February 8, 1796, he died at Bath, in the thirty-eighth year of his age.

Of the value and extent of Dr. Sibthorp's labours, some notion may be formed from the fact that the number of species collected from his manuscripts and specimens amounts to three thousand. Unhappily, he lived to finish only one work, a 'Flora Oxoniensis,' published in 1794. In his will he bequeathed to the University of Oxford an estate of 200*l.* a year, for the purpose of publishing his 'Flora Græca,' in ten folio volumes, with a hundred plates in each; and a prodromus of the work, without plates. [DIOSCORIDES.]

SICARD, ROCH AMBROSE CUCURRON, was born at Fousseret,

near Toulouse, on the 20th September, 1742. He completed his studies at that city, and entered into holy orders; but while thus engaged he felt impelled to enter upon a new career, for which, as his success afterwards proved, he was peculiarly adapted. The archbishop of Bordeaux wished to establish a school for the deaf and dumb, and he fixed upon the Abbé Sicard to second his project, who went to Paris to learn the method of instruction there pursued by the Abbé de l'Epée. He returned to Bordeaux in 1786, and the new establishment prospered under his care. This success obtained for Sicard new preferment, under the title of vicar-general of Condom, with that also of canon of Bordeaux. Very eager for honorary distinctions, the vanity of Sicard was flattered by the attentions paid to him: he became a member of numerous academies and literary and scientific societies, and he felt pleasure in assuming the titles thus conferred upon him. These literary honours did not however cause him to relax in his zeal for the education of the deaf and dumb, in which pursuit he became so distinguished that public opinion pointed to him as the most worthy to be the successor of the Abbé de l'Epée, who died in 1789. To obtain this honourable office it was necessary that the candidates should undergo an examination before a commission from the three academies named by the king. Three candidates entered into competition with Sicard: the Abbé Salvan, instructor at Riom in Auvergne, afterwards a joint director at the institution for the deaf and dumb at Paris; Father Perrenet, an Augustine; and the Abbé Masse, to whom the commune of Paris had temporarily entrusted the management of the institution. The last-named candidate did not submit to the examination, and after a minute investigation into the acquirements of the other three, Sicard was chosen, and the choice of the commissioners was confirmed by Louis XVI., in April, 1790.

The establishment at Paris was supported during the latter part of the Abbé de l'Epée's career by the government. From 1778 to 1785 a decree of the council had secured a revenue of 240*l.* (6000 livres) from the estate of the suppressed convent of the Celestines for the institution of the deaf and dumb, which only ceased when the National Assembly declared the confiscated possessions of the ancient monasteries to be national property. In July 1791, the Assembly granted a donation of 12,700 francs (508*l.*) to the institution, which was then removed to the convent of the Celestines. In 1791, though the oath affirming the civil constitution of the clergy was not required from Sicard, he was willing to acknowledge liberty and equality, and this acknowledgment he accompanied with a gift of 200 livres. Notwithstanding this concession, he was arrested on the 26th of August, and confined till the 2nd of September. On this occasion, the pupils of Sicard addressed to the Assembly an eloquent petition, which demonstrated the intelligence which Sicard had called forth in them. This petition was presented by Sicard's most celebrated pupil Massieu at the bar, and read by one of the secretaries: it was highly applauded, and a decree was made, directing the minister of the interior to give an account of the cause of Sicard's arrest. Other matters caused this decree to be disregarded, and on the 2nd of September Sicard was transferred to L'Abbaye; at that time this was like a sentence of death. During the two following days Sicard felt the danger of his position, which he has narrated with great prolixity. The weapon of the executioners was already raised over Sicard, when a watchmaker named Monnot placed himself before the intended victim, saying "It is the Abbé Sicard, one of the most useful men in the country: you shall run through my body to get at his." Sicard then said, "I am the instructor of the deaf and dumb; and as these unfortunates prevail more among the poor than the rich, I am more to you than to the rich." This address produced such an effect, that those who had just been about to put him to death embraced him, and proposed to take him home in triumph. An affected scruple of justice prevented him from allowing this to be done: he said he had been imprisoned by a constituted authority, and to that authority alone could he look for his freedom. During two days and two nights he remained in prison, in imminent danger of being massacred. He wrote to the president of the Assembly stating his situation, and the devotion of Monnot, and a decree was made declaring that this brave man deserved well of his country. But the commune of Paris, though apprised of the interest Sicard excited, passed on to the order of the day. On the 4th of September Sicard knew that he was to be sacrificed that evening; and it was only by the decisive steps taken by several of his friends in the Assembly to whom he wrote that his life was saved. Even on his release, so great was his desire of popular applause, that, instead of retiring in quietness to his pupils, he went to the Assembly, accompanied by his preserver Monnot, to exhibit himself, and to thank those who had been instrumental in his deliverance.

After his restoration to his pupils he did not experience further persecution, but occupied himself solely with them during the reign of terror. After the fall of Robespierre, when the National Convention took up some useful projects, a normal school was created, in which Sicard was appointed a teacher of grammar. In his first lecture, in 1795, he extolled philosophy so highly when applied to education, as to leave religion nearly out of the question. On another occasion he analysed grammatically the following phrase:—"Frenchmen should rally round the Convention, which will persecute the disaffected, to whatever party they belong." He contended against the revolutionary freedom of thinking and theing, and contributed

with Laharpe to banish its use from the normal schools. His scientific course had great success, which is to be less attributed to his grammatical innovations, than to the simple and ingenious manner in which he submitted the forms of grammar to the operation of analysis. His lectures were much frequented, and occasionally by Garat, Volney, Wailly, and others. He was soon after engaged in contributing to and otherwise assisting in the publication of political and religious papers in various periodicals, and was brought under the notice of the Directory, and banished. It was a considerable time, and then only after humiliating submissions, before he was restored to his pupils. But the establishment had been neglected during his proscription, the resources had been cut off, and the ceremonies of religion forbidden. This state of things was changed on his return. He set up a printing-press in the Institution, had his own works printed by the pupils, and from that time employed himself solely in perfecting the methods of instruction transmitted to him by his illustrious predecessor. The Abbé de l'Epée had translated things by signs, and signs by words, and he had applied his system only to physical objects: in explaining intellectual things and operations he adopted the reverse of this order; he taught them the verbal expressions first, and then explained these by signs. In the latter operation the eyes and memory only of the pupils were exercised; the words conveyed no knowledge to their minds, and consequently the signs for them were without meaning. Sicard applied De l'Epée's process for material objects to metaphysical ideas also, and thus succeeded in giving to his pupils that development of intellect of which he found them capable. The public examinations of his pupils contributed to extend his reputation; on these occasions he exhibited successively his favourite pupils, Massieu, Clerc, and Berthier. Foreigners crowded to these examinations, which were also attended by many persons of the highest distinction.

The chief works of Sicard are his '*Théorie des Signes*,' '*Cours d'Instruction d'un Sourd muet de Naissance*,' and '*Eléments de Grammaire Générale appliquée à la Langue Française*,' but he also wrote and translated several other works. In 1815 he visited England with Massieu and Clerc, and was very honourably received and noticed. The old age of Sicard was not one of ease and plenty, though his life had been passed in assiduous labour, for he was involved by his good nature in becoming responsible for the pecuniary engagements of others, and was consequently obliged to put his expenses on the most economical scale. His death took place in May 1822. Three funeral orations were pronounced to his memory; one of them was by his unfailing friend M. Lafond de Ladébat, in the name of the Directors of the Institution for the Deaf and Dumb.

SICKINGEN, FRANZ VON, was born in 1484, at the seat of his ancestors, the castle of Ebernburg, in what is now the circle of the Middle Rhine, in the duchy of Baden. From his youth he devoted himself to military pursuits, and became one of the noblest and most distinguished soldiers of his age. He supported the cause of the Emperors Maximilian and Charles V. with ability and courage, but rendered himself more remarkable by his support of the poor and oppressed. Whenever a humble suitor had cause of complaint against the corporation of a city, or a debt was to be recovered from a rich man by a poor one, he deemed it a duty to assist him with all his might. He made war upon the governing powers of Worms, who had infringed on the rights of the citizens; and in spite of the ban of the empire under which he fell, he assembled an army, fought with the Duke of Lorraine, and afterwards with the Elector of Mainz, until the Emperor adjusted the quarrel and released him from the ban. With the Count of Nassau he next invaded France, and wasted Picardy. He endeavoured on every occasion to repress the despotism of princes and the arrogance of the clergy, and he was an earnest supporter of the movement in favour of Lutheranism in the Rhenish provinces. Though not himself a scholar, he was the patron, supporter, and defender of some of the eminent spirits who were then forwarding that movement. He protected Reuchlin from the monks of Cologne; Bucer and Ecolampadius found refuge in his castle; and Ulrich von Hutton resided for a considerable time and composed several of his works there. At length, during a feud with Treves, Hesse, and the Palatinate, he was besieged in his castle of Neustall, near Landstuhl, in the Bavarian Palatinate, was severely crushed by the falling of a beam loosened by the enemy's cannon, forced to surrender, and died shortly afterwards on May 7, 1523. His tomb still remains in the church of Landstuhl, though injured by the French troops. A descendant still exists, bearing the title of Count von Sickingen.

SIDDON'S, MRS. SARAH, was born at Brecon, in South Wales, July 5, 1755. She was the eldest child of Mr. Roger Kemble and Sarah his wife (whose maiden name was Ward), and, while a mere infant, made her first appearance on the stage on the occasion of her father's benefit. The audience expressed their disapprobation of what they considered too premature an exhibition; but Mrs. Kemble boldly led the child forward, and she disarmed their anger by reciting the well-known fable of 'The Boy and the Frogs.' From that period Miss Kemble continued to perform regularly in her father's company till she attained her fifteenth year; and at the early age of thirteen, she sustained the principal female parts in several standard English operas. Having formed an attachment to a young actor named Siddons, which was not agreeable to the family, Miss Kemble was removed from the theatre, and placed under the direction of Mrs.

Greathead, of Guy's Cliff, Warwickshire, in the capacity of reader and companion. At the age of eighteen the affection of the young couple being undiminished by separation, Mr. and Mrs. Kemble consented to their union. They were married at Trinity Church, Coventry, November 26, 1773, and the young bride returned to the provincial stage at Cheltenham in company with her husband. At Cheltenham she attracted the notice of the Hon. Miss Boyle, Lord Bruce, afterwards created Earl of Aylesbury, and some other noble personages. Upon their strong recommendation, Garrick was induced to send King down to Cheltenham, to witness her performance in the 'Fair Penitent.' The Rev. Henry Bate, afterwards Sir Henry Bate Dudley, was also much struck by her Rosalind; and her transfer to the metropolis being at length determined on, she made her first appearance in London at the Theatre Royal, Drury Lane, on Friday, December 29, 1775, being then only twenty years of age, in the character of Portia, in the 'Merchant of Venice.' Garrick performed Shylock. She was announced simply as 'a young lady;' and, though favourably received, failed to make any strong impression, being thought more of as a beautiful young woman than as a great or even promising actress. On the revival of 'Richard the Third,' Garrick not having acted Gloster for five years, he cast Mrs. Siddons the part of Lady Anne. "She there," says Mr. Boaden, "met Roscius in all his terrors;" and on the first night hung a little back from timidity. "I have mentioned," he continues, "in another work the glance of reproach that corrected the failure, and the extreme sensibility with which it was long retained." The fact was, as Mr. Campbell states it, that instead of advancing to the front of the stage and turning, as Garrick had instructed her, from the audience, she by "hanging a little back," compelled him to act the scene with his back towards the audience, instead of hers, an unintentional annoyance which he never forgave her, for at the close of the season when the re-engagements for the next campaign were under consideration, his answer to the person who mentioned in her turn "the young lady," was simply "Let her go." This latter circumstance we state on the authority of a contemporary of Garrick and a most intimate friend of Mrs. Siddons, whose memory was as clear and retentive as his means of information were numerous and peculiar.

But the triumph of Mrs. Siddons, though retarded, was not to be prevented even by so great a theatrical potentate as Garrick. In the summer of 1776, she appeared at Birmingham, where her genius was acknowledged by the celebrated actor, Henderson, who pronounced her to be "the first and best of actresses; to have in herself all that her predecessors possessed and all they wanted," and predicted that "she would never be surpassed." From Birmingham she went to Manchester, York, and Bath, increasing her reputation to such a degree that offers were again made to her from the metropolis; and on the 10th of October 1782, she reappeared at Drury Lane, as Isabella, in the 'Fatal Marriage.' On the 30th of October, she performed Euphrasia in 'The Grecian Daughter,' and subsequently enacted Jane Shore, Calista in 'The Fair Penitent,' and Belvidera in 'Venice Preserved,' a succession of triumphs which established her fame; and at the end of the season she went to Dublin, where her brother John was engaged for three years. In 1783 the celebrated trial of skill took place between the rival Lady Randolphs, Mrs. Crawford, at Covent Garden, and Mrs. Siddons, at Drury Lane, and added another leaf to the laurels of the latter. In 1784 a cabal was made against her, upon a most unfounded charge of illiberality towards two brother performers, and she personally addressed the audience at the opening of Drury Lane, on the 5th of October, having been assailed by hooting and hissing on her appearance as Mrs. Beverley. On the 2nd of February 1785, Mrs. Siddons first performed Lady Macbeth. In 1794 Mrs. Siddons opened Holland's new Drury Lane Theatre by the performance of Lady Macbeth, on which occasion her brother Charles made his first appearance in the character of Macduff; and, in 1809, she again, as Lady Macbeth, assisted at the opening of the new Covent Garden Theatre, September 18th. The notorious O.P. row ensuing, seven months elapsed before she made her second appearance that season, repeating Lady Macbeth on the 24th of April 1810. Two years afterwards, on the 29th of June 1812, Mrs. Siddons took her leave of the stage she had so long adorned by her genius and elevated by her private conduct, in the same celebrated character of Lady Macbeth, after which she spoke a farewell address, written by her nephew, Mr. Horace Twiss. Thrice again however during the next season she was induced to revisit the scenes and revive the recollections of her former glories: she performed on the 25th of May for the Covent Garden Theatrical Fund; on the 11th of June for Mr. Charles Kemble's benefit, and on the 22nd of the same month at Drury Lane for the fund of that theatre. In November 1815, she acted for ten nights at Edinburgh for the benefit of the widow and family of her son Henry; again at Covent Garden, four times in 1816, for benefits and charities, and at the request of the Princess Charlotte of Wales, who was however unfortunately prevented by illness from witnessing the performance. In 1817 she performed once (June 5) for Mr. C. Kemble's benefit, and made her final appearance upon any stage at Covent Garden, June 9, 1818, for the benefit of Mr. and Mrs. Charles Kemble, in the character of Lady Randolph.

For two seasons after her public farewell in 1812, Mrs. Siddons gave occasional readings alternately from Shakspeare and Milton at the

Argyle Rooms, having been led to do so in the first instance by the kind desire of serving the widow of Mr. Cherry, author of 'The Soldier's Daughter.' She was also honoured by a command to read to Queen Charlotte and the Royal family at Frogmore, and an invitation from the universities of Oxford and Cambridge. "Whether this great actress regretted the stated calls to exertion," says Mr. Boaden, "I know not." That she did regret them however there can be little doubt, from the following remarks, which she one day made to an old and attached friend, an eminent physician, from whose lips we heard it. It was about the period of the evening when she had been accustomed to repair to the theatre to dress for the performance. "At this time," she observed, "every body in London used to be thinking of me—now, nobody thinks of me!" The tone in which this was spoken, and the sigh which accompanied it, sufficiently indicated the feeling with which she contrasted her public and private life, although still the queen of every circle she condescended to enter. She died on the 8th of June 1831, about nine in the morning, at her residence in Upper Baker-street, in the seventy-sixth year of her age, and the prophecy of Henderson has not yet been falsified.

SIDMOUTH, HENRY ADDINGTON, VISCOUNT. The father of Lord Sidmouth was Dr. Anthony Addington, a physician, who, after practising for some time with considerable distinction in London, was induced by the state of his health to retire from the metropolis, and to settle in Reading, where he died in 1790. Dr. Addington married in 1745 Mary, daughter of the Rev. Haviland John Hiley, of Reading; and Henry, who was born at Reading on the 30th of May 1757, was their eldest son. Mrs. Addington died in 1778. In the beginning of that same year Dr. Addington obtained much notoriety by a strange attempt in which he engaged in conjunction with Sir James Wright, the medical attendant of the Earl of Bute, to bring about a political alliance between that nobleman and the Earl of Chatham, whom Addington had been in the habit of visiting in his professional capacity. The negotiation, which of course came to nothing, appears to have originated solely with the two physicians—who afterwards quarrelled upon the subject and assailed one another, through the press, with mutual contradictions and recriminations—and to have been carried on for the greater part without the knowledge of the two noble persons who were principally concerned. Lord Chatham was at the time on his deathbed.

Meanwhile Addington's son Henry, after having commenced his classical education at Winchester School, had been entered at Brasenose College, Oxford, in January 1774. He took his degree of B.A. in February 1778; and in 1779 obtained the Bachelor's prize for an English essay. On leaving the University he entered himself a student of Lincoln's Inn, and was called to the bar on the 11th of May 1784. Events however had by this time taken a course which had the effect of withdrawing him from the further pursuit of the profession upon which he had thus entered. His father's connection with the family of Lord Chatham had led to an intimacy while they were yet boys between him and the younger William Pitt, who was his junior by about three years, but had been in parliament since 1780, and was already, when Addington was called to the bar, firmly seated in the post of first minister of the crown. Addington is said to have been previously fond of attending the debates in the House of Commons; his brother-in-law, James Sutton, Esq., of New Park, had much influence at Devizes; and on Mr. Pitt's suggestion he stood for and succeeded in getting himself returned for that borough at the general election which preceded the opening of the new parliament on the 18th of May 1784.

The long political career upon which he now entered was not marked by many events in which he bore a prominent part, and its general course may be briefly traced. So long as he was only a private member of the House of Commons—in which he retained his seat for Devizes until he became a peer—he was, as might be expected, one of Mr. Pitt's steadiest supporters. Accordingly, when the office of Speaker became vacant in May 1789, by the promotion of Mr. (afterwards Lord) Grenville to be secretary of state, Addington, although so comparatively young a member, was put forward as the ministerial candidate, and was elected by a large majority. He filled the chair, with considerable credit, if not with any remarkable distinction, till on the retirement of Pitt, in March 1801, he was induced to undertake the formation and chieftainship of a new ministry, with the offices of chancellor of the exchequer and first lord of the treasury, as they had been held by his predecessor. He differed, therefore, it now appeared, from Pitt upon the great question of Roman Catholic emancipation, upon which that minister had gone out; but there were probably other subjects upon which their opinions and views had by this time considerably diverged. Addington had come to be considered as the leader or head of the class of persons specially styled the King's Friends; and it was understood to have been at the express request of his majesty that he now assumed office. The most memorable event of Mr. Addington's short administration was the Peace of Amiens, which proved still shorter than its author's tenure of power. Soon after the renewal of the war in the beginning of 1803, Pitt, who had hitherto supported his old friend, began to intimate an apprehension that he was scarcely equal to the crisis, and then openly joined Fox and the regular opposition. The result was that Addington resigned, and Pitt was restored to power in May of the following year.

The displaced minister however made no attempt to form a party against his successor. He would probably indeed have admitted as readily as any one else that Mr. Pitt was the preferable person of the two to be at the head of affairs at such a moment, now that he was willing to accept the post upon the condition—namely, the abandonment of the question of Roman Catholic emancipation—which he had formerly rejected; but which the king, and it must be added, the great majority of the country and of both houses of parliament, regarded as indispensable. The resumption of office by Pitt in May 1804 was a concession on his part of a great point and a great principle, and a decided victory obtained by George III. and his friend Addington. The new government was from the first supported by Addington, who in January 1805 again took office as president of the council, being at the same time made a peer by the title of Viscount Sidmouth. It is said that he accepted this elevation, which removed him from the House of Commons, with much reluctance. He resigned the presidency in July of the same year in which he accepted that office. The causes are thus stated in the 'Annual Register,' in the relation of the proceedings, so distressing to Pitt, which were this year taken against Lord Melville:—"During the whole of these proceedings the new president of the council and his adherents separated from the minister, and took an eager and an active part in bringing Lord Melville to the bar of public justice; conduct which must have been considered as a defection from the government of which they formed a part, and, as such, must have been deeply resented by the minister. It was also rumoured that other causes of distaste and disagreement existed between Mr. Pitt and Lord Sidmouth at this period; that the former was jealous of the influence which the latter maintained in a certain quarter, which had lately been manifested in the conferring of high ecclesiastical dignities; and that, instead of gaining an useful ally, Mr. Pitt had only exposed himself to the machinations of a dangerous rival. Whether these reports were founded in truth it is not our province to decide, but certain it is that on the 10th day of July the Viscount Sidmouth and the Earl of Buckinghamshire resigned their respective offices."

When Mr. Fox and Lord Grenville succeeded to power in February 1806, after the death of Pitt, Lord Sidmouth was made lord privy seal; and when the ministry was reconstructed in October, he was replaced in his former post of president of the council, which he held till the breaking up of Lord Grenville's government in March following. After this he remained out of office for about five years. Then in April 1812, in the last moments of Mr. Perceval's administration, he was appointed president of the council for the third time. In June of the same year, when Lord Liverpool assumed the premiership after the assassination of Mr. Perceval, Lord Sidmouth became secretary of state for the home department.

This office, which for the first time gave him much of a real share in the business of government, he continued to hold for the next ten years. His conduct on several occasions, as, for instance, on that of the great meeting for reform, held at Manchester in August 1819, exposed him to a good deal of popular outcry and obloquy; but he was never charged with being deficient in decision and fearlessness, and he at least succeeded in very difficult times in preventing the public safety from ever being seriously endangered. He resigned his office in 1822, but at the earnest request of Lord Liverpool he retained his seat in the cabinet for two years longer. He finally retired from official life in 1824; but he continued for some years to attend frequently in the House of Lords, though he seldom spoke. He had at no time indeed been accustomed to come forward much in debate. He survived till the 15th of February 1844, when he died at his residence, the White Lodge, in Richmond Park, of which he was deputy ranger. Lord Sidmouth was twice married; first in 1781, to Ursula Mary, daughter of Leonard Hammond, Esq., of Cheam, in the county of Surrey, who died in 1811, after bringing him four sons and four daughters; secondly, in 1823, to the honourable Marianne, widow of Thomas Townshend, Esq., of Honington Park, in the county of Warwick, and only daughter of Lord Stowell, who died also before him in 1842.

SIDNEY, or SYDNEY, ALGERNON, was the second surviving son of Robert, second earl of Leicester of that creation, and of his wife Dorothy, eldest daughter of Henry, earl of Northumberland. He is supposed to have been born in 1621 or 1622. When his father went as ambassador to Denmark in 1632, he took his son Algernon with him; and four years after he likewise accompanied his father on his embassy to France. His first entrance upon public life was in 1641, when, upon the breaking out of the rebellion in Ireland, he went over to that country, of which his father was then lord-lieutenant, and commanded a troop of horse in the earl's regiment. Both he and his elder brother, the Lord Viscount Lisle, distinguished themselves by their gallantry in the campaigns of that and the following year.

Returning to England in August 1643, the two brothers, who professed to be on their way to the king at Oxford, were seized as they landed in Lancashire, by order of the parliament; an incident which lost them the favour of Charles, who believed that their capture was of their own contrivance. On this they both joined the parliamentary party, and Algernon received a commission as captain of a troop of horse in the regiment of the Earl of Manchester. In April 1645 Fairfax raised him to the rank of colonel, and gave him a regiment;

and in 1646, his brother Lord Lisle having become lieutenant-general of Ireland, he was made lieutenant-general of the horse in that kingdom, and governor of Dublin. In the beginning of the same year he had been returned member for Cardiff, in the room of William Herbert, Esq., who two years before had been disabled from sitting, for siding with the king, and who had in the interim been killed at the battle of Edgehill. In May 1647, having come over to his native country, he received the thanks of the house of Commons for his services in Ireland, and was appointed governor of Dover. In 1648 he acted as one of the judges at the trial of the king, although he was not present when the sentence was passed, nor did he sign the warrant for the execution. On the establishment of the protectorate however he retired from public affairs, and he appears to have continued to reside at the family seat of Penshurst in Kent, and at other places in the country, during the government of Cromwell and his son.

But on the restoration of the long parliament in May 1659, Sidney again came forward, and on the 13th of that month was nominated one of the council of state. On the 5th of June following he was sent, along with Sir Robert Honeywood and Mr. Borne, to Denmark, to negotiate a peace between that country and Sweden; and he was absent upon this mission when the king returned. In a letter written to him by his father shortly after the Restoration, and published in 'Familiar Letters, written by John, late earl of Rochester, and several other persons of honour' (8vo, Lond., 1697), the earl mentions a report which he had heard, that when the University of Copenhagen brought Sidney their album, and desired him to write something in it, he wrote—

" . . . Manus hæc inimica tyrannis  
Ense petit placidam sub libertate quietem,"

and signed the verses with his name. This anecdote is confirmed by Lord Molesworth, who, in the Preface to his 'Account of Denmark' (first published in 1694), tells us, that even while Sidney was still at the Danish court, "M. Terlon, the French ambassador, had the confidence to tear out of the 'Book of Mottoes' in the king's library" the above lines, "which Mr. Sidney, according to the liberty allowed to all noble strangers, had written in it." "Though M. Terlon," adds Lord Molesworth, "understood not a word of Latin, he was told by others the meaning of that sentence, which he considered as a libel upon the French government, and upon such as was then setting up in Denmark by French assistance or example." His father intimates that this and some other things he had heard of him made him hesitate about speaking to the king in his behalf, as he intended to do. "It is also said," continues the earl, "that a minister who hath married a Lady Laurence here at Chelsea, but now dwelling at Copenhagen, being there in company with you, said, 'I think you were none of the late king's judges, nor guilty of his death,' meaning our king. 'Guilty!' said you. 'Do you call that a fault? Why it was the justest and bravest action that ever was done in England, or anywhere else;' with other words to the same effect. It is said also that, you having heard of a design to seize upon you, or to cause you to be taken prisoner, you took notice of it to the King of Denmark himself, and said, 'I hear there is a design to seize upon me; but who is it that hath that design? *Est ce notre bandit?*' by which you are understood to mean the king. Besides this, it is reported that you have been heard to say many scornful and contemptuous things of the king's person and family, which, unless you can justify yourself, will hardly be forgiven or forgotten; for such personal offences make deeper impressions than public actions, either of war or treaty."

The reports were probably not to be gainsayed. Indeed Sidney, in his answer to his father says, "That which I am reported to have written in the book at Copenhagen is true; and, never having heard that any sort of men were so worthily the objects of enmity as those I mentioned, I did never in the least scruple avowing myself to be an enemy unto them." Accordingly, instead of coming home, he proceeded first to Hamburg, whence he went to Frankfurt, and from thence to Rome, where he proposed to take up his residence. About the middle of the year 1661, however, he was forced to remove to Frascati; and he is afterwards traced to various places in Germany, France, and the Low Countries. In 1665 he was at the Hague, actively employed, along with other English exiles of the same principles, in urging the states of Holland to invade this country; and the next year he is found at Paris, impressing upon Louis XIV. the advantage France would derive from the establishment of a republic in England: a project in favour of which he engaged, in a memorial to the king, to procure a rising, if he were allowed a grant of 100,000 crowns. From this time he appears to have resided in Gascony, till at last, in 1677, a pardon and permission for him to return home were obtained from Charles II., on the plea that he was anxiously desirous to see his aged father once more before he died. The earl died that same year, and, although he had never approved of the course his son had taken, left him a legacy of 5,100*l.*, with which, he says, in his 'Apology,' dated on the day of his death, he would have immediately returned to Gascony, if he had not been detained by a long and tedious suit in Chancery, in which he was involved by his elder brother, now Earl of Leicester, choosing to dispute his father's will. Before this, Sidney appears to have been only assisted by his

father with irregular and scanty remittances; and during his wanderings on the Continent he was often in great straits.

It is commonly stated that Sidney's pardon was obtained through the interest of the Earl of Sunderland, who was the son of his sister Dorothy (Waller's 'Sacharissa'); but he himself, in a letter to the Hon. Henry Savile, then the English ambassador at the court of France, appears to attribute it to that gentleman's exertions. "My obligation unto you," he says, "I so far acknowledge . . . to be the greatest that I have in a long time received from any man, as not to value the leave you have obtained for me to return into my country, after so long an absence, at a lower rate than the saving of my life."

We are indebted for the strongest light that has been cast upon the conduct of Sidney after his return, to the despatches of the French minister, Barillon, published from the originals in the foreign office at Versailles, by Sir John Dalrymple, in his 'Memoirs of Great Britain and Ireland,' 4to, Lond., 1773. In a despatch dated 5th December 1680, Barillon writes, "The Sieur Algernon Sydney is a man of great views and very high designs, which tend to the establishment of a republic. He is in the party of the Independents and other sectaries; and this party were masters during the last troubles. They are not at present very powerful in parliament, but they are strong in London; and it is through the intrigues of the Sieur Algernon Sydney that one of the two sheriffs, named Bethal, has been elected. The Duke of Buckingham is of the same party, and believes himself at the head, &c. . . . The service which I may draw from Mr. Sidney does not appear, for his connections are with obscure and concealed persons; but he is intimate with the Sieur Jones [Sir William Jones, lately attorney-general], who is a man of the greatest knowledge in the laws of England, and will be chancellor, if the party opposed to the court shall gain the superiority, and the Earl of Shaftesbury be contented with any other employment." And in the account of his disbursements among the patriots, from the 22nd December 1678, to the 14th December 1679, Barillon sets down "To Mr. Sidney 500 guineas, which makes 543l. 15s. sterling." See also the despatch of September 30th, 1680, for an account of the arguments Sidney was accustomed to use with Barillon to show that it was for the interest of France that England should be converted into a republic. Mr. Hallam has some remarks which will be found worth attention upon the conduct imputed to Sidney as to this matter, in his 'Constitutional History,' vol. ii.

Sidney was a candidate for the representation of Guildford, at the general election in 1678, and for Bramber at that in 1679; but was defeated both times, although on the first occasion he petitioned against the return of his opponent, and on the second he was only unseated after a double return. He had thus openly taken his stand as the opponent of the court; and he was looked upon as leagued with Monmouth, Shaftesbury, Russell, Essex, and the other popular leaders, who may have differed among themselves in their principles and views, but the designs of the most moderate of whom certainly extended to such a change of government as would have amounted to a revolution. When the Rye-House Plot was announced [RUSSELL, WILLIAM, LORD], in June 1683, Sidney was immediately arrested, along with his friend Lord Russell, and committed to the Tower on a charge of high treason. He was brought up to the bar of the King's Bench to plead, on the 7th of November, and his trial took place on the 21st, before Sir George Jeffries, lately promoted to the place of Lord Chief Justice. Jeffries exhibited less than usual of his wonted coarseness and passion on this occasion; but his demeanour was very determined and inflexible, and he bore down every objection of the prisoner with an authority that nothing could shake or impress. The only evidence in support of the principal facts charged was the vile Lord Howard of Eserick, who had, according to his own account been a party to the plot, and now came to swear away the lives of his associates in order to save his own; and as the law of high treason required two witnesses to prove the crime, the other was supplied by bringing forward a manuscript found among Sidney's papers, and asserted, no doubt with truth, to be his handwriting, which, it was pretended, contained an avowal and defence of principles the same, or of the same nature, with those involved in the alleged plot. He was on this imperfect evidence found guilty; and being again brought up on the 26th, was sentenced to be put to death after the manner of execution then enjoined by law in cases of high treason. He twice petitioned the king for pardon; but all that could be obtained for him was the remission of the degrading and brutal parts of his sentence; and on Friday, the 7th of December, he was beheaded on Tower Hill. No one ever suffered with more firmness or with less parade. He did not even address the people; but when asked to speak, replied that he had made his peace with God, and had nothing to say to man. A paper which he delivered to the sheriff, and which was afterwards printed, concluded as follows:—"The Lord sanctify these my sufferings unto me; and though I fall as a sacrifice unto idols, suffer not idolatry to be established in this land. . . . Grant that I may die glorifying thee for all thy mercies, and that at the last thou hast permitted me to be singled out as a witness of thy truth, and, even by the confession of my very opposers, for that old cause, in which I was from my youth engaged, and for which thou hast often and wonderfully declared thyself."

The trial and condemnation of Algernon Sidney seem very naturally to have shocked the public feeling of the time in no ordinary degree. Even the cautious Evelyn, after stating that he was executed "on the single witness of that monster of a man, Lord Howard of Eserick, and some sheets of paper taken in Mr. Sidney's study, pretended to be written by him, but not fully proved, nor the time when, but appearing to have been written before his majesty's restoration, and then pardoned by the Act of Oblivion," adds, that "though Mr. Sidney was known to be a person obstinately averse to government by a monarch (the subject of the paper was in answer to one of Sir E. [R.?] Filmer), yet it was thought he had very hard measure." He describes Sidney as "a man of great courage, great sense, great parts, which he showed both at his trial and death;" and he appears to have been looked upon universally in the same light—by his friends as one of the ablest, by his enemies as one of the most dangerous of his party. While he was yet in exile, Charles himself, in 1670, described him to Colbert, the French minister, as one who could not be too far from England, where his pernicious sentiments, supported with so great parts and courage, might do much hurt: and there can be little doubt that Charles's personal enmity contributed to this manifest perversion of the law. With the exception of Shaftesbury Sidney was the only person of eminent ability in the particular knot of patriots to which he belonged. Yet he must not be confounded in intellectual, any more than in moral character, with that brilliant and versatile politician. A man of talents and accomplishments he was, but narrow-minded, opinionative, and egotistical, to the point of utter impracticability. Burnet describes him "as a man of most extraordinary courage, a steady man, even to obstinacy, sincere, but of a rough and boisterous temper, that could not bear contradiction, but would give foul language upon it. He seemed to be a Christian," adds the bishop, "but in a particular form of his own: he thought it was to be like a divine philosophy in the mind; but he was against all public worship, and everything that looked like a church. He was stiff to all republican principles, and such an enemy to everything that looked like monarchy, that he set himself in a high opposition against Cromwell when he was made Protector. He had studied the history of government in all its branches beyond any man I ever knew."

Sidney's 'Discourses concerning Government' were first published in 1698, with a short preface by John Toland; again in 1704, and a third time in 1751, at the expense of Mr. Thomas Hollis, who prefixed a Life of the Author, and also printed for the first time his 'Apology' already mentioned. This edition of the works of Algernon Sidney was reproduced in 1772 by Mr. Brand Hollis, to whom Mr. Thomas Hollis left his property, with notes and corrections by Mr. J. Robertson, and the addition of some letters and other short pieces of Sidney's, all previously published, together with a tract entitled 'A General View of Government in Europe,' first printed in James Ralph's anonymous publication entitled 'Of the Use and Abuse of Parliaments,' 2 vols. 8vo, London, 1744, and there attributed to Sidney, but which Robertson says he is convinced 'is the production of a different hand.' In fact there is no doubt that it is spurious. The two editions of 1751 and 1772 both contain 'Letters of the Honourable Algernon Sydney to the Honourable Henry Savile, Ambassador in France, in the year 1679, &c., now first printed from the Originals in Mr. Sidney's own Hand,' which originally appeared in an octavo volume at London in 1742. See also Arthur Collins's 'Memoirs of the Lives and Actions of the Sydneys,' prefixed to his 'Letters and Memorials of State,' &c., 2 vols. fol., London, 1746; and Blencowe's 'Sidney Papers,' 8vo, London, 1825. Collins states that several treatises by Sidney in Latin and Italian, and also an 'Essay on Virtuous Love,' in English, remain in his own handwriting at Penshurst. There is a Life of Algernon Sydney, by George Wilson Meadley, 8vo, London, 1813.

Sidney's trial was printed in 1684, but is said to have first passed through the hands of Jeffries, who struck out whatever he pleased. It is given, along with the other trials connected with the Rye-house Plot, in Howell's 'State Trials,' vol. ix., pp. 357-1000. See also the 'True Account and Declaration of the Horrid Conspiracy against the late King,' &c., written by Bishop Sprat, and published by order of James II. in 1685; and 'The Secret History of the Rye-house Plot, by Ford, lord Grey,' first printed in 1754.

The attainder of Algernon Sidney was reversed after the Revolution by the 7th Private Act of the first session of the first parliament of William and Mary, the preamble of which declared that Sidney had been most unjustly and wrongfully convicted and attainted "by means of an illegal return of jurors, and by denial of his lawful challenges to divers of them for want of freehold, and without sufficient legal evidence of any treasons committed by him; there being at that time produced a paper found in the closet of the said Algernon, supposed to be his handwriting, which was not proved by the testimony of any one witness to be written by him, but the jury was directed to believe it by comparing it with other papers of the said Algernon; besides that paper so produced, there was but one witness to prove any matter against the said Algernon; and by a partial and unjust construction of the statute declaring what was his treason." It is observable, that neither in this Act nor in that passed in the same session reversing the attainder of Lord Russell is there any assertion of the innocence of the convicted party.

SIDNEY, SIR PHILIP, was born November 29, 1554, at Penshurst in Kent. He was the son of Sir Henry Sidney, the favourite of Edward VI, by whom Sir Henry was knighted and sent as ambassador to France. This gentleman is described by Sir R. Naunton, in his 'Fragmenta Regalia,' as 'a man of great parts,' and certainly the favour which he enjoyed in the reign of Mary, and which was continued to him by Elizabeth, who made him lord-deputy of Ireland and president of Wales, is strong evidence of the truth of this assertion. Abundant testimony to his wise government of Ireland is borne by Spenser and Sir John Davies, in their treatises on the state of that country. Sir Philip's mother was Mary, eldest daughter of John, Duke of Northumberland, and sister to Robert Dudley, the favourite of Queen Elizabeth.

Young Sidney was in 1564 placed at school at Shrewsbury. While there his father addressed a letter to him in the year 1566, full of sterling advice. This letter was published in 1591, by one Griffiths, a person formerly in Sir Henry's household. At this time Sidney was only twelve years old, but even at that early age his biographer and companion Lord Brooke states that he was distinguished for intelligence and for a gravity beyond his years.

In 1569 he was entered at Christchurch, Oxford, and is reported to have held a public disputation with Carew, the author of the 'Survey of Cornwall.' During his residence at Oxford, negotiations between his father and Sir William Cecil, as to a marriage between Sidney and Anne Cecil, were entered into, but from some unexplained cause never were matured. From Oxford he passed to Cambridge, a practice not unusual in those days, and he left that university with a high reputation for scholarship and general information.

In 1572 Sidney proceeded on his travels. Paris was his first halting-place; but on the occasion of the Massacre of St. Bartholomew he was obliged to shelter himself at the house of Sir Francis Walsingham, the English ambassador, to whom he had been introduced by his uncle, the Earl of Leicester. After quitting that city, he visited Belgium, Germany, Hungary, and Italy. At Frankfurt he first became acquainted with Hubert Languet, who addressed a volume of letters to him. He arrived at Vienna in 1573, where he appears to have devoted considerable time to perfecting himself in horsemanship and other exercises peculiar to those times. At Venice he became acquainted with Edward Wotton, brother of Sir Henry Wotton, who is the E. W. referred to in the first lines of the 'Defence of Poesie.' He is stated also to have enjoyed the friendship of Tasso, but this statement cannot be verified. He returned to England in May 1575.

On his return home Sidney at once became a courtier, and a very successful one. This is ascribed by Sir Robert Naunton to the influence of his uncle, the Earl of Leicester. Naunton says he came "famed aforehand by a noble report of his accomplishments, which, together with the state of his person, framed by a natural propension to arms, he soon attracted the good opinion of all men, and was so highly prized in the good opinion of the queen, that she thought the court deficient without him." Connected with this success, is his first literary attempt, a masque, entitled the 'Lady of May,' which was performed before queen Elizabeth at Wanstead House in Essex.

Sidney rose in favour. In 1576 he was appointed ambassador to the court of Vienna on a message of condolence, the manuscript 'instructions' of which are still extant in the Harleian Collection. Part of his mission was to condole with the two Counts Palatine, and in the execution of this duty he obtained the strong regard and friendship of Prince Casimir. He returned home in 1577.

About this time great excitement prevailed throughout England, owing to a negotiation for the marriage of the queen with Henry, Duke of Anjou. The queen appearing at one time to lean somewhat favourably to this project, Sidney addressed to her the celebrated 'Remonstrance.' The very boldness of this famous letter seemed to preserve the author from any of the usual consequences of interference with the will of princes, for we find him in as high favour as ever; while inferior people who took the same views suffered mutilation and imprisonment. Soon afterwards a quarrel at tennis between the Earl of Oxford and Sidney, in which the latter behaved with great spirit, occasioned his retirement from court. Wilton, the seat of his brother-in-law the Earl of Pembroke, was his retreat, and during this retirement the 'Arcadia' was written. He never completed it, nor was it even printed in his lifetime. After his death, his sister collected the manuscript, and a continuation of it was written by Gervase Markham. It was published in 1590, under the title of the 'Countess of Pembroke's Arcadia.' The 'Arcadia' was universally read and admired at the time of its publication, and gave perhaps a greater impulse to the national taste for the romantic style of fiction than any single work before or after it. It is now, like most of its class, almost forgotten. Admired and read by Cowley and Waller, it was also the companion of the prison-hours of Charles I. Milton says that the prayer of Pamela in the 'Ikon Basilike' is stolen from it. Horace Walpole and Mr. Hazlitt have spoken in very deprecatory terms of it. Walpole was probably incapable of appreciating its high tone of feeling and sentiment, and Hazlitt seems to have censured it from the spirit of paradox in which he so often loved to indulge. It is a work little likely ever again to find a wide circle of readers, but the literary student who reads it with due allowance for the time and circumstances in which it was written, as well as the comparative youth of the writer, and a

desire to find out what is good in it, as well as to learn what there was in it to impress so strongly the mind of the age, will not fail to discover a breadth and force of thought, a rich beauty of imagination, and an exquisite poetic feeling such as will convince him that—however tedious or even unreasonable it may appear to those who turn to it as to an idle novel—it is really a work of rare genius though cast in an unfortunate mould. In 1581, the 'Defence of Poesie,' the other great work of Sidney, and upon which his fame as an author now perhaps more decidedly rests, was composed, but did not appear until 1595. Nothing more can be said upon the cause which it advocates, and what is said is placed in such a point of view, and expressed in so happy a manner, as to leave nothing to desire. The names of Wither, Ben Jonson, and Warton are sufficient evidence of the high favour with which it has been received.

After sustaining a severe disappointment from the marriage of the Lady Penelope Devereux, whom he celebrated under the names of Philoclea in the 'Arcadia,' and Stella in his poems, and to whom he was most deeply attached, he married in 1583, Frances, only daughter of his old friend Sir Francis Walsingham. Shortly after he stood proxy for Prince Casimir at an installation of Knights of the Garter at Windsor, and received the honour of knighthood from the queen. In the ensuing year he took up the defence of his uncle, the Earl of Leicester, who had been attacked by Parsons, the Jesuit, in a tract called 'Leicester's Commonwealth.' Sidney's answer is entitled a 'Discourse in Defence of the Earl of Leicester.' Early in the year 1585 he seems to have meditated joining Sir Francis Drake's second expedition against the Spaniards in the West Indies. The queen however, taking fright "lest she should lose the jewel of her dominions," peremptorily forbade his embarkation. Fuller and some other writers assert that at this time also the crown of Poland was offered to him and declined.

The war between the Spaniards and the Hollanders was being carried on at this time. In order to mark her sense of his merits, the queen, in 1585, appointed him governor of Flushing. After some considerable successes against the enemy, the troops under his command accidentally met and encountered a force of about 3000 men who were marching to relieve Zutphen, a town of Guelderland. The engagement took place on the 22nd of September 1586, almost under the walls of the town. After having had a horse shot under him, and in his third charge, Sidney received a wound from a musket-bullet in the left thigh, a little above the knee. The anecdote related by his friend and biographer Lord Brooke of his conduct on leaving the battle-field illustrates his character. Lord Brooke's words are—"In which sad progress, passing along by the rest of the army, where his uncle the general was, and being thirsty with excess of bleeding, he called for some drink, which was presently brought him; but as he was putting the bottle to his mouth he saw a poor soldier carried along, who had eaten his last at the same feast, ghastly casting up his eyes at the bottle. Which Sir Philip perceiving, took it from his head before he drank, and delivered it to the poor man with these words: 'Thy necessity is yet greater than mine.'" The wound was mortal, and after many days of severe suffering he died at Arnheim, in the arms of Lady Sidney (who had accompanied him to Flushing) and of his faithful secretary William Temple, on the 7th of October 1586, in the thirty-third year of his age.

The body of Sidney was conveyed to England, and interred in Old St. Paul's Cathedral, on the 16th of February 1587, after lying many days in state. A general mourning, the first, it is believed, of the kind, was observed throughout the country. The funeral was attended by seven deputies, one for each of the Seven United Provinces, and by a great number of peers, his friends, and others.

The universities published three volumes of Elegies on his death. Spenser composed one on him under the title of 'Astrophel.' Constantine contributed sonnets.

"Sir Philip Sidney was," says a writer in the 'Retrospective Review,' "a gentleman finished and complete, in whom mildness was associated with courage, erudition mollified by refinement, and courtliness dignified by truth. He is a specimen of what the English character was capable of producing, when foreign admixtures had not destroyed its simplicity or politeness debased its honour. Of such a stamp was Sir Philip Sidney, and as such every Englishman has reason to be proud of him." His character has been a favourite theme. Near his own times, Nash, in his 'Pierce Penniless,' Lord Brooke, Camden, Ben Jonson, Sir Robert Naunton, and John Aubrey have all contributed to fill the ranks of his panegyrists. Sir Walter Raleigh called him the 'English Petrarch.' The chivalry of his character, his learning, generous patronage of talent, and his untimely fate combine to make him an object of great interest. "He trod," says the author of the 'Effigies Poeticae,' "from his cradle to his grave amid incense and flowers, and died in a dream of glory."

Upon the whole, it may be said of Sidney's writings, that they display great brilliancy of imagination, with a chasteness of sentiment well calculated to refine the taste of the times. Their chief faults are chargeable on the strained and artificial style, the excess of which in all its absurdity may be found in that very curious work Lilly's 'Euphues.' Some of Sidney's Sonnets are among the most perfect in the language.

Sidney's widow married Robert Devereux, earl of Essex, who was

beheaded in February 1600; and she again married Richard de Burgh, known as the Great Earl of Clanricarde. Sidney's 'Stella,' Lady Rich, afterwards caused great scandal by her unfortunate connection with Mountjoy, earl of Devonshire. Mrs. Jameson, in her 'Romance of Biography,' gives an interesting account of this lady. Sidney left one child, Elizabeth, countess of Rutland, who died without issue.

Besides the works before enumerated, he contributed poems to 'England's Helicon,' 'England's Parnassus,' and 'Davidson's Rhapsody.' An English version of the 'Psalms' and 'Valour Anatomised into a Fancy,' published in 1581, attributed by some to Sir Thomas Overbury, are his other remains. For the modern reader, Gray's edition of his miscellaneous works, published at Oxford in 1829, leaves little to be desired.

SIDONIUS APOLLINARIS, a Latin writer, or with his full name, C. SOLLIUS APOLLINARIS MODESTUS SIDONIUS, was born in the province of Gallia Lugdunensis, A.D. 428. His works consist of several poems, chiefly panegyrics and epithalamia, and nine books of epistles, which possess some historical value; but the style and language of his prose, as well as poetry, bear evident traces of the downfall of the Latin language and literature. Sidonius was a person of high rank. He lived, as appears from his epistles, on intimate terms with Theodoric, king of the Visigoths. He was the son-in-law of the emperor Avitus, whom he praises in a panegyric of 600 verses, for which he was rewarded with a bronze statue placed in one of the porticoes belonging to Trajan's library; and on the inauguration of the Emperor Anthemius at Rome, he obtained the office of præfect of the city, as a reward for the panegyric which he pronounced upon the occasion. Sidonius was made bishop of Arverni (Clermont) in A.D. 473, and died in 484.

The first edition of Sidonius was printed at Milan in 1498. The best editions are by Sirmondus, Paris, 4to, 1614, and Labbeus, Paris, 4to, 1652.

(Germain, *Essai Littéraire et Historique sur Apollinaris Sidonius*, Montpellier, 8vo, 1840.)

SIEGEN, LUDWIG VON, the inventor of mezzotinto engraving, was born in Utrecht in 1609, of an ancient and noble family of Westphalia. His mother was a native of Holland, but of Spanish origin; her name was Anna Perez, and Johann von Siegen, the father of Ludwig, was her second husband. Ludwig was the third son of his parents. In 1619 Ludwig's mother died, and his father Johann entered in the following years into the service of Prince Maurice of Hesse and removed to Cassel, where he was placed at the head of the Collegium Mauritanum, founded for the education of nobles by that prince in 1617. Ludwig von Siegen was educated in this college, and was also appointed page to one of the princes. He remained in Cassel until 1626, when the inhabitants of the place were dispersed to various parts in consequence of the plague. Maurice resigned the government in the year following, and his successor William V. suspended the college altogether. Johann von Siegen retired to Juliers and afterwards to Kampen in Holland, where he died in 1655.

Nothing is known of the life of Ludwig Von Siegen from the time that he left the college of Cassel in 1626 until 1637, except that he was in France and Holland, and it is probable that he was doing military service in this time. In 1637 after the death of the Landgrave of Hesse, he was appointed page to the young prince William VI., by his mother the regent Amelia Elizabeth of Hanau, and in two years afterwards he received the title of Kammerjunker, and served in that capacity until 1641. It was during these years, between 1637 and 1641, that Siegen discovered his new method of engraving, but he removed in 1641, or in the beginning of 1642, to Amsterdam, without imparting his secret in Germany. On the 19th of August 1642 he sent a letter from Amsterdam to the Landgrave, inclosing some proofs of a portrait of his mother Amelia Elizabeth, and the plate of these prints is the first mezzotinto engraving. Siegen speaks of his portrait in the letter referred to as executed in a new and astonishing manner, invented by him; and he further observes, that no engraver will be able to devise the manner in which it was executed. This letter still exists among the archives in the library of Cassel, and a fac-simile of it is given in Laborde's 'Histoire de la Gravure en Manière Noire,' ('History of Mezzotinto Engraving').

The earliest mezzotinto engraving, though as the above letter shows, printed in 1642, was not published until 1643, when it appeared with the date altered to that year, together with a portrait of Elizabeth of Hungary; and the prints drawn off by Siegen himself, not already disposed of, were altered with a pen to the same date; specimens of all three still exist. It is a bust portrait, 16 French inches high by 12 wide, and is rounded at the top.

After the termination of the Thirty Years War in 1648, Siegen left Holland and entered the military service of the Duke of Wolfenbüttel, and he married shortly afterwards the daughter of Michel Cail, the bailiff of Hildesheim, by whom he had several children. In 1654 he returned to Holland, and visited also Cologne, where he resumed the style of Siegen von Sechten, from the name of his paternal estate near Cologne, to part of the rents of which he had become entitled. From Cologne he went to Brussels, and there he became acquainted with Prince Rupert, to whom he communicated his new method

of engraving. Prince Rupert, to enable him to carry out this new method, communicated it to the portrait painter Wallerant Vaillant, who assisted him in his attempts, and engraved several plates in the style at Brussels and at Frankfurt, in 1656 and 1658; a few good prints were also executed by Prince Rupert himself. The secret is however said to have been sold by one of Siegen's sons already in the year 1656, and was known at that time at Mainz. This general publication of his discovery, forced Siegen to sign himself, on one or two of his prints of this period, as the inventor of this new method of engraving.

It was however in England that mezzotinto engraving was first cultivated to any very great extent or with very great success. In 1660, Prince Rupert accompanied Charles II. to England, and explained the whole process of the new art to his friend Evelyn, who was then engaged on his history of engraving; and in this book, which was published in 1662, he describes it as Prince Rupert's, and published a specimen of the style by the prince. Through this work, entitled 'Sculptura, or the history and art of Chalcography, and engraving in copper, with an ample enumeration of the most renowned masters and their works, to which is annexed a new manner of engraving or mezzotinto, communicated by his Highness Prince Rupert to the author of this treatise,' Prince Rupert was generally considered the inventor of mezzotinto. Evelyn precisely though briefly states that Prince Rupert was the inventor of the art, yet from a paper which he himself drew up on the subject, to be read before the Royal Society as a communication from the prince himself, the invention is not claimed by the prince, and this paper is noticed by Evelyn in his history, as in preparation: it was written, but was never read before the Royal Society. In his history, Evelyn heads his sixth chapter with the following words: 'Of the new way of engraving, or Mezzotinto, invented and communicated by his Highness Prince Rupert Count Palatine of Rhine, &c.' In the paper prepared for the Royal Society, the following passage occurs:—"This invention, or new manner of chalcography, was the result of chance, and improved by a German soldier, who, espying some scrape on the barrel of his musquet, and being of an ingenious spirit, refined upon it, till it produced the effects you have seen, and which indeed is for the delicacy therefore much superior to any invention extant of this art, for the imitation of those masterly drawings, and as the Italians call it that moribondezza expressed in the best of their designs. I have the honour to be the first of the English to whom it has been yet communicated, and by a special indulgence of his Highness, who with his own hands was pleased to direct me with permission to publish into the world, but I have esteemed it a thing so curious, that I thought it would be to profane it, before I had first offered it to this illustrious society."

Sandart was better informed as to the origin of this art, though he was in error as to the discovery and the title of Siegen: he says, "the inventor of this art was a lieutenant-colonel in the Hessian service, of the name of Von Siegen, who discovered it after the peace in 1648."

Siegen was not a lieutenant-colonel of Hesse, but a major in the service of the Duke of Wolfenbüttel, but he did not attain this rank until 1674. He died at Wolfenbüttel, but the date of his death is not known; he was still living in 1676, when he took possession of some property in Antwerp. He then styled himself Ludwig Siegen von Sechten. He appears to have wholly given up engraving in the latter years of his life.

Laborde gives the following list of Siegen's engravings:—the portrait already mentioned of the Landgravin of Hesse, marked L. a. S. 1642; Eleonora de Gonzague, wife of the Emperor Ferdinand III., sometimes called the Queen of Bohemia, a bust portrait after Hondthorst, 19 inches 3 lines (French) high, by 15-6 wide, marked L. a Siegen Inventor fecit 1643; Prince William of Nassau, Guilielmus D. G. Princeps auricus comes Nassaviæ &c., also after Hondthorst, marked L. a Siegen Inventor fecit 1644, 1 foot 7 inches 4 lines high, by 1 foot 3 inches wide; and Augusta Maria Caroli M. B. Rex filia Guilielmi Princ. avr. sponsa, of the same size and date; the Emperor Ferdinand III., marked Lud. Siegen in Sechten ex. novoq. a se invento modo sculptis Anno Domini 1654, 1 foot 3 inches 7 lines high, 1 foot 1 line wide; St. Bruno, —L. a S. in S. A. o. 1654, 11 inches high by 6 inches 11 lines wide; and lastly a Holy Family after Annibal Carracci, called La Sainte Famille aux Lunettes; it is dedicated to Prince Leopold of Austria—Ludw. a Siegen humilissime offert, Annib. Caratti pinx., Ludovicq. a S. novo suo modo lusit.

(Sandart, Evelyn, Descamps, Walpole, but especially Laborde, *Histoire de la Gravure en Manière Noire*, Paris, 1839.)

SIEYES, EMMANUEL JOSEPH, Count, more generally known as l'Abbé Sieyes, was born at Fréjus, on the 3rd of May 1748. Destined from early youth to the ecclesiastical profession, he completed his studies with success at the University of Paris, where his mind became imbued with the philosophical speculations prevalent at that period, and he applied himself seriously to political economy, and to the investigation of the various schemes of social reform which were then so frequently suggested. The liberality of his sentiments does not appear to have impeded his advancement in the Church. By the patronage of De Lubersac, Bishop of Chartres, he was appointed to a canonry in that Cathedral, and afterwards became Vicar-General and Chancellor of the diocese. He took an active part in various assemblies of the clergy, and warmly espoused those opinions which were

rapidly producing the Revolution of 1789. When the disordered state of the public finances compelled the government to summon the States General, the question arose, in what manner that body was to be convoked? Whether they were to be called upon, as in the last assembly of 1614, to vote by classes, or, as justice and the necessities of the time appeared to require, by individuals? To this important question, Sieyès replied by publishing three pamphlets, which were so skilfully adapted to the prevailing opinion on the subject that they at once placed him on the highest pinnacle of political popularity. The first was entitled 'Essai sur les Privilèges.' The second and the most remarkable bore the title 'Qu'est ce que le Tiers Etat?'; in it he asserts that the 'Tiers Etat' is the nation itself, and then proceeds to show that it had hitherto exercised no appreciable influence on the government of France, and he demands for it a political recognition. The title of the third pamphlet was 'Moyens d'Exécution dont les Représentans de la France pourrout disposer en 1789.' The bold speculations of Sieyès soon became realities through his active influence. On the convocation of the States-General, Sieyès was elected deputy for Paris. An opportunity for carrying his scheme into execution was given him by the refusal of the majority of the nobles and clergy to unite with the 'tiers état,' and to verify their powers in common; by his eloquent exertions he induced the representatives of the people to constitute themselves into an independent body styled the National Assembly (June 16, 1789). He it was likewise who proposed the oath which was taken by all the members at the 'Jeu de Paume' [BAILLY] "never to separate themselves, but to assemble wherever circumstances required until the perfect establishment of the constitution." This sudden and vigorous measure, which must have proved the immediate signal of civil war had not the power of the other orders of the state been already paralysed, was vehemently opposed by Mirabeau [MIRABEAU] at the head of the more moderate of the republican party; it was however carried by a very large majority. So great was the popularity of Sieyès that, on presenting himself before the Assembly, he was greeted by the loud and reiterated applause of the members present, who rose up to receive him. On the meeting of the 23rd of June, when the king declared the resolutions of the Assembly to be null and void, and ordered the members to disperse, Sieyès energetically reminded them that they were "still the same body to-day that they had been the day before," and bade them "proceed in their deliberations." His counsel was followed, and the revolution was the result. Sieyès was also the framer of the decree which was passed on the 30th of October, by which the ancient provinces were abolished, and France was divided into eighty departments all governed by the same law.

He continued to take a prominent part in the deliberations of the National Assembly until the publication of those decrees which he considered of too levelling a nature, and which alarmed him as to the ultimate result of the innovations which he had himself been too eager to introduce. Accustomed to command, he was unable to endure contradiction, and, when he found that the measures which he opposed were carried in spite of his influence, he betook himself to a sullen silence from which even the persuasions of Mirabeau were unable to rouse him. The most important of these measures was the question of the abolition of tithes. To this he was favourable; but he considered that they should be purchased by the landed proprietors, and an indemnity for their loss made to the tithe-holders. To this indemnity however the Assembly was unwilling to acquiesce; and the determined and impassioned manner in which he advocated it well nigh lost him the popularity which his previous conduct had acquired. The discourse he delivered on that occasion is remarkable for the earnest vehemence of the language, and the concise correctness of the arguments; he exposed the impolicy and the injustice of the proposed measure, and showed that the only members of society likely to be benefited by the change were the wealthy proprietors of land, whom they were about to enrich by the gratuitous addition of one-tenth of its value. The energetic exclamation with which he concluded his address will probably be quoted and admired long after the author has been forgotten: "Ils veulent être libres, ils ne savent pas être justes," "they would be free, and know not how to be just." The apt reply of Mirabeau to Sieyès, when the latter was indulging in bitter invectives on the violence and injustice of the decrees of the Assembly which he had created, is characteristic of that remarkable man: "You have unloosed the bull, and you complain that it gores you."

Elected in 1791, member for the department of Paris, in the new legislative assembly, he refused the additional honour, which was offered him by the electoral assembly, of electing him constitutional bishop of that capital. Shortly afterwards he published a letter, in which he explained his opinions on monarchical government: he remarks that "he makes it the object of his preference from no desire to accommodate himself to ancient customs or from any superstitious regard for royalty, but because he considers it proved that the citizen enjoys more freedom under a monarchy than under a republic." He was named deputy of the department of La Sarthe, in the convention of 1792, but foreseeing the danger of an active participation in the debates, he persevered in the silence he had previously imposed upon himself, and for the most part contented himself with the simple record of his vote. At the trial of the king it has been generally asserted that he accompanied the sentence of death, which he pro-

nounced, with an ill-timed sarcasm on the lengthened arguments with which the deputy who had spoken before him attempted to justify his vote. "Robespierre's vote," says Carlyle, "cannot be doubtful; his speech is long. Men see the figure of shrill Sieyès ascend; hardly pausing, passing merely, the figure says 'La mort sans phrase' ('Death without phrases')." ('History of the French Revolution,' vol. iii, p. 226, 8vo. ed.) It will be seen however, by reference to the 'Gazette Nationale,' or 'Moniteur Universel,' for January 20, 1793, where the different speeches are given at length, that the vote of Sieyès was simply 'la mort,' and that he gave it a considerable time after Robespierre and Philippe, to both of whom the allusion has been supposed to be made. So strongly however was the stigma of this sarcasm attached to his name, that when, at a subsequent period, he was ambassador of the French republic at the court of Berlin, one of the ministers of the King of Prussia having been solicited to show him the attentions due to the office he held, he replied: "Non, et sans phrase." (Morellet, 'Mémoires,' vol. ii. c. 3.)

While the power of Robespierre and his colleagues was in the ascendant, Sieyès prudently retired into the country; and when subsequently asked "What he had done during the reign of terror?" he wittily retorted, "I have lived;" no small achievement at that time for a man of his political celebrity.

After the fall of Robespierre he returned to the Convention, and by his influence obtained the recall of the proscribed members of the Gironde party. In 1795 he again took an active part in the management of affairs, and was named a member of the new Comité du Salut Public; on the 19th of August of the same year he made a proposition to the Convention to establish a constitutional jury, which was however rejected. During this time he chiefly occupied himself with the direction of the foreign affairs, and successfully carried on several important negotiations with the European states, and went to Holland to conclude a treaty of alliance.

In the same year Sieyès was named by the Council of Ancients one of the five directors, but he declined the proffered honour, and Carnot was appointed in his stead.

In 1797 he had a narrow escape from the hand of an assassin, l'Abbé Poule, who, entering his room, fired a pistol at him at arm's length, and one of the balls shattered his hand. He behaved on this critical occasion with his usual coolness, and a few days after quietly told his servants, "If Mons. Poule should return, inform him that I am not at home."

In 1798 Sieyès was sent on a mission from the French Government to the court of Berlin, in which, though he failed in his attempt to form an alliance with that power, he succeeded in securing its neutrality. On his return to Paris the following year he was named member of the Directory, a nomination which showed the disposition of the councils, as he had openly expressed his dissatisfaction with the directorial government. Placing himself at the head of a conspiracy which had been formed against three of his colleagues, who were known for their republican sentiments, he procured their forced resignation, and a new Directory was formed in which the majority was favourable to his views. Another important measure which he effected through the instrumentality of the Minister of Police, Fouché, was the closing of the Jacobin Club, a body whose name was connected with all the excesses of the Revolution. These measures, as they destroyed the popularity of the author of the Tiers Etat, and exposed him to the vengeance of republican fury, made him anxious to secure the support of some military leader possessed of sufficient talent and energy to take upon himself the sole direction of the affairs of state. "We must have no more dealings with declaimers," said he, "we want a head and a sword." Military chiefs there were many at that period, some of them of the highest renown, but they appeared to Sieyès to fail in the necessary requisites for a civil ruler. Joubert, in whom he hoped to find them, had recently fallen at Novi. Masséna was merely a brave and skilful soldier, and Augereau and Bernadotte were too well known for their democratical sentiments. The arrival of Bonaparte from Egypt determined the difficulty; the penetration of Sieyès discovered in him a fit associate for his designs. They were favoured by the enthusiastic reception which Bonaparte met with from all ranks and parties on his arrival, by the views of this military chief himself, and by the active co-operation of many of the French generals and the most influential members of the legislature. The talents and influence of Sieyès were appreciated by Bonaparte, while the speculative nature of his views precluded the possibility of his becoming an object of jealousy. Mutual esteem indeed there was none; they were in the frequent habit of expressing their dislike of each other in no measured terms; but to effect their respective purpose each felt that the other was the most useful ally he could select.

The Revolution of the 18th Brumaire (9th of November 1799) was the result of this co-operation, and Napoleon, Sieyès, and Roger Duco were the first consuls named, and two commissions of twenty-five members each were appointed from each Council of State to assist the consuls in the formation of a new constitution. In the formation of this constitution, however, Sieyès and Bonaparte soon disagreed; Sieyès was allowed to form a legislature according to his political speculations, and he made it consist of a Senate without the power of debate, and a Tribunal which was to discuss with the Council of State the legislative measures proposed. But to his visionary scheme

respecting the executive, which was to be vested in a Grand Elector, whose sole power was to consist in the nomination of two consuls who were to exercise all the powers of government, Bonaparte offered a decided and successful resistance. Discontented with the overthrow of his political theory, and discovering with characteristic penetration that he had found his master, he refused to act a subordinate part in the new constitution, which was proclaimed on the 24th of December 1799. At this period he may be said to have terminated his public career. His services however were richly rewarded with 600,000 francs and the estate of Crosne, which was afterwards exchanged for a magnificent hotel in Paris, and the valuable lands of Faisanderie in the park of Versailles.

Under the consulate and the empire, Sieyes studiously avoided all participation in power. He declined the offer of the presidency of the Senate, and contented himself with accepting the title of Count. Napoleon borrowed largely from his theories, which he had the talent to translate into acts, and many of his political ideas formed the basis of the legislative measures which he introduced. At the Restoration he was exiled, and only returned to France after the Revolution of 1830, fifteen years afterwards. He died at Paris, in tranquil obscurity, on the 20th of June 1836.

The character of Sieyes has been graphically depicted by Dumont in his valuable and interesting memoirs. "His manner," he says, "was neither frank nor engaging; he was a man with whom it was difficult to become intimate, and who was wont to express his opinion without deigning to enter into any discussion upon it. His writings had given him a well-established reputation; he was looked upon as the oracle of the *Tiers État*, and the most formidable enemy of privileges. He was easily excited to a display of ill-humour, and appeared to hold in extreme contempt the existing state of society (1790). I imagined that this friend of liberty had necessarily a liking for the English nation, and the subject being familiar to me, I introduced it to him, but I discovered to my surprise that the whole English constitution was in his eyes a mere piece of charlatantry to impose upon the people: he seemed to pity my ignorance as I described the various modifications that system had undergone, the cautious regard ('*ménagemens réciproques*') shown towards each other by the three orders of the state, the hidden checks which they opposed to each other's movements, and the disguised but real dependence which existed between them. The influence of the crown appeared to him venality, the opposition a mere court trick ('*manège d'antichambre*'). The only thing he approved of among the English was trial by jury, which however he but little understood, and in common with most Frenchmen, he had formed wrong notions respecting it. In a word, it was manifest that he regarded the English but as children in the art of framing a constitution, and that he considered himself capable of giving a much better one to France." (Dumont, '*Souvenirs de Mirabeau*,' p. 62, 63, Paris, 1833.) So great indeed was the vanity of this political philosopher that on one occasion he remarked that "the art of government was a science which he considered he had brought to perfection." This disposition may have been the cause of the surname of Mahomet, which Mirabeau was in the habit of applying to him. There is also an admirable sketch of his character in Mignet, '*Hist. de la Révolution*,' c. ii.

The principal writings of Sieyes, not already mentioned, are, 1, '*Observations sommaires sur les Biens Ecclésiastiques*.' 2, '*Préliminaires de la Constitution*.' 3, '*Reconnaissance et Exposition des Droits de l'Homme*.' 4, '*Des Opinions Politiques*.' 5, '*Divers Rapports et Projets de Lois*.'

SIGISMUND, Emperor of Germany from 1411 to 1437, was a younger son of the Emperor Charles IV., and was born in 1366. His father died in 1378, leaving Bohemia to his eldest son Wenceslaus, and to Sigismund the markgraviate of Brandenburg, which had been previously bestowed on Wenceslaus, who by a treaty concluded at Prague in June 1378, renounced his claims. For four years the young Sigismund occupied himself in traversing his new dominions, and receiving the homage of the nobility and the towns; but his territories suffered much during this time from the incursions of the Poles, the Pomeranians, and the Mecklenburghers. In 1382 he was betrothed to Maria, daughter of Ludwig, king of Hungary and Poland, who designed him for his successor. In the following year he visited Poland, but his pride and haughtiness rendered him so unpopular that, on Ludwig's death in 1383, the nobility of Poland at the diet of Wilka chose Maria's sister Hedwig for queen, who married Ladislaus Jagellon, duke of Lithuania. Sigismund abandoned Poland, and proceeded to Hungary to celebrate his marriage with Maria. In the meantime Charles of Durazzo had usurped the government, had been murdered, and Sigismund's bride had been carried off from Buda by the Ban of Croatia as a prisoner. Sigismund followed with an army, the Ban was affrighted, gave up his prisoner, and Sigismund was married to her at Stuhlweissenberg, where he was crowned king of Hungary in 1386. In the following year the Ban of Croatia fell into his power and was put to death, but this did not deter Stephen, the waywode of Wallachia, from declaring himself independent of Hungary. Sigismund invaded his territories, and Stephen sought the assistance of Bajazet, the Turkish sultan. Their joint armies were defeated and Sigismund returned to Buda in triumph, where he found his wife had died, and Ladislaus of Poland claimed the crown for his wife, the

sister of Maria. He supported his claims with an army and advanced to the Hungarian frontiers, but the inhabitants flew to arms, and he was forced to retire. But though the Hungarians had repelled a foreign invader, Sigismund was not popular. The nobility were constantly conspiring against him, and he became morose, suspicious, and cruel, and on the suppression of one insurrection the leader Stephen Contus, and thirty-two of his followers were beheaded before his eyes. The Wallachians also rose against him, and invoked the assistance of the Turks. Sigismund alarmed, sought the assistance of France, and a large number of volunteers joined him, who, under the Count de Nevers, were defeated and nearly destroyed at the battle of Nicopolis in 1396. The Hungarians were affrighted, and fled without fighting. Sigismund escaped with difficulty and took refuge in the isle of Rhodes, whence he repaired to Constantinople, and afterwards to Venice. After long wandering he returned to Hungary, where he was taken prisoner on April 23, 1401, by the malcontent nobles, and confined in the citadel of Siklos, when Ladislaus, son of Charles, king of Naples, was elected king in his stead. Sigismund escaped from confinement, assembled an army, dispersed the league of the nobles, and resumed the sovereign power, which he exercised with great rigour. On September 10, 1410 he was elected emperor of Germany by a part of the electors on the death of Ruprecht, palatine of the Rhine, who had been elected on the deposition of Wenceslaus, the brother of Sigismund. Ten days after this election another portion of the electors chose Jobst, marquis of Moravia, a younger brother of Sigismund; and Wenceslaus refusing to accede to his deposition, the three brothers were all emperors at the same time. Jobst died within a few months after his election, and Wenceslaus acquiescing in the election of his brother, this schism was terminated, and Sigismund was crowned at Aachen in 1414. He had the art of conciliating the princes of the diet, he introduced many ameliorations into his government, and he restored a calm to Germany which it had not enjoyed for thirty years. It was however again interrupted by the council of Constanx, assembled in 1414, which, though it put an end to the papal schism by deposing John XXIII. and Benedict XIII., yet by the burning of John Huss, to which Sigismund imprudently consented though he had given him a safe conduct, occasioned insurrections in Bohemia that endured nearly the whole of his reign. The war in that country continued till 1435, when it was concluded by the treaty of Iglau. In 1415 he visited Charles II. in Paris, and undertook to negotiate a peace for him with Henry V. of England, whom he also visited; with whom, with extreme perfidy, he however concluded a secret treaty against Charles, vainly hoping by this means to recover Arles to the empire. In his contests with the Bohemians he was opposed by the celebrated Zisca. He was personally brave, but had little talent as a military leader, and was frequently beaten in pitched battles, both by Zisca and the two Procopiuses who succeeded him; but after the victory of Broda, in 1434, where a German general commanded, and in which the Bohemian army was almost annihilated and their leaders were killed, he offered them an amnesty, attracted many of their chiefs to Pilsen, collected them in a barn, and burnt them. Sigismund had sold Brandenburg to Friedrich, burgrave of Nürnberg, and as a reward for his assistance in the Hussite war, raised him to the electoral dignity, and thus laid the foundation of the kingdom of Prussia. He also constituted Cleves a dukedom, and elevated the counts of Savoy to the rank of dukes. After a vain attempt at Eger in 1437 to form a German union, he died at Znaym in Moravia, on December 9, 1437, the last of the dynasty of Luxembourg, and was succeeded by Albert of Austria, who had married his daughter.

SIGISMUND, King of Poland, was the youngest son of Casimir. He was born in 1466, and succeeded his brother Alexander in 1506, having been previously Duke of Glogau and Oppeln, and having become by inheritance grand-duke of Lithuania. He found the affairs of both countries in a very unfavourable state. The southern provinces of the kingdom were converted into a desert by the repeated inroads of the Tartars, and even some parts of Lithuania had experienced the disastrous effects of their ravages. The czars of Muscovy, who were recently emancipated from their subjection to the Tartars, and had reduced and united with their dominions the principalities of Rezan and Tver, as well as the republics of Novgorod and Pakow, became by these important acquisitions very formidable neighbours to Poland. Though experience proved that the Muscovite armies were inferior to the Polish in courage and military skill, they always surpassed them in numbers. The resources of the Muscovite sovereign were immense: he ruled despotically over many rich and populous provinces, and his mandate was sufficient to call round his standard countless thousands. It was quite the reverse in Poland, where the turbulent nobility frequently and in the most wanton manner opposed the best views of the king, and often resisted his commands with no other view than to assert their own rights, an encroachment upon which they dreaded more than any foreign aggression. It is true that the warriors who generally flocked to the royal standard were the bravest of the brave, but their numbers were few, and though they fought with the utmost gallantry, they were soon tired of the fatigues of the camp. The arrière ban, or general levy of the nobility, called *Pospolite Ruszenie*, that is, general movement, could only be raised with great difficulty, and it soon returned home. The treasury was empty, and the nobles, unwilling to submit to any taxation, sought to

throw all the imposts on the inhabitants of towns, whose number was comparatively small, and on the peasants, who were already crushed by the oppression of the landowners. The crown was in possession of extensive demesnes, but they were generally granted for life to some noble, and the prodigal Alexander had greatly diminished them. All these difficulties were however overcome by the firmness and prudence of Sigismund, and he was much assisted in his task by the treasurer of the crown, Bonar, who succeeded, by his great industry and strict economy, in restoring order to the finances of the country. The revolt of Gliniski, a most powerful Lithuanian grandee, who, having been educated at the court of the Emperor Maximilian I., acquired great military skill in his campaigns, involved Sigismund in a bloody war with Muscovy. Gliniski, who had enjoyed supreme influence under Alexander, created many enemies, who attributed to him treasonable projects, and he was treated with perhaps injudicious harshness by Sigismund. He attacked and murdered his chief enemy, Zabrezinski, a powerful grandee; and having committed that crime, he declared, together with a great number of adherents, for the Czar of Moscow, who promised to elevate him to the dignity of a sovereign prince of Smolensk. Aided by the traitor, the Muscovites invaded without opposition many provinces of Lithuania, but a brilliant victory obtained by the king in person stopped the progress of the enemy, who were expelled from the Polish frontier, and their own country was invaded. The spirit of insubordination among the army however prevented Sigismund from obtaining any result from his victory, and he was obliged to accept the czar's proposals of peace. It was concluded by a treaty which left the frontier of the belligerent powers in the same state as it was before the war. The families of Gliniski and his adherents were permitted to join them in Muscovy, but many of them were pardoned and restored to their estates and former dignities. [RUSSIA.]

Bohdan, prince of Moldavia and Wallachia, invaded (1510) the southern provinces of Poland; he was however soon defeated, and compelled to conclude a treaty, by which he acknowledged himself the vassal of the kings of Poland. This acquisition became afterwards the origin of long and bloody wars with the Ottoman Porte, but an immediate collision with that power was avoided by the prudence of the king.

Pope Julius II. sent an embassy to Sigismund to compliment him on his recent success, and to propose to him to become the head of a league which that pope proposed to form for the expulsion of the Turks from Europe; but this flattering proposition was declined by the Polish monarch, and a brilliant victory over the Tartars, in which 27,000 of those barbarians were slain, secured for a considerable time the tranquillity of the frontiers. Sigismund married Barbara, daughter of Stephen Zapolya, waywode of Transylvania. The Emperor Maximilian, who watched with jealous influence which Poland exercised over Bohemia and Hungary, and which was increased by Sigismund's marriage, by his intrigues, and particularly by the agency of Gliniski, incited the Czar of Muscovy to attack Poland. In 1514 the Muscovites invaded the frontier of Lithuania with an immense force, and took Smolensk. They advanced into Lithuania with an army of 80,000 men, which however, being met by the Lithuanian general, Prince Ostrogski, with a force of 32,000 men, was completely routed at the battle of Orsha. But this brilliant victory was without any result, as the army soon dispersed, without even taking Smolensk, which remained in the possession of Muscovy at the ensuing peace.

These events induced the Emperor Maximilian to seek the friendship of Sigismund, whom he invited to a congress at Vienna in 1515. This meeting produced no advantage to Poland, and the promises given by the emperor on that occasion to interfere with the Teutonic order and the Muscovites on the behalf of Poland, proved entirely delusive. The matrimonial alliance between an Austrian duke and a Jagellonian princess of Bohemia, which was agreed on there, in the course of time placed the crowns of Bohemia and Hungary on the head of the Austrian monarchs, a circumstance which greatly increased their power, and destroyed the influence that Poland had possessed over those countries.

After the death of his first queen, Sigismund married Bona, the daughter of John Galeazzo Sforza, last duke of Milan. She was a most beautiful and accomplished princess, but of a dissolute and abandoned character. She did much mischief by her ambition and intrigues, although she introduced into Poland many Italian refinements, and the Spanish courtesy, which rendered the Court of Poland one of the most brilliant and refined in Europe.

The troubles produced by the Reformation of Luther in the Prussian provinces induced Sigismund to repress them by severe measures, which were, however, taken from political motives, and not from any religious intolerance; for Sigismund on many other occasions showed himself very tolerant towards the doctrines of the Reformation, which under his reign spread over Poland, saying in answer to Eckius, the celebrated antagonist of Luther, who had sent him Henry VIII.'s book against that reformer, that he wished to be king of goats as well as of sheep. Albert of Brandenburg, grand-master of the Teutonic order, having become a convert to Protestantism, the part of Prussia which was still held by the order was erected into a secular principality, and Albert of Brandenburg was created hereditary duke of Prussia, and became a liege to the crown of Poland.

Thus Poland gave the first example of a diplomatic recognition of a Roman Catholic institution, secularised by the Reformation. Albert's successors continued to recognise the suzeraineté of Poland till the treaty of Velau (1657), by which Prussia was declared an independent dukedom. This was the origin of the dominion of the Brandenburg family over Prussia.

The dukedom of Mazovia was reunited with Poland after the death of the last prince in 1526; and the Wallachians, who attacked Poland in 1530, were defeated with great loss. The affairs of Wallachia requiring the display of a considerable force, the king ordered the arrière-ban of the equestrian order to assemble at Leopold in 1539. According to the account of a contemporary historian (Orichovius), 150,000 militia, splendidly armed, assembled at the royal summons. But this numerous force, instead of marching against the common enemy, raised an outcry against the authority of the king, claiming the redress of certain imaginary wrongs, and the extension of their already overgrown privileges. Thus they separated, without producing any effect whatever, and the memory of this miserable expedition was ridiculed by the nickname of the Chicken War.

Sigismund died in 1548, in the eighty-second year of his age, with the character of a wise, just, and magnanimous prince, notwithstanding that in the latter years of his reign he had become unpopular, owing to the misconduct of his queen Bona, to whom he was dotingly attached. He was succeeded by his son

SIGISMUND AUGUSTUS, who had been elected and crowned during his lifetime, and was only then ten years old. Before his accession to the throne, and even after the death of his first wife, Elizabeth of Austria, he secretly married Barbara Radzivil, widow of Gastold, palatine of Troki, a most beautiful and accomplished lady, and he declared his marriage publicly a few days after he was proclaimed king. This union, although agreeable to the Lithuanians, was strongly opposed by the Poles, who were afraid that it would give the Radzivils and other Lithuanian families an undue influence in the councils of the king. A violent opposition, influenced by the queen-mother, was raised in two diets against the king's marriage, who was required to abandon his wife; and the primate Dziejzgowski promised to distribute on the heads of all the nation the sin of perjury which the king would commit by breaking his marriage oath to Barbara. The firmness of the king quelled that factious opposition, and Barbara was crowned, but she died shortly afterwards, not without strong suspicion of having been poisoned by her mother-in-law Bona Sforza.

At the suggestion of his mother, Sigismund Augustus married Catherine of Austria, the widowed duchess of Mantua. This was a very unfortunate marriage for Poland; it was the cause of Sigismund Augustus dying without issue, of the Jagellonian dynasty becoming extinct, and the throne, which during its existence had been elective only in theory, becoming so in practice.

The most remarkable events of Sigismund Augustus's reign are the acquisition of Livonia, which voluntarily submitted to Poland, in order to save itself from the Muscovite yoke, and the union between Poland and Lithuania, which was effected at the diet of Lublin, 1569. By this arrangement, it was agreed that the deputies and senators of both nations should deliberate in common. The rights of the Polish nobles were extended to those of Lithuania, and the throne of both countries became equally elective; yet the laws, finances, and army remained distinct. This union continued until the final dissolution of Poland.

It was under the reign of Sigismund Augustus that the doctrines of the Reformation acquired a greater influence in Poland, particularly among the higher classes; so that there was a time when its complete triumph was expected by the enemies and equally dreaded by the adherents of Rome. Sigismund Augustus was wavering, and his mind seems to have been much unsettled by the conflict of religious opinions. There are however sufficient grounds to believe that he was friendly to a reform of the national church, as his favours were bestowed chiefly on the open and secret promoters of that measure. It is therefore very probable, that had he lived longer, this great event would have taken place in Poland. He died in 1572.

SIGISMUND III., the son of John III. of Sweden, and a sister of Sigismund Augustus, was born in 1566, and elected king of Poland in 1587, chiefly through the influence of the Zamoyskies. The choice was unfortunate; bigoted in his attachment to the Roman Catholic religion, in which he had been educated, he was ever ready to sacrifice the interests of his kingdom to those of his church. He thus lost his hereditary dominions, and created a general discontent in Poland by his complete subserviency to the Jesuits and the house of Austria, as well as his tendency towards despotism. A civil war ensued; but the insurgents being defeated, the country was restored to peace. An individual named Demetrius, pretending to be the legitimate heir to the throne of Moscow, who was believed to have been murdered by Godoonoff [GODUNOFF], appeared in Poland. Sigismund, expecting that he would subject the Russian church to the supremacy of Rome, secretly favoured him; and many powerful grandees having espoused his cause, he ascended the throne of Moscow, but was afterwards murdered in a popular riot. An impostor however appeared, who pretended that he had escaped from the massacre, and created great disturbance in Muscovy, where Prince Shooyski was elected Czar

instead of the murdered Demetrius. Sigismund, taking advantage of the distracted state of Muscovy, declared war against that country; and the Polish general Zolkiewski, having defeated the Muscovite army and an auxiliary Swedish force, entered Moscow, and concluded a treaty by which Vladislav, eldest son of Sigismund, was elected Czar of Moscow, 1610, on conditions which limited the absolute power that the monarchs of that country hitherto possessed. Shooyski, who had been deposed previous to the entrance of the Poles, was conducted to Poland, where he died in captivity. Zolkiewski made the noblest use of his victory over the Muscovites. Though he entered their country as a conqueror, he restored tranquillity by placing on the throne a Polish prince, and giving to a nation oppressed by the most abject despotism the advantages of a free government, a benefit which was due not to the demands of the Muscovites, who were anxious only to secure the interests of their church, but to the generous and sound policy of the Polish general, who foresaw the dangers which threatened his own country if a prince likely to become its king should possess despotic power in Muscovy. The inhabitants of Muscovy were willing to swear allegiance to their new king; but the accomplishment of that fortunate event, which would have established a constitutional government in Russia, and created a Slavonian empire, and the most powerful state in Europe, was destroyed by the jealousy and incapacity of Sigismund, who instead of confirming those conditions, delayed his confirmation under various pretences, and in the mean time endeavoured to possess himself of some towns and provinces of Russia. The Muscovites, justly irritated by Sigismund's conduct, rose in arms, and a bloody war ensued, during which the Polish general, ill-supported by the king, maintained himself for a long time against the Muscovites, but was finally obliged to retire. The refusal of the diet to grant the necessary supplies produced insubordination in the army, which was unpaid, and the Russians gained great advantages. Sigismund at last made an effort, and sent his son Vladislav to recover, at the head of the army, the throne which was lost through his father's incapacity, and already occupied by Michael Federovich Romanov, who was elected in 1613. Vladislav penetrated to the walls of the capital; and after an unsuccessful attempt to carry it by storm, occupied a strong position in the vicinity: but the insubordination of the army, which was still badly paid, and several impolitic measures of the king, hastened the conclusion of a truce for fourteen years, by which the Czar Michael Federovich was recognised by Poland, which retained Smolensk with other provinces. This truce was urgent, on account of the increasing hostilities with Turkey, which originated chiefly in the disputed possession of Moldavia, where many Polish grandees, related to Mohila, prince of that country, espoused his part against the Turks, who had deposed him from his dignity. The constant inroads of the Tartars into the Polish territory, and the depredations of the Cossaks, subjects of Poland, committed in the Turkish dominions on the Black Sea, rendered the preservation of peace difficult; but war was rendered inevitable by Sigismund's sending a considerable force to Hungary against Bethlen Gabor, prince of Transylvania, who, with the Bohemian insurgents, was besieging Vienna. This produced a diversion favourable to Austria, but involved Poland in an unnecessary quarrel with Turkey. Zolkiewski, whose expedition against Moscow we have mentioned, having encountered the Turks with a very inferior force, was defeated and killed in 1620. The Tartars ravaged the border provinces; and Sultan Osman marched at the head of an army which is said to have amounted, including the Tartars, to 400,000 men, with the view of conquering Poland, which sent to oppose that overwhelming force only 35,000 Poles and 40,000 Zaporogne Cossaks. The Polish army, under the command of Chodkiewich and Lubomirski, occupied a fortified camp near the banks of the Dneister, and resisted all the attacks of the enemy. Peace was concluded on the 7th of October 1621, on condition that everything should remain in the same state as before the war. In the meantime the Swedes took Riga and many other towns in Livonia, but a truce restored a part of their conquests. War with Sweden was renewed in 1625; but Gustavus Adolphus, unable to obtain any success, proposed, on conditions favourable to Poland, a truce of thirty years, during which the dispute about the succession to the Swedish throne should be settled; but Sigismund, seduced by a delusive promise of assistance from Spain, rejected those offers, and was obliged to conclude, in 1629, a truce of six years, on much less advantageous terms.

Sigismund III. died in 1632, in the sixty-sixth year of his age, and his son, Vladislav IV., was elected without opposition. Sigismund's reign of forty-five years was an uninterrupted succession of errors, the immediate effect of which was however in a great degree prevented by the many eminent persons whom Poland produced during his reign; but the seeds of the future calamities of that country were sown by that king. A strong Roman Catholic, he thought more about the conversion of his opponents than about the interests of his country. Protestantism, which was prevalent in many parts of Poland, was almost entirely destroyed by his efforts, and he effected it not by open oppression, which was rendered impossible by the constitution of the country, but by a cunning system of secret persecution, and by every possible means of seduction. Several bishops of the Greek Church having subscribed to a union with Rome (1598), the opponents of that union, which was supported by the king and the priests, were exposed

to much persecution, which scattered the seeds of discontent and future rebellion among the inhabitants of the south-eastern provinces of Poland, and prepared the way for great calamities. Being entirely under the guidance of the Jesuits, the devoted promoters of the interests of Austria, his external policy was constantly subservient to that power, and often at the cost of the interests of Poland. His private character was respectable.

SIGNORELLI, LUCA, a celebrated Italian painter, born at Cortona in 1439, was the son of Egidio di Ventura Signorelli, by the sister of Lazzaro Vasari: he was the pupil of Piero della Francesca, with whom he worked at Arezzo, where he lived with his uncle Lazzaro Vasari.

Vasari mentions many of Luca's works, few of which however still exist; but the altar-piece of St. Onofrio, painted in 1484, is still in the cathedral of Perugia, and there are two other pictures in the cathedral of Volterra; there are also still some pictures by him at Orvieto, Rome, Cortona, at Siena and in its neighbourhood, and in the Florentine gallery. His most celebrated work is the fresco of the Last Judgment in a chapel of the church of the Madonna or cathedral at Orvieto. The painting of this chapel of the Madonna di San Brizio was commenced in 1447 by Fra Giovanni da Fiesole, who however painted only part of the ceiling, and it was completed many years afterwards by Luca Signorelli. The contract concerning the continuation of these frescoes by Signorelli is dated April 5, 1499; he undertook the completion of the ceiling for 200 ducats, and the walls for 600 ducats, besides free lodging, and two measures of wine and two quarters of corn every month. The ceiling was finished in 1500; when the walls were finished is not known, but as the ceiling was done apparently within the first year, and this may from the amount of the remuneration be fairly estimated at about one quarter of the whole, the chapel was probably completed by 1503. The frescoes comprise the history of Antichrist, the Resurrection of the Dead, Hell, and Paradise; and such is the vigour and boldness displayed in these works, especially in the invention and the naked figure and their foreshortenings, that Vasari and many others have pointed to Signorelli as the immediate precursor of Michel Angelo. Vasari says that Michel Angelo always expressed a high admiration of the works of Signorelli, and observes that all may see that he made use of the inventions of Luca in the Last Judgment in the Sistine Chapel, especially in the forms of the angels and demons, and in the arrangement.

Luca Signorelli was one of those who competed for the prize of Sixtus IV. in the Sistine Chapel, which was won by Cosimo Roselli. He retired in his old age to Cortona, where his Italian fame was rivalled by the personal respect that was shown him. He is represented by Vasari as having been a man of very high character, and he adds that he always lived more like a nobleman than an artist: he died in 1521, aged eighty-two. The frescoes of the cathedral are described and in part engraved in Della Valle's 'Storia del Duomo d'Orvieto,' Rome, 1791. The design, though full of power, is hard, and the colouring wants harmony.

SIGNONIO CAROLO was born at Modena, about 1520. He was a pupil of Franciscus Portus, who taught him Greek. He afterwards studied medicine and philosophy at Bologna, and he also visited the university of Pavia. In 1546 he was invited back to Modena to fill the chair of Greek literature, which had become vacant by the departure of Portus. In 1552 he accepted the chair of belles-lettres at Venice, where he became acquainted with Panvinio, who, like himself, was a diligent student of antiquity. His reputation having become widely spread by various works on classical antiquity, he had invitations both to Rome and Padua, at which latter place he accepted the chair of eloquence in 1560. At Padua he again met with Robortello, with whom he had already had a dispute on the names of the Romans, and the disputes between these two scholars, being renewed, were carried to such a pitch that the senate of Venice found it prudent to silence the combatants. [ROBORTELLO.]

Sigionio left Padua in the year 1563 for a place in the university of Bologna, where he received a handsome salary, and was made a citizen. His reputation attracted numerous students to Bologna. Roman antiquity was his special subject, and his instruction was characterised both by comprehensiveness and accuracy. He also occupied himself with middle-age history, and with this object he visited the great libraries and collections of Italy. It was at the request of Pope Gregory XIII. in 1578, that he commenced the ecclesiastical history, of which his friend Panvinio had formed the plan. Sigionio having discovered some fragments of Cicero's 'De Consolatione,' undertook to restore the work, which he completed and published as a genuine work of Cicero. The fraud was detected and exposed by Riccoboni, one of his pupils; but Sigionio, instead of confessing the fact, endeavoured to reply to the arguments of his opponent. So well indeed has he succeeded in imitating the manner and expression of Cicero, that the work 'De Consolatione' long passed for genuine, notwithstanding the criticism of Riccoboni; and Tiraboschi, who maintained this side of the question, was only convinced by seeing some unpublished letters of Sigionio, in which he acknowledges himself to be the author. Sigionio retired to the neighbourhood of Modena, where he died in 1584. His numerous writings were collected by Argellati, Milan, 1732-1737, in 6 vols. folio, to which is prefixed a Life of Muratori. All his works on matters of antiquity are also

contained in the 'Thesaurus Antiquitatum Græcarum et Romanarum' of Grævius and Gronovius.

The following, which are among the principal works of Sigonio, will indicate the general character of his labours: 'Regum, Consulium, Dictatorum ac Censorum Romanorum Fasti, una cum Actis Triumphorum à Romulo rege usque ad Tiberium Cæsarem; in fastos et acta triumphorum explicationes,' fol. Modena, 1550: there is also a second edition of this work, Venice, 1556; 'De Antiquo Jure Civium Romanorum Libri Duo; de Antiquo Jure Italiæ Libri Tres; de Antiquo Jure Provinciarum Libri Tres,' fol. Venice, 1560; 'De Republica Atheniensium Libri Quinque; de Atheniensium et Lacedæmoniorum Temporibus Liber Unus,' 4to, Bologna, 1564; 'De Judiciis Romanorum Libri Tres,' 4to, Bologna, 1574; 'De Occidentali Imperio Libri xx., ab anno 281 ad 575,' fol., Bologna, 1577; 'Historiæ Ecclesiasticæ Libri xiv.:' this work comes down to the year 311, but it was the intention of the author to continue it to 1580.

Sigonio was one of the great scholars to whom we owe much of our knowledge of antiquity, and particularly of Roman history. His industry was unwearied, and his learning was sound and comprehensive. He wrote the Latin language with ease and correctness, and his style is simple and perspicuous. Modern scholars have often been more indebted to Sigonio than they have been willing to allow, and the results of his labours have been used by one person after another, and sometimes without making any discrimination between what is right and what is wrong. Heineccius was largely indebted to him, as will appear from examining his 'Syntagma.' It would require a minute investigation to ascertain how far some of the more recent views of the Roman polity have been suggested by the writings of Sigonio. His remarks on the Agrarian laws, though far from being marked by sufficient clearness and precision, are still worth reading.

\*SIGOURNEY, LYDIA HUNTLEY, one of the most prolific and popular of the female poets of America, was born November 1, 1791, at Norwich, in the state of Connecticut: her maiden name was Huntley, her marital name, according to a practice which obtains pretty widely in the United States, being superadded to instead of superseding her maiden name. While yet a child she displayed her fondness for poetry and facility for rhyming; but she first appeared before the public as an authoress with a volume of 'Moral Pieces in Prose and Verse,' in 1815. Having for awhile supported herself by keeping a school for young ladies, she in 1819 married Mr. Sigourney, a merchant at Hartford, in her native state. In 1822 appeared her most ambitious poem, 'The Aborigines of America,' a descriptive poem in 5 cantos. Her chief subsequent works have been a prose sketch, 'Connecticut, Forty Years Since;' 'Poetic Sketches;' 'Zinzendorf;' 'Minor Poems;' 'Poetry for Children;' 'Pocahontas,' one of her most elaborate poems; 'Olive Leaves;' 'Scenes in my Native Land;' 'Water Drops;' 'Myrtis;' 'Letters to Mothers;' 'Letters to Young Ladies;' and 'Prose Tales.' In 1840 Mrs. Sigourney came to Europe, and stayed some months in England, where the popularity of her poetry insured her a very cordial reception. On her return, she published (in 1842) a warm-hearted account (in prose and verse) of her visit, under the title of 'Pleasant Memories of Pleasant Lands.' In 1850 she published a poem, 'Faded Hope,' occasioned by the death of her only son. In 1854 she published 'Past Meridian.' Mrs. Sigourney has been pretty generally called the American Hemans; and the tenderness and grace of her poetry, its purity of feeling and religious sentiment, can scarcely fail to remind the reader of the poetry of that excellent lady, though it can scarcely perhaps be justly compared with it in vigour and originality of thought, or in splendour of diction. The illustrated edition of her collected poems, in royal 8vo, is noteworthy as a handsome specimen of American typography and American art.

SIKE, or SIECKE, HENRY, an Oriental scholar of some repute, who lived in the latter half of the 17th and the beginning of the 18th centuries. He was a native of Bremen, and a professor of Oriental languages at Utrecht, and afterwards at Cambridge. It appears that owing to some misdemeanour he was to be subjected to punishment, and in order to escape from this disgrace, he put an end to his life by hanging himself in 1712. The only work of any note which he published is the 'Evangelium Infantiæ Christi, adscriptum Thomæ,' 8vo, 1697, a very curious apocryphal gospel. It is reprinted in Fabricius's 'Codex Apocryphus Novi Testamenti,' tom. i., pp. 127-212. Sike also founded, with L. Küster, at Utrecht, the literary periodical called 'Bibliotheca Novorum Librorum,' to which he contributed several papers. (Saxii *Onomasticon Literarium*, v. 490, &c.)

SILIUS ITALICUS, CAIUS. The place of this poet's birth is unknown. It has sometimes been stated that his name is derived from Italica (near Seville) in Spain, and that this was the birthplace of himself or of his ancestors; but to this conjecture we must oppose the silence of Martial, who frequently mentions Silius without speaking of his Spanish origin. The name also ought in that case, according to analogy, to be Italicensis. Silius was of an illustrious plebeian family. He studied oratory, in which Cicero was his pattern; and he also aspired to make himself a poet on the model of Virgil. He is said to have possessed himself of a country-house that had belonged to Cicero, and of one that had belonged to Virgil. (Martial, 'Epig.,' xi. 48.) In the year A.D. 68, in the last year of the reign of Nero, he was consul with M. Valerius Trachalus Turpilianus; and some time after he was governor of the province of Asia, which he is said to have

administered in a creditable manner. He was a friend of Vitellius, and appears to be the Silius Italicus who is mentioned by Tacitus. ('Hist.' iii. 65.) There was, says Pliny ('Ep.,' iii. 7), a rumour that he had acted the part of an accuser or informer under the reign of Nero; but while he enjoyed the friendship of Vitellius he conducted himself with prudence. He finally retired to his estate in Campania, where he devoted himself to poetry and philosophy. Silius was fond of objects of art, and he enriched his residence with statues, paintings, and books. When his old age became troubled with infirmities, he hastened his death by starvation, in which he followed the fashion of those times, when suicide was not uncommon. Silius was a Stoic. The time of his death is fixed at A.D. 100, when he is said to have completed his seventy-fifth year. He was married, and had two children. He enjoyed, says Pliny, unmingled happiness to the day of his death, with the exception of the loss of his younger child.

The only extant work of Silius Italicus is an epic poem on the second Punic war, in seventeen books, entitled 'Punica.' This poem, which may be called an historical epic, comprises the chief events of the war from the commencement of the siege of Saguntum (i. 268), to the defeat of Hannibal in Africa and the triumph of Scipio Africanus. The materials of Silius seem to be chiefly taken from Polybius and Livy, and the poem has consequently a kind of historical value. As a work of art, it has been variously estimated, but the judgment of the younger Pliny ('Ep.' iii. 7) seems to us to be correct: "Silius wrote with more industry than genius." His poem is in fact a very laboured composition, and the labour is apparent. Numerous episodes interrupt the continuity of the narrative. Silius falls short of his model, Virgil, in simplicity and clearness; and he endeavours to make up for force and precision by rhetorical ornament and long-drawn description. Instead of making a picture by a few striking touches, he fills it with detail till the whole is trivial. His invention is poor. There are few passages which excite our sympathies. In short, the poem is a rhetorical history in verse. All his contemporaries however did not judge so unfavourably of him. Martial on several occasions speaks very highly of him, and compares him with Virgil ('Ep.' iv. 14; vi. 64; vii. 63; "perpetui nunquam moritura volumina Sili;," viii. 66; ix. 86; xi. 49, 51): he also celebrates his eminence as an orator. According to Martial, in an epigram written after Silius had enjoyed the consulate, he did not attempt to imitate Virgil till he had acquired distinction as an advocate. Martial mentions the court of the Centumviri as one of the places in which he practised: Pliny the younger also practised in this court. [PLINY.]

The poems of Silius seem to have been forgotten after his death, if we may judge from the silence of subsequent writers as to them. Sidorius Apollinaris is the only writer who mentions them. Poggio is said to have discovered a manuscript of Silius in the library of the convent of St. Gallen, in Switzerland, which was printed at Rome, 1471, folio. Another manuscript was afterwards found at Cologne by Ludwig Carrio, from which the text of Silius was improved. It was to supply the loss of the 'Punica' that Petrarca, as it is said, wrote his 'Africa.' It has been conjectured that Petrarca had a copy of Silius, which he made use of, and carefully suppressed. Such conduct would be quite inconsistent with the character of Petrarca, and one would suppose that a comparison of the two poems would soon determine whether there is any foundation for such a statement.

There are numerous editions of Silius. The editio princeps is that of Rome already mentioned. There is an edition by Drakenborch, Utrecht, 1717, and Mitau, 1775; by Ernesti, Leipzig, 1791-2; and by Ruperti, with a preface by Heyne, Göttingen, 1795-98.

There is an English translation by Thomas Ross, London, 1661, 1672, folio; and a French translation by Le Febvre de Villebrune, Paris, 3 vols. 12mo, 1781.

SILVA Y FIGUEROA, GARCIA DE, was born of illustrious parents at Badajoz, in 1574. At the age of fifteen his father sent him to court, where he entered the household of Philip II. as page. He then joined the Spanish army in Flanders, where he greatly distinguished himself, and obtained the command of a company. Having subsequently shown some talent for diplomacy, he was despatched by Philip III. on an embassy to Shah Abbās, king of Persia, who was willing to conclude a treaty of commerce with Spain. Silva embarked for Goa, where he arrived in 1614; but the governor of that place, who was a Portuguese, fearing lest Silva's mission should lead to an inquiry into the administration of the Spanish possessions in India, threw every impediment in his way, and refused to provide him with a vessel and money to prosecute his journey, as he was ordered to do. Impatient at the delay, Silva embarked on board a native vessel and sailed for Ormuz, which port he entered on the 12th of October, 1617. Thence he sailed to Bander (Bender Abassi) in the dominions of the Shah, where he was well received. He reached Ispahān on the 18th of April, 1618, by the then usual route of Lar and Shirāz. After a short residence in the latter place, Silva started for Kazwin, or Casbin, where Shah Abbās was then holding his court, who received him with every mark of distinction, but would not hear his message until he had himself returned to Ispahān, where he directed Silva to wait till his arrival. Accordingly, after a stay of two months at Kazwin, the Spanish envoy returned to Ispahān, where Shah Abbās arrived shortly after, in July, 1619. He granted Silva an audience; but though he manifested a wish to conclude a commercial treaty, and

to be upon friendly terms with Spain, the Shah refused to subscribe to two conditions stipulated by the ambassador of Philip III., namely, that he should restore some fortresses belonging to Ormuz, which he had lately seized; and that he should exclude all other European nations from trading with his dominions. The negotiations for the treaty being thus suspended, Silva left Ispahan on the 25th of August 1619, and returned by the same route to Goa, where he landed in November 1620. From Goa he sailed to Spain, where he died in 1628.

During his residence in Persia Silva wrote an itinerary of his travels, with an account of such events as came within his observation; and a sketch of the manners and customs of the inhabitants of that empire. This work was never printed in the original Spanish, though a French translation appeared in 1667, under the title of 'L'Ambassade de Don Garcias de Silva Figueroa en Perse, contenant la Politique de ce Grand Empire, les Mœurs du Roi Shah Abbas, et une relation exacte de tous les Lieux de la Perse où cet Ambassadeur a été l'espace de huit années qu'il y a demeuré,' par M. Wicqfort, 4to. Paris, 1667. It is the best old account of Persia that we possess, and is much commended by Chardin. During his residence in Goa, Silva also made an abridgement of Spanish history, which appeared at Lisbon soon after his death: 'Breviarium Historiæ Hispanicæ,' Lisbon, 1628, 4to. A Latin letter of his, dated Ispahan, 1619, and addressed to the Marquis of Bedmar, in which he gave a short account of his travels, was also published at Antwerp: 'Garcia Silva Figueroa, Philippi III. Hispaniarum Indiarumque Regis, ad Persarum Regem Legati, de Rebus Persarum Epistola,' Antw., 1620, 8vo.

**SIMEON OF DURHAM**, an English historical writer who lived about the beginning of the 11th century. He was a teacher of mathematics at Oxford, and was afterwards precentor in Durham cathedral. He wrote a history of the Kings of England from 616 to 1130, for which he was at great pains to collect materials, especially in the North of England, where the Danes had established themselves. The work was continued to 1156 by John, prior of Hexham. 'Simeon of Durham is supposed to have died soon after 1130, when his history terminates. This work is included in Twysden's 'Anglicanæ Historiæ Scriptores Decem.' Simeon also wrote a history of Durham cathedral, which was published in 1732: 'Historia Ecclesiæ Dunelmensis, cui præmittitur T. R. Disquisitio de Auctore hujus Libelli; edidit T. Bedford,' Lond., 1732, 8vo.

**SIMEON SETH** (Σιμεὼν Σήθ), or **SIMEON SETHUS**, or **SIMEON THE SON OF SETH**, the author of several Greek works still extant, lived at Constantinople towards the end of the 11th century. He held there the office of *ὑποβιβραρχης*, or 'Master of the Wardrobe,' in the palace of Antiochus, whence originated his title *Magister Antiochie*, and this gave occasion to the false opinion that he was born at Antioch. His office appears to have given him the charge of the imperial jewels, which were kept in the palace named after the Eunuch Antiochus, who was consul A.D. 431. (Du Cange, 'Glossar. Med. et Inf. Græcic,' tom. i. p. 194, ed. Lugd., 1688, and 'Constantinop. Christ.,' lib. ii., cap. 16, § 5, p. 168, ed. Lutet. Paris, 1680.) Having taken the part of the unfortunate patrician Dalassenus against the usurper Michael of Paphlagonia, the latter banished him from Constantinople, A.D. 1038. He retired to Thrace, and founded on Mount Olympus a monastery, in which he composed several works, and peaceably ended his days. (Georg. Cedreni 'Histor. Compend.,' p. 737, ed. Paris, 1647.) Some time after the foundation of this monastery, Michael Dukas having ascended the throne, A.D. 1071, Simon Seth dedicated to him his work entitled *Σύνταγμα περὶ τροφῶν ἀνδρῶν*, 'Syntagma de Cibariorum Facultate.' This contains an alphabetical list of eatable things and their properties, according to the opinions of Greek, Persian, Agarian (or Arabian), and Indian physicians; and is the more valuable as at that time the trade with the East, and the seeking after foreign and costly articles of food at Constantinople, were very extensive. It is compiled chiefly from the treatise of Michael Psellus on the same subject, and shows us that the Greeks were beginning already to learn *Materia Medica* from the Arabians, to whom in return they imparted their theories. Simeon Seth also goes through the medicines then in use in alphabetical order, and he explains their mode of action according to the elementary qualities of Galen, and their different degrees. He says that Asparagus had been for some time introduced as an article of food (p. 6, ed. Gyrard.), and that it possesses great medicinal virtues. He is the first who speaks of yellow Amber (*ἐμπας*) which comes from a town in India, and which is the best; and also of Ambergris, which is an animal production, coming from fish (p. 8). Apricots (*Βερικοκκα*), he says, are indigestible and produce poorness of blood (p. 9). His work contains the first description of Camphor, which he says is the resin of a very large Indian tree; that it is cold and dry in the third degree; and that it is used with much advantage in acute diseases, especially in inflammations (p. 35). He is also the first who speaks of Musk, of which the best is of a yellow colour, and comes from a town to the east of Khorasan; the black musk comes from India: the properties attributed to this medicine are the same as those given to it in the present day (p. 41). The best Cinnamon comes from Mosul (p. 32). This work was first published, Basil, 1538, Gr. and Lat., 8vo, ed. Lilius Greg. Gyrardus, ap. Mich. Isingrinum. The Latin translation was improved and published separately, 8vo., Basil, 1561, ed. Domin.

BIOG. DIV. VOL. V.

Monthesaurus, ap. Pet. Pernam. The best edition was published Paris, 8vo, 1658, Gr. and Lat., ed. Mart. Bogdan, ap. Dion. Bechet et Lud. Bilanum.

Another of his works, entitled *Σύνοψις καὶ Ἀπάνθισμα Φυσικῶν τε καὶ Φιλοσόφων Δογμάτων*, 'Compendium et Flores Naturalium et Philosophorum Placitorum,' is still in manuscript in several European libraries. A long account of it (extracted from Allatius, 'De Simeonum Scriptis') is given by Fabricius ('Biblioth. Gr.,' tom. xi. p. 323-326, ed. Harles).

But Simeon Seth is better known in the history of literature than in that of medicine, as having translated from the Arabic into Greek the work known under the name of 'Pilpay's Fables,' in which "fifteen moral and political sentences" (says Gibbon, 'Decline and Fall,' chap. 42) "are illustrated in a series of apologues; but the composition is intricate, the narrative prolix, and the precept obvious and barren." [PILPAY.] He is also said to have translated from the Persian a fabulous history of Alexander the Great, which at present exists, says Warton ('Hist. of English Poetry,' vol. i. p. 129), under the adopted name of Callisthenes, and is no uncommon manuscript in good libraries; but it is by no means certain that Simeon Seth is the author of this work. It is entitled *Βίος Ἀλεξάνδρου τοῦ Μακεδόνα καὶ Πράξεις*, 'De Vita et Rebus Gestis Alexandri Macedonis;' and a long passage from the beginning of the work is quoted by Abr. Berkel in the notes to Stephanus Byzantinus (in v. *Βουκεφάλεια*), and by Fabricius, 'Biblioth. Gr.,' tom. xiv., p. 148-150 (ed. Vet.). This fabulous narrative is full (as might be expected) of prodigies and extravagancies, some specimens of which are given by Warton. Of all the romances on the subject of Alexander the Great, this was for some centuries the best known and the most esteemed; and it was most probably (says Warton) very soon afterwards translated from the Greek into Latin, and at length from thence into French, Italian, and German. The Latin translation was printed at Colon. Argentorat., 1489; perhaps before, for in the Bodleian Library there is an edition in 4to, without date, supposed to have been printed at Oxford, by Fred. Corcellis, about the year 1468. It is said to have been made by one Æsopus, or by Julius Valerius; supposititious names, which seem to have been forged by the artifice or introduced through the ignorance of scribes and librarians. This Latin translation however is of high antiquity in the middle age of learning; for it is quoted by Gyrardus Cambrensis, who flourished about the year 1190. It was translated into German by John Hartlieb Moller, a German physician, at the command of Albert, duke of Bavaria, and published at August. Vindel., fol. 1478. Scaliger also mentions ('Epist. ad Casaubon,' 113, 115) a translation from the Latin into Hebrew by one who adopted the name of Joseph Gorionides, called Pseudo Gorionides.

**SIMMIAS** was a native of Thebes, and is said to have been a disciple of Philolaus. He was a friend of Socrates (Plat., 'Crito,' p. 45, B), and is introduced by Plato as one of the speakers in his 'Phædon.' (Diogenes Laertius, ii. 16, 124) mentions the titles of twenty-three dialogues which were in his time attributed to Simmias, (Suidas, v. *Σιμμιᾶς*), but none of his works have come down to us.

A second **SIMMIAS**, a grammarian, was a native of Rhodes, and probably lived about the year B.C. 300. He is said to have written a work on languages, consisting of three books, and a collection of miscellaneous poems, consisting of four books. (Suidas, v. *Σιμμιᾶς*; Strabo, xiv. p. 655.) Some of his poems, which however are of little value, are contained in the 'Anthologia Græca.' (Compare Athen., vii. p. 327; xi. p. 472 and 491.)

A third **SIMMIAS**, who lived about the commencement of the Olympiads, wrote a work called *Ἀρχαιολογία τῶν Σαμίων*, of which nothing has come down to us. Suidas confounds this historian with Simmias the grammarian.

**SIMNEL, LAMBERT.** [HENRY VII.]

\* **SIMON, JOHN**, a distinguished surgeon, and medical officer of the General Board of Health. He was educated for the medical profession at King's College. He became a member of the Royal College of Surgeons in 1838, and was appointed shortly after assistant-surgeon to King's College Hospital, and demonstrator of anatomy in the medical school of King's College. In 1844 he was nominated a Fellow of the College of Surgeons under their new charter. In 1845 he obtained the Astley Cooper prize of 300*l.* for the best essay 'On the Physiology of the Thyroid Gland.' He likewise contributed a paper to the 'Philosophical Transactions' 'On the Comparative Anatomy of the Thyroid Gland.' He is also author of articles in the 'Cyclopædia of Anatomy and Physiology,' and of several papers on various surgical subjects in the 'Medical Times' and the 'Lancet.' On the reconstruction of the medical school at St. Thomas's Hospital he was invited to take the chair of pathology, and to become surgeon to the hospital. It is however in connection with his duties as a medical officer of health, that he is best known. He was the first medical man who held this important position in this country, being appointed medical officer to the city of London in 1848. His annual reports on the sanitary condition of this part of the metropolis have attracted general attention. The ability and energy he displayed in this new public sphere induced the government to offer him the position of medical officer to the General Board of Health. In this position he has published several reports on sanitary questions, which have fully maintained the reputation he had acquired as medical officer of health in the city of London.

2 L

SIMON MACCABÆUS, or MATTHES, surnamed THASI, was the second son of Mattathias, and brother of Judas Maccabæus and Jonathan Apphus. Mattathias, when dying, recommended him to his brethren as their counsellor (1 Macc., ii. 3). He distinguished himself on several occasions during the lives of Judas and Jonathan. (1 Macc., v. 17; x. 74; 2 Macc., viii. 22; xiv. 17). Under the latter he was made, by Antiochus Theos, governor over the coast of the Mediterranean from Tyre to the frontier of Egypt (1 Macc., xi. 59); and here he took the fortified towns of Bethsur and Joppa, and founded Adida, in the plain of Sephela. (1 Macc., xi. 65; xii. 33, 38.)

After the treacherous seizure of Jonathan by Trypho [JONATHAN APPHUS], Simon was chosen by the people as their chief (1 Macc., xiii.); and, according to Josephus ('Antiq.' xiii. 6, 6), as high-priest also. After putting Jerusalem in a state of defence, he marched out to meet Trypho, who did not venture to give him battle, and who was soon after compelled to retreat into winter-quarters in Gilead, where he murdered Jonathan and his two sons. Simon recovered his brother's corpse, and interred it in his father's sepulchre at Modin, and built over it a magnificent mausoleum, which was standing in the time of Eusebius. About this time (B.C. 143) Trypho had murdered Antiochus, and proclaimed himself king. Simon immediately declared for his competitor, Demetrius Nicator, with whom he made a very favourable treaty, whereby Simon was recognised prince and high-priest of the Jews, all claims upon whom for tribute Demetrius relinquished, and consented to bury in oblivion their offences against him. Thus the Jews became once more free and independent, and they began to reckon from this period (170 AER. SELEUC.; B.C. 143-142) a new civil era, which is used on the coins of Simon as well as by Josephus and the author of the First Book of Maccabees (1 Macc., xiii. 41.). The last remains of their bondage to the Syrians were removed in the next year by the surrender of the Syrian garrison in the citadel of Jerusalem.

The succeeding period of peace was employed by Simon in extending and consolidating his power, and improving the condition of his people. He made a harbour at Joppa, established magazines and armouries, improved the laws and administered them with vigour, restored the religious rites, and renewed the treaties of alliance which Jonathan had made with the Romans and Spartans. (1 Macc., xiv., xv.) In the year B.C. 141, the people met at Jerusalem, and registered a public act recounting the services of the house of Mattathias, and recognising Simon and his heirs as perpetual prince and high-priest of the Jews: and this act was afterwards confirmed by Demetrius. (1 Macc., xiv. 35.) After the capture of Demetrius by the Parthians, his successor Antiochus Sidetes renewed the treaty with Simon, allowed him to coin money, and declared Jerusalem a free and holy city. Soon afterwards however Antiochus not only refused to ratify this treaty, but demanded of Simon the surrender of several fortified places, including the citadel on Mount Zion, or the payment of 1000 talents. Simon refused these demands, and Antiochus sent a large army into Palestine, which was soon however driven back by John Hyrcanus and Judas, the sons of Simon (B.C. 139-138). For the next three years the Jews again enjoyed a season of tranquillity, during which Simon occupied himself in inspecting and improving the state of the country. In the course of his tour he visited his son-in-law Ptolemæus, at the castle of Doc, where he and his two sons Mattathias and Judas were treacherously put to death by Ptolemæus, who aimed at the principality of Judea (B.C. 135). He was succeeded by his surviving son John Hyrcanus. [HYRCANUS, JOHN; ASMONÆANS; MACCABEES.]

The coinage of Simon is the first of which we have any historical account among the Jews.

(Josephus, *Antiq.*; Prideaux, *Connection*; Jahn, *Hebrew Commonwealth*; Winer, *Biblisches Realwörterbuch*.)

SIMON MAGUS, that is, the 'magician,' is mentioned in the Acts of the Apostles as having imposed upon the people of Samaria by magical practices. When Philip the Deacon preached the gospel at Samaria, Simon was among those who received baptism at his hands. But when Peter and John came down to Samaria, and Simon perceived that the Holy Ghost was received by those upon whom they laid their hands, he offered them money if they would give him the same power. Peter vehemently rebuked him, and he showed some appearance of penitence (Acts viii. 9-24); but the early Christian writers represent him as afterwards becoming one of the chief opponents of Christianity. According to them he was the founder of the Gnostic heresy, and was addicted to magical practices and to abominable vices. After travelling through several provinces, endeavouring as he went to spread his errors and to damage Christianity as much as possible, he came to Rome, where it is said that he worked miracles which gained him many followers, and obtained for him the favour of Nero. At last, as he was exhibiting in the emperor's presence the feat of flying through the air in a fiery chariot, which he was enabled to perform by the aid of demons, the united prayers of Peter and Paul, who were present on the occasion, prevailed against him, and the demons threw him to the ground. There are also other marvellous stories about his life and doctrines. (Calmet, *Dictionary*; Winer, *Biblisches Realwörterbuch*; Lardner, *Credibility*.)

SIMON MATTHES. [SIMON MACCABÆUS.]

SIMON, RICHARD, was born at Dieppe, in Normandy, May 13, 1638. After he had finished his studies, he entered into the Congre-

gation of the Oratory, and became lecturer on philosophy at the College of Juilly. Being summoned by his superiors to Paris, he applied himself to the study of divinity, and made great progress in oriental learning. There being a valuable collection of oriental manuscripts in the Oratory of Rue St. Honoré, Simon was directed to make a catalogue of them, which he did with great skill. In 1668 he returned to Juilly, and resumed his lectures on philosophy, and two years after published his defence of a Jew whom the parliament of Metz condemned to be burned on the charge of having murdered a Christian child: 'Factum pour le Juif de Metz,' &c., Paris, 1670. In the following year, with a view to show that the opinions of the Greek Church are not materially different from those of the Church of Rome with respect to the Sacrament, he published his 'Fides Ecclesiæ Orientalis,' 8vo, Paris, 1671, and 4to, 1682. This work, which is a translation of one of the tracts of Gabriel, metropolitan of Philadelphia, with notes, Simon gave as a supplement to the first volume of the 'Perpetuity of the Faith respecting the Eucharist,' whose authors he accused of having committed many gross errors, and not having sufficiently answered the objections raised by the Protestant minister Jean Claude, in his 'Reponse au Traité de la Perpétuité de la Foi sur l'Eucharistie,' [CLAUDE, JEAN.] This involved him in a controversy with the writers of Port-Royal, and laid the foundation of that opposition which he afterwards met with from the learned of his own communion. His next publication, which came out under the assumed name of Recared Simeon, was a French translation of the work of Leo of Modena: 'Cérémonies et Coutumes qui s'observent aujourd'hui parmi les Juifs,' 12mo, Paris, 1674. A second edition appeared in 1681, under the name of the Sieur de Simonville, containing also a supplement respecting the Caraites and the Samaritans, and a comparison between the ceremonies of the Jews and the discipline of the Church. In 1675 he published the 'Voyage de Mont Liban,' from the Italian of Dandini, with notes, and about the same time his 'Factum du Prince de Neubourg, abbé de Feschamps, contre les Religieux de cette Abbaye,' in which work, as was usual with him, he took an opportunity to attack the Benedictines. But the work which rendered him most famous is his 'Histoire Critique du Vieux Testament,' which immediately after its publication (8vo, Paris, 1678) was suppressed on the ground that it contained doctrines dangerous to religion and to the Church. The work, however, was so much admired for its learning and criticism, that it was reprinted the year after, and translated into Latin at Amsterdam, 1681, and into English at London, 4to, 1682, by John Hampden. After the publication of his 'Histoire Critique,' Simon left the Congregation of the Oratory, and repaired to Belleville, a village near Caux, where he held a curacy; but in 1682 he resigned his office and removed to Dieppe, and thence to Paris to renew his studies and make arrangements for the publication of other works. In 1684 he published at Frankfurt 'Histoire de l'Origine et du Progrès des Revenues Ecclésiastiques,' under the name of Jerome à Costa, of which a second edition appeared at the same place in 2 vols. 8vo, 1709. In the same year (1684) he printed in London his 'Disquisitiones Criticæ de variis per diversa Loca et Tempora Bibliorum Editionibus,' which was immediately translated into English. In 1688 he published at Frankfurt, under the name of John Reuchlin, 'Dissertation Critique sur la Nouvelle Bibliothèque des Auteurs Ecclésiastiques par Du Pin,' in which he defends some opinions contained in his 'Histoire Critique,' which had been controverted by Du Pin. His next publication was 'Histoire Critique du Nouveau Testament,' 4to, Rotterdam, 1689, an English version of which appeared the same year at London. Besides the above, Simon was the author or editor of many other works. He was unquestionably a man of profound learning and great acuteness, and he contributed in no small degree to lessen the authority of his own church; but a love of controversy, in all its bitterness, and too great a propensity to depreciate and abuse those who happened not to acquiesce in his opinions, rendered him equally obnoxious to Protestants and Roman Catholics. He died at Dieppe, in April, 1712, in the seventy-fourth year of his age.

SIMONIDES was a native of Iulis, in the island of Ceos, and was born about B.C. 556. His father's name was Leoprepes, and his grandfather's Simonides, who was also a poet.

Simonides is said to have obtained great fame as a poet at an early age. He appears to have remained in Ceos till about B.C. 525, when he removed to Athens, where he was honourably received by Hipparchus, and became acquainted with Anacreon and Lasus (Plato, 'Hippiarchus,' p. 228; Ælian, 'Var. Hist.,' viii. 2). After the murder of Hipparchus, he took refuge with the Aleuada and Scopadæ in Thessaly, whose praises he celebrated in some of his poems ('Theocrit.,' xvi. 34, &c., with the Schol.; compare Plato, 'Protagor.,' p. 333). How long Simonides remained in Thessaly is not known; but after the battle of Marathon (B.C. 490) we find him again at Athens. For the next ten years he appears to have lived chiefly at Athens, and to have been actively engaged in the pursuit of his art. After the banishment of Themistocles and the death of Pausanias, with both of whom he lived on intimate terms, he retired to Hieron's court at Syracuse (Ælian, 'Var. Hist.,' ix. 1; iv. 15), where he died, B.C. 467, in his ninetieth year.

Most of the poems of Simonides are lost; but enough have come down to us to enable us to form some opinion of the merits of his poetry, and to justify the panegyrics which the ancient writers bestow

upon him. He was one of the most distinguished of the elegiac poets, and particularly excelled in the pathetic, as we see in his 'Lament of Danaë' and in other remains of his poetry. He is stated to have had the superiority over Æschylus in an elegy which he composed in honour of those who died at Marathon, when the Athenians instituted a contest of the chief poets. But some of Simonides's best poems are epigrams, which species of poetry he carried to greater perfection than any of his predecessors. The Persian war gave constant employment to his muse, as he was frequently employed by the different states of Greece to adorn with inscriptions the tombs of those who fell, and the votive offerings which were dedicated in the various temples. We still possess several of his epigrams belonging to this period. Of these one of the most celebrated is upon the Spartans who fell at Thermopylæ: "Stranger, tell the Lacedæmonians that we are lying here in obedience to their laws;" and another upon the Athenians who fell at Marathon: "Fighting in the van of the Greeks, the Athenians at Marathon destroyed the power of the glittering Medians." Simonides also celebrated the sea-fights of Artemisium and Salamis in two larger poems, which are often referred to by ancient writers, but of which no fragments have come down to us.

The remains of the poems of Simonides have been published by F. G. Schneidewin, under the title of 'Simonides Carminum Reliquæ,' Bruns., 8vo, 1835. The Greek letters  $\Sigma$ ,  $\Psi$ ,  $\Omega$ , are said to have been invented by Simonides, who is also stated to have converted the sign of the aspirate H into a long e.

Simonides of Ceos must not be confounded with Simonides of Amorgus, which is an island not far from Paros. The latter was a contemporary of Archilochus, and flourished from B.C. 693 to 662. He wrote iambics, in which he attacked private persons, and of which a few fragments have come down to us. He also wrote a satirical poem upon women in the iambic metre, which is still extant. The fragments of his poems have been published by Welcker, Bonn, 1835.

(Müller's *History of the Literature of Greece*, p. 125, &c., 140; Bode's *Geschichte der Lyrischen Dichtkunst der Hellenen*, vol. i., p. 318, &c.; vol. ii., p. 122, &c.)

SIMPLICIUS, a native of Tibur, succeeded Hilarius as bishop of Rome, in 467. He had a controversy with Acacius, Patriarch of Constantinople, about precedence. Simplicius dedicated several churches at Rome to particular saints, and he also framed several regulations concerning the discipline of the clergy of Rome. He died in 483.

SIMPLICIUS was a native of Cilicia, and lived in the reign of Justinian. He had been trained in the study of philosophy by Ammonius, and appears to have been engaged in teaching at Athens when Justinian issued the decree which imposed perpetual silence on the few yet remaining votaries of heathen science and superstition in that city. Simplicius and six of his philosophic friends, who were resolved not to abandon the religion of their forefathers, left Athens, to seek in a foreign land the freedom which was denied to them at home. They went to Persia, where Chosroes then reigned, expecting to find all their hopes realised; but when they saw the actual state of affairs in the East, they repented of the steps which they had taken, and declared that they would rather die on the borders of the empire than enjoy the favours and the wealth which the barbarian monarch might bestow upon them. They returned to their country; and Chosroes, in a treaty which he at the time concluded with the Greek emperor, stipulated that the seven philosophers who had visited his court should be exempt from the penal laws which Justinian enacted against his pagan subjects. Simplicius and his friends, after their return, lived in peace and retirement at Athens, where they devoted the remainder of their lives to the study of philosophy, enjoying the reputation of being wise and virtuous men.

Simplicius wrote Commentaries on Aristotle's *Categoriæ*, *Physica*, *De Colo*, and *De Anima*. One of his objects in these commentaries is to reconcile the Platonic and Stoic systems with the Peripatetic school, to which he himself belonged. They are the most valuable of all the extant Greek commentaries on Aristotle; for Simplicius possessed a profound knowledge of his author, as well as of other philosophical writers of antiquity; and as he frequently quotes the opinions of ancient philosophers whose works are no longer extant, his commentaries are a fruitful source for those who wish to study the history of ancient philosophy. His commentaries are printed in some of the early editions of Aristotle; they are also contained in 'Scholia in Aristotelem, collegit Ch. A. Brandis,' Berlin, 1836, &c.

Simplicius also wrote a Commentary on the *Enchiridion* of Epictetus, which for its pure and noble principles of morality has commanded the admiration of all ages. The best separate edition of this commentary is that by Schweighäuser, with a Latin translation, in 2 vols., Leipzig, 1800. It has been translated into English by Dr. G. Stanhope, London, 8vo, 1704; into French by Dacier, Paris, 1715; and into German by Schultheß, Zürich, 1778.

SIMPSON, THOMAS, a distinguished English mathematician, was born at Market-Bosworth in Leicestershire, August 20, 1710. He appears even in his boyhood to have had a strong inclination for acquiring information by reading and conversation; but his father, who was a weaver, intending that he should follow that occupation, endeavoured to divert him from a pursuit which interfered with the labour of his hands. The impulse of genius however prevailed over the remonstrances of the parent, and the youth, having quitted his

father's house, went to reside at Nuneaton, where, in the exercise of his trade, he obtained the means of subsisting, and during the interval of leisure he indulged his taste for the acquisition of knowledge.

Young Simpson was led to the study of mathematics by having accidentally obtained possession of a copy of Cocker's 'Arithmetic,' to which was annexed a short treatise on algebra; and, similarly to what is related of Tycho Brahé, it is said that he applied himself to astronomy from admiration of the science in consequence of the occurrence (in 1724) of a great eclipse of the sun at the time, which had been predicted. It is added that an itinerant pedlar and fortune-teller instructed him at the same time in the mysteries of judicial astrology, and this art he occasionally practised during several years.

While yet a stripling he married a woman about fifty years of age, the widow of a tailor and the mother of two children, of whom the younger was his senior by two years; all the family however appear to have lived together in harmony, Simpson working at his trade by day, and increasing his income by keeping a private school in the evenings. In 1733 he went to reside at Derby, where he continued to follow the united avocations of weaver and schoolmaster, and where he found means to increase his knowledge of mathematics. With arithmetic, geometry, and algebra he was already acquainted; and now, having obtained a loan of Stone's translation of the Marquis de l'Hôpital's 'Analyse des Infinimens Petits,' he was enabled by the force of genius and unremitting application to make himself master of the direct and inverse method of fluxions. Being thus qualified he began in or before the year 1735 to write answers to the mathematical questions in the 'Ladies Diary,' and even to propose questions for solution in that work. Some of the questions have a certain degree of intricacy, and they afford evidence that, at this time, the scientific attainments of Simpson, considering his means, must have been very extensive.

In the year 1735 or 1736 Simpson came to London and took lodgings in Spitalfields, where at first he both worked at the loom and gave instruction as he had done in the country; but his great abilities becoming known to the world, and being perhaps more conspicuous from the obscurity of his situation, he was enabled to give up his trade and devote himself wholly to science. Having brought his family to the metropolis, he established himself there as a teacher of the mathematics, and employed his leisure hours in extending his researches into the highest branches of the science.

On the death of Dr. Derham, Mr. Simpson was, in 1743, appointed professor of mathematics in the Royal Military Academy at Woolwich; and this post he held during nearly all the rest of his life. He is said to have been successful in acquiring the friendship and esteem of his pupils; and while exerting himself diligently in fulfilling his public duties, he found time to compose numerous works on the most abstruse points in the mathematical and physical sciences.

In 1746 he was admitted a fellow of the Royal Society, and on account of the mediocrity of his circumstances he was excused the payment of the admission fee and the annual subscriptions: several of his mathematical papers were printed in the 'Transactions,' but most of them were afterwards republished in the volumes of his works. In 1760, when the present bridge at Blackfriars was about to be built, Mr. Simpson was consulted with other mathematicians concerning the form which would be most advantageous for the arches; he appears in consequence to have taken some pains in investigating the conditions of the stability of vaults, and to have given the preference to those of a hemi-cylindrical form, but he did not live to complete the work, and the results of his researches have never been made public.

As Mr. Simpson advanced in life, he became gradually a prey to melancholy, which appears to have been increased by the influence of bad habits; his mental faculties were at length so far impaired that he became incapable of performing the duties of his professorship, and in the beginning of the year 1761 he was prevailed on to retire to his native town. The fatigues of the journey increased his disorder, and he died May 14, in that year, in the fifty-first year of his age.

Considering the circumstances attending Simpson's early life, and the laborious occupation in which he was afterwards engaged, it is not without surprise that we contemplate the number of works which he wrote, and the profound research those works display. His first publication, which came out in 1737, was entitled 'A New Treatise of Fluxions,' in which the direct and inverse methods, as they were called, are demonstrated with considerable precision and perspicuity, and agreeably to the manner of Newton: the work also contains several useful applications of the calculus to subjects in natural philosophy and astronomy. Thirteen years afterwards, that is, in 1750, he published 'The Doctrine and Applications of Fluxions,' which he dedicated to the Earl of Macclesfield, and which, though it embraces the same subjects as form the body of the 'Treatise,' must from the numerous improvements it contains, be considered as a separate work.

In 1740 Simpson published 'A Treatise on the Nature and Laws of Chance,' besides 'Essays on several subjects in Pure and Mixed Mathematics,' and two years afterwards 'The Doctrine of Annuities and Reversions,' with tables showing the values of single and joint lives. These works were followed, in 1743, by 'Mathematical Dissertations

on Physical and Analytical Subjects,' among which will be found an investigation of the figure of a planet revolving on its axis, and of the force of attraction at the surfaces of bodies which are nearly spherical; also a theory of the tides and of astronomical refractions. These dissertations were dedicated to Martin Folkes, Esq., the president of the Royal Society.

'An Elementary Treatise on Algebra' was published in 1745; 'The Elements of Geometry,' in 1747; and in the next year 'A Tract on Plane and Spherical Trigonometry,' with the 'Theory of Logarithms.' With the 'Elements of Geometry' are given notes in which are suggested improvements on some of the demonstrations of Euclid; but in making occasional observations on the notes given in the first edition of Dr. Robert Simson's 'Euclid,' for example on the note to the first proposition of the eleventh book, he has fallen into some slight inaccuracies which have been remarked on in the succeeding editions of the latter work. A second edition of Thomas Simpson's 'Geometry' was published in 1760.

In the year 1752 he published 'Select Exercises in Mathematics,' in which are given many geometrical and algebraical problems, with their solutions, and a theory of gunnery; but his last and most valuable work was that which is entitled 'Miscellaneous Tracts' (1754). This consists of eight separate papers, four of which relate to pure mathematics, and the others to physical astronomy. The first paper contains investigations for determining the precession of the equinoxes and the nutations of the earth's axis; the second contains equations for correcting the place of a planet in its orbit on the hypotheses of Bullialdus and Seth Ward; and the third is on the manner of transferring the motion of a comet from a parabolic to an elliptical orbit. In the fourth paper are explained the advantages, in point of accuracy, which arise from using a mean of several astronomical observations instead of one single observation. The fifth contains the determination of certain fluents; the sixth, the resolution of algebraic equations by means of surd divisors; and the seventh, a general rule for the resolution of isoperimetric propositions. The eighth paper contains the resolution of some important problems in astronomy; the propositions in the third and ninth sections of the first book of Newton's 'Principia' are demonstrated, and the general equations are applied to the determination of the lunar orbit.

In order that the merit of this last paper may be rightly appreciated, it is necessary to observe that about the year 1745 the modern analysis was first applied to the determination of the elements of the orbits of the earth, moon, and planets; these bodies being supposed to perturbate each other's motions by their mutual attractions, as well as to be subject to the general attraction of the sun. In the prosecution of the research, the mathematicians Clairaut, D'Alembert, and Euler particularly investigated the effect of the sun's attraction in causing a progression of the apogee of the moon's orbit, which progression, being a remarkable consequence of perturbation, was considered as a test of the correctness of the general principle and law of attraction which had been assumed by Newton. The first efforts of M. Clairaut showed an amount of progression in the period of a revolution of the moon about the earth, equal to about half only of that which had been determined from astronomical observations ('Mémoires de l'Académie,' 1747); and it is remarkable that both D'Alembert and Euler obtained at the same time a like erroneous result. This circumstance at first caused some doubts to be entertained of the truth of Newton's hypothesis, that the force of attraction varies inversely as the square of the distance; but the process employed by the three mathematicians being one of successive approximations only, it was afterwards discovered by Clairaut that, on continuing the process, the second step in the approximation produced a quantity nearly equal to that which had been obtained by the first step; and thus the computed progression was found to coincide with the results of observation. Now Simpson, employing a differential equation of motion like that which had been used by the foreign mathematicians, obtained the values of its terms by means of indeterminate coefficients; a method which entirely avoided the inaccuracy resulting from the species of approximation which they had adopted; and thus he arrived at once at the true value of the progression.

The 'Tracts' were not published till seven years after Clairaut's 'Mémoire' came out, and it appears that, in the interval, that mathematician during a visit to England had an interview with Simpson; the latter states however, in the preface to his 'Tracts,' that previously to having had any communication with M. Clairaut, he had discovered that the movement of the moon's apogee could be accounted for on the Newtonian law of gravitation. There is therefore no reason to doubt that Simpson had the merit of arriving at a determination which served to confirm the truth of that law by a process entirely his own: the whole investigation exhibits profound mathematical skill, and fully entitles him to the character of having been one of the ablest analysts, for all the purposes of practical science, of which the country can boast.

Mr. Simpson continued during the whole of his life his contributions to the 'Ladies' Diary,' of which work he was the editor from 1754 to 1760.

\*SIMROCK, KARL, was born on August 23, 1802, at Bonn, in the Prussian Rhein Provinz, where his father kept a music shop. His early education was received in the Lyceum established in Bonn by

the French, when it formed a part of the Confederation of the Rhine. After it again became a portion of the Prussian monarchy, he entered, in 1818, the University there, and studied law, which study he continued at the University of Berlin in 1822, and in 1823 entered the service of the Prussian government in the law department. His study of the law had, however, not diminished his attachment to the study of ancient German poetry and legends, and in 1827 he published a translation of the 'Niebelungenlied,' which has gone through several editions: to this, in 1840, he added translations of 'Twenty Songs of the Niebelungen,' which Lachmann had pronounced to be genuine. In 1830, he published a translation of the 'Armen Heinrich' (Poor Henry), of Hartmann von der Aue; and soon after, an original poem written on the first intelligence of the French revolution in that year, occasioned his dismissal from the Prussian service. Since that time he has devoted himself entirely to his favourite pursuit, for which his poetical talents, his German predilections, and his deep philological knowledge of the language used by the national poets in the middle ages, peculiarly fitted him. His information however is not confined to this branch of literature or to his own tongue. In 1831, in conjunction with Echtermayer and Henschel, was published, 'Quellen des Shakespeare in Novellen, Märchen, und Sagen,' ('Sources of Shakespeare's Plots in Novels, Tales, and Legends'). In this he had the greatest share, and the remarks on the plots, in which he traces them to their remotest sources (sometimes rather fancifully), and produces strong presumptive proof that Shakespeare's knowledge of languages must have been much more extensive than has been generally supposed, was wholly his own. They have been translated into English, edited by Mr. Halliwell, and published by the Shakespeare Society in 1850. In 1832 also he published a single volume entitled 'Der Novellenschatz des Italiener' ('The Novel-Treasure of the Italians'). In conjunction with Wackernagel, he completed, in 1833, a translation, with explanations, of 'Gedichte Walthers von der Vogelweide' ('Poems by Walter of the Birdmeadow,' though Vogelweide is here a proper name), of which the valuable remarks at the end of the second volume are all Simrock's. In 1835, he wrote an original poem called 'Wieland der Schmied. Deutsche Heldenage' ('Wayland the Smith, a German heroic poem'). It consists of twenty-four adventures of the old German hero, written in the ballad style; to which were added a few ballads and romances founded on other legends, all deeply impressed with the spirit of the ancient lays, and of great excellence. They were received with great favour: as were also his 'Rheinsagen aus dem Munde des Volks und Deutscher Dichter; für Schule, Haus, und Wanderschaft' ('Legends of the Rhine, from the Mouths of the People and from German Poets; for Schools, Families, and for Travelling'), of which a third edition was published in 1841. It follows the course of the Rhine from its mouth upwards, illustrating the places by the legends connected with them, some of which are ancient, but the most either by himself or other modern German writers. In 1839, he also wrote 'Das Malerische und Romanische Rheinland' ('The Picturesque and Romantic Rhineland'), a description of the district for the use of travellers and others. He next resumed, and carried out to the extent of many small volumes, 'Die Deutscher Volksbücher' ('Books for the German People'), originally commenced by Marbach, which he continued from 1839 to 1847. The collection contains a large number of German tales and legends, and many which appear to be a common property of Europe, such as 'Patient Grizel,' 'Tristan and Isolde,' &c. In 1842, he published a translation of 'Parzival und Titurel,' by Wolfram von Eschenbach. And in order to give a poetical representation of German heroic poetry, partly by translations and partly by his own productions, he commenced in 1843, 'Das Heldenbuch' ('The Book of Heroes'), of which several volumes have been published. The first contained a translation of 'Gudrun;' and the fourth, fifth, and sixth 'Das Amelungenlied,' an original poem which was opened in his 'Wieland.' In 1844, a collection of his own poems, ballads, and romances were published, which have become extensively popular. Indeed, few poets have ever on so large a scale so thoroughly imbued themselves with the spirit of ancient poetry, and so successfully imitated its simplicity and energy.

In 1850, he was created Professor of the German language and literature in the University of Bonn. In 1851, he published a most successful translation of the 'Lieder des Edda' ('Lays of the Edda'); a 'Handbuch der Deutschen Mythologie,' in 1852; and an 'Alteutsches Lesebuch in neu deutscher Sprache' ('Reading Book of old German Authors in Modern Language'), in 1854.

SIMSON, ROBERT, one of the many mathematicians who have given a lustre to the universities of Scotland, was a son of Mr. John Simson, of Kirton Hall in Ayrshire, and was born in October 1687. About the year 1701 he was sent to the University of Glasgow, where he acquired that proficiency in the learned languages which he retained during all his life, and at the same time he made considerable progress in moral philosophy and theology, being destined by his father for the church. Young Simson soon however found a pursuit more congenial to his taste in the study of mathematics, and chiefly of the ancient geometry: to this subject he applied himself at first as a relief from what he considered as a more laborious occupation, and it became at length almost the sole employment of his life.

In 1710 Mr. Simson made a visit to London, where he remained

about a year, and where he became acquainted with Dr. Halley, Mr. Caswell, Dr. Jurin, and Mr. Ditton; from the conversation of the last gentleman, who was then mathematical master of Christ's Hospital, he gained, not as a pupil, but as a friend, a considerable accession to his knowledge of science.

On the resignation of Dr. Robert Sinclair, Mr. Simson was appointed, in 1711, to succeed him as professor of mathematics in the University of Glasgow. He then applied himself to the duties of his office, and regularly gave lectures on five days in each week during the session of seven months. This practice he continued for nearly fifty years; but in 1758, being then seventy-one years of age, he was obliged to employ an assistant, and three years afterwards the Rev. Dr. Williamson, who had been one of his pupils, was appointed his successor.

In 1735 Dr. Simson published in 4to a 'Treatise on Conic Sections,' and a second edition in 1750: in this work the investigations are conducted agreeably to the spirit of the ancient geometry, and propositions are introduced expressly that it might serve as an introduction to the treatise of Apollonius on the same subject.

By the advice, it is said, of Dr. Halley, Simson early directed his attention to a restoration of the works of the Greek geometers, and his first effort was made on the porisms of Euclid; a branch of the ancient analysis which is only known from the short account in the works of Pappus. In this difficult task however he succeeded, but his 'Tract' on the subject was not published till after his death. Having acquired a sort of key to that analysis, he undertook a restoration of the 'loci plani' of Apollonius, and this he completed about the year 1738. The work was first published in 1746, and Dr. Simson acquired by it the reputation of being one of the most elegant geometers of the age. Another subject on which the peculiar talents of Dr. Simson were exercised, was the 'sectio determinata' of Apollonius, and this also he was so fortunate as to restore. The work appears to have been commenced at an early period of his life, but it was only published, along with the Porisms, after his death.

A perfect edition of the principal part of Euclid's 'Elements' was the next object of Dr. Simson's labours. Numerous errors were known to exist in the Greek copies, and the correction of these was a task worthy of a scholar who had made the ancient geometry almost exclusively his study. An edition of the 'Elements' and of the 'Data' was published in 4to about 1758, and the work has always enjoyed a high character both for precision in the definitions and accuracy in the demonstrations. It is probable that the British mathematician has even corrected errors which existed in the original text, though his high regard for Euclid has led him to assume that all those which he has discovered have arisen from the negligence or unskilfulness of the ancient editors or copyists. Having been very generally used for the purposes of elementary instruction, many editions of this work have since been published.

After his retirement Dr. Simson employed himself chiefly in correcting his mathematical writings; but though he had several works nearly fit for publication, he printed none except a new edition of Euclid's 'Data.' He was seriously ill only during a few weeks previously to his death, which took place October 1, 1768, in the eighty-first year of his age.

In 1776 Earl Stanhope published, at his own expense, and for private circulation, the above-mentioned restorations of Euclid's books of Porisms, and of the two books of Apollonius 'De Sectione Determinata' together with these works the same nobleman published a tract on the limits of ratios and another on logarithms, both of which had also been written by Dr. Simson. An edition of the works of Pappus was found among the Doctor's manuscripts, and was sent by his executors to the University of Oxford.

Dr. Simson, though devoted to geometry, was well acquainted with the modern analysis, and the latter was occasionally the subject of his college lectures; it is however to be regretted that so much of his time was spent in the effort to restore the precise works of the ancients, when it might have been more profitably employed in forming a connected system of their analysis, and in showing its application to the solution of problems relating to physical science. He was never married, and the greater part of his long life was spent within the walls of the college; his hours of study, his exercises, and even his amusements being regulated with great precision. In his disposition he was cheerful and sociable; and his conversation, which was animated, abounded with literary anecdote and good humour, though he was subject, when in company, to occasional fits of absence. He was a man of strict integrity and pure morals, and he appears to have had just impressions of religion, though he never allowed the subject to be introduced in mixed society.

SINCLAIR, SIR JOHN, Bart., third son of G. Sinclair, Esq., heritable sheriff of Caithness, was born at Thurso castle, in the county of Caithness, in the year 1754. He embraced the profession of the law, and was called to the English bar in 1782, having been admitted a member of the faculty of advocates in Scotland in the year 1775.

In 1780 he was chosen member for his native county, and sat in the house during several successive parliaments, sometimes for Caithness, sometimes for other places. He was created a baronet in 1786, and in 1810 was honoured with a seat at the board of privy council. He was likewise a member of several learned societies, and became extensively known by his writings, which, for more than fifty

years, issued rapidly from the press. His death took place at Edinburgh, on December 21, 1835, in the eighty-second year of his age.

Sir J. Sinclair did much for the improvement of his country. He established a very useful society in Scotland in 1791 for improving wool, and his exertions led to the formation of the Board of Agriculture in 1793, of which he was the first president. Among the most important of his numerous works may be mentioned his 'Statistical Account of Scotland'; 'History of the Revenue of Great Britain'; and 'Account of the Northern Districts of Scotland.' The first of these is an extraordinary work, and displays an almost incredible amount of labour and research.

\*MISS CATHERINE SINCLAIR, born in 1800, the sixth daughter of Sir John, after acting during her father's life as his secretary, distinguished herself after his decease by becoming his biographer. She has since acquired an extensive popularity by writing a large number of novels and tales, chiefly religious in tone; among others, 'Modern Accomplishments,' 'Modern Society,' 'The Journey of Life,' 'The Business of Life,' 'Modern Flirtations,' 'Beatrice,' &c., most of which have had a very large circulation. She has also written notices of a tour in Wales, 'Scotland and the Scotch,' 'Shetland and the Shetlanders,' a work called the 'Kaleidoscope,' several children's books, and various others of a miscellaneous character.

SINDIA, FAMILY OF. Two members of this family. Madhajeo Sindia and Dowlut Row Sindia, occupy so conspicuous a place in the history of India, that a brief notice of them seems necessary in this work. The origin of this celebrated family of Mahratta chiefs and princes is comparatively modern. The family were sudras, of the peaceful tribe of koombee, or cultivators. The first who distinguished himself as a soldier was

RANOJEE SINDIA, who was originally a potail, or head man of a village. The Paishwa Bajerow, who succeeded his father Biswanath Row in 1720, appointed Ranojee to the humble office of bearer of his slippers. A circumstance which seemed to show his fidelity and attachment to his master is said to have led to his promotion. Bajerow one day found him asleep on his back, with the slippers firmly clasped to his breast, and was so much pleased as to appoint him immediately to a station in his body-guard. Ranojee Sindia was active and enterprising, and he was rapidly promoted. In 1743 he had risen to the highest rank of Mahratta chiefs; for when Bajerow came into Malwa in that year, Ranojee signed a bond which was required by the emperor of Delhi, Mahomed Shah, as a surety for the good conduct of his master the Paishwa. Before Ranojee died he had obtained the hereditary government of one-half of the extensive province of Malwa. By his wife, who belonged to his own tribe, he had three sons, Jeypah, Duttagee, and Juttabah; and by a Rajpoot woman he had two sons, Tukajee and Madhajeo, of whom

MADHAJEE SINDIA became the head of the family. The date of his birth is uncertain; it was probably about 1743; he was present at the battle of Paniput in 1761 when the Mahrattas were defeated by Ahmed Shah Abdallah and his Afghans, in union with the Rajpoot and Mohammedan princes of northern Hindustan. In this disastrous battle one-half of the Mahratta army, which amounted to 200,000 men, are said to have been slain. Madhajeo Sindia was pursued by an Afghan horseman for many miles, who at length overtook him, and left him for dead in a ditch, after having wounded him with his battle-axe in the knee in such a manner as to render him lame for life. The Sindia family, as well as the other Mahratta chiefs, were for a time deprived of all their possessions in Malwa and Hindustan proper; but this was not of long continuance. The Paishwa Bajerow died in 1761, and was succeeded by his son Madhoo Row, under whom, on the death of Mulhar Row Holkar in 1764, Madhajeo Sindia became the most powerful of the Mahratta chiefs. Besides being the principal leader of the household-horse of the Paishwa, he had a large army of his own; and the return of Ahmed Shah to Cabul, and the contests among the Mohammedan princes under the weak Emperor Shah Alim II., in a few years afforded opportunity to him and his brother Tukajee Sindia to recover their former hereditary government and possessions in Malwa and northern Hindustan.

In 1770, on the invitation of Nujeeb ud Dowlah, who was the minister of Shah Alim, Madhajeo Sindia, Bassajee Row, and Tukajee Holkar entered Hindustan proper with their armies, for the purpose of expelling the Sikhs, who had invaded the emperor's territories. This was soon accomplished; and on the death of Nujeeb ud Dowlah in 1771, Madhajeo Sindia obtained possession of Delhi, whither he invited Shah Alim to return from Allahabad, where he had been living under the protection of the British since 1755. In December the same year the emperor was crowned with great pomp in his capital. He was not however the less in subjection. Madhajeo compelled him to sign a commission by which he appointed the Paishwa vicergerent of the empire; and the Paishwa, by a like commission, appointed Madhajeo his deputy.

In 1772, and again in 1773, with his two colleagues Bassajee and Holkar, Sindia invaded and ravaged Rohilcund, and was preparing to cross the Ganges, when the murder of the young Paishwa Narrain Row, the usurpation of the office by his uncle Ragoba, and the appearance of the British and the nabob of Oude, who had been invited to assist the Rohillas, caused him to return to Poona. A confederation of Mahratta chiefs was got up against Ragoba, who, after a reign of a

few months, was compelled to fly. Sevajee Madhoo, the posthumous son of Narrain Row, was appointed Paishwa, and Ballajee Pundit, better known as Nana Furnavese, was elected dewan, or minister. The British, on the condition of his ceding to them certain territories, came to the assistance of Ragoba, which occasioned a war between them and the Mahrattas. This war, twice interrupted by treaties which were not completed, continued till 1782, when the treaty of Salbhye was concluded, by which Madhajeel Sindia was confirmed in all his possessions, the places taken from him by the British were restored, and he was recognised by them as an independent prince.

Madhajeel Sindia had now time and opportunity to prosecute his plans of aggrandisement. In 1785 he again appeared at Delhi, and by the murder of two of the imperial ministers once more got the emperor into his power; he also conquered Agra and Alyghur, and obtained possession of nearly the whole of the Doab. About this time he engaged in his service a Frenchman, De Boigne, who became of the most essential service to him; for by his assistance he formed an army consisting of troops regularly disciplined, he fought pitched battles, besieged fortresses previously deemed impregnable, gradually subjected raja after raja to contribution, and added district after district to his possessions, till he became master of nearly all the territory south-west from the banks of the Ganges to the Nerbudda. The battle of Meerta, gained by De Boigne in 1790 over the collected forces of Joudpoor, had made Sindia master of that principality as well as of the weaker state of Odeypoor; to these conquests was added soon after that of Jypoor, which was followed in 1792 by the defeat of the troops of Junkajee Holkar, when four corps of regular infantry belonging to Holkar's army, which were commanded by a French officer, were almost utterly destroyed. Sindia himself had returned to Poona in 1791, where he died in 1794.

Madhajeel Sindia's life was one of incessant activity; he was engaged in a series of contests in which he displayed great talent and untiring energy, and by which his power and possessions were gradually extended, consolidated, and confirmed. His habits throughout the whole of his career were those of a plain soldier; he was never seduced by luxury, and he despised the trappings of state. Though occasionally guilty of violence and oppression, his life was for the most part unstained by cruelty; his disposition was mild, and he was desirous of improving the countries which he conquered. Towards the British and those states which were unconnected with the Mahratta government he conducted himself as an independent prince, but in matters relating to the Paishwa he paid the most scrupulous attention to all the forms of humility, of which (as related by Sir John Malcolm) he made a curious display when Sevajee Madhoo Row, at the termination of his minority in 1791, entered upon the duties of his office, and Sindia came to Poona to pay his respects to him.

Madhajeel Sindia had no sons. His brother Tukajee had three, of whom the youngest, Anund Row, became the favourite of his uncle, who adopted Dowlut Row Sindia, the son of Anund Row, as his heir.

DOWLUT ROW SINDIA, at the death of his grand-uncle, was only thirteen years of age. He was opposed by the widows of Madhajeel, who set up another prince in opposition to him, and he was not established in his power till after several battles had been fought. He married, soon after his accession, the daughter of Sirjee Row Gatkia, an artful and wicked man, who became his minister, to whom is doubtless to be ascribed much of the rapacity and cruelty which marked the early part of Dowlut Row's reign. The seizure and imprisonment of Nana Furnavese, the murder of several Erahmins, the plundering of Poona and the neighbouring places under pretence of paying the expenses of his marriage, and the aiding of Casee Row Holkar in the murder of his brother Mulhar Row, are among his early atrocities; in addition to which it should be mentioned, that when Sirjee Row Gatkia defeated Jeswunt Row Holkar in 1801, he plundered the city of Indore, set fire to the best houses, and murdered many of the inhabitants; in 1802 however Holkar defeated Sindia, and re-established himself in Malwa. But the interference of the British at length put a stop to his career of spoliation and bloodshed. The Paishwa Bajerow, having been defeated by Jeswunt Row Holkar in 1802, fled to Bassein, and placed himself under the protection of the British, by a treaty, the chief conditions of which were, that he should cede to them the island of Salsette, and they should restore him to the office of Paishwa.

After many fruitless negotiations with Sindia and the Raja of Berar, the British resident left the court of Sindia, August 3, 1803, and war was commenced on the 8th by an attack on the fortress of Ahmednuggur by Major-General Wellesley, which he soon took, and followed up on the 25th of September 1803, by the battle of Assaye, when he gained a complete victory over the confederated forces of Sindia and the Raja of Berar, which were under the command of the French general Péron, and greatly more numerous than his own. In Hindustan Proper, General Lake, on the 29th of August 1803, defeated Sindia's forces in the Doab, took the strong fort of Alyghur, (and afterwards the cities of Delhi and Agra. In the short period of five months was included a series of the most brilliant and decisive victories; the battles of Delhi and Laswaree, of Assaye and Arghaum, the reduction of the strong forts of Ahmednuggur, Alyghur, Agra, Gwalior, Asserghur, and Cuttack, besides a number of inferior conquests. The two Mahratta chiefs were compelled to sue for peace

separately. Sindia's brigades, which had been trained under De Boigne and Péron, and which amounted to at least 40,000 well-disciplined infantry, were destroyed; 500 guns, cast in the foundries which Madhajeel had established, were taken; and by the treaty of December 1803 he was compelled to cede to the British the Upper Doab, Delhi, Agra, Saharunpoor, Meerut, Alyghur, Etawah, Cuttack, Balasore, the fort and territory of Baroach, &c., amounting altogether to more than 50,000 square miles. By a treaty of defensive alliance, February 27, 1804, he engaged to receive a British auxiliary force in those dominions which he was suffered to retain, which were still large, and which were considerably increased, after the subjugation of Holkar, by the territory of Gohud and the strong fort of Gwalior, which were given up to him by the treaty of Muttra, November 23, 1805, one of the conditions of which treaty was, that his father-in-law Sirjee Row Gatkia should be for ever excluded from his councils.

Dowlut Row Sindia, though he retained for a considerable time no friendly feeling towards his British allies, by whom he had been so severely humbled, never again ventured into a direct contest with them; and after he was freed from the influence of his father-in-law, he became by degrees better disposed towards them; so that in the war of 1818, by which the Mahratta power was entirely destroyed, he prudently kept aloof, though the Paishwa urgently called upon him for his assistance. The consequence was that he retained his territories, and continued on friendly terms with the British till his death, which took place March 21, 1827. He left an army of about 14,000 infantry, 10,000 cavalry, and 250 pieces of ordnance, with territories worth about 1,250,000*l.* per annum.

(Malcolm, *Political History of India*; Malcolm, *Central India*; Mill, *British India*.)

SINGLETON, HENRY, was born in London, 1766. His father died while he was an infant, and he was brought up by an uncle, William Singleton, a miniature-painter, who gave him instruction in drawing: the etchings of Mortimer also were favourite studies with him. At the age of eighteen he obtained the first silver medal for drawing in the Royal Academy; and in 1788 he obtained the gold medal for the best historical painting: the subject was Dryden's 'Ode on Alexander's Feast.'

Singleton painted portrait and history. The first remarkable picture which he produced was a large portrait piece of all the Academicians assembled in the Council Chamber; this picture was painted in 1793. Singleton was for more than half a century a constant exhibitor in the Royal Academy, and he exhibited many attractive pictures, both portraits and historical pieces, but it was not until 1807 that he put down his name as a candidate for the honours of the academy; he was however passed over, and he did not make a second attempt.

Singleton was versatile and ready in invention, though his style of drawing was uniform; and both his pictures and his designs are very numerous; he was much employed by publishers. West has been heard to say—"Propose to Singleton a subject, and it will be on canvas in five or six hours." The range of his works is very great, and comprises figure-pieces of almost every class; many of them have been engraved, and some on a large scale. Among his best works are Christ entering Jerusalem; Christ healing the Blind; John Baptizing; Coriolanus and his Mother; and Hannibal swearing enmity to the Romans; the Storming of Seringapatam; the Death of Tippoo Saib; and the Surrender of Tippoo's Sons; of all of which there are engravings of a large size. In his later years he was almost wholly employed upon an extensive series of illustrations from Shakspeare, which are his principal works: the series includes several designs from each play, and many of them appear to be taken from the favourite dramatic representations of Shakspeare which in Singleton's time were so abundant. He died on the 15th of September, 1839.

SIRI, VITTORIO, born at Parma in 1625, became a priest, and afterwards went to Paris, where he found favour with Louis XIV., who appointed him his almoner and historiographer. Siri wrote a journal in Italian, entitled '*Mercurio Politico*,' which he continued for many years, and as Louis acted for a long period the principal part on the political stage of Europe, he was flattered at having by him a writer who contributed to spread his fame in a foreign language. Siri however was not a fulsome flatterer, and although he often praised Louis, he did not always spare his ministers and other powerful men of that and the preceding reign; and this freedom passed unheeded chiefly from the circumstance of his writing in a language foreign to France, and which was not understood by the people in general. Besides the '*Mercurio Politico*,' the collection of which consists of fifteen thick volumes, Siri wrote another journal, entitled '*Memorie Recondite*,' which fills eight volumes. Le Clerc ('*Bibliothèque Choisie*,' vol. iv., p. 138) observes that both these works contain a vast number of valuable authentic documents. The general style of the writer is however prolix and heavy. Siri died at Paris in 1685. (Corriani, *Secoli della Letteratura Italiana*.)

SIRICIUS, a native of Rome, succeeded Damasus I., as bishop of that city, A.D. 384, under the reign of Valentinian II. We have several letters by him written to various churches on matters both of dogma and of discipline. Some of them are in condemnation of the Priscillianists, Donatists, and other heretics; one is directed to Anycius, bishop of Thessalonica, on matters of jurisdiction; another to

Himerius, bishop of Tarracona, which is one of the oldest instances of a bishop of Rome sending mandates to other churches to be received as ecclesiastical laws. Siricius is also one of the first bishops of Rome who wrote concerning the celibacy of the clergy. He directed that a priest who married a second wife after the death of the first should be expelled from his office. (Platina, 'Lives of the Popes;' Dupin, 'Nouvelle Bibliothèque, Vie de Sirice.') The council of Nicea had already decreed that all clerks who had been married before they took orders should be allowed to retain their wives according to the ancient tradition of the church, but that priests and deacons should not marry after their ordination. Siricius died in 398.

SIRMOND, JACQUES, was born at Riom, in France, October 22, 1559. Having completed his studies at the Jesuits' college at Billom, the first which that society had in France, he adopted the rule of St. Ignatius, and prepared himself, by a diligent study of the ancient languages, for fulfilling the duties of a teacher. When he had finished his novitiate, his superiors required him to proceed to Paris as professor of rhetoric, in which city he remained till 1790, when he repaired to Rome, on the invitation of the Père Aquaviva, General of the Society of Jesuits, who chose Sirmond as his secretary. In this employment he continued sixteen years, during which he examined diligently the manuscripts in the Vatican library, as well as the inscriptions and other remains of antiquity, of which Rome possessed such an abundant supply.

In 1608 the Père Sirmond returned to Paris, and soon afterwards commenced a visitation of the libraries and archives of the convents, and was thereby enabled to save from destruction a great number of documents of the highest value for the history of the middle ages. Sirmond's first publication was the 'Opusculs' of Geoffroi, abbé de Vendôme, in 1610; from which time he continued to add to his reputation by other publications almost every year. Pope Urban VII. invited him to return to Rome, but Louis XIII. retained him in France, and in 1637 made him his confessor. Having left the court on the death of Louis XIII., in 1643, he recommenced his literary labours, which had been somewhat interrupted by attention to the duties of his late dignified office, and continued with unabated ardour to occupy himself in the same way till his death, October 7, 1651, when he was 92 years of age.

Sirmond's 'Ouvrages' were collected and published in 1696, in 5 vols. folio. The first three volumes contain the 'Opusculs' of those Fathers and other ecclesiastical writers which had been published by Sirmond, with prefaces and notes; the fourth volume contains his Dissertations; and the fifth volume contains the works of Théodore Studite. This edition of Sirmond's Works is by the Père la Baume, and is preceded by a Life of Sirmond by the editor, his Funeral Oration by Henri de Valois, and a list of Sirmond's Works in manuscript as well as printed. In this edition are included the Works of Enodius bishop of Pavia, of Sidonius Apollinaris, of Eugenius bishop of Toledo, the Chronicles of Idatius and Marcellinus, the Collections of Anastasius the Librarian, the Capitularies of Charles-le-Chauve and his successors, the works of St. Avit, of Théodulpe bishop of Orleans, &c. Father Sirmond published other ecclesiastical writers besides those included in the above edition, among which are 'L'Histoire de Reims,' by Flodoard, the 'Lettres de Pierre de Celles,' the 'Œuvres' of Radbert, of Théodoret, of Hincmar archbishop of Reims, &c. Sirmond published also a Collection of the Councils of France, 'Concilia Antiqua Gallie,' Paris, 1629, folio.

SISINNIUS, a Syrian by birth, succeeded John VII. as bishop of Rome, A.D. 707, and died twenty days after his election. He was succeeded by Constantine.

SISMONDI, JEAN CHARLES LEONARD SIMONDE DE, was the son of a Protestant minister of the canton of Geneva; he belonged to an ancient family of Tuscan origin, which has become extinct by his death. His ancestors, who were attached to the Ghibelline party, were expelled from Pisa in the 14th century, and took refuge in France, where they remained till the revocation of the Edict of Nantes, when they settled at Geneva. Sismondi was born at Geneva on the 9th of May, 1773. He was first placed at the College of Geneva, where he acquired a sound knowledge of classical literature. From the college he was removed to the Auditoire, where he was enabled to pursue a more extended course of study. His education being completed, he was compelled by the change of fortune which befel his family, owing to the events of the French revolution, to enter as clerk in the counting-house of the firm of Eynard and Co. at Lyon. Filial obedience induced him to undertake a duty to which he was unfitted by his previous habits, and which the highly cultivated disposition of his mind rendered scarcely supportable. The moral training, however, which he underwent in mastering the difficulties of his new situation, and in the regular discharge of its duties, produced an effect which, in after life, he acknowledged to have been eminently beneficial; to it he was also accustomed to ascribe his taste for the science of political economy, which predominates in his historical writings. The revolutionary troubles, which overtook the city of Lyon in 1792, compelled Sismondi to return to Geneva: this city, however, having become annexed to the French republic, proved no asylum from political persecution; his father and himself, though they had carefully abstained from interference in public affairs, were imprisoned; but, as no charge could be brought against them, they were soon after

liberated. In February 1793, he accompanied his family to England, where they intended to settle; but the dilapidated state of his father's fortune rendered their residence in London one of privations to which they had not been accustomed, and, after a year's residence in different parts of England, they returned to their native city. This sojourn in England Sismondi turned to profitable account; besides acquiring a sound knowledge of the language, and studying the English constitution, he examined our commercial and agricultural system, and was thus enabled, when in after-life he published his peculiar views on political economy, to speak from actual knowledge of the merits and defects of the internal policy of England. His return to Geneva afforded him the painful opportunity of studying the science of politics in a far ruder school; it was his lot to behold the peaceful commonwealth where his fathers had enjoyed liberty of conscience and freedom of speech, suffering under the despotism of what was, by courtesy, termed a popular rule. The frenzy of revolutionary feeling had spread over the city of Geneva, and had converted its quiet money-making citizens into turbulent and suspicious demagogues. In the hope of finding a more quiet abode, and in order to afford a shelter to a friend, M. Caila, who had been proscribed by the revolutionists, the family of Sismondi removed to Châtellaine. The capture of their unfortunate friend, and his immediate execution in their presence, rendered their residence at Châtellaine as distasteful as it was dangerous. Having sold the estate they possessed there, they determined upon emigrating to the country of their ancestors, and arrived at Florence in October 1795. They invested the produce of the estate which they had sold in purchasing a small farm at Valchiusa, near Pescia, a spot selected by the young Sismondi. Here he divided his time between the active superintendence of his farm and the preparation of a work which he had projected during his travels, 'Recherches sur les Constitutions des Peuples Libres.' These researches were the groundwork of his subsequent historical writings; and though the 'Researches' themselves were never completed, the ideas which were adopted in them were reproduced in their leading principles in his 'Etudes sur les Constitutions des Peuples libres' published in 1836.

In 1801 appeared at Geneva the first published work of Sismondi, which he had written during the latter part of his stay in Italy; it was entitled, 'Tableau de l'Agriculture Toscane.' To his study of this subject may perhaps be attributed the prominence which, in his writings on political economy, he gives to agriculture. Eminently practical in its details, this interesting treatise discards even the appearance of theory, and contents itself with portraying in true but lively colours the actual state of the country and the manner of life of its inhabitants. The year previous to the publication of this work, Sismondi and his parents had again returned to Geneva, where they lived on the remnant of a once large property, which his father had sacrificed to his confidence in the financial measures of Necker. [NECKER, JAMES.] He published, in 1803, his essay on political economy, with the title 'De la Richesse Commerciale, ou Principes d'Economie Politique appliqués à la Législation du Commerce.' This work he afterwards entirely remodelled, and, in 1819, published it under the title 'Nouveaux Principes d'Economie Politique.' The views of Adam Smith are almost implicitly followed in this treatise, and, as they happened to coincide with the popular notions on the subject, they brought the writer into repute. The vacant chair of political economy in the university of Wilna was soon after offered to him by Count Plattner, who came purposely to Geneva to urge in person his proposal. Though the offer was advantageous in a pecuniary point of view, and the acceptance of it on that account urged upon him by his parents, it was declined by him from his dislike to teaching. It was at this period that Sismondi began to apply himself in earnest to historical investigations, and, by the advice of his mother, a woman of cultivated mind and sound understanding, to devote himself chiefly to the study of history.

His residence at Geneva, though it was enlivened by his enjoying the intimacy of several literary persons, such as Benjamin Constant and Madame De Stäel, could not deliver him from the desponding feelings which are so common to the young author, and, at the suggestion of his excellent mother, he was induced, in 1805, to accompany Madame De Stäel in a tour through Italy. Sympathy of literary tastes had produced the sincerest friendship between these two distinguished writers; the influence of the scenes they visited together in that classical country, and the poetic charm cast upon them by the conversation of the authoress of 'Corinne,' [STÄEL, ANNE GERMAINE DE], fixed the determination of Sismondi to consecrate the past glories of the land of his ancestors in the page of history. The first-fruits of his historical studies appeared in the first two volumes of his 'Républiques Italiennes,' which were published at Zürich, in 1807. His publisher, Gesner, is stated to have dealt hardly with him, and the publication of the subsequent volumes, the last of which appeared in 1818, was transferred to Treuttel and Würtz. A new and more complete edition, in sixteen volumes, appeared during the years 1825 and 1826, both at Paris and Brussels. In the composition of this his first and most important historical work, Sismondi has been blamed for not having made a sufficient use of public archives and private collections; he is, however, acknowledged to have carefully consulted every printed book from which he could derive information. It is to this

conscientious examination of authorities, and the absence of political prejudices, that the value of the 'Républiques Italiennes,' as a faithful historical record, is chiefly due. The style is pleasing and attractive, but, though a good French scholar, he never hesitates to use an unauthorised or even ungrammatical phrase in order to convey his meaning with greater precision. The part of the work, which is generally considered to be most defective, is that which treats of the development of the republican constitutions and the modifications which they afterwards experienced; for the full accomplishment of this portion of his task, Sismondi is said not to have possessed sufficient legal knowledge. While engaged in writing this history he was likewise employed as a contributor to the 'Biographie Universelle,' which was publishing in Paris under the editorship of Michaud. The biographies which he contributed to this valuable work were those of the principal historical personages of Italy, for the composition of which the researches he was then making in Italian history eminently fitted him. Sismondi was accustomed regularly to read the manuscript pages of his history to his mother, and, with the humility of filial obedience, to lend an attentive ear to the corrections she suggested. To her pious care he has gratefully acknowledged himself not a little indebted for the eminence he attained as an author; in his desponding moments she was ever a present comforter, and the rough path to literary fame was smoothed by her counsels and cheered by her example. In 1811 he delivered at Geneva a course of lectures upon the Literature of the South of Europe, which were printed at Paris in 1813, and a third edition, in four volumes, was published in 1829. It comprises an introductory history of the decline of the Latin language and the formation of the languages of Southern Europe, and presents us with a history of Italian, Spanish, and Portuguese literature to the end of the eighteenth century. The portion of this work which treats of the literature of Spain and Portugal is the most imperfect, as the information which it contains is derived from secondary sources. This work has been translated into English by Mr. Thomas Roscoe, and forms two volumes of Bohn's Standard Library.

In 1813 Sismondi visited Paris, which at that time presented an interesting study for a political observer; he there formed an acquaintance with an illustrious brother historian, M. Guizot, who, when, in 1819, he became minister of public instruction, made him the offer of a valuable professorship at Paris, which however he declined. During the Hundred Days a series of letters, which he published in the 'Moniteur,' on the French Constitution, attracted the attention of Napoleon I., who requested an interview with the author. The interesting details of this interview were immediately after reported by Sismondi to his mother, and an abridgment of them may be seen in the 'Quarterly Review' (vol. 72, p. 318-321).

In 1819 Sismondi began his longest, and, as it is by some considered, his best work, 'L'Histoire des Français,' which occupied him till the close of his life. It was not at first the intention of the author to bring down this history to a later period than the Edict of Nantes, which terminates the twenty-first volume; he was induced to continue it, on a more abridged scale, to the period of the Revolution, but he carried it no further than the year 1750. His principal motives for undertaking this important work were, the connection of French history with Italian, and the fact that French literature possessed no history of the kind which could be looked upon as a work of authority. To these motives may be added the great interest which Sismondi evinced in the affairs of a country which he had adopted as his own. He has not, however, allowed his bias in favour of France and the French to interfere with the investigation of truth and the declaration of it. So little indeed did he seek to gratify in it the national vanity, that he has not hesitated to expose the weak foundation on which had rested undisturbed for centuries many traditional incidents in the history of France, which, as they responded to the popular feeling, had been fondly cherished in the memory of the people.

The history is divided into eleven periods: the first three treat of the early races of French kings, the Merovingian, Carolingian, and early Capetian races, to the accession of Louis IX.; the fourth brings it down to the death of Charles IV., 1328; the fifth, from the accession of Philip le Valois to Charles V., 1422; the sixth, from 1422 to 1515; the seventh, and most interesting, presents us with the reign of Francis I., and is a beautiful specimen of historical portraiture, in which the colours, though lively and pleasing, are never exaggerated; the eighth embraces the period of the religious wars of France, which are treated of with an impartiality scarcely to be looked for in a Genevan Protestant; the ninth is the reign of that favourite of French kings, the first of the Bourbons, and here, more perhaps than in any other part of his writings, may be seen the honest spirit by which he was actuated; indeed in his endeavour to be impartial, he has perhaps sometimes been unnecessarily severe on the character of Henri IV. The last three periods embrace the history of France under the Bourbons to the latter period of the reign of Louis XV.

In the year 1830 Sismondi published, in 'Lardner's Cabinet Cyclopædia,' an abridgment, in English, of his 'Républiques Italiennes,' a French edition of this work appeared in Paris in 1832, under the title 'Histoire de la Renaissance de la Liberté en Italie.'

The last and least known of his historical works is entitled 'Histoire de la Chute de l'Empire Romain et du Déclin de la Civilisation.'

This work, which was published at Paris in 1835, embraces the history of 750 years, from A.D. 250 to 1000.

The other writings of Sismondi are, 1, 'Julie Severe,' an historical novel in imitation of Sir Walter Scott, in which he describes the condition of Gaul at the time that Rome was a prey to the barbarians; it was published at Paris in 1822: 2, 'Études sur les Sciences Sociales,' published at Paris in 1836; this work contains a collection of articles which he had previously contributed to various periodicals: 3, 'De la Vie et des Ecrits de Th. Mallet,' 8vo, 1807.

The above is a brief account of the writings of Sismondi; but it would be doing injustice to his memory to omit some of the details of his private life and character which have been recorded by his biographers. Surrounded by a circle of all that was most distinguished in literature, he was conspicuous among them for the amiability of his disposition and the devotedness of his friendship. Though he never reached a state of affluence, he was liberal in contributing to the necessities of the poor, and he is said to have spent considerable sums in the furtherance of causes which had political freedom for their object. Fond of society, he never allowed his inclination to enjoy it to trespass upon the time he had marked out for study, usually nine or ten hours a day. The time he allotted to this object was never broken in upon, except to assist a friend or to alleviate misfortune. As a public character he displayed considerable firmness in the maintenance of his political opinions, and he was careless of the unpopularity which this conduct often entailed upon him.

About the year 1840 he felt the first symptoms of the cruel malady to which he fell a victim, which was a cancer in the stomach. A short journey which he made to England appears to have aggravated his disease; but his sufferings, though intense, scarcely interrupted his application to study, and he may almost be said to have died with the pen in hand. Indeed three days before his death, which occurred on the 25th of June, 1842, he was occupied in correcting the last proof sheets of his 'Histoire des Français.'

Sismondi married, in 1819, Miss Allen, sister to the late Mr. Allen of Cressilly, member of parliament for Pembrokeshire, and to the second wife of Sir James Mackintosh.

SIXTUS I. is recorded as bishop of Rome after Alexander I., about the beginning of the second century of our era, but the precise epoch is not ascertained, and nothing more is known of him.

SIXTUS II. succeeded Stephen I., A.D. 257. He is said to have been by birth an Athenian, and a philosopher of the Academy until he became a convert to Christianity. He suffered martyrdom in the persecution of the Christians under the Emperor Valerianus, in 258.

SIXTUS III. succeeded Celestine I., in 431. He endeavoured, though with little success, to settle the dispute between Cyril, bishop of Alexandria, and John, bishop of Antioch, concerning the Nestorians. Several of his letters are contained in Constant's collection. He died in 440.

SIXTUS IV. (Cardinal Francesco della Rovere), a Franciscan monk, succeeded Paul II. in 1471. He greatly enriched his nephews, or sons, according to some, one of whom was afterwards pope under the name of Julius II. He seized Città di Castello from its lord, Niccolò Vitelli, and took Forlì, Imola, and other places. He afterwards supported the conspiracy of the Pazzi against Lorenzo de' Medici, and his nephew Cardinal Riario was present in the church when Giuliano, Lorenzo's brother, was assassinated. The conspiracy however failed of its principal objects, for Lorenzo was saved, and the conspirators were put to death, including Salviati, archbishop of Pisa, who was one of the leaders. Riario was saved by Lorenzo's interposition, and merely confined for a time. Sixtus, on hearing the news, excommunicated Lorenzo, and all the magistrates of Florence and their abettors, for having hung the archbishop. The clergy of Florence took the part of Lorenzo, and being assembled in convocation or synod held for the occasion, they signed an act of accusation grounded upon depositions and statements of facts proving Sixtus to have been accessory to the conspiracy and the murder of Giuliano. This curious document, the original of which, in the hand-writing of Gentile d'Urbino, bishop of Arezzo, exists in the archives of Florence, is given by Fabroni and Roscoe in their respective biographies of Lorenzo. The expressions used by the clergy of Florence, in speaking of the head of the church, are stronger than any of those used half a century later by Luther and the other reformers. Another document, drawn up by Bartolomeo Scala, chancellor of the republic of Florence, corroborates the statements in the Florentine synod, by giving an historical memorial of all the proceedings of that celebrated conspiracy. Pope Sixtus induced Ferdinand, king of Naples, to join his troops to the papal forces against Florence, but the Florentines braved the storm, until Lorenzo took the bold resolution of proceeding to Naples alone, to plead the cause of his country before King Ferdinand, in which he succeeded. Sixtus, being forsaken by his ally, and alarmed at the same time at the progress of the Turks, who had landed at Otranto, was fain to agree to a reconciliation with the Florentines. In 1482 Sixtus entered into another intrigue with the Venetians, for the purpose of depriving Duke Ercole of Este of his dominion of Ferrara, which he wished to bestow upon Count Girolamo Riario, another of his nephews. This led to a war, in which the king of Naples and the Florentines supported the Duke of Ferrara against the pope and the Venetians. The emperor however interposed, threatening to call

together a general council of the church, upon which Sixtus thought it advisable to detach himself from the Venetians, and make a separate peace with the duke of Ferrara. He then advised the Venetians to do the same, and as they disregarded his counsel, he solemnly excommunicated his late allies. In 1484 however the Venetians made peace also, and a few days after Sixtus died. He was one of the most turbulent and unscrupulous in the long list of pontiffs.

SIXTUS V. (Cardinal Felice Peretti di Montalto) succeeded Gregory XIII. in 1585. His first care was to purge the city and neighbourhood of Rome of the numerous outlaws which the supineness of his predecessors had encouraged. He resorted to summary means, he employed spies and armed men, and he soon extirpated by the sword and the halter the noxious brood. The name of 'Papa Sisto,' as connected with his summary justice, has continued proverbial at Rome to the present day. Being a shrewd politician, he disliked the overgrown power of Spain, and was not displeased at the staunch opposition which Philip II. received from Elizabeth of England, whom Sixtus however formally excommunicated as a heretic. He embellished Rome with numerous and useful structures, among others the present building of the Vatican library (Bocca, 'De Sixti V. Edificiis,' in his 'Bibliotheca Vaticana.') He published a new edition of the Septuagint, 1587, and one of the Vulgate with improvements, 1590; and he himself edited the works of St. Ambrose, and is said also to have superintended an Italian translation of the Bible, which was condemned by the Spanish Inquisition, between which body and Sixtus there was little sympathy. Sixtus died in August 1589. His life has been written by Leti, Tempesti, Robardi, and others. As a temporal prince he was distinguished in his age.

SJÖBERG, ERIK, a Swedish lyric poet of considerable note, is better known under the assumed name of Vitalis, which was the signature to his earliest poems, and which he intended to convey the notion of 'Vita-lis,' 'Life is a struggle.' In his own case the motto was but too well borne out. He was born on the 14th of January 1794, in the parish of Ludgo in Södermanland or Sudermania, and his parents were unequally matched, his father being a common labouring man, and his mother the daughter of a clergyman. The child was of a weakly constitution. It soon became evident that he would not be fitted for hard work, and as he grew up he manifested a love for books and learning. His father thwarted his inclinations, but fortunately for the boy, the schoolmaster of Trosa took an interest in him, and in 1806, when he was removed from his school wrote to some relations of Erik's mother, that the boy was of uncommon capacity, and ought to be encouraged. A small subscription was raised, and Erik was sent to the gymnasium or grammar-school of Strängnäs. A friendship was soon struck up between him and one of the other boys named Nicander, which with some interruptions lasted through life, and their names are still constantly associated in the history of Swedish literature. They were students at Upsal together in 1819, Sjöberg having gone to the university in 1814, when Bruzelius a bookseller projected a new 'Ladies' Calendar,' or as it would be called in England an annual, to compete with that of Atterbom, published by Palmblad [PALMBLAD], which had met with distinguished success. Nicander wrote in the new annual under the signature of August, and Sjöberg under that of Vitalis; and its appearance produced a sensation. From that time they were both poets of note, but their success brought them little pecuniary advantage. Sjöberg was in the habit of walking the streets of Upsal in the coldest weather without a greatcoat, and Palmblad tells us that the practice which was attributed by the ladies to a poetical whim, was owing to sheer poverty, and to a sensitive pride which rendered it impossible for a friend to offer assistance without the certainty of having it resented as an affront. In 1822, however, the Crown Prince of Sweden, the present King Oscar, on a visit to the university of Upsal, had his attention called by Professor Geijer [GEIJER], to the circumstances of Vitalis, and offered him a pension of 200 rix-dollars for his support at the university till he should have taken his degree in philosophy. The poet was prevailed upon to accept it as coming from a public source; but in the following year, from some scruples which were in his mind concerning it, he threw it up, though as deeply steeped in poverty as ever. In 1824 he left the university, and afterwards settled at Stockholm in the dreadful position of a Swedish author seeking to earn his livelihood by his talents. After issuing a few poems and some translations from Washington Irving, and suffering all the evils of extreme poverty, he was attacked by consumption, which had long threatened him, and on the 4th of March 1828, he died in an hospital.

His poems were collected and published in 1828, after his death, by Geijer, with a prefatory memoir, from which and from a memoir by Palmblad, in his 'Biographical Dictionary of eminent Swedes,' the foregoing facts have principally been taken. Palmblad observes that all that Vitalis wrote was either above or below mediocrity. His happiest efforts were in comic verse, and he was remarkable for the freedom of sarcasm in which he indulged with regard to his friends, while with regard to himself he was always sensitive in the extreme. Some of his satire was directed against Nicander, and led to a temporary estrangement, and some against Palmblad, who had not forgotten it and does not appear to have forgiven it when he wrote his biography.

\* SJÖGREN, ANDREAS JOHANN, an eminent philologist, whose labours have chiefly been devoted to the elucidation of the Finnish

family of languages, is by birth a Finn, but first had his attention called to that particular study by Rask the Dane [RASK]. Sjögren was born in the parish of Ithia, in Finland, on the 8th of May, 1794, studied first at Lowisa and Borgo, and then at the university of Abo, and in 1819 went to reside at St. Petersburg as a private tutor. His first work 'On the Finnish Language and Literature,' written in German, appeared at St. Petersburg in 1821; two years afterwards he became librarian of the Romanzov or Rumiantsov public library; and in 1824, he undertook a journey of scientific and literary investigation to Finland, the fruits of which appeared in his 'Notes on the Parishes in Kemi-Lappmark' (Helsingfors, 1828), written in Swedish. A disorder in one of his eyes, for which he was advised to visit the mineral springs of the Caucasus, took him to the south, and during his absence, which lasted from 1835 to 1838, he is said to have mastered the Tatar, the Turkish, the Persian, the Armenian, the Georgian, the Circassian, and the Ossetic languages. His 'Ossetic Grammar and Vocabulary,' in German, occupying a quarto volume, published in 1844, is considered a model of works of the kind. The whole structure of a language which had but five printed books in its literature, is traced with a minute care and accuracy which seem to leave nothing for a subsequent observer. The alphabet used in these five books is, it may be remarked, discarded by Sjögren, who has invented a new alphabet for the Ossetic, consisting of the Russian alphabet, with some additional characters to express familiar sounds. On the publication of this important work, its author, who was already an "adjunct" in the St. Petersburg Academy, was appointed special member for the philology and ethnography of the Finnish and Caucasian nations, and a month after director of the Academical Ethnographical Museum. He has since been a frequent contributor to the 'Bulletin' and 'Mémoires' of the Academy, in which he has made public some interesting researches in the language of Livonia, the product of his journeys to that country in 1846 and 1852.

\*SKARBEK, FREDRIK FLORIAN, COUNT, an eminent Polish writer of fiction and political economy, was born on the 15th of February, 1792, at Thorn, studied from 1805 to 1810 at Warsaw, and completed his studies at Paris. In 1818, at the age of twenty-six, he was appointed Professor of Political Economy at the University of Warsaw, and soon afterwards published works in Polish on 'Political Economy' (4 vols, 1820-21); 'The Theory of Finance' (1824); and the 'Elements of National Economy.' In 1829 he composed a work on the same science in French, the 'Theory of Social Wealth,' ('Théorie des Richesses Sociales' 2 vols, Paris, 1829). His reputation among the general Polish public was however chiefly acquired by his 'Tales and Humorous Writings' ('Powieści i Pisma Humorystyczne'), of which a collection in 6 vols. was published at Breslau in 1840. In the dedication of one of them, 'Tarlo,' addressed to his friend Lukas Golebiowski the historian, he says, that having rigidly allotted its occupation to every hour of the day, and finding that he was often unable to spend those hours intended for 'recreation' in the society of his friends, he resolved on employing them in novel writing, and that these volumes were the result. The tales are lively and interesting in spite of the sober and mechanical character of their origin; and it must be remembered that the best English novels of our time have been produced with a degree of mechanical regularity that till it was achieved would have seemed impossible; that they have been settled beforehand to extend to a certain number of pages with a certain number of lines in each page, and with a definite break at certain intervals, and that these irksome conditions have been fulfilled over and over again without any sign of effort. 'The Journey without an Object,' 'The Small Pleasures of Life,' and 'The Adventures of Dodosynski,' are three of Skarbek's most interesting tales; and he has also gained some reputation as a dramatic poet. Before the Polish insurrection of 1830, he had distinguished himself by his labours with regard to pauperism and the improvement of prison discipline; and since the re-establishment of Russian domination in Poland, he has, holding high office in the government, entirely remodelled the system of the houses of detention of Warsaw, Kalisz, Plock, and Siedletz, the prisons at Warsaw and Sieradz, the houses of refuge and workhouses in Warsaw and elsewhere, and the institution for the reform of juvenile criminals. In 1842 he was appointed President of the Insurance Societies of Poland, and in 1844 President of the Benevolent Institutions.

SKARGA POWESKI, PIOTR, OR PETER, the most eminent preacher whom Poland has ever produced, still retains, after the lapse of a quarter of a thousand years, the title which was given him by his contemporaries, of the Polish Chrysostom. Born in 1536 at Grodziec, a town of Masovia, he took holy orders in 1563, and went to Rome in 1568, to enter the then newly established order of Jesuits. It was after this that he became eminent for pulpit oratory, and the return of Poland to Catholicism is attributed in a great degree by the Roman Catholics to the extraordinary eloquence of Skarga. For twenty-five years he was court preacher to King Sigismund III., to whose violent measures against them the Protestants are more disposed to attribute the decline of Protestantism in Poland. It was in 1612, the culminating point of the reign of Sigismund, when the Poles were in possession of Moscow, that Skarga, who had previously retired from public life, expired in a cell of the house of the Jesuits at Cracow. The Jesuits in general are notorious in the history of Polish literature for the

corrupt taste which they introduced, and the fatal decline of the language under their influence; but Skarga is, on the contrary, the great example of excellence in prose in the period to which he belonged. His work, entitled 'Zywoty Swietych' ('Lives of the Saints'), is regarded as a model of style; it has run through more than twenty editions, and is as popular a book in Poland as Foxe's 'Book of Martyrs' used to be in England. The last edition of his 'Sermons,' in 6 volumes 8vo, was issued by Bobrowicz at Leipzig in 1848. A complete translation of them into Latin by Pieniazek was published at Cracow in 1691. That Skarga was not very scrupulous as to accuracy in respect of facts is shown by a passage in one of these sermons relating to England, in which he states that the Puritans (Puritanowie), who he says out-numbered the Calvinists, did not hold the resurrection of the dead or the immortality of the soul. A long list of works from his pen is given by Niesiecki in the 'Herbarz Polski,' of which three are in Latin and the rest in Polish.

SKELTON, JOHN, an English poet of an ancient Cumberland family, was born somewhere about 1460, but whether in Cumberland or Norfolk is not certain, though the latter county seems the more probable. Very few particulars of his life are known. The first mention of him is in the preface to Caxton's translation of the 'Æneid,' printed in 1490, where he is said to have been lately created poet-laureate in the 'Unyversite of Oxenforde.' This honour was a degree in grammar conferred by universities, and not, as is now the case, an office in the gift of the crown. (Warton, 'Hist. Eng. Poetry,' in the account of Skelton; and Malone, 'Life of Dryden,' i. 83.) Skelton was ordained deacon in 1498, by the Bishop of London, and priest the following year. ('Regis. Savag. Epis. London,' quoted by Bishop Kennet in his collections; Lansdowne MSS.) He was afterwards admitted to an ad eundem degree at Cambridge (where he appears to have been at one time a student, as in his 'Alma parens,' he styles himself "quondam Alumnus" of Cambridge), and allowed to wear the dress ('habitus') given him by the king. This we must suppose to have been some badge of royal favour bestowed on him by Henry VII., to whose son the Duke of York, afterwards Henry VIII., he was tutor, being esteemed so great a classical scholar as to obtain from Erasmus the praise of being "Britannicarum Literarum Decus et Lumen." ('Epistle to Henry VIII.,' prefixed to his 'Epigrams,' 294, 4to, Basil, 1518.) In 1504 we find from his own statement in his poems that he was rector of Diss in Norfolk and curate of Trompington in Cambridgeshire.

In the reign of Henry VIII., if not during the lifetime of his predecessor, he was appointed orator regius, as he styles himself in the title to several of his poems, being, according to Warton, a graduated rhetorician employed in the service of the king, though whether with any salary does not appear; in one place he is called *Reginæ Orator* ('Poems'), in a passage referring probably to the battle of Guinegate, 1513.

Skelton became noted for his coarse but bold invective against Cardinal Wolsey and the clergy in general, but according to tradition, not easily traceable to its source, his own conduct as a priest was far from being creditable. He was esteemed, observes Wood ('Athenæ Oxon.'), in his parish and the diocese more fit for the stage than the pew or pulpit; he is said to have been suspended by the Bishop of Norwich, having been guilty of "certain crimes, as most poets are." (Wood, 'Ibid.') But there is really no authority whatever for these aspersions on Skelton's private or priestly character. He is accused by Fuller of having kept a concubine; but it is affirmed that he was really married (Delafield, 'Anecdotes of celebrated Jesters,' &c., manuscript Bodl., quoted by Bliss, 'Ath. Oxon.'). though he was afraid to publicly own his marriage; a piece of cowardliness for which he is said to have expressed remorse on his death-bed. There appears to be reason to believe that Skelton had in fact some of the free notions respecting the marriage of the clergy and some other subjects entertained by the Reformers. The severe attack upon Wolsey in the poem, 'Why come ye not to Court?' drew upon him the resentment of that great ecclesiastic, who ordered him to be arrested. Skelton took sanctuary at Westminster, under the protection of Abbot Islip, to whom, in 1512, he dedicated the 'Praelonium Henrici Septimi.'

He died in this retreat, June 21, 1529, and was interred in the churchyard, with the inscription, "J. Skeltonius Vates Pierius hic situs est. Animam egit 21 Junii, An. Dom. MDXXIX."

Skelton was much thought of in his day. We have already quoted the praise bestowed on him by Erasmus; and "of the like opinion," says Wood, "were many of his time. Yet the generality saw that his witty discourses were biting, his laughter opprobrious and scornful, and his jokes commonly sharp and reflecting." Among the nobility his patron was Algernon Percy, fifth earl of Northumberland, and he has written a long elegy on the death of that nobleman's father.

Skelton attempted several kinds of poetry, but the larger and better part of it is of a humorous or satirical character; about all of which there is a heartiness, and a sense of enjoyment that are as evidently natural as they are pleasant. In his lightest and briefest snatches of mirthful rhymes, as well as in his longer pieces, there is nothing of formality apparent; every part overflows with an artless freedom and gaiety. His serious poetry, on the other hand, is elaborate, and stately, and dull. Not so dull however as has been represented; but certainly not of a kind to be read for the pleasure it affords. He is wanting in elevation of sentiment, and in pathos. Passages of a

rugged grandeur often occur, but nowhere any which affect the feelings or arouse the passions. His directly religious poems are few; but they are not wanting in a religious sobriety and even solemnity of tone. His elegies are more forced and less impressive. The chief of his poems are his drama or morality of 'Magnificence,' another called the 'Bouge of Court,' the 'Crown of Lawrell,' 'Why come ye not to Court?' a satire against Wolsey; the 'Boke of Colin Clout,' 'Ware the Hawk,' 'The Tunning (or brewing) of Elinor Rumming,' 'Phillip Sparrow,' ("an exquisite and original poem," as Coleridge very truly calls it), &c. In other poems Henry VIII.'s foreign enemies, particularly the Scotch, are the victims of most bitter attacks. According to Caxton in the passage quoted above, Skelton translated the Epistles of Cicero, Diodorus Siculus, and various Latin writers. The structure of his verse is irregular and sometimes tuneless; but there occur passages of rare beauty and harmony. His Latin compositions are written with considerable elegance. Skelton appears to have been one of the earliest authors in this country who addressed themselves to the nation at large, rather than to the nobility or to any particular class. Hence perhaps the often grotesque combination in his works of classical allusions and phraseology, and of doggerel for the unlettered multitude. And hence too he has claims on our regard other than as a poet. The nature of his writings led him to treat of popular manners, of which he has left us some lively pictures sketched with the free hand of an original and a keen observer, and which are especially valuable as belonging to a period midway between Chaucer and Shakspeare. A bold, popular satirist, he was thoroughly imbued with the prejudices of his time; and if he does not go beyond his term, he clearly reflects it. Such a writer must not be overlooked by one who would judge of that age; but he also deserves regard for the share which he had in imparting fixedness to our language, which at the close of the 15th century was in an exceedingly unsettled state.

The Poetical Works of Skelton should be read in the admirable edition of the Rev. Alexander Dyce (2 vols. 8vo, 1848), who for the first time brought the whole of them together, and illustrated them with a body of valuable notes, and also an outline of the life of Skelton separating from it as far as practicable the calumnies with which it had come to be overlaid.

SKINNER, STEPHEN, M.D., a skilful physician and a very learned philologist, was born in 1623 in London or the neighbourhood. He studied in the University of Oxford, where he was a commoner of Christ Church; but the Civil War coming on, he left Oxford without taking a degree, and travelled abroad, occasionally remaining some time at the foreign universities. In 1646 he returned to Oxford, and took the usual academical degrees; after which he again went abroad, living in France, Italy, Germany, and the Netherlands; frequenting the courts of princes and the halls of the universities, being highly esteemed both for his learning and his general deportment. He took the degree of M.D. at Heidelberg, and afterwards at Oxford, in 1656. He then settled at Lincoln, where he engaged in the practice of medicine with great success; but his career was short. In the beginning of autumn in 1667, febrile complaints were very prevalent in Lincolnshire, and he, among others, was fatally attacked. He died on the 5th of September in that year, at the age of forty-four, to the great regret of his friends, to whom the innocence of his life and the cheerfulness of his disposition had endeared him.

His early decease was a great loss also to the world, for he was applying his vast stores of philological knowledge to the illustration of his native language; and had made no inconsiderable progress in a work which was designed to serve as an etymological dictionary of the language. This manuscript came after his death into the hands of Thomas Henshaw, Esq., of Kensington, who had a disposition to the same kind of studies, and who made additions to it. He also superintended the publication of it, which was effected in 1671, in a folio volume, under the title of 'Etymologicon Linguae Anglicanae.' Dr. Skinner's work has the great disadvantage of having been left unfinished by the author, who, it may be presumed, would have struck out, as well as added, as his knowledge advanced and the general principles of philology became more distinctly perceived by him, which would probably have been the case had he proceeded in his work. As it is, it is to be regarded rather as containing anecdotes of the language than as a systematic body of English etymologies; but it contains numerous valuable suggestions, and many later English etymologists have made use of his labours. The etymological part of Dr. Johnson's Dictionary is mainly derived from Skinner and Junius.

SKOVORODÁ (known in the Ukraine under the name of Gregory Sawicz, or Gregory the son of Sava) was born about 1730, of poor parents, in a village near Kiew, where his father was subdeacon or parish clerk. He was admitted at the age of twelve years into the ecclesiastical academy of Kiew, in the capacity of a servant, but was soon allowed to attend the lectures there, in consideration of the talent which he showed. After obtaining the reputation of being the best classical scholar of the place, and in vain soliciting permission to go abroad, he set out on foot, without the knowledge of his superiors, for Pesth, where he commenced the study of the German language, and in six months was able to profit by the lectures. His account of these lectures however shows them to have been very inefficient, and moreover the fame of Wolf was then at its height and attracting

students from every part of Germany to Halle. Skovorodá went to Halle, where he devoted three years to metaphysical and theological studies; and that his country might profit by the advantages which he derived from foreign learning, he made at this time translations from the Homilies of St. Chrysostom, and composed moral fables which have been handed down orally by the inhabitants of the Ukraine, the surest possible test of their popularity. After four years he returned to Kiev, but was not re-admitted into the academy, nor appointed to any post in which his energies might find exercise. Upon this he applied himself to mitigate the persecutions of the United Greeks, concerning whom a few details are necessary.

This sect had arisen in Russia from a kind of politico-religious compact between the Holy See and the sovereign of Russia about the year 1610, for the purpose of reducing Russia under the papal dominion. In order to effect this, the two powers established a medium sect, partly Romanist, partly Greek: the pope sent Jesuits to teach the necessary doctrine; and the emperor Wladislaw imposed this body of doctrine as the creed of the provinces on the border of Russia and Poland, whose situation had already exposed them to the influences of both parties. The Unites (as the members of the Greek Church who acknowledge the supremacy of the pope, are called in Russia) had already appeared in the north of Italy, in Illyria, and Croatia; but nowhere under similar circumstances. In Russia this sect became a sort of rallying-point for the members of both Churches, teaching the Russians gradually to confound distinctions of doctrine, and so to think little of the purer faith and system handed down to them by their ancestors. It has existed to the present day, and so late as 1840 the Emperor of Russia, by a dispensing power as strange as that which he exercised originally, decreed that the United Greeks should exist no more. But in the reign of Catherine II., under which Skovorodá lived, the oppression of the inhabitants of the Ukraine (who had lost the privileges guaranteed to them by Peter the Great after the battle of Poltava) had so far spoiled their disposition, as to render them willing in their turn to oppress any one who was weak enough to fear them. The United Greeks, who had from the commencement of the sect lived under the protection of the throne, were selected as the objects of their persecution. The most rational way of checking these persecutions was to destroy the spirit which gave them birth. To this task Skovorodá applied himself; in the mixed character of priest and minstrel, he proceeded from village to village through his native Ukraine, preaching the words of peace, singing the religious songs which he had composed for them, and inculcating the same truths under the attractive form of fables. Still he constantly refused to head the sect of the Unites, as his object was not to create or foster schism, but merely to give both parties the benefit of his lessons. By this time the influence which he had justly acquired, had pleaded strongly in his favour, and the academy conferred on him the vicarage of his native village. In this station he prohibited all rigour against the persecuted Unites, and endeavoured to gain them over by his doctrines, which were enforced by an eloquence unequalled in the pulpit of South Russia. This at the same time gave an impulse to the clergy of the province, which however unhappily ceased with his death. Even when ordered by the synod, he refused to use the means of persecution, and his refusal led to his ejection from the cure which his exertions had so greatly benefited. His occupation being gone, he resolved to indulge a long-felt desire to visit Rome, the nurse of doctors and confessors, and to view her who, in his eyes, had been glorious as the queen of nations. But almost immediately on his arrival in that city he was recalled by the news of fresh persecutions at home; his works however show what an impression Christian rather than Pagan Rome had left on his mind. His return again checked the fury of the opposite parties; but his exertions, though successful, were only working out his own ruin. The jealousy of the court at St. Petersburg could not allow a single individual, in a cause however humane, to stand in the way of its views. He was considered as a rebel, and orders for his apprehension were issued, which he evaded by taking refuge at the country residence of a noble who had often pressed him to become tutor to his son. This sanctuary of feudal power could not be invaded, even by the imperial authority, and he might still have lived in a diminished sphere of usefulness, but he died at the early age of forty-eight, and traditions say that he foretold his own death the day before it occurred, and dug his grave in the garden, unwilling to give this last trouble to the friends to whom he thought he had long enough been a burden.

He was the only author in Little Russia who had written in prose: his work called 'Symphonon' was a solitary instance of that kind of composition, and it has the advantage over the works written in Great Russia in being formed rather on the ancient Greek model than on that of the Latin or German languages, a style of which Lomonossov was the founder. His translations have been already noticed. Some original essays in the Latin and Russian languages, which remain, show much good taste and elegance, with a great extent of reading, qualifications which were little known in his age or country. With the exception of the common songs of war and love, all traditional songs were almost to the present day attributed by the bandurists (the troubadours of the Ukraine) to Skovorodá.

SLEEMAN, SIR WILLIAM HENRY, K.C.B., the son of Philip

Sleeman, Esq., was born at Stratton, Cornwall, in 1788. In 1808, he became a cadet in the East India Company's service at Bengal. He served in the Nepaulese war of 1812 with distinction; and at its conclusion being laid up with an illness which disqualified him for active employment, he spent fifteen months at the College of Fort William, during which time he made himself master of the history and language of the natives, and prepared himself for a career of future usefulness. In 1816, he commended himself to Lord Moira (afterwards Marquis of Hastings), then Governor General of India, by conducting an inquiry into the claims arising out of the war in Nepal, and in 1820 was appointed agent in the Saugur and Nerbudda districts. Here he employed his energies in the extinction of the atrocious systems of Thuggee and Dacoity, on which he wrote several able pamphlets; he at the same time produced a larger work, entitled 'Military Discipline in our Indian Army.' In 1842, he was commissioned by Lord Ellenborough to report on the condition of Bundelcund; and in 1849 he was promoted to the Residency at Lucknow, by Lord Dalhousie, who employed him in preparing for the reduction of Oude under British laws. As a proof of the necessity for adopting stringent measures, it should be mentioned that while resident at Lucknow, he intercepted a letter sent from the King of Persia to the King of Oude, in which the former spoke hopefully of a Persian invasion of India, and promised in that event to secure to him his throne, on condition of betraying the English into his hands. He also wrote a 'Treatise on Political Economy,' and a 'Review and Analysis of the Peculiar Doctrines of the System of Political Economy founded by Ricardo.' His most popular works, however, are his 'Diary in Oude' (1852), and his 'Rambles and Recollections of an Indian Officer' (1843), a work which has been pronounced by competent authorities to be the best adapted of all existing treatises on British India, to give an Englishman a faithful picture of the actual state of the religious, moral, and social condition of the natives of that country. He lived to see his measures with regard to Oude carried into effect by his successor, Sir James Outram, and to hear of the proclamation of Lord Dalhousie, announcing the actual annexation of that rich and important district. His health gave way towards the close of 1855, and he died at sea on his return to England, February 10, 1856, a few days after having been created a Knight Commander of the Bath, at the special request of Lord Dalhousie, to mark his distinguished services in the cause of religion and humanity by the suppression of Thuggee.

SLEIDAN, JOHN, whose original name was PHILIPSON, was born in 1506 at Sleida, near Cologne, and assumed the name of Sleidan from the place of his birth. After receiving his first instruction in the Gymnasium of his native town, he proceeded successively to the universities of Liège, Cologne, Louvain, Paris, and Orléans, in which he studied law, and attained the degree of licentiate; but feeling a disinclination to practise at the bar, he, while not neglecting his professional studies, paid great attention to classical literature. In 1535 he was recommended to Cardinal du Bellay, the French minister in Paris, whom he accompanied to the diet of Haguenau, where he displayed much aptitude for public business, and he was also for a short time the delegate of Francis I. of France to the diet of Ratisbon. Sleidan had secretly adopted the opinions of Luther, and the edicts of Francis against the partisans of Luther, compelled him to quit his service in 1542. He retired to Strasburg, where the Protestant princes of the Schmalkaldic League appointed him their historian, and the council of the town created him professor of law. In 1545 the Protestant princes next employed him in negotiations with France and England, in which latter country he married. The battle of Mühlberg, gained by Charles V. in 1547, having dissolved the League of Schmalkald, Sleidan was deprived of his employment, but the town of Strasburg settled a pension on him; and in 1551 sent him as a deputy from their town to the Council of Trent, in which he displayed considerable ability. When Maurice of Saxony captured Augsburg the council dispersed, without having effected anything, and Sleidan returned to Strasburg in 1552. On the approach of the French army under Henry II. in the same year, he was sent as deputy to negotiate with him as to the demand of provisions for his army and admission into the town as he had come to their assistance. The latter was refused, the town was garrisoned, and the French retreated. He continued to occupy himself with state affairs till 1555, when the death of his wife brought on a melancholy which incapacitated him for business, and he died on December 31, 1556.

During all his political avocations Sleidan's literary activity was considerable. The chief source of his reputation however arises from his 'De Statu Religionis et Reipublice, Carolo quinto Cesare, Commentarii,' in twenty-five books, which was published in 1555, to which was added a twenty-sixth book, found among his papers after his death, the whole containing the history of the Reformation from 1517, when Luther began to preach, till September 1556. The work is highly valuable for the particularity and faithfulness of the details; for the trustworthy sources from which he drew his facts, as well as from his own personal knowledge of many of them; for its impartiality and fairness, which extorted a favourable judgment even from Pope Paul IV. (though an opposite opinion was given by the Emperor Charles V., who called Sleidan and P. Jovius his liars, as the one had said too much ill and the other too much good of him), and the judgment of the pope has been confirmed. The Latin also is simple and

elegant. The best edition is that by J. G. Böhm, with notes and additions by C. C. Am-Ende, Frankfurt, 1785-86. The work had no sooner appeared than it was translated into German, Italian, and French; and into English in 1560 by John Daws. In 1689 another translation by G. Bohun was published in English, with a continuation to the end of the Council of Trent in 1563. Sleidan also published in 1556 'De Quatuor Summis Imperiis, Babylonicis, Persico, Græco, et Romano, Libri Tres,' which has gone through many editions, been continued by various hands, and translated. His other works were, an abridgment of Froissart's Chronicles in Latin; a translation of the Memoirs of Philip de Comines into the same language; 'Summa Doctrinæ Platonis de Republica et de Legibus,' printed in 1548; and his 'Opuscula,' which were published in 1608.

SLINGELANDT, PETER VAN, was born at Leyden in 1640, and became a pupil of Gerard Douw. He imitated very successfully the highly finished style of his master, whom in this respect he frequently equalled. His colouring is perfectly true to nature, and his chiar'oscuro admirable. Various instances are recorded of his extreme patience in finishing his works. It is related by Houbraken, that he was employed three years, without intermission, on a small picture containing portraits of the family of Meerman, and that he devoted a whole month to the finishing of a ruff. When he introduced a dog, a cat, or a mouse, which he often did, he seemed to have made a point of representing every single hair. It was to be regretted that with all this labour his design and composition are in general indifferent, and far inferior in correctness and expression to his master. His works are however highly valued, as among the best of the Flemish school, and are often mistaken for those of Mieris and Gerard Douw. Very few of this artist's performances are in the galleries of England: one is in Sir Robert Peel's collection; one in the Bridgewater gallery, distinguished, says Dr. Waagen, by the incredible minuteness of detail in the execution, in which it even exceeds Gerard Douw, though far inferior to him in other respects; two are in the private collection of George IV., both of which have been ascribed to G. Douw, and sold as his; and one in the collection of the Marquis of Bute, at Luton House. Slingelandt died in 1691, aged fifty-one.

SLOANE, SIR HANS, BART., was born at Killileagh, in county Down, on the 16th of April 1660. Though a native of Ireland, he was of Scotch extraction, his father Alexander Sloane having been the head of a colony of Scots whom James I. settled in Ulster.

While young his health was delicate, and from his sixteenth to his nineteenth year he suffered from spitting of blood. It was however in his youth, and while living at home, that he imbibed a taste for those pursuits in the cultivation of which he afterwards attained such celebrity. As soon as his health would permit, he repaired to London, and during four years which he spent in the metropolis devoted himself to the study of medicine and the collateral sciences. Strafforth, a pupil of the celebrated Stahl, was his instructor in chemistry, and his fondness for botany brought him acquainted with Ray and Robert Boyle. In 1683 he set out for Paris, and during his stay there attended the anatomical lectures of Duverney and those on botany by Tournefort. On his departure for Montpellier he was furnished by Tournefort with introductions to all the celebrated men at that university. Here he passed a year, spending much of his time in collecting plants, and, after having travelled through Languedoc with the same purpose, returned to London late in the year 1684.

He gave many of the plants and seeds which he had collected to Ray, who described them, and acknowledged his obligations to the donor in his 'Historia Plantarum.' He now settled in London, and the young physician found in the great Sydenham a most valuable friend, who did all in his power to introduce him to practice. In 1685 he was elected a fellow of the Royal Society; and a fellow of the College of Physicians, in April 1687. His attention had been excited when young by the descriptions of the wonderful productions of tropical climates, and the offer of the appointment of physician to the Duke of Albemarle, who was going out as governor to Jamaica, afforded him an opportunity of gratifying his curiosity. He accordingly set sail with the duke on September 12, 1687, and after touching at many of the Caribbee islands, reached Port Royal on the 19th of December in the same year. The death of the duke soon after his arrival diminished Sloane's resources, and compelled him to hasten his return, though he did not leave Jamaica till he had formed in that and the neighbouring islands an immense collection of plants. He arrived in England on the 29th of May 1689, after a residence in Jamaica of only fifteen months.

The plants which he brought with him amounted to 800 species. Of these he gave his friend Mr. Courten whatever he wanted to complete his collection, and the remainder, with other objects of natural history, formed the nucleus of his museum. Success too attended him in practice. He was appointed physician to Christ's Hospital in 1694, and held the office for thirty years; and in 1695 he married a lady of considerable wealth, Elizabeth, daughter of Alderman Langley, by whom he had four children, two of whom died young, while two daughters survived their parents, and carried their wealth to the noble families of Stanley and Cadogan.

In 1693 he was chosen secretary to the Royal Society, and in 1762 was elected one of the vice-presidents. The Academy of Sciences in Paris had conferred on him the title of a foreign associate in 1708.

George I. created him a baronet in 1716, and appointed him physician-general to the forces. He was elected president of the College of Physicians in 1719, and held the office till 1735. In 1727 he was appointed physician to the king, and in the same year had the honour of succeeding Newton in the president's chair of the Royal Society. He had purchased an estate at Chelsea in 1720, and retired thither in 1740, when eighty years old. His time was now passed in entertaining scientific men, and in examining the treasures he had collected. He died, after a short illness, on the 11th of January 1753, in the ninety-third year of his age.

Sir Hans Sloane was a man of a benevolent and generous disposition, and active in all schemes for doing good. During the thirty years that he held the appointment of physician to Christ's Hospital he never kept his salary, but always devoted it to charitable purposes. He was very active in establishing the dispensary set on foot by the College of Physicians for providing the poor with medical attendance and medicines gratuitously, the opposition to which on the part of the apothecaries called forth Garth's talent for satire; but he was so ready to banish the memory of a quarrel, that when he purchased his Chelsea estate in 1720, he presented the Apothecaries' Company with the freehold of their botanic garden. He did all in his power to promote the formation of the colony in Georgia in 1732, and was one of the founders of the Foundling Hospital, and drew up the plans for the management of the children.

Sir Hans Sloane directed that at his death his museum should be offered to the nation for 20,000*l.*, a sum which he says, in a codicil to his will, dated July 20, 1749, did not amount to a fourth part of its real value. This collection, in the purchase of which by government the British Museum originated, was not altogether accumulated by Sir Hans Sloane, but had been greatly increased by the bequest, in 1702, of the museum of his friend Mr. Courten. At the time of his death Sir H. Sloane's cabinet contained 200 volumes of dried plants, and 30,600 other specimens of objects of natural history, besides a library of 50,000 volumes and 3566 manuscripts. His fame however does not rest merely on his collection: he contributed many papers to the 'Philosophical Transactions.' Before he was appointed secretary to the Royal Society, the publication of these Transactions had been suspended for six years; he resumed their publication, and continued to superintend it till 1712. He likewise wrote a pamphlet on sore eyes, which had considerable repute for many years. But his great work was the 'Natural History of Jamaica,' which appeared in 2 vols. fol., with many plates, of which the first volume was published in 1707, and the second twenty years after. The first volume contains an introduction comprising a description of the island, its climate, products, and the diseases of its inhabitants, followed by an account of the plants indigenous there and in other of the West India Islands: the trees and animals are described in the second volume. He mentions in his preface that the whole undertaking had been submitted to Ray, and met with his approval, though it did not receive any emendations from him. A small Latin catalogue of the plants of Jamaica had been published by him in 1696, and serves as a sort of index to the large work. Notwithstanding his diligence in studying natural history, Sir H. Sloane appears not to have fully appreciated the benefits of scientific arrangement; and he contents himself in his writings with referring plants to genera and species already known, and made no attempt to improve the defective classification of that day.

SMART, CHRISTOPHER, was born at Shepburne in Kent, on the 11th of April 1722. He was educated at Durham and Maidstone schools, and at Pembroke Hall, Cambridge, where he was sent on the 30th of October 1739. Here he distinguished himself by his classical attainments; he was elected Fellow of Pembroke Hall, July 3, 1745. He gained the Seatonian prize for five successive years: the subjects of the prize poems were respectively, the Eternity, the Immensity, the Omniscience, the Power, and the Goodness of the Supreme Being. In 1753 he quitted Cambridge on his marriage with Miss Ann Maria Carman, and afterwards resided in London, endeavouring to make a livelihood by trifling literary undertakings. He became engaged in an altercation with Sir John Hill, who criticised his poems; and Smart in revenge published a satire called the 'Hilliad.'

In 1754, in consequence of pecuniary embarrassment and other mortifications, he became deranged, and continued in this condition, with intervals more or less lasting of sanity, till his death, on the 18th of May 1770, in the rules of the King's Bench, where he had been confined in his latter years. Smart translated the *Palms*, *Phædrus*, and *Horace* into prose; and in 1752 published a small collection of poems, to which he made subsequent additions. His productions have sunk into deserved oblivion. He seems to have been a weak improvident man, not destitute of good qualities, such as gained the favour of several of the nobility, and the friendship of Garrick and Johnson, the latter of whom has written an account of him. His poems were printed in 1791.

SMEATON, JOHN, was born, according to most authorities, on the 28th of May, 1724, at Austrope, near Leeds, in a house built by his grandfather, and long afterwards inhabited by his family. His father was an attorney, and brought him up with a view to the legal profession. Our information respecting the domestic history of Smeaton is exceedingly scanty; it amounts to little more than that he very early displayed a taste for mechanical pursuits; delighting, it is

said, even when a child in petticoats, to observe mechanics at work, and to question them respecting their employments. One of his biographers states that his toys were the tools of men; and that, while yet little more than an infant, he was discovered one day on the top of his father's barn, fixing something like a windmill. But passing over such symptoms of precocity, the evidence of which must always be received with caution, we find him, at the age of fourteen or fifteen, constructing a machine for rose-engine turning, and producing neat ornamental boxes, &c. for his friends. He appears to have been but little older when he cut, in a lathe of his own manufacture, a perpetual screw in brass, according to the design of his intimate friend Mr. Henry Hindley of York, with whom he joined enthusiastically in mechanical pursuits. By the age of eighteen years he had attained much practical skill in mechanical operations, and had furnished himself with many tools for performing them.

About this time, in the year 1742, in pursuance of his father's design, young Smeaton came to London, and attended the courts of law at Westminster Hall; but finding the bent of his mind averse to the law, his father yielded to his wishes, and allowed him to devote his energies to more congenial matters. The next circumstance in his history related by his biographers is his taking up the business of a mathematical-instrument maker, about the year 1750, when he was residing in lodgings in Great Turnstile, Holborn. In 1751 he tried experiments with a machine that he had invented for measuring a ship's way at sea; and in 1752 and 1753 was engaged in a course of experiments "concerning the natural powers of water and wind to turn mills and other machines depending on circular motion." From the latter investigation resulted the most valuable improvements in hydraulic machinery. In the construction of mill-work, Smeaton, during the whole of his useful career as a civil engineer, stood deservedly high; and, by his judicious application of scientific principles, he increased the power of machinery impelled by wind and water as much as one-third. The results of these experiments were published in 1759, after he had been able to give them a practical trial; and their value obtained for him the Copley gold medal of the Royal Society in that year. Smeaton had previously, in 1753, been made a member of the Royal Society; and he had made some communications to the 'Transactions' even before that date. In 1754 he visited Holland and the Netherlands; and the acquaintance he thus obtained with the construction of embankments, artificial navigations, and similar works, probably formed an important part of his engineering education.

In 1766 Smeaton commenced the great work which, more than any other, may be looked upon as a lasting monument of his skill—the Eddystone Lighthouse. Two lighthouses had been erected on the Eddystone rock, before the admirable structure of Smeaton; of which the first was swept away in a storm, and the second, which was formed of timber, was destroyed by fire in December, 1755. The immediate re-erection of the beacon being highly important, Mr. Weston, the chief proprietor, lost no time in applying to the Earl of Macclesfield, then president of the Royal Society, for advice as to the person who should be intrusted with the difficult task. The previous structures had been designed by non-professional men; and it was felt now, to adopt the language of Smeaton's narrative, that to erect another "would not so much require a person who had merely been bred or had even rendered himself eminent in this or that given profession; but rather one who from natural genius had a turn for contrivance in the mechanical branches of science." The earl immediately perceived that Smeaton was the man required, and therefore recommended him. Although a great portion of the lease under the provisions of which the lighthouse had been erected was expired, and their interest in the undertaking was consequently limited to a comparatively short time, the proprietors liberally entered into Smeaton's views respecting the superior advantages of a more durable material than timber; and determined on the adoption of his plans for a stone structure of the greatest possible strength. The cutting of the rock for the foundation of the building was commenced on the 5th of August, 1756; the first stone was landed upon the rock June 12, 1757; the building was finished on the 9th of October, 1759, and the lantern lighted for the first time on the 16th. During this time there were 421 days' work done upon the rock.

Smeaton appears to have been by no means fully employed as an engineer for several years after the completion of the Eddystone lighthouse; for in 1764 he became a candidate for the office of a receiver of the Derwentwater estate, the funds of which were, after its forfeiture in 1715, appropriated to Greenwich Hospital. On the last day of that year, chiefly, as he states in his account of the Eddystone lighthouse, through the friendship of the Earl of Egmont and Earl Howe, lords of the admiralty, he was appointed to this office. In this engagement he was happy in being associated with Mr. Walton, the other receiver, who took upon himself the management of the accounts, leaving Smeaton at leisure to devote his attention to improvements and to professional engagements. While he held the receivership he greatly improved the estate, the mines and mills of which required the superintendence of such a man to make them of their full value. Increasing business induced him, in 1775, to desire to relinquish this engagement, but he was prevailed on to retain it about two years longer.

Of the many useful works executed by Smeaton, Ramsgate harbour

perhaps holds, next to the Eddystone lighthouse, the most prominent place. This work was commenced in 1749, but was carried on with very imperfect success until it was placed under his superintendence in 1774. This harbour, being inclosed by two piers, of about 2000 and 1500 feet long respectively, affords a safe refuge for ships where it was much needed, vessels in the Downs having been exposed to imminent risk during bad weather before it was constructed. Smeaton laid out the line of the great canal connecting the western and eastern shores of Scotland, from the Forth to the Clyde, and superintended the execution of great part of it. To his skill, in all probability, the preservation of old London bridge for many years was attributable. In 1781, in consequence of alterations made for the improvement of the navigation, one of the piers was undermined by the stream to a fearful extent. The bridge was considered in such danger that no one would venture to pass over it; and the engineers were perplexed. An express was therefore sent to Yorkshire for Smeaton, who immediately sunk a great quantity of stones about the endangered pier, and thereby preserved it. The Calder navigation was one of the great works which he successfully accomplished; and he provided with much skill for the effect of the impetuous floods to which that river is subject. The Spurn lighthouse at the mouth of the Humber, some important bridges in Scotland, and many other works of like character might also be mentioned.

About 1783, Smeaton's declining health rendered it necessary for him to avoid entering upon many new undertakings. He then devoted much attention to the publication of an account of the Eddystone lighthouse, which was to have been followed by a 'Treatise on Mills,' and other works embodying his valuable experience as an engineer. The former of these was the only work he lived to complete; and it is a volume of great and permanent interest, detailing in the most minute and simple manner every circumstance worthy of record concerning the history or the construction of the lighthouse. It is dedicated to George III., who had taken much interest in the structure; and in the dedication, in explaining the circumstances which had deferred the appearance of the narrative so long after the completion of the building, the author observes, "I can with truth say, I have ever since been employed in works tending to the immediate benefit of your Majesty's subjects: and indeed so unremittingly, that it is not without the greatest exertion that I am enabled even now to complete the publication." He had made some progress in this work before 1763; but it appears to have been laid aside for about twenty years, and was not published until 1791. On the 16th of September 1792, while walking in his garden at Austhorpe, Smeaton was seized with an attack of paralysis; and on the 28th of October he died.

About the year 1771 several friends of Smeaton, engaged in kindred pursuits, formed themselves into a society, which may perhaps be looked upon as the first public recognition of the usefulness of men who have since, under the name of Civil Engineers, done so much in developing the resources of this country. Untoward circumstances led to the dissolution of this society previous to Smeaton's death, but steps were taken to re-organise it before that event took place. The new Society shortly took steps for the publication in a collected form of Smeaton's numerous professional reports; but the work was not completed until 1812. It is in three quarto volumes, to which a fourth was subsequently added, consisting of his miscellaneous papers communicated to the Royal Society, &c. The Society alluded to is mentioned in the first volume of the 'Transactions of the Institution of Civil Engineers' as still existing. The introduction to this volume contains a high eulogium on the talent of Smeaton as an engineer. Alluding to the Eddystone lighthouse, it observes: "This, Smeaton's first work, was also his greatest; probably, the time and all things considered, it was the most arduous undertaking that has fallen to any engineer, and none was ever more successfully executed. And now, having been buffeted by the storms of nearly eighty (now nearly a hundred) years, the Eddystone stands unmoved as the rock it is built on—a proud monument to its great author. Buildings of the same kind have been executed since, but it should always be borne in mind who taught the first great lesson, and recorded the progressive steps with a modesty and simplicity that may well be held up as models for similar writings. His 'Reports' are entitled to equal praise; they are a mine of wealth for the sound principles which they unfold and the able practice they exemplify, both alike based on close observation of the operations of nature, and affording many fine examples of cautious sagacity in applying the instructions she gives to the means within the reach of art." The deliberation and caution always exercised in the works of Smeaton are well worthy of imitation; and to this may be attributed the almost unexampled success of his undertakings. So highly was his judgment appreciated, that he has been called the "standing counsel" of his profession, and he was constantly appealed to by parliament on difficult engineering questions.

His improvements of wind and water mills have been mentioned already. The atmospheric steam-engine of Newcomen was the subject of similar experiments, attended with the like results; although the more important improvements of Watt threw Smeaton's efforts in this way comparatively into the shade. His improvements consisted chiefly in the proportions of the components of the machine; yet they effected so great a saving of fuel, that Boulton and Watt excluded them from their ordinary agreement—which was, to receive for the use of their

patent right one-third of the coal saved by their machine in comparison with those previously used. The low state of the mechanic arts in England led Smeaton, during the early part of Watt's career, to doubt the possibility of his machines being made with the required accuracy.

Smeaton also introduced many improvements in mathematical apparatus, and had an ardent love for science. He was particularly attached to astronomy, and had an observatory at Austhorpe, where, even during the most active part of his career, he occasionally resided.

In person he was of middle stature, broad and strong made, and of good constitution. His manners were simple and unassuming. His temper was warm, but not overbearing; and his social character unimpeachable. Very little is recorded of his private history; but his daughter Mary Dixon, in a letter prefixed to his 'Reports,' gives a pleasing account of his character as a husband, parent, and friend. He was by no means grasping or avaricious, as many anecdotes related of him seem to show. The Empress Catharine of Russia was at one time very desirous of engaging his services, and offered him his own terms; but the Princess Daschkov, by whom the request was communicated, found him to be, as she said, a man who had no price.

SMEDLEY, REV. EDWARD, was born about 1789, and was the son of the Rev. Edward Smedley, who died in 1825, after having been one of the ushers of Westminster school for nearly half a century. The elder Smedley was the author of 'Erin, a Geographical and Descriptive Poem,' published by subscription in 1810. His son was admitted a king's scholar at Westminster in 1800; and thence he removed in due course to Trinity College, Cambridge. He took his degree of B.A. in 1809, as tenth Junior Optime, and, having obtained one of the Member's Classical Prizes in 1810, and again in 1811, was then elected a Fellow of Sidney College. He obtained no fewer than four of the Seatonian Prizes for English poems; the first on the Death of Saul and Jonathan, 1814; the second, on Jephtha, 1815; the third, on the Marriage at Cana, 1827; the fourth, on Saul at Endor, 1828. In 1829, he was collated by Bishop Tomline to a prebend in the cathedral church of Lincoln, the value of which, however, was only 14*l.* a year; and this was the only ecclesiastical preferment he ever obtained. Besides his Seatonian prize poems, he was the author of a poem entitled 'Prescience,' and of some others; and also of a 'History of the Reformed Religion in France,' in five vols., 12mo., and of one volume of a History of France, published under the superintendence of the Society for the Diffusion of Useful Knowledge. At the time of his death he was editor of the 'Encyclopædia Metropolitana;' and he contributed several articles on French biography and English and Roman literature to the earlier volumes of the 'Penny Cyclopædia.' His death took place at Dulwich on the 29th of June, 1836.

\*SMEE, ALFRED, surgeon, distinguished for his acquaintance with electricity and its practical applications. He was educated for the medical profession, and became a member of the Royal College of Surgeons of England in 1840. He is also surgeon to the Bank of England, to the General Dispensary, Aldersgate-street, and to the Central London Ophthalmic Hospital, and was formerly a lecturer at the Aldersgate-street School of Medicine. He has devoted much time to the study of the laws of galvanism, and a galvanic arrangement suggested by him is familiarly known as Smee's battery. He is one of the earliest experimenters on electro-plating, and has written a work on the subject, entitled 'Electro-Metallurgy.' Since then he has devoted himself to the theoretical application of the laws of electricity to the phenomena of life. His views are embodied in a work entitled 'Electro-Biology.' He attributed the potato disease to the attacks of an aphid, and in a work on 'The Potato-Plant—its Uses and Properties,' has developed this theory. He is a copious writer, as the following list of his more remarkable books and papers will indicate:—'Vision in Health and Disease;' 'Accidents and Emergencies;' 'Principles of the Human Mind;' 'Instinct and Reason;' 'Detection of Steel Needles impacted in the Body;' 'Process of Thought adapted to Words and Language;' 'Lectures on Electro-Metallurgy, delivered at the Bank of England;' 'Lecture on the Human Mind at Different Periods of Life.' Mr. Smee was elected a Fellow of the Royal Society in 1841.

SMIRKE, ROBERT, R.A., during his later years the Nestor of the Royal Academy, of which he was a member for fifty-three years, was born in 1751. Originally a painter of coach-panels, he was one of the most distinguished of the English *genre* painters, and had indeed no great rival before the time of Wilkie. His subjects are various, but his favourite author was Cervantes; a great proportion of his pictures are from Don Quixote. Though so long a member of the Academy, he sent few pictures to its exhibitions, and only three before his election as a member, which were Narcissus, and the Lady and Sabina, from Comus, in 1786; and the Widow in 1791. He was elected an Academician in 1792, the year that Reynolds died, and he gave as his presentation picture Don Quixote and Sancho. He contributed two pictures also in this year to the Academy exhibition: The Lover's Dream, and Musidora, from Thomson's Spring and Summer. In 1793 he exhibited Lavinia, from the Autumn of the same poet. Smirke designed much for booksellers, and for annuals and such works, and he was one of the contributors to Boydell's Shakespeare. He painted several pictures from Shakespeare, as Catherine and Petruchio, Juliet

and her Nurse, Prince Henry and Falstaff—"This chair shall be my state, this dagger my sceptre, and this cushion my crown."—The Seven Ages; and others. From Don Quixote he painted Sancho's Audience of the Duchess; The Countess Dolorado discovering the cause of her grief to Don Quixote; The ceremony of beard-washing performed by Don Quixote at the Table of the Duke; Don Quixote addressing the Princess Dulcinea; and The Combat between Don Quixote and the Giants interrupted by the Innkeeper. The last time he exhibited was in 1813: the picture was styled Infancy. In other classes, the following pictures are among his best works:—Infant Bacchus; Psyche; the Plague of Serpents; the Angel justifying Providence, from Parnell's Hermit; the Gipsy; the Fortune-tellers, &c. &c. He died at his house in Osnaburgh-street, Regent's-park, January 5, 1845, in his ninety-fourth year. Smirke was the contemporary of Sir Joshua Reynolds—he was the father of the present Sir Robert and Mr. Sydney Smirke, the architects.

\*SMIRKE, SIR ROBERT, R.A., eldest son of the preceding, was born in 1780. Under his father he received a careful training in art; and having adopted the profession of an architect, he after the usual preparatory studies, made a tour in Italy, Sicily, Greece, and Germany, whence he returned in 1805. His attention was mainly directed to the remains of ancient art, and some of the results of his investigations appeared in Donaldson's 'Antiquities of Athens,' and elsewhere. He also published shortly after his return to England, 'Specimens of Continental Architecture,' folio, Lond., 1806. He was fortunate in early finding influential friends and patrons, through whose good services and his own ability he obtained, while still a young man, rare opportunities of distinguishing himself. His first work (1808-9) was Covent Garden Theatre, an important undertaking to be intrusted to so young a man, but one which, despite of some faults, was worthily carried out. This building was especially noteworthy as almost the first important specimen of the Grecian Doric order in the metropolis, and as having given a marked impulse to the architectural improvements of London. Externally the chief features of this building were a noble tetrastyle Doric portico, and the sculptures in relief by Flaxman. The interior of the theatre was entirely altered in 1847, under the care of Mr. Albano, in order to adapt it to the purposes of the Italian Opera. Its destruction by fire March 5, 1856, need hardly be mentioned. The walls and the portico were suffered to stand for about a year, when they were removed, and Smirke's theatre is now a thing of the past.

Smirke's next building was the Mint, erected in 1811, which, like the theatre, is a Grecian Doric edifice, but unlike that has a rusticated basement. It is a neat unpretending but substantial-looking pile of three stories, having a centre with attached columns supporting a pediment, and wings. A still more important work was the new Post-Office, St. Martin's-le-Grand, commenced in 1823, and completed in 1829. This vast pile has a frontage of 390 feet; but, though an insulated building, it is the St. Martin's-le-Grand façade alone which makes any pretension to architectural display; and this is confined to the three porticoes, one at each end of four columns, and one in the centre of six columns, surmounted by a pediment: these porticoes are of the Ionic order. The building has, on the whole, undoubtedly a good deal of grandeur of character, but it is still far from satisfactory. He also erected during the progress of the Post Office, and in the same order (Grecian Ionic), the College of Physicians, and the Union Club, Trafalgar-square; and the club-house at the corner of Charles-street, Regent-street, for the United Service Club: being found too small for that club, it was, however, sold to the Junior United Service Club, and recently, being (like Sir Robert's more pretentious club-house, the Carlton) thought too sombre a pile for its purpose, it has been pulled down, and replaced by one of a more ornate character. In 1830-31, Sir Robert completed the Library (Gothic), the extension of King's Bench Walk (Grecian), and other improvements in the Inner Temple. He also, in 1831, erected King's College, as the eastern wing of Somerset House. The extensive rebuilding and restoration of York Minster, rendered necessary by the fire of 1829, were from his designs and conducted under his superintendence, and form his chief work in the Gothic style. In 1834, he completed the Carlton Club, like most of his works a pseudo-classic structure, but one even more than usually heavy and unattractive in appearance. It is, however, unnecessary to notice it further, as it has been made to give place to the building of his brother noticed below. His next club-house, the Oxford and Cambridge University, completed in 1838, was executed in connection with his brother, Mr. Sydney Smirke, and is of a much more florid character than any of the structures executed under Sir Robert's sole direction.

The work on which Sir Robert's fame will however chiefly depend, is the British Museum, with the exception of the Palace of Westminster the greatest architectural work erected in London in the present century. It was commenced in 1823; but owing to various causes beyond the control of the architect, its progress was even slower than the massive character of the building rendered necessary, and the portico was not completed till 1847. Of this immense pile, too well known to require description, it will be enough to say that it is of the Grecian Ionic order, carried out externally with great severity, and is the largest and most imposing Grecian structure in the metropolis. The grand front, the only one of the external fronts upon

which any architectural embellishment is expended, is 370 feet long, and consists of a central portion with advanced wings. The forty-four columns of the façade are five feet in diameter at the base, and 45 feet high, and rest upon a stylobate five feet and a half high. The tympanum of the pediment is occupied by a group in alto-relievo, from the chisel of Sir R. Westmacott. The building as originally constructed inclosed an open quadrangle, 320 feet by 240 feet, and each of the façades of the quadrangle had a certain amount of architectural character. But this open space has been now pretty well filled up by the new Reading Room and connected buildings, and the quadrangle fronts are almost entirely concealed. It has been the lot of the British Museum to be subjected to a great amount of adverse criticism both as regards the æsthetic character of the building and the fitness of the interior arrangements for the purposes for which it was designed. The public taste has outgrown the period when objection was silenced by the statement that a work was classic in character; but it may be that the reaction against classic art is excessive, or at any rate it may fairly be doubted whether the adoption of an ornate, ecclesiastical Gothic, or renaissance style would not, after the novelty had worn off, have proved less satisfactory for the purpose of a public museum of archaeology and natural history than the more severely simple Grecian one adopted by the architect. At the same time the question as to the actual style of the architecture ought, of course, to be regarded as subsidiary to that of the adaptation to its purpose of the building itself, in the size, height, lighting, number and arrangements of its apartments; and in this respect it is to be feared that the British Museum is far from satisfactory: but this is a failing which it has in common with most, if not all, of our great public buildings.

Sir Robert Smirke was elected R.A. in 1812; and was for some years treasurer of that institution, but resigned the office in 1850. He was one of the architects to the Board of Works and Public Buildings for several years prior to the abolition of the office in 1831, when he received the honour of knighthood.

\*SMIRKE, SYDNEY, A.R.A., is like his elder brother, Sir Robert Smirke, a distinguished architect. In 1834 he published 'Suggestions on the Architectural Improvements of the West of London;' but he first made his name known to the public as an architect in 1835-37 by the erection, in conjunction with his brother, of the Oxford and Cambridge University Club-house in Pall-Mall. In this building, of which the design of the north or Pall-Mall front was understood to be the production of Mr. Sydney Smirke, he showed, by giving to it a florid Corinthian character, that he was by no means disposed to become a servile adherent of the severe classicism which had for so many years been associated with the name of Smirke. About the same time he erected a church in Leicester, and conducted extensive alterations and enlargements of Bethlehem Hospital. In 1842 he superintended the completion of the restorations of the Temple Church, of which he published an account, 'Architecture of the Temple Church,' 4to. His next works were a church at Bickerstaffe, in Lancashire, which he erected for the Earl of Derby; and the office of the 'Morning Post' newspaper, and Exeter Change in Wellington-street, Strand, London. A more important work was the Conservative Club-house, erected on the site of the Thatched House Tavern, St. James's-street, in 1844-45; but in this work Mr. Smirke was associated with Mr. Basevi the architect of the Fitzwilliam Museum, Cambridge [BASEVI, GEORGE]; and we have no means of apportioning the respective shares of the two architects: in the interior was largely introduced that polychromatic decoration of which Mr. Smirke has since shown himself so decided an adherent.

In 1845 Mr. Smirke erected a new portrait-gallery at Drayton Manor, for the late Sir Robert Peel. In 1847 he commenced the new Carlton Club, Pall-Mall. For this building he slightly modified the well known design by Sanovino of the Library of St. Mark, at Venice, a work much more ornate in character than any previously adopted for a London Club-house, and it has been carried out in all its richness of decoration. At first only half the design was erected as an addition to the original Carlton, constructed by Sir Robert Smirke, which was made to look singularly gloomy by the contrast; but in 1855 Sir Robert's building was replaced by the other half of his brother's Italian edifice, and the whole is now complete. A novelty was introduced in this façade in the shape of pillars of polished Aberdeen granite, but from the building standing on the shady side of the street, the anticipated richness of effect was hardly attained. Another of Mr. Smirke's works, the New Buildings in the Temple, also placed him in something like antagonism to the architectural taste of his brother, they being in connection with, and partly an extension of, those noticed above as erected by Sir Robert Smirke in 1830, and Mr. Smirke made the antagonism the more palpable by the adoption of the Elizabethan or Tudor style, while the buildings of Sir Robert were of course Grecian; an incongruity by which both have suffered.

Except the restorations of Lichfield Cathedral, Mr. Smirke's recent works, so far as they have been brought under public cognisance, have been chiefly in connection with the British Museum, of which he has succeeded his brother as architect. And here, to pass over various modifications of his brother's design, his great work has been the New Reading Room, by general consent the most successful of recent public works. The suggestion for the erection of a great circular reading-room in the inner quadrangle of the British Museum, was

made by Mr. Panizzi, keeper of the department of printed books, and now principal librarian of the Museum, but the designs for carrying the suggestion into effect were made by Mr. Smirke. The building is constructed principally of iron; and the dome, the largest in existence with the exception of that of the Pantheon at Rome, which is 142 feet, this being 140 feet in diameter, is admitted to have evinced the highest order of constructive skill. It was executed too with remarkable rapidity, the first standard being only fixed in January 1855, and "the framework and scaffolding upon which the dome rested were removed on the 2nd of the following June. No subsidence or 'set' of material was observed on the wedges being removed. The entire dome was roofed in and the copper covering laid in September 1855." The building was completed for use in May 1857. The interior arrangements, fittings, &c., were designed by Mr. Panizzi; and the complete adaptation of the work to its object, and its consequent complete success, is unquestionably due in a great measure to Mr. Panizzi's constant superintendence of its progress, and his cordial and unreserved co-operation with the architect. This however can in no wise be regarded as detracting from the merits of the architect, of whose constructive ability and artistic skill it is a noble monument.

SMITH, ADAM, the only child of his parents, was born at Kirkcaldy, June 5th 1723, a few months after the death of his father, who was comptroller of the customs at that place. He was brought up with great tenderness by his surviving parent, and sent to the grammar-school of his native town. From 1737 to 1740 he pursued his studies at the University of Glasgow. Being designed for the Church of England, he left Glasgow, and proceeded as an exhibitor on Snell's foundation to Balliol College, Oxford, where he spent seven years. Mathematics and natural philosophy, with ancient and modern languages, were his favourite studies at this University. Having abandoned the idea of taking orders, he returned to Scotland; and in 1748 went to reside at Edinburgh, where, for the next three years, he read lectures on rhetoric and belles-lettres, under the patronage of Lord Kames. In 1751 he was elected professor of logic in the university of Glasgow; and in the following year was appointed to the chair of moral philosophy, which he filled for the next thirteen years. The third division of his lectures included various subjects, which he subsequently so ably treated in the 'Wealth of Nations.' His talents in the chair have been highly praised, and his lectures were generally delivered extempore. During his residence at Glasgow, he published his 'Theory of Moral Sentiments;' the first edition appeared in 1759; and the sixth, which contains considerable additions, shortly before the author's death. The fundamental principle of this work is, that sympathy forms the foundation of morals; that "the primary objects of our moral perceptions are the actions of other men; and that our moral judgments with respect to our own conduct are only applications to ourselves of decisions which we have already passed on the conduct of our neighbours." (Dugald Stewart.) This theory being now little thought of, it is unnecessary to enter into further details. To the second edition of the above work was prefixed a dissertation on the origin of languages, which was afterwards published separately, under the title of 'Considerations concerning the First Formation of Languages, and the Different Genius of Original and Compounded Languages.' It is praised rather for its ingenuity than the soundness of its conclusions.

In 1763 Mr. Smith resigned the professorship, in consequence of an invitation to accompany the Duke of Buccleugh on his travels. The University of Glasgow conferred upon him the honorary degree of LL.D., a title which he never assumed in private life. He left London with his noble pupil in January, 1764, and proceeded to Toulouse, where they resided eighteen months. They next visited various parts of the South of France, spent two months at Geneva, and proceeded to Paris at the end of 1765, where they remained ten months; and after an absence of nearly three years, returned to England. At Paris Mr. Smith became intimately acquainted with Turgot, Quesnay, Necker, D'Alembert, Helvetius, Marmontel, and other distinguished persons. Had Quesnay lived, it is said that the 'Wealth of Nations' would have been dedicated to him. Soon after his return to England, Smith proceeded to Kirkcaldy, where, with the exception of occasional visits to Edinburgh and London, he resided until 1776, engaged in his great work. He mixed with the best literary society of both capitals, and was on terms of intimate friendship with Hume. When Johnson visited Scotland, he and Smith met, and behaved towards each other with marked rudeness. The 'Wealth of Nations' appeared early in 1776. To the third edition (1784) the author made several additions; but the fourth edition (1789) contained no alterations of any kind. The two following years after the first appearance of the work were spent in London. In 1788, through the influence of the Duke of Buccleugh, Mr. Smith was appointed one of the commissioners of customs for Scotland, on which he removed to Edinburgh, where he spent the remaining thirteen years of his life. When this appointment took place, he was in his fifty-fifth year; and it has frequently been regretted that his time was not devoted to more profitable labours, for though the duties of his office were not onerous, they were sufficient to distract his attention. He had collected materials for publication, which, with the exception of some detached essays published by his executors, were destroyed by his orders a few days before his death, as he had never found time to arrange them for

the press. The closing years of his life were spent tranquilly in the society of a small circle of friends, who generally supped with him every Sunday. His mother resided with him until her death in 1784, a loss which he severely felt; and a maiden cousin, who had always superintended his domestic concerns, died four years afterwards. In 1787 he was elected rector of the University of Glasgow. He did not linger long after his domestic bereavements, but died in July 1790, aged 67. He was never married.

The private character of Adam Smith has been fully given by his friend Dugald Stewart, in the account of his 'Life and Writings,' which is prefixed to more than one edition of the 'Wealth of Nations.' His disposition was amiable and benevolent; his manners were artless and simple, and in society he not unfrequently exhibited instances of absence of mind. Dugald Stewart says:—"He was certainly not fitted for the general commerce of the world, or for the business of active life." His acts of private charity were on a scale much beyond what might have been expected from his fortune. The medallion by Tassie gives an exact idea of his profile and the general expression of his countenance.

The 'Wealth of Nations,' or, to give the title correctly, the 'Inquiry into the Nature and Causes of the Wealth of Nations,' is the work on which the fame of Adam Smith will permanently rest. It overthrew the errors of the mercantile theory, that money was wealth; those of the agricultural theory, that land was the only source of wealth; and established the principle that the true source of wealth was labour. Hobbes, in 1651 ('Leviathan,' chap. 24), had briefly glanced at the importance of labour in conferring value upon things; Locke, in 1689 ('Essay on Civil Government'), went further, but was evidently not fully aware of the importance of the principle which he elucidated. Mr. McCulloch, in his 'History of the Rise and Progress of the Science of Political Economy up to the publication of the Wealth of Nations,' thus sums up what Adam Smith has done for this science:—"In the 'Wealth of Nations' (he says) the science was, for the first time, treated in its fullest extent; and the fundamental principles on which the production of wealth depends, were established beyond the reach of cavil and dispute. In opposition to the French economists, Dr. Smith has shown that labour is the only source of wealth, and that the wish to augment our fortunes and to rise in the world is the cause of wealth being saved and accumulated. He has shown that labour is productive of wealth when employed in manufactures and commerce, as well as when it is employed in the cultivation of the land. He has traced the various means by which labour may be rendered more effective; and has given a most admirable analysis and exposition of the prodigious addition made to its powers by its division among different individuals, and by the employment of accumulated wealth, or capital, in industrious undertakings. Dr. Smith has also shown, in opposition to the commonly received opinions of the merchants, politicians, and statesmen of his time, that wealth does not consist in the abundance of gold and silver, but in the abundance of the various necessities, conveniences, and enjoyments of life. He has shown that it is in every case sound policy to leave individuals to pursue their own interest in their own way; and that, in prosecuting branches of industry advantageous to themselves, they necessarily prosecute such as are at the same time advantageous to the public. He has shown at great length, and with a force of reasoning and amplitude of illustration that leaves nothing to be desired, that the principles of the mercantile or exclusive system are at once inconsistent and absurd; and that every regulation intended to force industry into particular channels, or to determine the species of commercial intercourse to be carried on between different parts of the same country, or between distant and independent countries, is impolitic and pernicious—injurious to the rights of individuals—and adverse to the progress of real opulence and lasting prosperity."

Adam Smith's errors lean towards the theories of the French economists. Some principles he overlooked; others he did not duly appreciate. Many of the theories which he controverted have now become obsolete, yet the manner in which he has investigated them will always please and instruct. Still it is not safe for the student to read him without a guide.

The 'Wealth of Nations' is divided into five books; but the arrangement of the subject is not on the whole considered judicious. In the first and second books the circumstances which determine the price of commodities, the rate of wages and profits, and the rent of land are discussed. The third book treats of the probable progress of a country in which individual and national industry were unimpeded by restrictions, and shows the "natural progress of opulence." The causes which had produced the then existing policy of different European countries are pointed out. In the fourth book the mercantile and agricultural systems are examined. The fifth book relates to revenues of the state, the principles of taxation, and the effect of national debts. There are several long digressions on various branches of the subject.

\* SMITH, ALBERT, was born on May 24, 1816, at Chertsey, where his father practised as a surgeon, and was educated at Merchant Taylors' School. As he was destined for the medical profession, he pursued his studies at Middlesex Hospital, and became a member of the College of Surgeons early in 1838. In the same year he repaired to Paris, in order to increase his knowledge by attending the hospital

of the Hôtel Dieu, and lectures, and in September he visited Chamouni. He then returned to England, and commenced practice with his father at Chertsey. But he had always felt an inclination for literary pursuits, and an equal and early developed fondness for the subject of his subsequent triumph—the scenery of Mont Blanc. The first he gratified by some contributions to the 'Medical Times,' in which appeared 'Jasper Buddle, or Confessions of a Dissecting Room Porter,' and the second by successive visits to that renowned spot. Not being entirely satisfied with his position as a surgeon, he prepared views of the scenery of the Alps, together with a descriptive lecture, with which he visited most of the small towns in the vicinity of the metropolis during 1839 and 1840. In 1841 he settled in London, and commenced writing for the magazines, in which appeared, amongst a variety of miscellaneous articles, several of his novels. 'The Adventures of Mr. Ledbury,' 'The Scattergood Family,' 'The Marchioness of Brinvilliers,' 'Christopher Tadpole,' and 'The Pottleton Legacy,' all of which were published subsequently as separate works, were decidedly successful, and have gone through more than one edition, though more distinguished by a rattling good humour, and a talent for relating practical jokes, than by the higher attributes of correct taste and delineation of character. During 1847-49 he wrote a series of sketches, comprising the Natural Histories of 'Stuck-up People,' 'The Ballet Girl,' 'The Gent,' 'The Flirt,' 'The Idler upon Town,' and 'Evening Parties.' In 1849 he visited the East, and on his return published 'A Month at Constantinople,' in which the exaggerated notions respecting its romance and its beauty were cleverly ridiculed; and in 1850 he produced an entertainment called 'The Overland Mail,' wherein he was the only performer, and in which, with the aid of scenery, he described that route. He also in this year wrote two or three operatic burlesques, but we have not attempted to enumerate all his multifarious productions. In the autumn of 1851 he revisited the scene of his early predilection, and succeeded, with much difficulty, which he has himself described, in gaining the summit of Mont Blanc; a feat since become one of every day occurrence. On March 15, 1852, he produced, at the Egyptian Hall, his entertainment of 'The Ascent of Mont Blanc,' wherein his rapid but distinct utterance, his humour, the well-selected and well-painted scenery, and his careful attention to the comfort of his auditors, enabled him to achieve an unprecedented success. It has continued, by successive variations, to remain a favourite to the present time (June 1857); his readiness in adapting and incorporating allusions to the passing events of the day, giving to it a variety that forms a considerable portion of its attraction. Since the commencement of this entertainment Mr. Smith has ceased, in a considerable degree, to pursue his literary avocations, his slight 'Story of Mont Blanc,' which has some personal interest, being the only work he has since published; with an occasional letter to the newspapers, to which however his name has not been appended, containing smart and pleasant, though somewhat exaggerated, descriptions of the social state of London.

SMITH, ANKER, who received his unusual name by way of fanciful allusion to his being an only son, the "hope" of his parents ("anker" being an old way of spelling anchor), was born in London in 1759. He was educated in the Merchant Taylors' School, and was articled, in 1777, to his uncle, Mr. John Hoole, a solicitor. The unusual neatness of his writing led Mr. Hoole to try his skill at drawing with a pen. He therefore copied two line engravings in pen and ink; and so admirably was the second executed, that James Heath is said to have mistaken it for a print. In consequence of this indication of talent, young Smith was articled to an engraver named Taylor, in the year 1779, but he quitted him in 1782, by which time he had surpassed his instructor. He then became an assistant of James Heath, in whose name he executed many works, among others, the Apotheosis of Handel, which is said to be entirely his own. About the year 1787 Smith received his first independent employment as an engraver, being then engaged upon the plates to illustrate Bell's edition of the 'British Poets.' About the same time he was introduced by Hoole, the translator of Tasso (who was brother to the gentleman of that name before alluded to), to Alderman Boydell, by whom he was commissioned to engrave Northcote's picture of the Death of Wat Tyler. For this engraving he was, in 1797, elected an associate of the Royal Academy.

The engravings of Anker Smith are much esteemed for their beautiful execution and correct drawing; although, from the circumstance of his working much for book publishers, his name is less known than it deserves to be. His private character was unimpeachable; and his modesty, piety, and correct judgment secured him many friends. In 1791 he married. He died of apoplexy, in June 1819, leaving his widow, four sons, and a daughter. Of his sons, the second, named Frederick William, who became a pupil of Chantrey, gave great promise of eminence in the art of sculpture, but died in 1835, at the age of thirty-eight years; and the two younger embraced that of painting. Mr. Smith had several sisters, one of whom was mother to Sir W. C. Ross, R.A., miniature-painter to her Majesty.

\* SMITH, LIEUT.-COLONEL CHARLES HAMILTON, a well-known writer on subjects connected with the natural history of animals. One of his earliest papers is in the 13th volume of the Linnean Transactions, entitled 'Observations on some Animals of America allied to the genus *Antelope*.' The volume on 'Dogs' in Jardine's 'Naturalist's Library,' was written by Colonel Smith, and

contains a great quantity of interesting matter on these animals. The volume in the same series of books devoted to 'Horses' was written by him, and the introduction to the volume on *Mammalia*. A third volume, on the 'Races and Varieties of Man,' was also from the pen of Colonel Smith.

\*SMITH, SIR HENRY GEORGE WAKELYN, BART., was born in 1788, at Whittlesea, in the Isle of Ely, where his father was in practice as a surgeon. Having received such an early education as he could obtain at the grammar-school of his native town, he entered the army in 1805 as second lieutenant in the Rifle Brigade, and took part in the siege, storming, and capture of Monte Video, under the late Sir S. Auchmuty, and in the attack on Buenos Ayres under Brigadier-General Crawford. He was also present at the capture of Copenhagen, under Lord Cathcart. He was afterwards employed with the troops in Spain under Sir John Moore, and took an active part in the Peninsular war from the battle of Vimiera down to the embarkation of the troops at Corunna. Returning again to the Peninsula in 1809, he took part in the action on the bridge of the Coa near Almeida, where he was severely wounded, and commanded a company in the pursuit of Massena from the lines of Lisbon, and in one or two subsequent actions of less importance. Having been appointed to the command of a brigade of the Light Division, he was present at the battle of Fuentes de Onoro, and at the sieges and stormings of Ciudad Rodrigo and Badajoz, the battles of Salamanca, Vittoria, Orthes, Toulouse, and at several other lesser engagements, and in fact in every important battle throughout the war, with the exception of Talavera. We next find him present at the capture of Washington under General Ross, where he was assistant adjutant-general, and was honoured for his gallant conduct on that occasion by being appointed to bear the despatches to England. His next battle-field was New Orleans, whither he proceeded as military secretary under the brave Sir Edward Pakenham, who fell in his arms mortally wounded. He was soon afterwards appointed military secretary to Sir John Lambert, under whom he took part in the siege and capture of Fort Bowyer. He returned to England in time to bear his share in the last European battle, and was assistant quarter-master-general to the Sixth Division of the army at Waterloo. He served on the staff from the year 1811, and was deputy adjutant-general successively at Halifax, Nova Scotia, and in the West Indies, whence he was transferred in 1827 to the Cape of Good Hope, and commanded a division under the late Sir B. d'Urban throughout the operations against the Kaffir tribes in 1834 and 1835. In 1839 or 1840 he was appointed adjutant-general to the forces in India, and was present in that capacity at the battles of Gwalior and Maharajpore, for which action he was nominated a K.C.B. He also took an active part in the wars against the Sikhs in the Punjab, and was in command of a division at Moodkee, and of the reserve at the subsequent battle of Ferozepore, where he nobly supported the late Sir John Littler in his charge upon the guns of the enemy. A few days later the Sikh forces crossed the river Sutlej near Loodianah, and took up their position at Aliwal. Lord Gough despatched Sir H. Smith with 7000 men and 24 guns to relieve Loodianah, and this object he succeeded in effecting. On the 28th of January 1846 Sir Henry Smith led the main charge in the battle of Aliwal, carrying that village at the point of the bayonet, and capturing all the enemy's guns to the number of 67; a success which enabled him to come to the aid of the commander-in-chief, and to join in the final victory of Sobraon (February 10), which crushed the last hopes of the Sikh troops and their leaders, and gave the possession of the Punjab to the British forces. For his conduct on these occasions he was highly commended in the despatches of Lord Gough, who attributes the victory of Aliwal to his valour and judgment. The same statement was repeated by the Earl of Ripon in his place in the House of Lords, in proposing that the thanks of that house should be given to Sir Henry Smith for his distinguished services in India, and it was most fully endorsed by the Duke of Wellington. At the same time Sir H. Smith was presented with the freedom of the city of London, the thanks of the Hon. East India Company, as well as the honorary distinction of the Grand Cross of the Bath and the dignity of a baronet. He had not long returned to England when he was appointed to the colonelcy of the Rifle Brigade, and in September 1847 was nominated governor of the Cape of Good Hope. Here he conducted all the operations of the Kaffir war of 1851-52, and brought them by force of arms to such a successful issue that Kreli was compelled to sue for peace, pledging himself to keep within the Indwe and Kei rivers; while Sandilli acknowledged his cause to be hopeless, submitted to the governor's terms, and withdrew from Caffraria. In 1854 Sir Harry Smith (as he is usually styled) was promoted to the rank of lieutenant-general, and has held since that year the military command of the northern and midland districts. He married in 1814 a Spanish lady, the Donna Juana Maria de los Dolores de Leon, by whom however he has no issue.

SMITH, JAMES, the great propagator of the system of deep ploughing and thorough draining, was born at Glasgow on the 3rd of January 1789. His father had been in business at Glasgow, in which he acquired some property, but died when his son was only two months old, leaving him in the charge of his mother, who was a daughter of Mr. Buchanan, of Carston in Stirling. After her husband's death Mrs. Smith resided with her brother, who was the manager of

an extensive cotton manufactory at Deanston, a few miles from Stirling. James Smith received his early education at home, completing it at the University of Glasgow. On leaving the university he returned to his uncle, who had by this time removed to the Catrine Works in Ayrshire, where, in order to attain a thorough knowledge of the trade, he worked through the various grades, labouring with persevering industry for twelve hours a day, with such good effect that at eighteen he was entrusted with the entire management of the works at Deanston, into which he subsequently introduced many improvements for promoting the health of the labourers that were noticed with approval by Mr. Chadwick in his 'Report on the Sanitary Condition of the Labouring Population of Great Britain,' published in 1841.

But Mr. Smith's attention had been early given to agricultural processes, and his intimate acquaintance with manufacturing machinery was made available in gratifying his predilection. The Dalkeith Farmers' Club having offered a prize of 500*l.* for a reaping-machine, Mr. Smith produced one, which, though it was not successful in obtaining the prize, was so ingenious that he was encouraged to prepare another in 1813. For this, though an accident prevented his gaining the prize, he received presents from several Scottish agricultural societies, and a gold medal from the Agricultural Society of St. Petersburg. He had the management of his uncle's farm, and many of his experiments were eminently successful; but he could not obtain his uncle's consent to carry out a full development of his theories. In 1823 however he became possessed of the farm of Deanston, about 200 acres of extremely poor land, having a soil not averaging more than four inches in depth, formed chiefly of the debris of the old red-sandstone, with a subsoil partly of sandy clay and partly of a compact soil with stones, and the whole interspersed with boulder stones, producing little but rushes in the watery hollows and broom on the dryer portions. The whole of this he intersected with drains, laid at distances of 21 feet and at a depth of 30 inches. This, and a subsoil plough to stir the ground deeply without bringing the subsoil to the surface, produced an effect on the crops that proved the soundness of his theory. In 1831 he published a pamphlet on 'Thorough Draining and Deep Ploughing,' which excited immediate attention among his more immediate neighbours, but it was several years before its merits were generally acknowledged and the practice it recommended was adopted.

In 1846 Mr. Smith was appointed one of a commission to inquire into the health and sanitary condition of our manufacturing towns. One of his recommendations was the removal of the sewage for agricultural purposes: there are many difficulties to be overcome in effecting this, and Mr. Smith gave much attention to plans for overcoming them, propounding several means of singular mechanical ingenuity combined with simplicity. After considerable opposition an act of parliament was passed enabling municipalities to adopt his scheme where circumstances admitted of it. He also suggested several valuable improvements to the Agricultural Society of Ireland, of which he was an esteemed member, as he was also of the Glasgow Philosophical Society, to whose 'Transactions' he was an occasional and valuable contributor. In political economy Mr. Smith was a follower of Adam Smith, and of course opposed to protection, holding that free competition was the great spur to improvement. After a life of almost incessant activity, he died on the 10th of June 1850, somewhat suddenly, having retired to bed on the 9th apparently suffering nothing but an accustomed feebleness, and being found dead in the morning.

SMITH, JAMES and HORACE, were the sons of Robert Smith, of London, an eminent legal practitioner and Solicitor to the Ordnance. James Smith was born Feb. 10, 1775, in London, where also Horace Smith was born in 1780. James Smith, after receiving a good education in the school of the Rev. Mr. Burford, at Chigwell, in Essex, was articled to his father, and in due time was taken into partnership. He eventually succeeded his father in the business and in the appointment of Solicitor to the Ordnance. Horace Smith became by profession a stockbroker.

The first literary productions of the two brothers were gratuitous contributions to 'The Pic-Nic,' a periodical started by Colonel Greville, in 1802. 'The Pic-Nic' was soon merged in 'The Cabinet,' which maintained a struggling existence till July, 1803, when it was discontinued. When the 'London Review' was started by Cumberland, the dramatist, on the principle of each writer affixing his name to his criticism, James Smith wrote one of the articles, but the 'London Review' was unprofitable, and was soon discontinued. James and Horace Smith wrote several of the prefaces to a new edition of 'Bell's British Theatre,' which was published about this time under the sanction of Cumberland's name. They were also contributors from 1807 to 1810 to the 'Monthly Mirror,' in which periodical originally appeared the poetical imitations entitled 'Horace in London,' which were subsequently published in a small volume. Horace Smith wrote several of these parodies, but the larger number was written by James Smith.

The celebrity, however, which the two brothers enjoyed arose chiefly from the 'Rejected Addresses,' a small volume which was published on the opening of the new Drury Lane Theatre, in October 1812. The committee of management had issued an advertisement requesting that addresses, one of which should be spoken on the first

night, might be sent in by way of competition. As all the addresses sent in, except one, were to be rejected, Mr. Ward, secretary to the theatre, casually started the idea of publishing a series of supposed 'Rejected Addresses.' This was just six weeks before the opening of the theatre. The brothers eagerly adopted the suggestion, and having immediately settled what authors each should imitate, Horace left London on a visit to Cheltenham, and James remained at home. Horace having executed his portion of the task returned to London a few days before the opening of the theatre. Each then submitted his productions to the other; a few verbal alterations were made, a few lines were added, and the little book was immediately printed and published. It was received by the public with enthusiastic delight. As the 'Rejected Addresses' are humorous imitations mostly of authors well known, and as the work is still in circulation, it is perhaps worth while to mention that the imitations of Wordsworth ('Baby's Debut'), Cobbett ('Hampshire Farmer's Address'), Southey ('The Rebuilding'), Coleridge ('Playhouse Musings'), and Crabbe ('The Theatre'), are by James Smith, as well as the songs styled 'Drury Lane Hustings,' the 'Theatrical Alarm Bell' (an imitation of the editor of the 'Morning Post'), and the travesties 'Macbeth,' 'George Barnwell,' and 'The Stranger.' The rest of the imitations are by Horace Smith. The copyright, which was originally offered to Mr. Murray for 20*l.*, was purchased by him in 1819, after the sixteenth edition, for 13*l.*

Besides a great number of amusing trifles which James Smith contributed to the periodical literature of the day, he was a gratuitous contributor to the earlier series of theatrical entertainments entitled 'At Home,' in which the elder Charles Mathews displayed his extraordinary powers of humorous imitation. Subsequently, for the 'Country Cousins,' the 'Trips to Paris,' 'Air-Ballooning,' and the 'Trip to America,' he received from Mr. Mathews altogether 1000*l.* "You are the only man in London," said Mathews to James Smith, "who can write what I want, good nonsense."

The brothers were both admired for their conversational powers. James Smith especially had a large circle of acquaintance, and went much into society. Though he was always a man of temperate habits, he became in middle life subject to attacks of gout, which increased in frequency and severity till he gradually lost the use of his limbs, and could only move himself by the aid of crutches. He died in London, December 24, 1839. In early and middle life he was distinguished for manly beauty both of figure and face. He was never married.

Horace Smith contributed numerous pieces of poetry, half playful, half sentimental, to the 'New Monthly Magazine,' while it was under the editorship of Thomas Campbell, the poet. He was also the author of about twenty novels, of about three volumes each, the greater part of which seem to have been little known except to the regular novel-readers of the circulating libraries. 'Gaieties and Gravities,' published in 1825, was one of the earliest of his novels. 'Love and Mesmerism,' 1845, was the latest. In the intermediate twenty years he gave to the public 'Brambletye House,' 'Tor Hill,' 'Reuben Apsley,' 'Zillah,' 'New Forest,' 'Walter Colyton,' 'Jane Lomax,' 'The Moneyed Man,' 'Adam Brown,' 'Arthur Arundel,' and others. Horace Smith died July 12, 1849, at Tunbridge Wells. He was a widower, and left two daughters.

(*Memoirs, Letters, and Comic Miscellanies in Prose and Verse*, by the late James Smith, Esq., one of the authors of the 'Rejected Addresses,' edited by his Brother, Horace Smith, Esq., 2 vols., cr. 8vo, 1840.)

SMITH, SIR JAMES EDWARD, celebrated as the purchaser of the collections and library of Linnæus, and founder of the Linnean Society, was born at Norwich, on the 2nd of December 1759. He is described as having extreme mental susceptibility, and a delicate constitution, whence he was much under the care of his mother, from whom he imbibed his taste for flowers. His father was a man of cultivated mind, and had no doubt considerable influence in forming his son's mind, especially as his education was domestic, with the assistance of masters from Norwich. This town has long been remarkable for the fondness of its inhabitants for flowers, introduced, it is believed, by the Flemish weavers, who took refuge in England from the tyranny of the Spaniards in their own country. Hence it has probably happened that botany has been a favourite pursuit in Norwich, and that so many botanists have been produced there, as may be seen in Smith's 'Biographical Notice of Norwich Botanists,' as well as in some of our living botanists. Mr. Smith was intended for some mercantile calling, but from his love of science was induced to study medicine, for which purpose he proceeded to Edinburgh in 1781, and obtained in 1782 Dr. Hope's gold medal for the best botanical collection. After his arrival in London he happened to be breakfasting with Sir Joseph Banks, from whom he learnt that the whole of the collection of books, manuscripts, and natural history of Linnæus had been offered him for 1000 guineas, but that he intended to decline it. The young student of medicine determined upon becoming himself the purchaser, though without funds for the purpose. His father, though at first refusing, afterwards consented to the purchase. The collection arrived here in twenty-six cases, in 1784, and cost 1088*l.* 5*s.* The ship conveying it had just sailed when the King of Sweden, Gustavus III., who had been absent in France, returned home, and sent a vessel to the Sound to intercept its voyage; but happily it

was too late. On the death of Sir James this celebrated collection was purchased by the Linnean Society, and forms a part of their valuable stores of natural history.

A number of circumstances appear thus to have determined the future course of Sir James's life. Though he took up his residence in London, with the intention of practising his profession, it seems never to have seriously occupied his attention. Two years after he became possessed of the collections of Linnæus, he made a tour through Holland, France, Italy, and Switzerland, of which he published an account. He obtained his medical degree at Leyden. In the year 1788, with the assistance of Sir Joseph Banks, Dr. Goodenough, (Bishop of Carlisle), and some others, the Linnean Society was founded, and Dr. Smith elected its first president. In 1792 he was employed to teach botany to Queen Charlotte and to the princesses. He continued to reside in London until 1796, when he removed to Norwich, but paid a yearly visit of two months to London, when he gave a course of lectures on botany at the Royal Institution. On the 28th of July 1814, Dr. Smith was knighted by the Prince Regent at a levee, when he presented a copy of the 'Transactions' of the Linnean Society. The honour was conferred on him as institutor and president of the Society. In 1818 Sir James became a candidate for the chair of botany at Cambridge; but not being a member of the University, nor of the Church of England, he was not considered eligible by the authorities of the University. His health began to decline five or six years previous to his death, which took place on the 17th of March 1828.

The public will be chiefly interested in his works. Of these a full list is given in the 'Memoir of his Life and Correspondence,' published by his widow. These are numerous, but those by which he will be principally known and remembered are, 'English Botany,' in thirty-six volumes, with 2592 coloured figures by Mr. Sowerby; 'The Latin Flora Britannica,' three volumes, and especially 'The English Flora,' in four volumes; also 'Flora Græca,' from Dr. Sibthorp's materials, and the 'Prodromus Floræ Græcæ.' He was also author of the botanical articles and of the botanical biography in Rees's 'Cyclopædia,' from the letter C, which have always been much valued, and of numerous papers in the 'Transactions of the Linnean Society.'

Sir James Smith was moreover esteemed as a man of a kind heart, amiable dispositions, and pure moral habits. His correspondence displays great warmth of friendship towards him on the part of numerous distinguished individuals. His purchase of the Linnean collections, and his devotion to the science of botany for so many years, had considerable influence in spreading a taste for and in extending the cultivation of that science. In his exclusive attachment to the artificial classification of Linnæus in preference to the natural method, in favour of which Linnæus has expressed himself in the strongest terms, he preferred that which was valuable for a time, to that which, as perfected, becomes fitted for all times.

SMITH, JOHN PYE, D.D., LL.D., one of the most learned ministers and theological tutors of the Independent or Congregationalist denomination, was born at Sheffield, May 25, 1774. In his early years he was employed in the shop of his father, who carried on a respectable bookselling establishment in Sheffield; but always a diligent student, and becoming strongly impressed with religious feelings, he became desirous of engaging in the Christian ministry. He accordingly left business, and in his twenty-second year entered the Independent Academy at Rotherham. Here he devoted himself zealously to the studies of the place, and such was the character he attained for ability and learning that, on a vacancy taking place in Homerton Theological Academy, Mr. Smith was chosen in 1800 to occupy the post of classical tutor in that seminary. At Homerton he subsequently formed a church, of which he became pastor, and which increased so largely in numbers as to require a separate chapel. In 1807 he received the diploma of D.D. from Yale College, Newhaven, Connecticut. In 1813, Dr. Pye Smith gave up the situation of resident classical tutor, retaining at the request of the directors the post of divinity tutor. In 1835 he received the diploma of LL.D. from Marischal College, Aberdeen. Dr. Smith became again in 1843 the resident tutor at Homerton, which office he filled till the breaking up of the establishment in 1850, when New College, St. John's Wood, was formed from the junction of Homerton, Highbury, and Coward Colleges. Dr. Pye Smith, who had been for many years afflicted with deafness, then retired from active duty, and his friends and admirers testified their regard for his character by raising a sum of 3000*l.*, to provide an annuity for him while he lived, the interest to be afterwards devoted to the foundation of a Smith scholarship in New College. Dr. Pye Smith died on February 5, 1851, in his seventy-seventh year. Dr. Pye Smith was held in unusual regard by all who knew him, as much for the singular simplicity, zeal, and benevolence of his character, as for his earnestness and devotion in his official duties, and his extensive erudition. He had been twice married.

Dr. Smith was a man of untiring industry, as well as of very unusual acquirements. He published numerous works on theology and on science, especially the science of geology. His great work was 'The Scripture Testimony to the Messiah,' 2 vols., 1818 and 1821. The remarkable range of reading which this work displayed, and particularly its familiarity with recent German theological literature,

then a rare attainment with English divines, and especially with those of the Nonconformist body, attracted great attention to the work, and though some of the positions of the author were regarded as questionable by many theologians who agreed with him in his general theological views, it at once took a high place, and eventually came to be pretty generally regarded as a standard work on the subject of the divinity of Christ, and as perhaps the most important work of the kind on the orthodox side of the question. In subsequent editions the work was in parts considerably enlarged, and in some respects modified; and in its final shape it may be regarded as embodying almost the whole of the erudition on the important subject of which it treats. The fourth edition was published in 1847. Among his other works, several of which were of a controversial character, may be enumerated—'The adoration of our Lord Jesus Christ vindicated from the Charge of Idolatry, a Sermon,' 1811. 'Four Discourses on the Sacrifice and Priesthood of Jesus Christ,' third edition, 1827. 'On the Personality and Divinity of the Holy Spirit, a Sermon,' 1831. 'The Mosaic account of the Creation and the Deluge, illustrated by the Discoveries of Modern Science,' 1837. 'On the Relation between the Holy Scriptures and some parts of Geological Science,' fourth edition, 1848. Dr. Pye Smith was a Fellow of the Royal Society and of the Geological Society, and took a deep interest in the philanthropic and religious movements of the day.

SMITH, JOHN RAPHAEL, son of a respectable landscape-painter, who, from the place of his residence, is commonly known as Smith of Derby, was born about the middle of the last century. His father, Thomas Smith (who died in 1769), has been stated to be one of the first artists "who explored and displayed the charming scenery of his native county," and he was unquestionably a painter of considerable ability. Several of his pictures were engraved by Vivares. He intended to make an artist of his eldest son Thomas, who had given early indications of inclination towards painting, and apprenticed the subject of this notice to a linen-draper. Time however proved that he was mistaken in his selection; for Thomas never advanced beyond mediocrity, while John Raphael forsook the counter, and became eminent as a mezzotinto engraver and also as a painter. Very little is recorded of his history, and the few circumstances which are narrated are conflicting. It appears however that he was in full practice as an artist in London about 1778. He executed many beautiful engravings from pictures by Sir Joshua Reynolds, and several from his own. Among the latter are whole-length portraits of Charles James Fox and Earl Stanhope. Latterly Smith devoted himself chiefly to the production of slight crayon portraits, which he executed with great facility. Dayes, a contemporary artist, observes in his 'Professional Sketches of Modern Artists,' "The number of slight heads he has painted at a guinea are incalculable; one of the family told me he had done as many in one week as brought him forty pounds, and each of them I know he could finish in an hour." While residing in London, he became a publisher and printseller; but during the latter years of his life he travelled about the country a good deal as a portrait-painter. He died in March 1812, in his sixtieth year, according to a brief notice of his life and works in vol. iv. of the 'Library of the Fine Arts.' Unhappily his habits and character were not such as to excite respect. He was much given to low sports and practices. With a taste for such pursuits, it is not surprising to find him on intimate terms with Morland, whom he assisted in bringing into notice.

SMITH, JOHN STAFFORD, a composer of great eminence, was born about 1750, in Gloucester, of which cathedral his father was organist, and by whom he was prepared for his final instructions in music under Dr. Boyce. At an early age he was appointed one of the gentlemen of the Chapel-Royal; of which on the decease of Dr. Arnold, in 1802, he became organist. In 1805 Dr. Ayrton resigned to him the mastership of the Children of the Chapel, an office which he relinquished in 1817, when he withdrew from all his professional engagements and enjoyed a moderate but well-earned independence till his death, which took place in 1836.

At the age of twenty-three Mr. Smith gained a prize-medal from the Catch-Club, for a composition which had nothing to recommend it but that kind of grossness so much admired in "the good old times;" but the following year produced his fine glee for four voices, 'Let happy lovers fly where pleasures call,' on which a similar medal was much more properly bestowed. The same honour was with equal discrimination conferred in the three succeeding years, on his glees, 'Blest pair of Syrens,' 'While fools their time in stormy strife employ,' and 'Return, blest days.' He obtained in the whole eight of these honourable distinctions; but his very delightful glees, 'Let us, my Lesbia, live and love,' and, 'As on a Summer's day,' missed the reward due to their merits. Mr. Smith was also author of a madrigal, 'Flora now calleth forth each flower,' a work which may compete with anything of the kind extant. He published, between the year 1777 and 1785, five collections of glees, a volume of anthems, 'Musica Antiqua,' and 'Antient Songs of the Fifteenth Century,' the two last of which bear indisputable evidence of his industry and research, and now form a part of every good musical library.

SMITH, JOHN THOMAS, for many years keeper of the prints and drawings in the British Museum, was the son of Nathaniel Smith, formerly a sculptor, and afterwards a well-known printseller in Great May's Buildings, St. Martin's Lane. Nathaniel Smith had been when

young the playfellow of Nollekens; and they had learned drawing together. In August 1755, Smith was placed with Roubiliac, the sculptor; and about 1759 and 1760 he and Nollekens, who had become a pupil of Scheemakers in 1750, obtained some of the best prizes of the Society of Arts. Nathaniel Smith, who gained many prizes from the Society, carved three of the heads of the river-gods which adorn the arches of Somerset House, from designs by Cipriani. The friendship existing between him and Nollekens occasioned the subject of this article, who was born on the 23rd of June, 1766, to be very early noticed by the eccentric sculptor, who, while he was yet a boy, used to take him to see various parts of London, pointing out curious vestiges of antiquity, and thus probably exciting that peculiar taste by which Smith was subsequently known. His mother dying in 1779, young Smith was invited to the studio of Nollekens, to whom his father was then chief assistant. After enjoying this privilege for three years, during which time he had much practice in drawing, he became a student at the Royal Academy. About this time he made pen-drawings in imitation of the etchings of Rembrandt and Ostade, and these through the introduction of Dr. Hinchliffe, then Bishop of Peterborough, obtained a liberal offer from Sherwin, in consequence of which Smith became a pupil of that skilful engraver. For some years after being with him, Smith was chiefly engaged as a drawing-master.

He married at the age of twenty-two years, and soon afterwards commenced the publication, in numbers, of his first work, the 'Antiquities of London and its Environs,' a collection of representations of houses, monuments, statues, and other interesting remnants of antiquity; unaccompanied by letter-press descriptions, but having short accounts, with references to Pennant and other writers, engraved under each subject. This work was commenced in January 1791, and completed in 1800; the whole series consisting of ninety-six plates of a quarto size. A complete list of the subjects is given in Upcott's 'Bibliographical Account of the Principal Works relating to English Topography,' vol. ii. p. 886. While this was in course of publication, Smith brought out his 'Remarks on Rural Scenery,' a thin quarto volume, illustrated with twenty etchings of cottages, some of which are very prettily executed.

Smith's next work for the illustration of the early architecture of the metropolis was his 'Antiquities of Westminster,' comprising the old Palace, St. Stephen's Chapel, &c., and containing engravings of 246 topographical objects, of which, at the time of its publication (1807), 122 were no longer in existence. This series of engravings is comprised in 38 plates and six wood-cuts, of which a particular account is given by Upcott, vol. ii. p. 835, et seq. "This task," it is observed by Mr. Smith's biographer, in the 'Gentleman's Magazine,' "appears to have been determined on in the year 1800; when on occasion of the Union with Ireland, it becoming necessary to remove the wainscoting for the enlargement of the House of Commons, some very curious paintings were discovered, on the 11th of August. The next day," the narrative proceeds to inform us, "Dr. Charles Gower and Mr. Smith visited the paintings. Mr. Smith immediately determined to publish engravings from them; and, permission being obtained, on the 14th he commenced his drawings. It was his custom to go there as soon as it was light, and to work till nine o'clock in the morning, when he was obliged to give way to the workmen, who often followed him so close in their operations as to remove in the course of the same day on which he had made his drawing, the painting which he had been employed in copying that very morning." Antiquaries will long esteem the name of John Thomas Smith, were it not only for the service he rendered in snatching these curious paintings from complete oblivion. The plates of the 'Antiquities of Westminster,' which comprise coloured copies of several of these paintings, are accompanied by descriptions of considerable length, a great part of which were written by J. Sidney Hawkins, F.S.A.; although, owing to a misunderstanding which led to the publication of much angry correspondence, portions of which are often bound up with the work, it was completed by Smith alone. A disastrous fire at Bensley's printing-office destroyed 400 copies of this work, and 5600 prints, occasioning a loss to Mr. Smith which he estimated at 3000*l*. In 1809 appeared sixty-two additional plates to the above work, forming a second volume, but without any description, or even a list of subjects. The latter however has been supplied by Mr. Upcott, in the work above alluded to, vol. ii. p. 839, &c.

These works were followed by another, in imperial 4to., entitled 'Ancient Topography of London,' the publication of which was commenced in October 1810, although it was not completed until 1815. This, which is considered Smith's best work, contains 32 plates, very boldly etched, in a style somewhat resembling that of Piranesi, and accompanied by descriptions of the buildings represented. The author intended to extend it somewhat further, but never did so. In 1816 Mr. Smith received his appointment as keeper of the prints in the British Museum; and in the next year published his 'Vagabondiana, or Anecdotes of Mendicant Wanderers through the Streets of London,' illustrated with about thirty portraits, and with an introduction by Mr. Douce.

The last literary production of Mr. Smith was the amusing but not very honourable or trustworthy book entitled 'Nollekens and his Times,' which appeared in 1828, and soon ran through three editions.

Smith was an executor to Nollekens, and was disappointed in not being a legatee. He therefore wrote under the influence of excited feelings, and made a discreditable use of the free access he had for so many years enjoyed to the home and studio of Nollekens. Still, although the work contains much that should not have been published, and is distinguished by a degree of high colouring which greatly impairs its veracity, it contains many curious anecdotes of artists and other distinguished men with whom Smith had come in contact in the course of a long and rather eventful life. He left in manuscript materials for a history of his own life and times, and had also collected much matter towards an account of the parish of St. Paul, Covent Garden, and for a work which he intended to call 'Walks through London;' but he did not live to complete any of these works, having died of inflammation of the lungs, after only a week's illness, March 8th 1833, in his sixty-seventh year. His wife, a son, and two daughters survived him. Mr. Smith is stated to have been of kind disposition, and inclined to encourage young artists. In his attention to the duties of his office he was exemplary; and his fund of anecdote rendered him a very amusing companion. There is a portrait of him engraved by Skelton, from a drawing by Jackson. ('Gent. Mag.,' vol. 103, part i, p. 641, &c.)

SMITH, JOSEPH, founder of the religious body commonly known as MORMONITES, but called by their founder and by themselves "The Church of Jesus Christ of Latter Day Saints."

Whether regarded as a religious, political, social, or intellectual phenomenon, the rise and progress of Mormonism is one of the most remarkable movements of modern times; and a calm survey of its origin and development, made with a view to arrive at a true knowledge of the facts, and, as far as practicable, a clear understanding of its inner spirit—to comprehend, that is, alike the system and its effects, the character of its founders, and its influence on its disciples,—could not but be serviceable as well as interesting. Such a survey we cannot of course attempt here. What will be attempted in the present article will be to give a brief notice of the founder of Mormonism, and of the system as he left it. Its subsequent development and present state will be noticed in our sketch of his successor. [YOUNG, BRIGHAM.]

Joseph Smith left behind him an autobiography; and a strange book purporting to be written by his mother has been published, under the title of 'Biographical Sketches of Joseph Smith, the Prophet, and his Progenitors for many Generations, by Lucy Smith, Mother of the Prophet.' Of these, as well as the notices of him by his adherents and opponents who profess to have obtained their information respecting him at first hand, we have made use; but we prefer to let the Prophet in a measure tell his own story as we find it in a short sketch of himself and his system, which he supplied a few months before his death to Mr. Daniel Rupp for that gentleman's 'Original History of the Religious Denominations at present existing in the United States,' 8vo, Phil., 1844, and which may consequently be taken as an authentic representation, as far as it goes, of what Smith himself wished to be believed. He says:—

"I was born in the town of Sharon, Windsor County, Vermont, on the 23rd of December 1805. When ten years old, my parents removed to Palmyra, New York, where we resided about four years, and from thence were removed to the town (township) of Manchester, a distance of six miles. My father was a farmer, and taught me the art of husbandry. When about fourteen years of age, I began to reflect upon the importance of being prepared for a future state; and upon inquiring the plan of salvation, I found that there was a great clash in religious sentiment. . . . Considering that all could not be right, and that God could not be the author of so much confusion, I determined to investigate the subject more fully. . . . Believing the word of God, I had confidence in the declaration of James, 'If any man lack wisdom let him ask of God, who giveth to all men liberally and upbraideth not, and it shall be given him.'

"I retired to a secret place in a grove, and began to call upon the Lord. While fervently engaged in supplication my mind was taken away from the objects with which I was surrounded, and I was enrapt in a heavenly vision, and saw two glorious personages, who exactly resembled each other in features and likeness, surrounded with a brilliant light which eclipsed the sun at noonday. They told me that all the religious sects were believing in incorrect doctrines, and that none of them was acknowledged of God as his Church and Kingdom. And I was expressly commanded to 'go not after them,' at the same time receiving a promise that the fulness of the Gospel should at some future time be made known to me."

This "fulness of the Gospel," was that revealed in the Book of Mormon; and as his account of the discovery of the book and its contents is really the point on which our estimate both of the man and the doctrine must to a great extent turn, it will be best given in his own words and without abridgment. He says—"On the evening of the 21st of September, A.D. 1823, while I was praying unto God and endeavouring to exercise faith in the precious promises of Scripture, on a sudden a light like that of day, only of a far purer and more glorious appearance and brightness, burst into the room; indeed, the first sight was as though the house was filled with consuming fire. The appearance produced a shock that affected the whole body. In a moment a personage stood before me surrounded with a glory yet

greater than that with which I was already surrounded. The messenger proclaimed himself to be an angel of God, sent to bring the joyful tidings, that the covenant which God made with ancient Israel was at hand to be fulfilled; that the preparatory work for the second coming of the Messiah was speedily to commence; that the time was at hand for the Gospel in all its fulness to be preached in power unto all nations, that a people might be prepared for the Millennial reign.

"I was informed also concerning the aboriginal inhabitants of this country (America) and shown who they were, and from whence they came;—a brief sketch of their origin, progress, civilisation, laws, governments, of their righteousness and iniquity, and the blessings of God being finally withdrawn from them as a people, was made known unto me. I also was told where there were deposited some plates, on which was engraven an abridgment of the records of the ancient prophets that had existed on this continent. The angel appeared to me three times the same night, and unfolded the same things. After having received many visits from the angels of God, unfolding the majesty and glory of the events that should transpire in the last days, on the morning of the 22nd of September 1827, the angel of the Lord delivered the records into my hands.

"These records were engraven on plates which had the appearance of gold; each plate was six inches wide and eight inches long, and not quite so thick as common tin. They were filled with engravings in Egyptian characters, and bound together in a volume, as the leaves of a book, with three rings running through the whole. The volume was something near six inches in thickness, a part of which was sealed. The characters on the unsealed part were small and beautifully engraved. The whole book exhibited many marks of antiquity in its construction, and much skill in the art of engraving. With the records was found a curious instrument which the ancients called 'Urim and Thummim,' which consisted of two transparent stones set in the rim on a bow fastened to a breastplate. Through the medium of the Urim and Thummim I translated the record by the gift and power of God.

"In this important and interesting book the history of ancient America is unfolded from its first settlement by a colony that came from the tower of Babel, at the confusion of languages, to the beginning of the 5th century of the Christian era.

"We are informed by these records, that America, in ancient times, has been inhabited by two distinct races of people. The first were called Jaredites, and came directly from the tower of Babel. The second race came directly from the city of Jerusalem, about 600 years before Christ. They were principally Israelites of the descendants of Joseph. The Jaredites were destroyed about the time that the Israelites came from Jerusalem, who succeeded them in the inheritance of the country. The principal nation of the second race fell in battle towards the close of the 4th century. This book also tells us that our Saviour made his appearance upon this continent after his resurrection; that they had apostles, prophets, pastors, teachers, and evangelists; the same order, the same priesthood, the same ordinances, gifts, powers, and blessing as was enjoyed on the eastern continent; that the people were cut off in consequence of their transgressions; that the last of the prophets who existed among them was commanded to write an abridgment of their prophecies, history, &c., and to hide it up in the earth, and that it should come forth and be united with the Bible, for the accomplishment of the purposes of God in the last days. For a more particular account I would refer to the Book of Mormon."

We must here for a while interrupt the Prophet's narrative. It will have been noticed that the account of his early life, and of his proceedings between the first appearance of the angel and the discovery of the plates, is remarkably vague. His education had evidently been of the rudest kind. From various accounts, including those of his mother, it would seem that he used to assist his father in his business, but that he was of an unsettled disposition, and probably spent a good deal of time in wandering about the country. It is stated also, that he for some time got a living by trying for mineral veins by a divining-rod, and some affirm that, like Sidrophel, he used "the devil's looking-glass—a stone," and was consulted as to the discovery of hidden treasures, whence he had come to be commonly known as the "money-digger;" and on one occasion he had been, at the instigation of a disappointed client, imprisoned as a vagabond. He is also stated to have carried off and married a Miss Hales, during the interval between the first angelic visitation and the discovery of the plates of Nephi.

As to the Book of Mormon itself, the authorship has been claimed for one Solomon Spalding, a presbyterian preacher, who having fallen into poverty composed a religious romance, entitled 'The Manuscript Found,' which professed to be a narrative of the migration of the Lost Tribes of Israel from Jerusalem to America, and their subsequent adventures on that continent, in the hope of obtaining enough from its publication to release him from his difficulties. The work was written, but he could not find a publisher for it, and some ten years after his death, the manuscript was carried by his widow into New York, where it was stolen by or somehow got into the hands of Smith, or Rigdon (an early associate in his proceedings). The statement is supported by affidavits made by Spalding's daughter, his brother, one Henry Lake, and some other persons, who declare that they had heard him read portions of the work which were substantially the same as

parts of the Book of Mormon. The story is incoherent in its details and the authenticity of the affidavits does not seem clear; but the work itself appears to agree pretty well with such an origin, supposing, that is, that the presbyterian preacher, as might well have been the case, was a rude-minded, uneducated man, sufficiently familiar with the Old Testament to find no difficulty in clothing his story in its language, and making use of the easily obtained information respecting the ruins of ancient "towns and temples," which have been discovered in various parts of America, as a ground-work for his narrative. The book itself is (even now that its grosser grammatical errors are said to have been expunged) a singularly ill-written one, and how any decently educated man could have written it as a book to be read for amusement would be inconceivable, were it not that experience teaches us that authors are by no means unfrequently mistaken in that respect. At the same time there is certainly nothing in the book to contradict the supposition that it is the work of Smith himself—for as to its being a divine revelation, the most cursory examination of the book will be enough to convince an educated man of the utter improbability of that, if its possibility were otherwise conceivable. Be the author who he may, Smith having obtained the book—whether from Solomon Spalding's travelling chest, his own brain, or the stone-box which the angel discovered to him—thought it behooved him to make his treasure known. At first he told the members of his own and his father's household, and, more fortunate than Mahomet, found little difficulty in [persuading them of the truth of his mission and the reality of the gift. But he says:—"As soon as the news of this discovery was made known, false reports, misrepresentation, and slander flew, as on the wings of the wind, in every direction. My house was frequently beset by mobs and evil-designing persons; several times I was shot at, and very narrowly escaped; and every device was made use of to get the plates away from me; but the power and blessing of God attended me, and several began to believe my testimony."

Among those he told of the discovery was a farmer named Martin Harris, whom he persuaded to convert his stock into money in order to assist in printing the book. But Harris wanted to consult some scholar, and Smith was induced to entrust him with a copy of a portion of one of the golden plates to carry to New York. Harris took the copy to Dr. Anthon, who according to the triumphant declaration of the Mormonites was unable to make out the characters, which he described to be "reformed Egyptian"—and this is one of "the proofs" cited by Mormonite teachers of the authenticity of the book. But Dr. Anthon's own account is very different. He says that he at first supposed the paper to be a hoax, and gave little heed to it; but on hearing the man's story, he assured him that the work was an imposture, and strongly advised him not to have anything to do with it. The paper itself he thus describes (and it is the only description of the 'Book of Mormon' which has been published):—"The paper was, in fact, a singular scrawl. It consisted of all kinds of crooked characters, disposed in columns, and had evidently been prepared by some person who had before him, at the time, a book containing various alphabets. Greek and Hebrew letters, crosses and flourishes, Roman letters inverted or placed sideways, were arranged in perpendicular columns, and the whole ended in a rude delineation of a circle divided into various compartments, decked with various strange marks, and evidently copied after the Mexican calendar, given by Humboldt, but copied in such a way as not to betray the source whence it was derived." ('Letter to Mr. Howe,' February 17, 1834.)

Mrs. Lucy Smith (the Prophet's mother) tells an odd rambling story about the first translation made from the plates having been entrusted to this Harris, and stolen from him by his wife. Smith she says was, after long repentance, assured by the angel of forgiveness for his negligence, but at the same time informed that Satan would cause the stolen work to be interpolated and altered; and in order to avoid the mischief that would else arise from these machinations, he was directed to make another translation—not as the first was to have been—from the original book, but from an abridgment of it. Harris, though despite of Dr. Anthon's advice he did sell his goods as a contribution towards Smith's outlay, afterwards apostatised, and one might fancy from Mrs. Smith's story that he had in his possession some version of the revelation differing from that eventually published, but it is possible that she might have written with some reference to the Spalding story.

No sooner was the discovery published, than great curiosity was manifested by the faithful as well as by unbelievers, to obtain a sight of the marvellous plates, and the Prophet and his mother give a minute account of the shifts to which he was driven to conceal them. At length it was revealed to him that the desired sight should be vouchsafed to three witnesses—whose 'testimony' is prefixed to every printed copy of the 'Book of Mormon.' These witnesses aver in their strange language—"that an angel of God came down from heaven, and he brought and laid before our eyes, that we beheld and saw the plates, and the engravings thereon." This is sufficiently vague, and it is noteworthy that the more detailed account of this transaction by the prophet's mother, has just the same vagueness as to what manner of vision this was. But a more specific testimony was given by eight other witnesses, to whom Smith was permitted to show the plates. Mrs. Smith says that these eight men went with

Joseph into a secret place "where the family were in the habit of offering up their secret devotions to God. They went to this place because it had been revealed to Joseph that the plates would be carried by one of the ancient Nephites. Here it was that these eight witnesses, whose names are recorded in the Book of Mormon, looked upon them and handled them." The witnesses themselves say—"We have seen and hefted, and know of a surety that the said Smith has got the plates of which we have spoken." Of these eight witnesses three were members of Smith's own family. After these witnesses had seen the plates, Mrs. Smith tells us, "The angel again made his appearance to Joseph, at which time Joseph delivered up the plates into the angel's hands;" and, Joseph himself says, "He (the angel) has them in his charge to this day." It is needless to remark that this disposes of any demand on the part of the sceptic to see the original plates, and gets rid of many awkward inquiries: nor need we add that it is a story quite satisfactory to Mormon 'saints'—but how far it is likely to satisfy the outside world the reader will judge for himself. We have, at the risk of being tedious, related these particulars, because they concern the very foundations of the system. To satisfy the curious we may mention that Smith carried on the process of translating the plates by retiring behind a screen where he read the plates through the "curious instrument called the Urim and Thummim," and was thus enabled to translate them, while a 'scribe' outside the screen wrote as he dictated.

The 'Book of Mormon' was published in 1830. In the previous year Smith and Oliver Cowdery, the scribe, had been baptised by an angel, and power given them to baptise others. Smith himself may now carry on the narrative:—"On the 6th April 1830, 'The Church of Jesus Christ of Latter Day Saints' was first organised, in the town of Manchester, Ontario county, state of New York. Some few were called and ordained by the spirit of revelation and prophecy, and began to preach as the spirit gave them utterance, and though weak, yet were they strengthened by the power of God; and many were brought to repentance, were immersed in the water, and were filled with the Holy Ghost by the laying on of hands. They saw visions and prophesied, devils were cast out, and the sick healed by the laying on of hands. From that time the work rolled forth with astonishing rapidity, and churches were soon formed in the states of New York, Pennsylvania, Ohio, Indiana, Illinois, and Missouri. In the last-named state a considerable settlement was formed in Jackson county; numbers joined the church, and we were increasing rapidly; we made large purchases of land, our farms teemed with plenty, and peace and happiness were enjoyed in our domestic circle and throughout our neighbourhood; but as we could not associate with our neighbours—who were many of them of the basest of men, and had fled from the face of civilised society to the frontier country to escape the hands of justice—in their midnight revels, their sabbath-breaking, horse-racing, they commenced at first to ridicule, then to persecute, and finally an organised mob assembled and burned our houses, tarred and feathered, and whipped many of our brethren [Smith himself was tarred and feathered], and finally drove them from their habitations; these, houseless and homeless, contrary to law, justice, and humanity, had to wander on the bleak prairies till the children left their blood on the prairie. This took place in the month of November (1833)." The government, he says, winked at these proceedings, and "the result was, that a great many of them died; many children were left orphans; wives, widows; and husbands, widowers. Our farms were taken possession of by the mob, many thousands of cattle, sheep, horses, and hogs were taken, and our household goods, store goods, and printing-presses were broken, taken, or otherwise destroyed." These outrageous proceedings were the result of the reports which had spread abroad of the scandalous practices of the Mormonites—practices almost perfectly analogous to those formerly charged upon the Anabaptists and other new sects, and in all probability with no more foundation in truth. Driven from Jackson, the Mormonites settled in Clay county, where they remained three years, when being again threatened with violence, they removed to Caldwell and Davies counties. Here their numbers rapidly increased. They formed three extensive settlements, established a bank, and appeared to be in a most flourishing condition. But again various troubles fell upon them. The bank failed, and Smith was obliged to conceal himself. Their old persecutors roused the popular feeling against them, and finally, by "an extraordinary order," issued by the governor of Missouri, in the summer of 1838, they were violently ejected from their homes, plundered of their goods, and subjected, the women especially, to the most frightful atrocities.

Being thus expelled from Missouri, they settled in Illinois, where they were at first treated with great kindness. An admirable site having been purchased by them on the Mississippi, at the head of the Des Moines Rapids, they "in the fall of 1839" laid the foundation of their famous city of Nauvoo, or 'the Beautiful,' for which the state legislature granted them in December 1840 a charter of incorporation with unusual privileges. Smith dwells with great delight on this city, which he had seen rise up under his presidency from a wild tract to be a place of "1500 well-built houses, and more than 15,000 inhabitants," all looking to him for temporal as well as spiritual guidance. Among the chief things which he describes as provided for, was "the University of Nauvoo, where all the arts and sciences will grow with

the growth and strengthen with the strength of this beloved city of the saints of the last days." But the grand feature of the city was the great temple, which Smith thus describes:—"The temple of God, now in the course of erection, being already raised one story, and which is 120 feet by 80 feet, of stone with polished pilasters, of an entire new order of architecture, will be a splendid house for the worship of God, as well as unique wonder of the world, it being built by the direct revelation of Jesus Christ for the salvation of the living and the dead."

The progress of Nauvoo was even more rapid than that of any of the preceding places. Converts flocked in from foreign countries as well as from different parts of America; the people were peaceful and industrious, the land was fertile, and the settlement was eminently prosperous. Dangers of various kinds beset Smith, but he escaped from them all. He had in 1841 been arrested on a charge of sedition, &c., but being carried before the authorities of Nauvoo, he was set at liberty. Again, he was charged with shooting at the ex-governor of Missouri, and deemed it prudent to conceal himself for a time, but eventually surrendered, and being able to prove that he was "some hundreds of miles distant" from the scene of the attack he was acquitted. Among his followers too there were occasional symptoms of disaffection, but they never extended widely, and were easily suppressed. With the 'gentiles' settled in Nauvoo, and whom he could not keep out, he had more trouble; and, as might have been anticipated, the reports which had led to the expulsion of the Mormons from their former cities followed them here, and suspicion and hatred gathered about them. But Smith from the foundation of Nauvoo had been making provision against this danger. He had procured the insertion of a provision in the city charter empowering the formation of an independent civic militia, which he at once organised, and of which he constituted himself 'Lieutenant-general.' He also set about consolidating his spiritual as well as civic government, and he made careful provision for an ample succession of hardy and zealous missionaries. The Book of Mormon was an historical revelation: the doctrine and discipline of the church were to be enunciated in subsequent revelations as circumstances called them forth. The first point was his own acceptance as "prophet, seer, and revelator." In other words, this "church of the latter days" was to be a theocracy, with himself as its head and inspired legislator—at once the Moses and Aaron of this new house of Israel. Nor in this capacity was he ever found wanting. He was always ready in the moment of difficulty with the needful revelation. In this manner he successively defined his own position, provided for his requirements, established his 'orders' of apostles, elders, priests, &c., in the church, and regulated all ceremonies, as well as defined its creed. These later revelations will all be found in the 'Doctrines and Covenants of the Church of Jesus Christ of Latter-Day Saints, selected from the Revelations of God, by Joseph Smith, President,' of which there have been numerous editions published. But, whatever was Smith's power over his followers, he was sadly deficient in wariness in his dealings with the outer world. Again and again he suffered himself to come into contact with the civil authority of the state; and his impunity led him, notwithstanding the terrible lessons he had already received, to defy the storm that was plainly gathering around him. So little did he heed the danger, that in prospect of the presidential election of 1844 he published his own 'Views of Government,' a sort of social scheme, in which "honesty and love," so that all might form a brotherhood, were declared to be the motive forces of just government; and he was actually put in nomination for the presidency.

But he did not live to the day of election. The storm that had been so long gathering, burst before then and swept him away in its fury. The 'gentile' residents in Nauvoo, supported as it would appear by some of the dissatisfied among the saints, had established an opposition newspaper 'The Expositor,' which, growing more and more bold, ventured at length to denounce the morals of the prophet as well as his system of government. The city council now interfered and condemned the newspaper to silence; upon which a mob assembled, broke into the office and destroyed the presses. The proprietors charged some of the Mormon leaders with inciting the mob to this act, and they were formally arrested, but immediately set at liberty by the public prosecutor entering a *nolle prosequi*, a practice said to have become usual when a 'saint' was charged with any offence. The injured parties now carried their complaints before the governor of Illinois, who, having been long waiting, as is said, for a legal opportunity to crush the power of Smith, readily granted a warrant for his apprehension, June 24, 1844, on a charge of treason and sedition. Smith's first impulse was to put Nauvoo into a state of defence, and his militia was drawn out. But on the approach of the state troops, he offered, in order to avoid bloodshed, to surrender on condition that Governor Ford would guarantee his safety till his trial could take place. This was agreed to, and Joseph Smith, his brother Hyram, and some other of the leading members of the council were carried prisoners to Carthage jail. A guard small in number and purposely chosen, as is affirmed, from among Smith's declared enemies, was set over them; but, on the 27th of June, a mob of about 200 armed ruffians broke into the jail, and firing in at the door of the room in which the brothers were confined, shot Hyram dead at once. Joseph Smith attempted to escape by the window, but was knocked down, carried

out, and shot. His dying exclamation is said to have been "O Lord my God." His body was given up to his friends, and buried with great solemnity.

Perhaps the death of Smith at that time did more than any other event could have done, to confirm and consolidate the Mormon church. Smith himself, it is evident, was becoming intoxicated with power and prosperity. He is said to have given way to lust and intemperance, and though the statement is warmly denied, there appears to be truth in the report, though the extent has been no doubt greatly magnified. There is every reason to believe that he was beginning to disgust even his followers, when his murder banished all feelings but those of pity and reverence. Thenceforth, he was thought of only as the glorified prophet and martyr; and his followers braced their nerves to endurance by the remembrance of their master's fate and example. In Nauvoo itself the impression produced by the event was most profound. At first the popular cry was only for revenge, but their leaders exhorted them to forbearance, and succeeded in their exhortations. They then proceeded to elect a successor to Smith. Three candidates put forward their claims to the prophet's place. The choice of the council fell on Brigham Young, who as soon as he was installed took measures to remove his people far beyond the farthest settlements of his countrymen, convinced now that only in a country far distant from societies living under the established forms, could the vision of the Prophet stand a chance of realisation. The only stipulation made with their enemies was that they should be unmolested till they could finish and dedicate their beautiful temple; and as soon as that was accomplished, September 1846, the last band of the brethren departed from the land of their hopes to seek a new land of promise.

Shortly before Smith's death he estimated his followers at upwards of 150,000, and declared that they were to be found among almost every civilised people on the face of the earth. Probably he exaggerated alike the number and the diffusion of his disciples, but that their number was very great and that they were very widely spread there can be little doubt. To what extent, if any, they have since increased we need not now stay to inquire. Their present condition will be more properly noticed in a future article. It only remains now to state their doctrines as enunciated by Smith, and this will be best done in the creed which he forwarded a few months before his death for publication in Rupp's work, quoted above:—

"We believe in God the Eternal Father, and his Son Jesus Christ, and in the Holy Ghost.

"We believe that men will be punished for their own sins, and not for Adam's transgression.

"We believe that through the atonement of Christ all men may be saved, by obedience to the laws and ordinances of the Gospel.

"We believe that these ordinances are—1st, Faith in the Lord Jesus Christ; 2nd, Repentance; 3rd, Baptism by immersion for the remission of sins; 4th, Laying on of hands for the gift of the Holy Spirit.

"We believe that a man must be called of God by 'prophecy, and by laying on of hands' by those who are in authority, to preach the Gospel and administer the ordinances thereof.

"We believe in the same organisation that existed in the primitive church, namely, apostles, prophets, pastors, teachers, evangelists, &c.

"We believe in the gift of tongues, prophecy, revelation, visions, healing, interpretation of tongues, &c.

"We believe the Bible to be the Word of God, so far as it is translated correctly; we also believe the Book of Mormon to be the Word of God.

"We believe all that God has revealed, all that he does now reveal; and we believe that he will yet reveal many great and important things pertaining to the kingdom of God.

"We believe in the literal gathering of Israel, and in the restoration of the Ten Tribes; that Zion will be established upon this (the Western) continent. That Christ will reign personally upon the earth; and that the earth will be renewed and receive its paradisaical glory.

"We claim the privilege of worshipping Almighty God according to the dictates of our conscience, unmolested, and allow all men the same privilege, let them worship how, where, or what they may.

"We believe in being subject to kings, presidents, rulers, and magistrates; in obeying, honouring, and sustaining the law.

"We believe in being honest, true, chaste, benevolent, virtuous, and in doing good to all men: indeed we may say that we follow the admonition of Paul, 'We believe all things,' we 'hope all things,' we have endured very many things, and hope to be able to endure all things. If there is anything virtuous, lovely, or of good report, or praiseworthy, we seek thereafter."

In this creed it will be seen that there is no reference to what is now commonly regarded as the characteristic feature of the Mormon system—polygamy, nor has it been mentioned in connection with Smith himself. There is no doubt that during the last year of Smith's life this was one of the charges brought against the Mormonites, but the doctrine of a plurality of wives was never openly taught until after his death, and if he proclaimed it at all, he confined the revelation to the initiated. He is said however to have "sealed" to himself "plural wives," as the Mormons express it, about two years before his death; and the privilege may have been accorded to some

of the chief of his followers. But the doctrine in its present form is one of the 'developments' of the system, which will be referred to more properly in our notice of Brigham Young.

SMITH, ROBERT, D.D., an English mathematician, who was born in the year 1689: the place of his birth and the manner in which he was educated are not known; but it appears that from his youth he applied himself diligently to the study both of pure mathematics and of the physical sciences. In the early part of his life he was appointed tutor to the Duke of Cumberland, and he subsequently received the title of master of mechanics to the king. He was a cousin by his mother's side of the celebrated Roger Cotes, and the two young men were intimately connected by friendship as well as by blood; they pursued their studies in each other's society, and their united labours were directed to the advancement of the Newtonian philosophy in this country. Mr. Cotes, who was Plumian professor of astronomy at Cambridge, dying in 1716, Mr. Smith, then M.A., was immediately afterwards appointed to succeed him: in 1723 he was made LL.D.; and in 1742, on the death of Dr. Bentley, he was appointed master of Trinity College. In 1722 he published, under the title of 'Harmonia Mensurarum,' and with a valuable commentary, several tracts on philosophical subjects which had been written by his relative and friend; and in 1738 he brought out, in 2 vols. 4to, his great work, entitled 'A Complete System of Optics,' which he dedicated to the Right Hon. Ed. Walpole. Such a work was then much wanted: it contains, besides a full development of the several different branches of the science, a considerable number of applications of the subjects to astronomy and navigation; but it is considered as rather deficient in perspicuity and arrangement. It was translated into French in 1767. Dr. Smith undertook to correct and publish Cotes's 'Lectures on Hydrostatics and Pneumatics;' and this work which came out in the year 1787, was enriched with a great number of notes, explanatory and illustrative of the subjects. A second edition of it was published in 1747. In the following year he published in one volume, 8vo, a treatise called 'Harmonics, or the Philosophy of Musical Sounds;' and of this work a second edition appeared in 1758. This learned man, of whose life so little is known, was in 1718 admitted a fellow of the Royal Society, and was intimately acquainted with most of the scientific men of his time. He died at Cambridge in 1768, in the seventy-ninth year of his age, having been a liberal benefactor both to the University and to Trinity College; and having bequeathed two annual prizes, each of £25., for students who, being bachelors of arts, should have made the greatest progress in mathematics and natural philosophy. The two bachelors who gain these prizes are designated by the name of Smith's prizemen.

SMITH, SYDNEY, Reverend, was born in 1771, at the village of Woodford, in Essex. His father, a gentleman of peculiar habits, resided at Lydiard, near Taunton, in Somersetshire; his mother was of French extraction. Sydney Smith was educated at the collegiate school of Winchester, on William of Wykeham's foundation, rose to be captain of the school, and was elected in 1780 a scholar of New College, Oxford, of which college he was elected a fellow in 1790. He afterwards went for some six months into Normandy, where he acquired a complete mastery of the French language. In 1796 he took the degree of M.A., and soon afterwards obtained the curacy of Nether-Avon, near Amesbury, in Wiltshire, where he remained about two years, and then accepted the office of tutor to the son of Mr. Hicks Beach, a gentleman who resided in the neighbourhood, and who was member of parliament for Cirencester. Sydney Smith was to have gone with his pupil to reside at the University of Weimar; but Germany having just then become the seat of war, he proceeded to Edinburgh, where he remained about five years. Among the first persons with whom he formed an acquaintance in that city were Henry Brougham, now Lord Brougham, Francis Jeffrey, afterwards Lord Jeffrey, and others of similar opinions in politics. This acquaintance led to the establishment of the 'Edinburgh Review,' the origin of which is thus related by Sydney Smith himself:—"One day we happened to meet in the eighth or tenth story or flat in Buccleuch Place, the elevated residence of the then Mr. Jeffrey. I proposed that we should set up a Review; this was acceded to with acclamation. I was appointed editor, and remained long enough in Edinburgh to edit the first number of the 'Edinburgh Review.'" The first number was published in October 1802. Sydney Smith while in Edinburgh officiated at the Episcopal chapel there. In 1804 he removed to London, where some two or three years before he had married the daughter of Mr. Pybus, the banker, and where he now fixed his residence. He became popular as a preacher at the chapel of the Foundling Hospital, and at other places. He also delivered lectures on polite literature with much applause at the Royal Institution in Albemarle Street, became famous as a wit, and still more widely known as a regular contributor to the 'Edinburgh Review.'

Lord Erskine, when Lord Chancellor, gave him in 1806, the rectory of Foston-le-Clay, in Yorkshire. In 1808 he published anonymously 'Letters on the Subject of the Catholics to my brother Abraham who lives in the Country, by Peter Plymley.' In 1828 Lord Lyndhurst presented him a stall in Bristol Cathedral, and a year or two later he was enabled to exchange Foston for the rectory of Combe-Florey, in Somersetshire. In 1831 he was appointed by Earl Grey one of the canons residentiary of St. Paul's Cathedral. Except a few years

when he resided at his rectory of Foston, during which he was the indefatigable friend of his poorer parishioners, and occasional residence at Combe-Florey, his place of residence was London, where he associated with literary men and politicians of Whig principles, distinguished for his almost unrivalled wit, and his conversational powers, and consequently a frequent "diner out." He died at his house in Green Street, Mayfair, London, February 22nd, 1845, and was buried in the Kensall Green Cemetery. He left the bulk of his property, which was large, to his widow and his son Wyndham Smith.

The Rev. Sydney Smith published 'Six Sermons,' Edinb., 12mo. 1800; 'Sermons,' 2 vols. 8vo., Lond., 1809; several occasional sermons and political pamphlets; and contributions to the 'Edinburgh Review.' In 1839 he published what he himself probably regarded as the best of his literary compositions, 'The Works of the Rev. Sydney Smith,' 3 vols. 8vo., with a preface by the author and a portrait. The collection consists of his contributions to the 'Edinburgh Review,' 'Peter Plymley's Letters,' and various occasional tracts. With respect to his contributions, he observes, "I see very little in my reviews to alter or repent of. I always endeavoured to fight against evil, and what I thought evil then I think evil now. I am heartily glad that all our disqualifying laws for religious opinions are abolished, and I see nothing in such measures but unmixed good and real increase of strength to our establishment." Two volumes of his lectures have been published since his death, under the title of 'Sketches of Moral Philosophy.'

Sydney Smith is a very effective writer; he has very considerable argumentative power, united with unflinching wit, humour, and poignant satire. His style is clear and forcible, without any apparent aim at elaboration or polish. Two or three letters which he published in the newspapers shortly before his death, against the repudiation of their debts by certain States of North America, are as strong in argument, as pungent in satire, and as effective in style as anything which he wrote in less advanced age.

(A *Memoir of the Rev. Sydney Smith, by his Daughter, Lady Holland, with a Selection from his Letters.* Edited by Mrs. Austin, 2 vols. 8vo. 1855.)

SMITH, SIR THOMAS, was the eldest of the three sons of John Smith, of Saffron-Walden, who appears to have been a gentleman of some distinction in the county, since he served the office of high-sheriff for Essex and Hertford in 1538. His son Thomas was born at Saffron-Walden, on the 28th of March, 1514, or 1515, most probably in the latter year.

In 1526 he was entered of Queen's College, Cambridge, of which he became a fellow in 1531. It is said to have been after this that, incited by the example of Dr. John Redman, who had just returned from the Continent an accomplished Greek scholar, he made himself master of that language in about two years; and the story is commonly told so as to imply that the study of Greek was till now unknown at Cambridge. But this is incredible; and indeed Smith's own relation of the methods he took to reform the prevalent mode of reading Greek at the university shows that some acquaintance with the language, though perhaps not a very exact or profound acquaintance, was previously general among the students. In 1535 he was appointed to read the public Greek lecture; and it was while holding this office that, in conjunction with his friend Cheke, he introduced the improved mode of pronouncing the Greek letters, of which he has given an account and defence in his tract entitled 'De Recta et Emendata Linguae Graecae Pronuntiatione,' first printed in 4to, at Paris, in 1568, and afterwards, along with the 'Disputationes' of Cheke, the 'VII. Epistolae' of Bishop Gardener (who espoused the cause of the old pronunciation), and other writings on the same subject, in Henry Stephen's collection entitled 'De Linguae Graecae ac Latinae Vera Pronuntiatione Commentarii Doctissimorum Virorum,' 8vo, 1587.

In 1536 Smith, now one of the most distinguished members of the university, was chosen public orator, and for some years he discharged the duties of that office with great applause. But in 1539 he left England, and remained abroad for two or three years, during which time he visited France and Italy, and took his degree of doctor of the civil law at Padua. After his return home, having taken the same degree at Cambridge in 1542, he was appointed king's professor of law in that university, and he seems to have continued to reside at Cambridge during the remainder of the reign of Henry VIII., although he is stated to have taken at least deacon's orders, and to have held in the church both the rectory of Leverington in Cambridgeshire and the deanery of Carlisle. His father had been long attached to the new doctrines in religion, and he had himself been brought up in the reformed faith from his childhood.

The accession of Edward VI. however was the great turning point in the history of this learned and able man. He was immediately taken into the family of the lord-protector Somerset; and, besides being made one of his masters of requests, was appointed to the two lucrative places of Provost of Eton and Steward of the Stannaries. In addition to his classical erudition, Smith had distinguished himself by his acquirements both in the pure mathematics and in such physical and experimental philosophy as was then known. We have already seen him figuring as a professor of law and as a clergyman: in 1548 he appears in a new professional character, having been that year made secretary of state and knighted. The same year he was sent to

Brussels on an embassy to the Emperor Charles V. There is some reason to suppose that on the fall of his patron Somerset he lost his place of secretary; but if so, he was soon restored to it; for in April, 1551, he was sent in that capacity on the embassy to Henry II. of France, to treat of a marriage between King Edward and that king's daughter.

When the crown passed to Mary, Sir Thomas Smith was deprived of all his employments and preferments; but having conducted himself with prudence, he was not farther molested, and was even allowed a pension of 100*l.* a year. On the accession of Elizabeth, he was immediately restored to his deanery, and he was soon also recalled to public employment. In 1559 he was one of the commissioners sent to France by whom a peace was concluded between the two countries; and being again sent thither in 1562, he continued to reside abroad till 1566. He was also employed on another mission to France in 1567. Then he resided for some years at his seat in the country, till he was recalled to court in 1571; and being admitted of the privy council, was soon after appointed assistant secretary of state under Burleigh. In 1572 he once more went over in a diplomatic capacity to France; and while he was abroad he was nominated by the queen Chancellor of the Order of the Garter. In June that same year, on Burleigh's promotion to the place of lord treasurer, Smith succeeded him as secretary of state; and this office he held till his death, August 12th, 1577. He died possessed of considerable landed property, which, as he left no issue, though he was twice married, descended to the family of one of his younger brothers. A natural son whom he had was killed in Ireland in 1573.

Besides his Latin treatise on the pronunciation of Greek, already mentioned, Sir Thomas Smith is the author of another tract, entitled '*De Recta et Emendata Linguae Anglicae Scriptione*,' printed along with that in 1568. But his most remarkable work is that entitled '*The English Commonwealth*,' in three books, first published in 1584, and several times reprinted since; and in a Latin translation executed by himself, forming one of the small volumes of the collection of the '*Respublicae*.' Some shorter performances of his are given in the appendix to his *Life* by Strype, which also contains accounts of his unprinted writings. [STRYPE, JOHN.]

\*SMITH, THOMAS SOUTHWOOD, M.D. a distinguished writer and physician. He was born about the year 1790, and took his degree of Doctor of Medicine in the University of Edinburgh in the year 1816. He first settled in the country, where he married, and came to London in 1820. He did not however come as a stranger, for in 1814 he had written a book entitled '*The Divine Government*,' which had excited very general attention. In this work he exhibited great power of thought and capabilities which, perhaps, would have produced more effect in the pulpit than in the medical profession. On settling in London as a physician, he became a member and licentiate of the College of Physicians. He was appointed also physician to the London Fever Hospital. This gave him an opportunity of writing a '*Treatise on Fever*,' which deservedly increased his reputation as a physician. He was one of the originators of, and writers in the '*Westminster Review*.' Here he forcibly pointed out the evils of the "resurrection" system as then practised in London, for the purpose of supplying the schools of anatomy with the means of dissection. The articles thus written were republished in the form of a book, with the title '*The Use of the Dead to the Living*.' This work elicited general attention, and concomitantly with the atrocities of Burke in Edinburgh and Bishop in London, led to the passing of the present Anatomy Act, by which the medical schools are enabled to study anatomy, without violating in any manner the feelings of society. Dr. Smith supplied the principal part of the articles on anatomy, medicine, and physiology in the '*Penny Cyclopædia*.' He also wrote a work on '*Animal Physiology*' in the series published by the Society for the Diffusion of Useful Knowledge; and the '*Philosophy of Health*,' a work of extensive knowledge and practical views, which has since been published in the series of Knight's Shilling volumes. Dr. Smith was for many years the intimate friend of Jeremy Bentham, and his medical attendant at the time of his death. It was the wish of this distinguished man that his body should be dissected, and it was left to his friend Dr. Smith for that purpose, who delivered an oration on the occasion at the school of anatomy, Webb-street, Maze Pond, on June 9th, 1832. Dr. Smith was appointed one of the commissioners to inquire into the condition of the factory children, and was thus greatly instrumental in obtaining the passing of the Factory Act. From this time his career became essentially connected with the sanitary legislation of the country. More devoted and self-denying efforts for the removal of terrible evils have seldom been made. To this his reports bear testimony in every direction. Although he has sacrificed his practice and his health in this cause, the only reward he has received is an annuity of 300*l.* a year. The passing of the Public Health Act, and the various measures which have been taken by the government for preventing the spread of disease and the increase of mortality since that time, were materially advanced by the labours and zeal of Dr. Southwood Smith. His numerous reports on sanitary measures and public health have been published by the government in the years from 1838 to 1846, and also in 1849 and 1850.

SMITH, WILLIAM, LL.D., author of the first geological map of

England and Wales, was born on the 23rd of March 1769, at Churchill, in Oxfordshire, and died on the 28th of August 1839, at Northampton, where a tablet is intended to be erected by subscription to his memory.

The life of this distinguished ornament of English geology is full of events which illustrate the power of a vigorous intellect and patient disposition, in conquering the difficulties which sometimes impede the prosecution of science; but we propose in this brief notice merely to state a few of the circumstances which justify his admitted claim to be entitled 'father of English geology.'

Previous to the year 1791, Mr. Smith had made observations on the various sorts of land, as depending on different kinds of rocks; had compared, for example, the red marls and lias of Warwickshire with the oolitic soils and strata of Gloucestershire; but in 1791, being employed to make careful surveys of collieries and mines in Somersetshire, he found, on descending the pits and comparing the underground sections with the surface features, evidence of a "constancy in the order of superposition" of strata, much more extensive and practically and analytically demonstrated than was ever stated or admitted before. Reflecting on this circumstance, he resolved to examine if the strata thus regularly superposed, were equally or approximately co-extensive in the limited district of Somersetshire and the bordering counties, in which his labours were then confined. He found by abundant investigation and levellings in separate valleys, that generally the edges of the strata above the coal were continuous on the surface, their plane surfaces declining into the earth in one direction, namely, toward the east or south-east; but that the strata of coal lying beneath the red marl were not 'conformed' in their inclination to the rocks above. This 'unconformity' he represented by a large working section of Pucklechurch Colliery in Gloucestershire.

In his investigations, which, as engineer to the Somerset Coal Canal, he made for the purpose of setting out the line and letting the works, it became difficult always to recognise and discriminate the rocks which were to be cut through, on account of the great mineral resemblance between some of these and their accidentally displaced positions. Searching for marks to aid these distinctions, Mr. Smith was quickly led to perceive the constancy with which certain classes of organic remains accompanied only particular layers or strata. By collecting these fossils, and placing them in relative order, as they were found lying in the earth, he was soon able by their aid to 'identify' the strata near Bath; to declare, regarding all these stratified rocks, that they had each formed "successively the bed of the sea," and contained each the remains of the creatures which then lived and died. These remains were different in different strata, because at successive times the forms of life had changed, and because of the influence on life of the different mineral constitution of the sea's bed; but they were generally identical in distant parts of the same strata.

With these ideas clearly established, Mr. Smith, in 1794, was enabled, by one long journey through a great part of England and Wales, to generalise the propositions, and to commence, as an obvious consequence of such views, a '*Map of the Strata of England and Wales*.' Five years afterwards he drew up a tabular view of the '*Order of the Strata and their imbedded Organic Remains*, in the vicinity of Bath, examined and proved prior to 1799.' A geological map of England on a small scale was produced in 1801; and the author promised in that year a valuable volume to accompany documents so new and important. The originals of these documents are fortunately preserved. It would be painful to speak of the discouragements and difficulties which Mr. Smith had to overcome before, in 1815, on a large and handsome scale, appeared the '*Geological Map of England and Wales, with part of Scotland*,' with an interesting memoir. These difficulties were often generated by his own unmeasured zeal in prosecuting his favourite science. To it all the considerable profits of a successful profession were freely devoted; and not even in later years, when he had to suffer the consequences of such devotion, was he ever known to regret this inconvenient profusion.

From 1819 to 1824 he gave to the world twenty-one geologically coloured maps of English counties (including the remarkable four-sheet map of Yorkshire), in which he was assisted by his nephew and pupil, Mr. John Phillips, now professor of geology in the University of Oxford. [PHILLIPS, JOHN.] He also published some valuable sections, and two unfinished volumes on Organic Remains. In 1824 Mr. Smith, for the first time, lectured on geology, in a course delivered at York before the then newly formed Yorkshire Philosophical Society; and he subsequently delivered lectures at Scarborough, and before the Philosophical Societies of Hull and Sheffield.

In 1828 he entered into an engagement in which were passed six of the calmest and happiest years of his declining life. Sir John V. B. Johnstone, Bart., of Hackness in Yorkshire, on succeeding to his estates, was desirous of converting to practical effect on his farms, some of the geological and botanical truths which he knew to have been established in the museum and laboratory. He found in Mr. Smith the union of practical and theoretical knowledge which was necessary for his object, and also a desire to exemplify that knowledge in agricultural improvements, which exactly coincided with his own wishes. From 1828 to 1834, accordingly, Mr. Smith acted as his land-steward, resided at Hackness, and occupied himself in the usual

concerns of a large landed estate; producing also a beautiful geological map of the Hackness property, executed in great detail and with extreme exactitude.

In 1831 however he had been drawn from his retirement by the Geological Society of London, which awarded to him the first medal placed at their disposal by the bequest of Wollaston, "in consideration of his being a great original discoverer in English geology; and especially for his being the first in this country to discover and to teach the identification of strata, and to determine their succession by means of their imbedded fossils." In 1835 he received the degree of LL.D. in Trinity College, Dublin, and during a few years he enjoyed a pension of 100*l.* from the crown.

In 1838 he was appointed by the government a member of the commission for selecting the stone of which the New Palace of Westminster, or new houses of Parliament, should be constructed. In this he was associated with Mr. (now Sir Charles) Barry, the architect of the intended building, Mr. (afterwards Sir Henry T.) de la Beche, director of the Museum of Economic Geology, and Mr. William Harriott Smith, a sculptor of architectural ornaments, possessing great practical knowledge of building-stones. They examined all the principal quarries of the kingdom, and obtained specimens of the stone worked in them, Dr. Smith's previous knowledge of nearly the whole of them being found highly beneficial to the commission; the magnesian limestone, or Dolomite, of Anston in Yorkshire, belonging to the Permian system of strata, being finally adopted for the purpose in view, for which accordingly it has actually been employed. A re-examination of the Dolomite quarries with Mr. Barry, in 1839, was his last work of a public nature. At his death, a vast mass of unpublished papers, many of which are of uncommon merit and bear on practical applications of geology, constituted his whole property.

(*Fitton, in Edinb. Review* for 1817; *Sedgwick, Address to Geol. Soc.*, 1831; *Magaz. of Nat. Hist.*, 1839; *Memoirs of W. Smith, LL.D.*, by John Phillips, F.R.S., 8vo, London, 1844. In this very valuable work a catalogue is given of Dr. Smith's publications on the geology of England and Wales, consisting of 23 maps, a table of strata, 6 sections, and the two works on 'Organised Fossils' alluded to above.)

\*SMITH, WILLIAM, LL.D., was born in the year 1814 in London. He was educated at the University of London, now University College, where he early distinguished himself by his acquirements in classical literature. He was intended for the legal profession, and kept his terms at Gray's Inn; but preferring the study of languages to that of law, and having added the German language to his previous acquisitions, he was appointed Professor of the Greek, Latin, and German languages, in the Independent Colleges of Highbury and Homerton. He wrote for the 'Penny Cyclopædia' the article 'Language,' which excited much attention, and articles of classical biography. In January 1841, he commenced, as editor, the publication, in Parts, of the 'Dictionary of Greek and Roman Antiquities,' the first of those classical dictionaries with which his name has since been associated. This Dictionary was completed in April 1842, forming an 8vo volume of 1121 pages, or 2242 columns, illustrated by numerous wood-engravings in outline. The articles were written by some of the best scholars in this country, including himself. In April 1843, he commenced the publication, also in Parts, of the 'Dictionary of Greek and Roman Biography and Mythology,' which was completed in June 1849, in 3 vols. 8vo, comprising about 3700 pages. The 'Dictionary of Greek and Roman Geography,' was commenced in January 1852, and completed in May 1857, and forms 2 volumes, similar to the preceding. Thus the entire subject of classical archaeology is included under the three separate divisions of Antiquities, Biography and Mythology, and Geography. Each division having by this means been completed within a comparatively short period, a much larger number of readers have become purchasers of the Dictionaries than there would have been if the whole had been comprised under one alphabet. In all these works the articles are generally well written, terse in style, sufficiently full of accurate information, and the best and latest authorities are constantly cited. They are provided with chronological and genealogical tables, and with tables of coins, weights, and measures. They are all illustrated by wood-engravings, and the geography has four maps. To the classical student they are of the highest value, and as books of reference must form a part of the library of every scholar.

Meantime a new edition of the 'Dictionary of Antiquities' was published in 1851, and Dr. Smith also published an abridgment of it for the use of schools. He also published a 'New Classical Dictionary of Biography, Mythology, and Geography,' 8vo, 1851, which is chiefly an abridgment of the 'Dictionary of Greek and Roman Biography and Mythology,' together with abridgments of the geographical articles which were afterwards to appear in the 'Dictionary of Greek and Roman Geography.' The Antiquities are thus excluded from the 'New Classical Dictionary,' which is probably a convenience to the publishers, but doubtless is a defect in the work. In 1852 Dr. Smith published an abridgment of it, entitled a 'Smaller Classical Dictionary.'

In 1850 the Coward College was united with the colleges of Highbury and Homerton, and the whole were incorporated under the name of New College, London, of which Dr. Smith was appointed Professor of the Greek and Latin Languages and Literature. In 1853 Dr. Smith

was appointed Classical Examiner in the University of London. In the same year he published a 'School History of Greece, from the Earliest Times to the Roman Conquest, with chapters on the History of Literature and Art,' 12mo. In March 1854 the first volume was published of 'The History of the Decline and Fall of the Roman Empire, by Edward Gibbon, Esq., with notes by Dean Milman and M. Guizot; edited with additional note by William Smith, LL.D.,' 8 vols. 8vo. In June 1855, was published 'A Latin-English Dictionary, based upon the Works of Forcellini and Freund, by William Smith, LL.D.,' 8vo. An abridgment of this Dictionary, for the use of younger students, and with some additions for their special advantage, was prepared under the immediate superintendence of the author, and was published under the title of 'A Smaller Latin-English Dictionary, by William Smith, LL.D.'

\*The REV. PHILIP SMITH, B.A., the brother of Dr. William Smith, is head master of the Mill Hill Protestant Dissenters' School, Hendon. He wrote several classical articles for the 'Penny Cyclopædia,' and has been a large contributor to the Classical Dictionaries edited by his brother.

SMITH. Several English artists of this name may be briefly mentioned. JOHN SMITH, a contemporary of Kneller, after whom he engraved many portraits, was by far the best mezzotinto engraver of his time. His works are very numerous, and comprise not only portraits, but historical and miscellaneous subjects also. The 'Biog. Univ.' without referring to any English authority, gives 1654 as the date of his birth, and 1719 as that of his death; and several other works state that he died in 1720. The writer has however seen a print with his name, bearing the date 1721. From Dallaway's edition of Vertue's 'Catalogue of Engravers,' it would appear that there were two engravers of this name, father and son; but this statement rests, as far as we know, on no other authority. A note in the work referred to mentions a collection of 574 engravings by these artists. Of the more eminent John Smith (if there were really two) there is a portrait by Kneller. Strutt mentions an indifferent portrait engraver named JACOB SMITH, who was living in 1730, and executed portraits of Sir Isaac Newton and Sir Hans Sloane, each of which consisted of a single spiral line; and GABRIEL SMITH, who died in 1783, and excelled in the chalk style of engraving. He lived for some time in Paris, but was a native of London, where, according to the 'Biog. Univ.' he was born in 1724. SAMUEL SMITH, a landscape engraver, surpassed by few, if by any, lived in the latter half of the 18th century. He engraved a beautiful plate of Wilson's 'Niobe,' which is now in the National Gallery; the figures were put in by Sharpe. He also did the landscape to Sharpe's 'Holy Family,' after Sir Joshua Reynolds, and some engravings from Louthborough. As he worked much for other engravers, his name is comparatively unknown. We have been unable to find the date of his birth or death, and know nothing of his history excepting that he never married. WILLIAM SMITH, born 1707, died 1764; GEORGE SMITH, born 1714, died 1776; and JOHN SMITH, born 1717, died 1764, were three brothers, natives, it is commonly stated, of Chichester, although Pilkington mentions Guildford instead of that place. George Smith is always spoken of as Smith of Chichester, and many of his landscapes are views of the scenery around that city. The first painted chiefly portraits, George painted principally landscape, and his works which were at one time in great request display much ability, and a tolerably close observation of nature, but they are deficient in colour and brilliancy. John Smith devoted himself mainly to flower painting. Although apparently self-taught, they attained a respectable standing in their profession. A picture representing the three brothers, by Pether, has been engraved. Several of George Smith's landscapes were engraved by Woollett.

SMOLLETT, TOBIAS, or, as he was baptised, TOBIAS GEORGE, was born in the old house of Dalquhurn, in the parish of Cardross, in the valley of Leven, in 1721, of good family; his grandfather, Sir James Smollett of Bonhill, upon whom he was left dependent, being a member of the Scottish parliament. The lovely scenes among which he was bred had no doubt considerable influence on his tastes and feelings; and he describes them in 'Humphrey Clinker' with great relish. He was sent to school at Dumbarton, where, under Mr. Love, he made great proficiency in the classics. His tendency to ridicule was manifested very early, and he wrote abundant satirical verses on his schoolfellows; and he also, with a boyish patriotism, wrote a poem on 'Wallace,' which has been lost. He left Dumbarton for Glasgow, where he chose the profession of medicine, and was apprenticed to Mr. Gordon, surgeon, whom Smollett is supposed to have ridiculed as Potion, in 'Roderick Random.'

His medical studies were but indifferently pursued: the more attractive pursuit of literature and history—the passion for miscellaneous reading which so often besets men of genius, unable to confine themselves to any one branch of study—and which so materially assisted him in his subsequent literary career—diverted his attention. Satirical verses; practical jokes, prompted by a wild reckless spirit of enjoyment; poetical and literary studies; fruitless endeavours to give the proper direction to his energies; these occupied, not quite unprofitably, his early years. Before completing his eighteenth year he finished a tragedy called 'The Regicide,' the preface to which, written ten years after, is perhaps the most amusing portion. It would

be unjust to require in such a production any of the requisites of tragedy; it would be unjust to object to so prosaic a man as Smollett, that it is only stilted prose; and it would be still more unjust to criticise it otherwise than as the production of a boy; but when we find him in his preface railing at the managers, and looking on himself as a very ill-used man because it was not produced; and when we look at this tragedy, which he brought with him to London in the hopes of making his fortune, we cannot wonder at the tricks of managers, nor at his being reduced to "print it, and shame the rogues."

In 1741 Smollett was appointed surgeon's mate on board a ship of the line, and he sailed on the expedition to Carthage. He describes this expedition in 'Roderick Random,' and also with historical accuracy in the 'Compendium of Voyages and Travels' which he published in 1756. He quitted the service in disgust whilst in the West Indies, and resided for some time in Jamaica, in what capacity is not known. It was here that he met and fell in love with Anne Lascelles, whom he subsequently married. On his return to London, 1746, his imagination was inflamed at the exaggerated descriptions of the severities practised in the suppression of the Scottish rebellion, and accordingly vented itself in some stanzas of prosaic fustian, entitled the 'Tears of Scotland.' "His friends wished him to suppress this piece, as having a tendency to offend the Whigs, on whose patronage he had some reliance; and although his enthusiasm was at present too warm for advice, and he had from this time declared war against the Whig ministers under George II., yet it does not appear that it was published with his name for many years after."

'Advice,' a satire, was his first appearance in public, in 1746. It has all the dirt and vehemence of Juvenal, with none of the power; it alarmed and disgusted his friends, increased his enemies, and enraged the persons attacked. He wrote also an opera for Covent-garden, called 'Alceste.' But his ungovernable temper was perpetually provoked at the delays and hindrances of a theatre, and a quarrel with the manager prevented its being acted. The next year he again disgraced himself by a satire, the 'Reproof,' a sequel to the 'Advice,' and of the same stamp, with some better lines on Rich, the manager of Covent-garden. It is curious to see how he quarrelled with all the managers, and thus for ever shut the theatres against him; and not content with quarrelling, he abused and ridiculed all who did not agree with him on the merit of his pieces. Garrick, Lacy, Rich, Quin, Aken-side, Lord Lyttleton, were all introduced by him into his novels and satires, and made to pay the penalty of having offended an author's vanity. In this year, 1747, he married Miss Lascelles, who was to have had three thousand pounds, but owing to a suit he obtained only a small portion of this dowry. This disappointment, together with sundry extravagancies he had been led into, placed him in a very unpleasant pecuniary position, to relieve which he published, 1748, 'Roderick Random,' the first and best of his novels. It is an admirable novel, and one which must ever be a favourite. The style is easy and unaffected: the incidents rapid, varied, but loosely connected, and often purposeless. The humour is broad, palpable, and coarse—mostly of a physical nature, and deriving its force from external circumstances; for instance, Roderick's "carrotty locks, which hung down over his shoulders like a pound of candles"—the adventure of Strap and Mrs. Weazle (which bears some resemblance to Chaucer's 'Reve's Tale')—Strap's ignorance of London, and the adventures and blunders which arise therefrom. Smollett's humour is essentially vulgar, but hearty. He exhibits, as Hazlitt said, the ridiculous accidents and reverses to which human life is liable, not the 'stuff' of which it is composed. Smollett does not probe to the quick, as Fielding does, nor penetrate beyond the surface. He has great knowledge of 'life,' especially in its worst shades, but little of character. He knows the peculiarities of men better than their motives; their eccentricities better than their natures. In a word he has a ready eye to seize the superficial distinctions of manner and appearance, but little insight into the passions and character. Here lies Fielding's superiority. On the other hand he has a "rude conception of generosity in some of his characters, of which Fielding seems incapable, his amiable persons being merely good-natured. It is owing to this that Strap is superior to Partridge; as there is a heartiness and warmth of feeling in some of the scenes between Lieutenant Bowling and his nephew, which is beyond Fielding's power of impassioned writing." (Hazlitt's 'Comic Writers,' p. 238.)

In 1750 Smollett went to Paris, but his prejudices against the French and his ignorance of their language rendered his stay there a short one. The year after he published 'Peregrine Pickle,' which was greatly read and applauded. He received "a handsome reward" for inserting the prurient and profligate memoirs of Lady Vane, and they form such a mere episode, we wonder they have not been expunged. It might suit the morbid vanity of the 'lady' to pay a large sum for the insertion of her memoirs in a popular novel; but what are we to say to the author who received the money for such a purpose?—one too who described himself as—

"Too coy to flatter and too proud to serve,  
Thine be the joyless dignity to starve."

Having done it, we are not to be surprised at his "flattering himself that he had expunged every adventure, phrase, and insinuation that

could be construed by the most delicate readers into a trespass upon the rules of decorum."—the one was a consequence of the other. After 'Peregrine Pickle' was published, he resumed his medical profession, and announced himself as Dr. Smollett; but from what university he obtained his degree was a secret, and remains one. With this character, however, he endeavoured to set up in Bath, and published a pamphlet on the 'External Use of Water.' Nobody however seemed inclined to trust their healths with the "popular author,"—reputation, unless exclusively professional, being often a greater drawback to success than the most profound stupidity. Disappointed therefore in this design, he again took up the pen as a profession, and fixed himself in Chelsea, where he wrote the 'Adventures of Ferdinand Count Fathom.' This novel has not been relished so much as the others, and with reason; the subject and characters are disgusting, and the story is tedious and spun out. There is however some biting satire on the follies and vices of the world, and some powerful writing in it. The robber-scene in the forest is a masterpiece of effect.

In 1755 he published by subscription his translation of 'Don Quixote,' this translation, which has been so often praised, is worthless. Let any one compare it with the original, and he will be struck with its inefficiency. All the difficult passages are slurred over; Sancho's dry proverbial humour is lost, by having a sort of conscious slang mixed with it; the exquisite gravity of the Don is lost—his use of antique heroic words, such as 'insula' for 'isla,' 'las fazañas que han fecho' for 'las hazañas que han hecho,' &c., is not represented; the melancholy and poetical shades of his character are not seized, and the whole becomes vulgarised. Lord Woodhouselee was the first to detect, in his 'Essay on Translation,' that Smollett had founded his translation on the forgotten one of Jarvis. He has been said to have excelled Jarvis, but without justice. Jarvis had a greater knowledge of Spanish; and if his translation be dull, it is at least free from the vulgarity and Smollettism (so to speak) of Smollett, which the latter has contrived to infuse into his translation.

Smollett then visited his relations in Scotland, and on his return to London undertook the management of the 'Critical Review,' which was to oppose the 'Monthly Review.' His taste was vitiated and capricious, and his temper irritable: his jealousy bitter and watchful, and his vanity enormous. These were not the qualities desirable in an editor, and in consequence his power to offend, coupled with his delight in offending, disgraced the 'Review' with unseemly personalities. Among the many he attacked was Admiral Knowles, who brought an action against the printer of the 'Review' for a libel. Smollett, by applying to persons acquainted with Knowles, endeavoured to stop the action, but without avail, and when judgment was about to be pronounced on the printer, he stepped forward and declared himself the author, and was sentenced to pay 100*l.* and be imprisoned for three months. In 1757 he wrote the 'Reprisals, or the Tars of Old England,' a comedy which Garrick, in spite of their old quarrel, produced on the stage, where however it had only small success. In 1758 he brought out his 'Complete History of England from the earliest times to the treaty of Aix-la-Chapelle in 1748.' This was written in the space of fourteen months—a specimen, as it has been observed, of 'literary industry,' a specimen also of literary presumption. Neither his temper of mind nor his pursuits had qualified him to be an historical writer. But the work was written in a clear and easy style; it became very popular, and was immediately reprinted in 8vo weekly numbers, of which an edition of ten thousand was rapidly sold.

During his imprisonment he wrote the 'Adventures of Sir Launcelot Greaves,' a stupid and tedious imitation of 'Don Quixote.' But the characters of Crowe, Ferret, and Clarke are amusing. This novel was printed in detached parts in the 'British Magazine.' The success of his 'Complete History' induced him to continue it from 1748 to 1764. The volume for 1765 was written by Guthrie during Smollett's absence on the Continent. Smollett is also supposed to have written the accounts of France, Italy, and Germany for the 'Universal History.'

On Lord Bute's promotion to the administration, Smollett defended him against Wilkes in a paper called the 'Briton,' which Wilkes answered by his celebrated 'North Briton.' Smollett's paper was however soon discontinued, and his services were unpaid. About 1764 also, having mastered the French language, he was engaged in a translation of the works of Voltaire and a compilation entitled 'The Present State of all Nations.' In June 1763 "traded," as he sentimentally informs us, "by malice, persecuted by faction, and overwhelmed by the sense of domestic calamity," he went to France and Italy, and on his return published the result of his observations, 'Travels through France and Italy.' Splenetic and prejudiced, this work has long been forgotten. His increasing ill-health made travelling necessary, and accordingly he went to Scotland, and from Scotland to Bath, and in 1767 found himself considerably restored. His renewed vigour was shown in the 'Adventures of an Atom,' a violent political satire, wherein, under fictitious names, he abused ministers. But his health again requiring a milder climate, this "independent writer," this man too "coy to flatter," got his friends to solicit the very ministers whom he had satirised, for a consulship. It can occasion no surprise that this application did not succeed.

In 1770 however he left England again for Italy, writing on the way 'The Expedition of Humphrey Clinker,' a pleasant gossiping work, which has remained a favourite. "It is quite as amusing as going the journey could have been; and we have just as good an idea of what happened on the road as if we had been of the party. Humphrey Clinker himself is exquisite; and his sweetheart Winifrid Jenkins not much behind him. Matthew Bramble, though not altogether original, is excellently supported, and seems to have been the prototype of Sir Anthony Absolute in the 'Rivals.' But Lismahago is the flower of the flock. His tenaciousness in argument is not so delightful as the relaxation of his logical severity when he finds his fortune melting in the wintry smiles of Mrs. Tabitha Bramble. This is the best preserved and most severe of all Smollett's characters. The indecency and filth in this novel are what must be allowed to all Smollett's writings." (Hazlitt's 'Comic Writers,' p. 239.)

In the neighbourhood of Leghorn he lingered through the summer of 1771, and died on the 21st of October, in the fifty-first year of his age. Stout, well-proportioned, and engaging in person; cold in his manners; impetuous, irritable, and unforgiving in temper; contemptuous and bitter towards all differences; hearty and loving in all sympathies; proud yet mean; vain, yet generous; of quick, versatile intellect; considerable information; broad exuberant humour, and shrewd observation—such appears to have been Tobias Smollett. As a novelist he stands next to Fielding—as a poet he is not to be named—and in reference to his other works he must be looked upon as a mere bookseller's hack, writing for bread, with no other object than despatch.

SMYTH, WILLIAM, was born at Liverpool in 1766, and was educated at Peterhouse, Cambridge, where he graduated B.A., and 8th Wrangler in 1797, and M.A. in 1790. His father, who was a banker, having become embarrassed in consequence of the war between England and France in 1793, he was compelled to look around for means of maintaining himself, and accepted the office of tutor to Thomas, the eldest son of R. B. Sheridan. Of his connection with these two celebrated characters Mr. Smyth has left an interesting little 'Memoir,' printed not for sale in 1840. Mr. Smyth had accompanied his pupil to Cambridge, and from that time it became his settled residence. In 1806 he published a small volume of poetry, 'English Lyrics,' of which a fifth edition was issued in 1850. In 1809 he was appointed Professor of Modern History, which secured him a moderate competence, as the salary is 400*l.* a year. He commenced his lectures the same year, of which the first series comprised the period from the irruption of the northern nations into the dominions of the empire, to the English revolution of 1688; the second series extended from that period to the close of the American war; the third series commenced in 1810, comprised a history of the French revolution from the accession of Louis XVI. to the close of the Constituent Assembly; and the fourth continued it down to the fall of Robespierre. To these he added in 1832, 1835, and 1837, Supplementary Lectures, containing reflections and observations on the events of that revolution, and in 1836 two others on America. The whole were published in 1840, and have been since reprinted in Bohn's Historical Library in 1854-5. These lectures were popular during their delivery, and are well adapted for the purpose intended, namely that of exciting attention to the study of history, rather than as satisfying all the requirements of the student; nevertheless they contain a useful commentary on the events: the first two series, though the briefest, being perhaps the best. In 1840, was also printed for private circulation, what is called an 'Occasional Lecture.' It is a pleasant little pamphlet, occasioned by the desire of a lady to hear a lecture, of which it takes the form. It is an eulogium on woman, displaying considerable humour, with much varied reading, and is dated 1814. In 1845 he published his last work, 'Evidences of Christianity,' and on June 24th, 1849, he died at Norwich, after having worthily occupied his professorial chair for forty years. In 1851 a painted window by Warrington, representing the 'Adoration of the Magi,' was erected by some of his friends to his memory in the north aisle of Norwich Cathedral.

SNELL, WILLEBRORD, a Dutch mathematician and philosopher, was born in 1591, at Leyden, in the university of which city his father, Rudolph Snell, the author of several scientific works, was professor of mathematics. He at first applied himself to the study of the law, but he very soon abandoned that pursuit, and devoted himself to the mathematics. In these he early made great progress, and at seventeen years of age he published an essay, in which it was attempted to restore the lost treatise of Apollonius, 'De Sectione Determinata.' The work is said to have possessed considerable merit, and to have procured for the author a reputation among the scientific men of that time, but it lost its importance upon the publication of the more complete restoration by Dr. Simson. [SIMSON, ROBERT.]

In order to acquire information relative to scientific subjects beyond that which his own country afforded, Snell travelled to Germany, where he obtained an introduction to Kepler. From the conversation of this mathematician, during the three years of his absence from home, he obtained a great accession to his knowledge of the sciences; he appears also to have acquired the esteem and friendship of the celebrated German, and he regularly corresponded with him during the rest of his life. On his return to Leyden, his father having

resigned his post in the university, the young mathematician was immediately appointed to succeed him. From this time he applied himself to the fulfilment of the duties of his professorship, to the performance of philosophical experiments, and to the composition of the works which have procured for him a high reputation among the learned men on the Continent.

His first publication was an explanation of the monetary system of the ancients, which appeared at Antwerp in 1613, 8vo, under the title 'De Re Nummaria Liber Singularis.' His second and most important published work was entitled 'Eratosthenes Batavus de Terræ Ambitū verā Quantitate à W. Snellio suscitatus' (Leyden, 1617): it contains a description of the method of determining the magnitude of the earth by trigonometrical operations, combined with the observed latitudes of the stations; and Snell has the honour of being the first who put in practice a method which has since been almost always adopted by those who have undertaken that great geodetical problem. He measured a base line on the ground, and observed with circular instruments the angles between the stations: he then by computation found the length of the terrestrial arc between Alkmaar and Bergen-op-Zoom, from which arc, with the difference between the observed latitudes of those places, he deduced the length of a meridional arc of one degree. The method possesses great advantages over the older process of actually measuring the whole length of the meridional arc with rods, or, as Fernel, in the beginning of the 16th century, is said to have ascertained it, by the number of revolutions made by a carriage-wheel. The imperfection of the instruments employed was the cause that some inaccuracies occurred in the performance of the operations; these were however discovered by Snell; and it is said that he intended to have given the necessary corrections in a second edition of his book, but he did not live to complete them.

He published, in 1619, a work in 4to, entitled 'Descriptio Cometæ qui ann. 1618 primum effulsit;' and two years afterwards his 'Cyclo-metricus, seu de Circuli Dimensione,' in which is given an approximation to the value of the circumference of a circle by a method more short than that of Van Keulen. His next work (1624), called 'Tiphys Batavus,' constitutes a treatise on navigation; and in 1627, that is, after his death, Hortensius of Delft published his 'Doctrinæ Triangulorum Canonice Libri Quatuor,' which contains the theorems of plane and spherical trigonometry, together with rules for the calculation of sines, tangents, and secants.

According to both Vossius and Huygens, Snell was the first who made the discovery that if a ray of light be incident on a refracting surface, and be produced within the medium, the parts of the refracted ray and of the produced incident ray intercepted between the point where the refraction takes place and any line passing through them perpendicularly to the refracting surface, have to each other a constant ratio. This discovery, which is said to have been made in 1621, is no other than the now well-known law between the sines of the angles of incidence and refraction, which Descartes published in his 'Dioptrics,' in 1637, as the result of his own researches. The experiments by which Snell discovered the law were never published; but Huygens states that he had seen the manuscript containing an account of them; and Vossius relates that the heirs of Professor Hortensius communicated the contents of the manuscript to Descartes. It is therefore very probable that Descartes obtained the idea from the works of Snell, to whom Montucla, Bossut, and most of the English philosophers agree in attributing the honour of this important discovery.

After having suffered during several years from bad health, Snell died, October 31, 1626, when thirty-five years of age; his wife survived him only eleven days, and both of them were buried in the same grave.

SNEYDERS, FRANCIS. [SNYDERS, FRANCIS.]

SNIADOCKI, JAN, an eminent Polish astronomer and mathematician, was born on the 29th of August 1756, at Znín, in the wayodeship of Gnesen, the son of a man of good family, who had suffered in his circumstances by marrying without the consent of his mother. The incidents of the early life of Sniadecki as given by his biographer Balinski are interesting from the light they throw on the state and progress of education in Poland. At the school of Posen, where he first studied, he distinguished himself by his attainments in rhetoric, which were called into action in delivering orations at funerals and on presenting a wreath to the bride at weddings, then a common custom with the students. His attainments attracted the attention of the Jesuits, as did those of every youth of promise in Poland, and when in 1772 he left Posen for the university of Cracow, some Jesuits joined him on the road and invited him to lodge in their convent at the end of his journey, besieging him with solicitations to enter their order, to which they knew that his father had an unusually strong aversion. The professors at the university lent him willing aid to extricate himself from their toils, and he shook himself loose. It was then the practice for the students to compose Latin speeches on some attractive subject—such, for instance, as the miraculous migration of the house of Loretto—commit them to memory and deliver them in the streets or public places, where they were listened to in respectful silence, "while," says Balinski, writing after 1830, "they would now be greeted with laughter." Sniadecki, who among his other accomplishments, had the whole of Horace by heart, became

such a proficient in Latin that, when a few years after, he studied at Göttingen, he found no one who could compete with him, and even Professor Heyne was in conversation much his inferior. In 1777 the merits of Sniadecki were noticed by Kollataj, or Kollontaj, the reformer of education in Poland, who assigned to him the teaching of statics, hydraulics, logic, and political economy, at the school of Nowodwów in Cracow. It was the first time that the name of political economy had been heard of in Poland, and the science was taught according to the doctrines of Quesnay. Sniadecki, who, at the same time, had the publication of an almanac allotted to him as part of his duties, ventured to leave out the 'Astrological Prognostics,' but was compelled to insert them by Niegowski, professor of mathematics at the university. The prospect of further improvements in the Polish educational establishments, and the wish to qualify himself to take part in them with effect led Sniadecki to travel abroad, with the assistance of the Polish Board of Education. He arrived at Göttingen ignorant of German, supposing that the instruction was given in Latin; but in a few months acquired the German language, and afterwards taught himself English to read the writings of Maclaurin and Simson. Two years of study at the university, pursued with too little relaxation, necessitated him to consult Baldinger, the eminent physician, who told him to throw his books aside and travel as the only means of recovery. An application to the Polish Board of Education brought for answer that they acknowledged his merits but had no money to spare, and but for the generosity of Kollataj, who advanced him two hundred ducats from his private purse, he would have been at a loss what to do.

After a short visit to Holland, he went to Paris, where, attracting the notice of Professor Cousin, he was introduced by him to the friendship of Delille the poet, and of Laplace the great mathematician, whose fame was yet to come, and he enjoyed the patronage of Condorcet and D'Alembert. The recommendation of D'Alembert to the Spanish ambassador Aranda, procured him an offer of the superintendence of the newly-erected observatory at Madrid; but the offer of the chair of mathematics and astronomy at Cracow at once obtained the preference. He returned to Poland in 1781, and for nearly the whole half century that followed was at the head of the sciences in that country. In 1787 he paid a visit to England, more especially with a view of acquainting himself with the powers of Herschel's telescope; and while he was one day engaged with Herschel in examining it at Slough, King George III. was announced, and Herschel presented to him the Polish astronomer. A few days after, as Sniadecki was walking at Windsor, "on that celebrated terrace of the castle," says Balinski, "from which he enjoyed a magnificent view of all England," he met the king, who had a conversation with him on the state of education in Poland, and invited him to his levées. After a prolonged residence in London, where his lodgings, as his biographer informs us, were at "Conduit Street, Hanover-square, No. 13," he returned home through France, and addressed a long letter in English to Dr. Hornsby of the Oxford Observatory, on the state of the astronomical establishments at Paris. With the exception of another tour to Germany and Italy, Sniadecki's life was spent at home, at first in the University of Cracow, which he did much to support, and after 1806 at the University of Wilna, founded by the Emperor Alexander, which flourished for many years under his superintendence as rector, and became eminent as a seat of the exact sciences, to which, in the opinion of Lelewel and others, an undue preponderance was given. Sniadecki's astronomical observations at Wilna from 1807 to 1824 are printed in the 'Transactions of the Petersburg Academy,' and in the Berlin 'Astronomische Jahrbücher.' The prosperity of the University of Wilna came to an end in 1823 [LELEWEL; MICKIEWICZ] with the proceedings of the Russian government against the students. In 1824 Sniadecki retired into private life; and he died in 1830, the year in which the insurrection broke out, which led to the total suppression of the University of Wilna.

An edition of Sniadecki's miscellaneous writings, 'Pisma Rozmaite,' appeared at Wilna in 4 vols. in 1822-24; an edition of his 'Works' ('Dziela') in 8 vols., with a life by Balinski, was published at Warsaw in 1837-39. The most interesting portions of it are his lives of Kollataj and of Poczobut, a Polish man of science, and above all his discourse on Copernicus, in which he vindicates against the Germans the claims of Poland to the honour of having produced the great astronomer. This discourse, which was originally delivered before the Society of Friends of Science at Warsaw, was translated into French and published at Warsaw in 1803, but very incorrectly, and a fresh translation by the author, published at Warsaw in 1818, has entirely superseded it, and was reprinted at Paris in 1820. In some dissertations in the Polish language, and in classical and romantic writings, Sniadecki is a defender of the so-called classical school, and though well acquainted with English, was no admirer of Shakspere, "much of whose writings," he declares, "is at present unintelligible even to educated Englishmen." The new school of Polish literature founded by Mickiewicz had in Sniadecki a determined opponent; but the general voice of Poland has refused to ratify the sentence pronounced in the case of poetry by a mathematician. In his 'Philosophy of the Human Mind' he is an uncompromising opponent of Kant. His 'Physical and Mathematical Description of the Globe' is a work of scientific value. An abridgment of the works of Sniadecki in

French by Jean Flaget appeared at Paris in 1823; and in 1804 some remarks in the same language on the observations relative to Poland in Villers' 'Essay on the Reformation' were published by Sniadecki himself.

SNIADIECKI, ANDRZEJ, brother of the preceding, a distinguished physiologist, was born on the 30th of November 1768, studied at the University of Cracow, completed his studies at Pavia and Edinburgh, and occupied for some time the post of professor of chemistry and pharmacy at Wilna. "What John Sniadecki did for mathematics and astronomy," says Stanislas Kozmian, in his valuable 'History of Polish Literature in the Nineteenth Century,' published in the 'Athenæum' for 1838, "his brother Andrew performed for chemistry and physiology; and whether or not there be bright days in store for the University of Wilna, it has already lived one golden age—that of the two Sniadeckis." The most important work of Andrew Sniadecki is his 'Teorya jęstestw organicznych' ('Theory of Organic Existences,' 2 vols., Warsaw, 1804-11; second edition in 1834), which was translated into German by Neubig in 1821, and attracted much attention in Germany; a French translation by Balard and Dessais appeared in 1825. After the suppression of the University of Wilna by the Russians, Andrew Sniadecki still continued to officiate at a medical academy which was founded in its place, and died there in 1833.

SNORRI STURULSON, also called STURLESON or STURLASON, and in Latin works SNORRO, was the son of Sturla, and was born in Iceland in the year 1178, on an estate belonging to his father, called Hoamms, whence the father is sometimes called Hoamms-Sturla. When Snorri had scarcely attained his fourth year, his father died, and he was thenceforth educated at Odi, in the house of Ion, the most learned man of the age. His education was conducted with great care, and his talents soon gave him distinction as a philosopher, a mathematician, a lawyer, a linguist, antiquary, and architect. At the same time he acquired great reputation for the enchanting manner in which he told the stories of former times, an art which is still highly valued in Iceland. Although his father had been the chieftain of an Icelandic tribe, the son appears to have been poor, until he improved his circumstances by a marriage with a wealthy lady, whom some years afterwards however he deserted. He managed his newly-acquired property so well, that he became no less distinguished for his wealth than for his talents and learning. He was several times invested with the office of Logsgjafmaðr, that is, interpreter of the law, the highest official dignity in Iceland, and gradually rose to the rank of Landur-maður and of Yarl, which was the highest title next to that of duke. During this period of his greatest prosperity he composed some of the most beautiful songs, tales (sagas) that exist in the literature of Iceland, and also wrote some historical works. He also spent considerable sums upon the building of splendid edifices, especially at Reykiaholt. His character as a man however was by no means in accordance with his great mental powers, for he was avaricious, quarrelsome, inconstant, and full of cunning, though wanting in active energy. A party was formed against him, which was headed by his own brother Sighvat and his nephew Sturla; and his sons-in-law, enraged at Snorri having abandoned his wife, joined his enemies. Snorri and his adherents were defeated and banished from the island (1234). They went over to Norway, where Snorri's patron, Duke Skuli, was preparing to revolt against King Hacon, and was supported by the poetical powers of Snorri. In the meanwhile however his enemies in Iceland were defeated, and Snorri dreading the vengeance of King Hacon, returned to his native island. But the king declared him an outlaw, and Snorri was murdered on the 22nd of September, 1241, at Reykiaholt, by his own sons-in-law.

Snorri is one of the greatest, and at the same time the last of the northern Scalds. His most important work is the 'Heimskringla,' a beautiful collection of sagas, consisting partly of Scaldic songs by Snorri himself, and partly of the poems of earlier Scalds, who were contemporary with the events which they describe, and whose poems are interwoven in the Sagas of Snorri himself. This collection was first published by Peringskiöld (Stockholm, 1697, fol.), with a Swedish and Danish translation; another edition, with a Danish and Latin translation, appeared at Copenhagen from 1777 till 1826. Vols. 1 and 2 were edited by Schöningh; vol. 3 by Sc. Th. Thorlacius; vols. 4, 5, 6, with the separate title of 'Noregs Konunga Sögor,' by Birg. Thorlacius and E. Chr. Werlauff. The last Danish translation is that by Grundtvig, Copenhagen, 3 vols. 4to, 1818-1822. It has also been translated into German by Wachter, who has added a very valuable historical and critical introduction.

Among the other works ascribed to Snorri are, 1, 'The Gylfa-Ginning,' which forms the first part of the 'Snorra-Edda'; 2, 'The Scaldic Songs called Kanningar or Skaldskaparmál'; 3, 'Hattalykill,' or the Key of the Wise, consisting of two eulogies on Duke Skuli, and three others which are partly written in praise of King Hacon. All these poems form part of the 'Skalds,' which has been edited by Rask (Stockholm, 1818), under the title of 'Snorra-Edda ásamt Skáldu.' Another edition was published under the title of 'Edda Snorrónis Sturlæi,' 2 vols. 8vo, Havn, 1848-52. Besides several other poems upon contemporary heroes, Snorri also wrote a number of Fræðidækur, i. e. manuals of science, which have been very much used by his countrymen.

SNYDERS, or SNEYDERS, FRANCIS, a painter, born at Antwerp

in 1579, was a pupil of Henry van Balen, and for a time followed the style of his preceptor, confining himself to the representation of fruit, flowers, and other objects of still life. He soon attempted the more difficult task of painting animals, in which, for freedom, truth, and energy, he became conspicuous, and for these qualities remains to this day without a rival, so far as relates to the representation of animals in violent action. D'Argenville says (and he is followed by some later writers) that *Snyders* went to Italy for professional improvement, and that at Rome he became an ardent admirer of the style of *Benedetto Castiglione*, from whose pictures he studied a considerable time. But as *Castiglione* was not born till 1616 this is of course impossible; though it by no means follows because he did not study under *Castiglione* that *Snyders* did not leave the Netherlands. During part of his career he lived at Brussels, having been invited there by the Archduke Albert, governor of the Low Countries, for whom he painted some of his finest works, particularly a stag-hunt, which was sent by the archduke to Philip III. of Spain, who was so charmed with the present, that he gave the artist commissions for several large pictures of huntings and other similar compositions, and which, down to a recent date, were in the old palace of *Buen Retiro*. *Rubens*, although himself eminent as an animal painter, held the abilities of *Snyders* in such admiration that he frequently intrusted that portion of his pictures, as well as the fruit, and other similar accessories, to the masterly pencil of his brother artist, and it would be difficult to point out any two masters who have worked in conjunction whose performances are in more perfect harmony than those of these eminent men. *Jordaens* too availed himself of the talents of *Snyders* in a similar manner, and in a variety of instances both *Rubens* and *Jordaens* conjointly executed the human figures in compositions of *Snyders*, and there are known to be several pictures in existence the joint production of these three great but friendly rivals. The works of *Snyders* are in many of the best collections in England. One in the possession of the Marquis of Westminster, in Grosvenor House, London, representing a Bear Hunt, consists of a group of two bears and eleven dogs. Unfortunately the National Gallery does not possess an example of this great painter's pencil. In the Louvre there are several pictures by *Snyders*, one of them containing the two lions, afterwards introduced by *Rubens* into his picture of the Marriage of Henry IV. Although the works of *Snyders* consist principally of boar and bear-hunts, and other compositions of animals, views of interiors and subjects of still-life are by no means uncommon, though it is but reasonable to suppose that the chief number of these were executed soon after he left the studio of *Von Balen*. Those however in which the human figures are painted by *Rubens* or *Jordaens* are of course of a later date. There is an admirable portrait of *Snyders* by *Vandyke*, which was in the Orleans collection, and is engraved in the well-known series of heads after pictures by that master. There are, according to Mr. Bryan, a set of sixteen etchings of various animals by *Snyders*, executed in a spirited and masterly manner. That there are a few etchings by him we know, but that they consist of so great a number as sixteen is very doubtful, for *Bartsch* in his catalogue does not mention even one as belonging to the extensive collection at Vienna, nor is there one by his hand among the prints formerly belonging to Mr. Sheepshanks, and now deposited in the British Museum, a collection confessedly rich in works, both with the graver and the point, by masters in the Flemish and Dutch schools. Although there are very few etchings by this eminent painter, there are many after his works. He died at Antwerp, in the year 1657.

SOANE, SIR JOHN, was a remarkable instance of a career commenced in poverty and obscurity, and terminating in opulence and celebrity. Of his origin little is known, except that his father was a bricklayer or petty builder, and he himself born at Reading, September 10th, 1753. At an early age he was taken into the office of Dance, the architect (in whose family his sister was also a servant), first merely as errand-boy or attendant, but afterwards he was placed on the footing of a pupil. He subsequently entered that of Holland, another architect of high standing, where he remained up to the time of his being sent to Italy for three years as travelling student of the Royal Academy, at the recommendation of Sir W. Chambers, in consequence of the talent displayed by him in a design for a triumphal bridge, which obtained the gold medal. It was perhaps a fortunate circumstance for him that an octavo volume of designs for temples, baths, &c., previously prepared by him, was not published till 1778, the year after he quitted England, since, so far from displaying any talent, it indicates the most wretched taste. No wonder, then, that at a later period the author should have bought up every copy he could meet with, more especially as his name is there printed *SOAN*, which name itself, we have been assured upon excellent authority, was an improvement upon the original one of *Swan*. These designs exhibit the germs of many of his after peculiarities—of those whims and freaks, together with that littleness of manner, from which he could never totally divest himself even in his best works.

During his stay in Italy (1777-1780) he made good use of his time, studying ancient buildings, particularly those arrangements of plan and picturesque combinations which occur in Roman *Thermæ*, or imperial baths. He also made original designs, among which were those for a British Senate House and Royal Palace. While in Italy he

became acquainted with Mr. Thomas Pitt, afterwards Lord Camelford, to whose influence he is said to have been mainly indebted for his appointment as architect of the Bank of England, on the death of Sir Robert Taylor. Very soon after his return to England, he executed several private residences and country-seats in the counties of Norfolk, Suffolk, &c., the plans and elevations of which he published in a folio volume, 1788; but except that there are some good points in the former, and that they manifest great attention to convenience, they display very little invention or taste. On obtaining the lucrative appointment to the Bank, he married Miss Smith, the niece of Mr. George Wyatt, a wealthy builder in the city, whose death soon put him into possession of a very considerable fortune in right of his wife. Other advantageous appointments followed: that of clerk of the works to St. James's Palace 1791; of architect to the Woods and Forests 1795; and of surveyor to Chelsea Hospital 1807; besides that of professor of architecture at the Royal Academy in 1806. Numerous commissions for both public and private buildings, in addition to his official engagements, kept him in constant occupation for many years; and some of them furnished him with more favourable opportunities than were afforded to almost any other architect of that day. Yet notwithstanding his undeniable attachment to his profession, and his industrious application to it, the majority of the buildings that he executed are little better than so many experimental attempts at originality, with considerable merits in parts, but more or less failures upon the whole. With all his apparent fertility of invention, they exhibit sameness of ideas, and those by no means of the happiest kind; while, with a good deal of study in some respects, they betray great neglect of it in others. Never was architect more unequal in his taste, not only at different times, but in the same building, for not a single building among all that he executed or designed is consistently finished up throughout. On the contrary, striking beauties and striking defects are so oddly mixed up in several of them, that it is hardly possible to say which predominate. Even in mere designs, where he was at liberty to exercise his fancy without restraint, there invariably occurs something most offensively mean or extravagantly uncouth and absurd. Proofs of this assertion are furnished by the folio of 'Public and Private Buildings,' published by him in 1828, and which was intended to be in some measure a record of his long professional career, although the plates are wretchedly executed; and nearly the same may be said of those in the 'Description' of his own house and museum, a quarto volume of some bulk, printed by him in 1832 for private distribution and presents. In both instances he was most niggardly towards himself, yet in the latter not altogether free at the same time from vanity. The same may be said with regard to his house itself, the exterior of which is by no means such a specimen of taste as an architect would be ambitious of bequeathing to posterity, though, taken altogether, the building and its contents form a monument sufficiently expressive of the character of the man—a strange jumble of insignificance and ostentation, of parsimony and extravagance, of ingenious contrivance in some parts, and of the most miserable conceits in others. Such as it is, however, it was for years his favourite amusement, even from the time he commenced it in 1812; and as he seems to have grudged no cost in making repeated alterations, it is singular, more especially considering the purpose to which he ultimately destined it, that he should not have rebuilt the front, and that of the house on each side of it (also his own property), so as to have produced a uniform façade of tolerably imposing aspect, even had he not added those houses to his own residence and museum.

In 1833 he obtained an act of parliament vesting his museum, library, &c. in trustees, for the use of the public after his death. Availing himself of the power given by the act of parliament to make such regulations as he afterwards pleased, he thought proper to limit the time of the 'Soanean Museum' being opened to the public to two days in each week for three months in the year; when it can be visited only by tickets, and those are given in a very limited number for each day. Whatever may have been the real cause, it is notorious that a most violent rupture had existed for years between Sir John and his only surviving son; nor could any reconciliation between them be effected—a circumstance which throws some light upon much that would otherwise be inexplicable in Sir John's character, including, among other points of it, his refusal of a baronetcy, and his determination to accept only simple knighthood (1831). His alienation from his son induced many to look forward to considerable legacies from him; but if he ever encouraged any such expectations, he certainly did not realise them. Advanced as he was in years, he had not fallen into dotage: both his faculties and health remained unimpaired to the last, when, with scarcely a day's previous indisposition, he died at his house in Lincoln's Inn Fields, January 20th, 1837.

Eminently successful as he was throughout life, Sir J. Soane was quite as much to be pitied as to be envied, and he is a striking lesson to the world that prosperity may be bitter to the man, and opportunity sometimes worse than useless to the artist. As an architect, he did not, with the exception of the Bank—and there only in bits—accomplish anything of sterling merit. He had great ingenuity and contrivance, and was often singularly happy in those picturesque and perspective effects which depend upon arrangement and plan, and on the mode of admitting light in interiors, but he never fully wrought up his ideas, and often left them quite crude sketchings. His

attempts at Gothic were almost beneath contempt. On the other hand, he is entitled to no small praise as being, if not the inventor of a new order, the first to apply and naturalise in this country the Tivoli Corinthian, employed by him at the Bank, the north-west corner of which structure so far surpasses anything else that he ever executed or designed, that his reputation would stand higher if that were all that he ever did.

SOBIESKI, JOHN, son of James Sobieski, a Polish noble, castellan of Cracow, and a distinguished warrior, was born in 1629, in the district of Olesko, in the present Galicia, or Austrian Poland, near the sources of the Bug and the Bog, on the feudal estate of his ancestors. He was carefully brought up under the superintendence of his father; he completed his education at Paris, served for some time in the mousquetaires, or body-guards, of Louis XIV.; and travelled with his brother Mark in France, Italy, and Turkey. The young Sobieskis were staying at Constantinople when the news of a fearful insurrection of the Cossaks, who were joined by a multitude of Polish serfs, made them hasten home. They overran Polish Russia, and destroyed many people, especially priests and Jews. Out of hatred of Roman Catholic intolerance, they obliged all the monks and nuns whom they could seize to marry each other under pain of death: the khan of the Tartars had also espoused their cause. The king of Poland, John Casimir, a weak prince, harassed by the proud independence of the magnates, opposed but a feeble resistance to the devastating torrent. At last the insurgents met with a check under the walls of Zamosc, and a peace was made with the Cossaks, but it was soon broken; and the Poles suffered many reverses, in one of which Mark Sobieski was killed by the hands of the Tartars. His brother John continued to serve in the army with distinction against the Cossaks and Tartars, as well as against the Swedes and Russians; for at that time Poland was assailed on every side, and nearly ceased to exist as a nation. In 1660 John Sobieski gained a victory over the Muscovite general Sheremetoff; and for several years after he continued to fight with success against both Muscovites and Tartars, in consequence of which he was raised to the dignities of grand marshal and grand hetman of Poland.

In 1667 Poland was invaded by 100,000 Cossaks and Tartars. Sobieski marched to meet them at the head of only 20,000 men. At first he kept on the defensive in order to weary out the assailants; but seizing a favourable moment, he sallied out of his intrenchments, routed the enemy, and compelled them to sue for peace. Poland was thus again saved from destruction. In 1671 he routed the Turks, who were led by Sultan Mahomet IV.; and some time after he took from them the fortress of Kotzim, till then considered impregnable. On the death of King Michael Wisniowietzki, in 1674, the diet assembled to name a successor. Several candidates appeared: Charles of Lorraine was countenanced by Austria, and Philip of Neuburg by Louis XIV. Sobieski himself proposed the Prince of Condé; but the palatine Stanislaus Jablonowski having stated in an eloquent speech his objections to those candidates, concluded by saying, "Let a Pole reign over Poland," and he proposed the conqueror of Kotzim, John Sobieski. The effect was electrical; all the Polish and Lithuanian nobles shouted "Long live John III.," and John was proclaimed king. The country was in a state of exhaustion; the regular army consisted of only a few thousand men, the treasury was empty, and the crown jewels were pledged to the Jews. Sobieski redeemed the jewels, raised several regiments at his own expense, and then marched to oppose the Turks, who were advancing with a large force. He was obliged to shut himself up within Lemberg, which was speedily invested; but taking advantage of a heavy fall of snow, which a high wind blew in the face of the Turks, he issued from the town with a small but devoted band, and the cry of "Christ for ever," and completely routed the besiegers. A fresh Turkish army came, at the head of which was the brave pasha of Damascus, who had acquired in war the surname of 'Shaitan,' or 'the Devil,' accompanied by a formidable artillery. Sobieski intrenched himself, with about 10,000 men, between two villages on the banks of the Dniester, and there sustained for twenty days the attacks of the enemy and a continued cannonade. At last, on the 14th October 1676, the Polish king issued out of his entrenchments with his few remaining followers, whom he drew up in order of battle. The Turks, who numbered between two and three hundred thousand, were astounded, when they began to cry out that it could not be a mere man who risked such odds, that Sobieski must be a wizard, and that it was useless to contend with the wizard king. The 'Shaitan' pasha was superior to such superstition; but he knew that the 'pospolite,' or *levy en masse*, of the kingdom was at hand; and he offered Sobieski an honourable peace, which was accepted.

A few years of peace followed, at least external peace, for Poland was seldom if ever at peace within herself. The king's authority was set at naught by the nobles, who would not listen to reform or redress of grievances, and by their veto dissolved every diet in which the attempt was made. In his own family, Sobieski was teased and tormented by his wife, a French woman by birth, an ambitious domineering woman, whom he had not the heart to restrain. But a new storm was gathering to draw out Sobieski's energies. This time the attack of the Turks was directed against Austria. The Turks were countenanced by Louis XIV. of France, who wished to

humble the house of Austria to the dust. A most formidable army, commanded by the grand-vizir Kara Mustapha, after sweeping over Hungary, in the month of July 1683, invested Vienna, from which the emperor Leopold and his family had fled. Germany, Italy, all Europe were in consternation. All eyes were turned towards Sobieski. The Polish king had no reason to love Austria, but, as a Christian prince, he determined to defend the Eastern bulwark of Christian Europe against the dreaded Ottomans. Having assembled at Cracow an army of 16,000 men, he marched to the banks of the Danube, and was met on the way by the Duke of Lorraine and other German princes with their contingents, and at length found himself at the head of 70,000 men. Having crossed the Danube, he ascended the ridge of the Kalemberg, which overlooks the Austrian capital. On the morning of the 11th of September, the allied army, reaching the summit of the ridge, saw before them the wide-spread tents of the Ottoman host in the plain below. On the following day Sobieski's army descended the mountain to attack the vizir, and, after a hard struggle, drove the Turks into their intrenchments, which were fortified with great care, and appeared even to Sobieski too strong to be forced. It was five in the afternoon, and he had given up all idea of attack for that day, when he spied the vizir sitting at the entrance of his splendid tent, tranquilly sipping coffee, with his two sons beside him. This composure provoked Sobieski, and he gave orders for an immediate attack. The Polish hussars cleared the ditch and rode into the camp, the infantry followed, and, after a rude shock, the Ottomans were driven in a confused mass towards the tent of the vizir. Kara Mustapha attempted to make a stand, but in vain: at last he fled with the rest; and Sobieski remained master of the whole camp, artillery, baggage, and all. On the news of the deliverance of Vienna, all Europe resounded with acclamations. Sobieski pursued the Turks into Hungary, and he experienced a defeat at Parany, where he was exposed to great personal danger; but he defeated them again at Strigonia, and at last cleared the whole country of them.

Returning to his own kingdom, he found himself again involved in domestic troubles. Every attempt that he had made for the regeneration of Poland was thwarted by some of the turbulent nobles by means of the veto which the constitution gave to each. Sobieski was even called a tyrant and traitor because he fretted at his own impotence to do good to his country. At the close of the stormy diet of 1688, he addressed the assembly in a sad and almost prophetic tone: "What will be one day the surprise of posterity to see that after being elevated to such a height of glory, we have suffered our country to fall into the gulf of ruin; to fall, alas! for ever. For myself, I may from time to time have gained her battles; but I am powerless to save her. I can do no more than leave the future of my beloved land, not to destiny, for I am a Christian, but to God, the High and Mighty."

Sobieski was an accomplished scholar, and very fond of learning: he acquired the Spanish language at an advanced age, amidst the cares of his kingdom. In 1696 Sobieski was suddenly taken ill, and died, on Corpus Christi day, and with him Polish greatness may be said to have expired. He was the last of its really patriot kings.

(*Lettres du Roi de Pologne Jean Sobieski*, publiées par de Salvandy, Paris, 1826; *Histoire de Pologne*, by the same author.)

SOCINUS FAUSTUS. The Socini were an ancient family of Siena. Marianus Socinus, a lawyer, is highly extolled by Aeneas Sylvius, Pope Pius II., with whom he was contemporary. This Marianus had a son Bartholomew, whom Politian calls the Papinian of his age; and also a son Alexander. Alexander had a son Marianus the younger, also a distinguished lawyer, who was the father of Alexander Socinus the younger and Lælius Socinus, by Camilla, who was related to the Salvetti of Florence. Alexander was a distinguished lawyer and a teacher of jurisprudence.

Lælius, the uncle of Faustus Socinus, was born at Siena in 1525. He was brought up to the law; but he turned his thoughts to the study of the Scripture, for which he was qualified by his knowledge of the Greek and Hebrew languages, and, it is said, the Arabic also. Having detected, as he supposed, various errors in the doctrines of the Roman Church, he left Italy in 1547, either that he might insure his safety, or have the advantage of prosecuting his theological studies more diligently. He was only about twenty-one years of age when he commenced his travels, which extended to England, France, Switzerland, Germany, and Poland. He first visited Poland about 1551, and a second time about 1556. He finally settled at Zurich, where he died in 1562, in the thirty-seventh year of his age. His nephew Faustus, who then happened to be at Lyon in France, succeeded in getting possession of his papers. Lælius was on intimate terms with all the great scholars of the time. By his prudent conduct he secured his personal safety amidst men who were the enemies of his opinions, which however he communicated freely to his friends, and principally to his countrymen who were in voluntary exile in Switzerland and Germany. He also corresponded with his family in Italy, and brought several of them over to his opinions. Lælius Socinus had put various questions to Calvin, among other great theologians. Calvin declined to answer his "portentous questions," and in a rough but well-meant letter, told him that "if he did not timely correct this itch of inquiring, he would draw on himself great torments." Calvin's letter was written in January 1552; and in the

month of October of the next year, Servetus was burnt at Geneva. This was a significant comment on the words of advice.

Faustus Socinus, the son of Alexander the younger, was born at Siena in December 1539: his mother Agnes was the daughter of Burgesio Petrucci, a distinguished personage at Siena, and of Victoria Piccolomini, niece of Pope Pius the Second. The parents of Faustus Socinus died young, and his education was somewhat neglected. He himself complains that he studied the liberal arts slightly, and without the direction of a teacher: he had learned nothing of philosophy or school divinity, and of logic he had only certain rudiments, and that very late. At the age of twenty he took refuge in France, on account of danger which threatened his family on a suspicion of heresy. On the death of his uncle Lælius he returned to Italy; and being taken into the service of the grand-duke of Tuscany, spent twelve years at the court of Florence. About the close of this period he began seriously to reflect on religious matters, and finally determined to abandon his country and his favourable prospects, that he might occupy himself about his own and other men's salvation. In the year 1574, at the age of thirty-five, he retired to Basel to study theology. About 1578 he was invited into Transylvania by George Blandrata, a person of great influence in that country, to oppose the opinions of Francisus Davidis on the power of Christ and the honour due to him. The two theologians lodged together in the same house for four months, but Davidis could not be prevailed upon to change his opinions; and as he still continued to proclaim them publicly, he was put in prison by the prince of Transylvania, where he soon ended his life. Socinus was blamed in this matter, but without any reason; for whatever share any of those who followed his opinions had in the persecution of Davidis, there is no evidence that Socinus joined them.

In 1579 Socinus visited Poland, and wished to be received into the Unitarian churches of that country, which acknowledged none but the Father of the Lord Jesus Christ to be the most High God; but as he dissented from the Unitarian churches in some matters, his application was at first rejected. Socinus however wrote in defence of the Polish Unitarian churches; and he also published his treatise, entitled '*Pro Racoviensibus Responsio*,' in reply to the work of Jacobus Palæologus, which was entitled '*Defensio Veræ Sententiæ de Magistratu Politico*.' Socinus maintains the doctrine of obedience to the sovereign power in its most unlimited extent, and he instances as an example of the mischievous teaching of those who inculcated the right of resistance to princes, the bloody wars of the Hollanders with Philip II. of Spain. It is singular that the Responsio was represented to Stephen Bathory, king of Poland, as a work against government, a charge which could not well be made against a treatise that was directed against all those who maintained the right of subjects to examine and pass judgment on the conduct of princes; however, Socinus thought it prudent to retire from Cracow, where he had lived four years, to the estate of a nobleman named Christopher Morsztyn, where he was safe. During this retreat he married Elizabeth, the daughter of his protector, by whom he had a child called Agnes, who afterwards married a Polish gentleman. By this marriage Socinus became connected with the principal families of Poland, a circumstance which greatly contributed to the influence which he subsequently obtained. His wife died in 1587, and his grief, which was excessive, was followed by a severe illness. He subsequently returned to Cracow, and in the year 1588 he assisted at the synod of Brest, which is a town on the borders of Lithuania, and disputed on the death and sacrifice of Christ, on justification, the corrupted nature of man, and with the followers of Davidis and Budny, on the invocation of Christ. Socinus was now beginning to gain over many persons of rank to his opinions, though some who were in authority, and most of the old ministers, still opposed him. It is said that Securius was the first who maintained the doctrines of Socinus; but Petrus Stoinius, a young minister, became one of the most eloquent expounders of his tenets. It was during the second residence of Socinus at Cracow, and in 1598, after the publication of his book on the Saviour, '*De Jesu Christo Servatore*,' that the populace, being stirred up, as it is said, by the scholars, pulled him from his sick chamber, and dragged him half naked through the streets, and he was rescued with difficulty by one of the professors. His property was plundered, and his manuscripts were destroyed, one of which was against atheists. After this outrage he left Cracow for a neighbouring village, where he died in March 1604.

Socinus was rather tall and slender: his forehead was lofty, and his eyes penetrating; he was a handsome man, and of dignified appearance. He was abstemious in all things; simple in his manners, though grave; and affable to all persons. He was naturally choleric, but he had so tamed his temper, that the mildness of his disposition seemed to be a natural gift. His services to the cause of the Unitarians in Poland, according to his Polish biographer, consisted in opening the genuine meaning of Scripture in innumerable places, and in confirming by solid arguments those opinions touching the person of God and Christ which he found in Poland. His biographer adds, "As for the errors received from the reformed churches, which did, in a great number, as yet reign in that church, he did, with a marvellous felicity, root them out. Such were that of justification, that of appeasing the wrath of God, that of predestination, that of the servitude of the will, that of original sin, that of the Lord's Supper and baptism, together with other misconstrued doctrines." With respect to Christ, Socinus

declares, in opposition to the Theses of Davidis, "that the man Jesus of Nazareth, who is called Christ, not only spoke by the spirit of prophecy, but more than prophecy, for he was the express image of God, in whom the whole fullness of the godhead dwelt corporeally, so that he never used a word in his teaching which ought not to be considered as uttered by the mouth of God himself;" and, further, for the reasons which Socinus alleges, "Christ may now justly be called God, inasmuch as, by the appointment of God, he discharges the highest of all functions and is endued with divine power in heaven and earth;" and, "that we ought, in addition to keeping his commands, to obey and worship him as our Lord and God, appointed over us by the Supreme God, and now reigning over us with supreme power." (Socini '*Opera*,' ii., pp. 801, 802.)

Antitrinitarian opinions had been promulgated in Poland in 1546, at the meetings of a secret society at Cracow. The works of Servetus were then read in Poland, and Lælius Socinus, in his visit to that country in 1551, is said to have propagated his doctrines. But it was Faustus Socinus who gave to the antitrinitarian opinions a definite form, and reduced them to a system. He did not form a catechism, though he designed one; but this was effected by Smalcus and Hieronymus Moskorzewski, who collected and digested the doctrines which were established or approved by Faustus Socinus. This catechism was published at Rakow in 1605, in the Polish language. It was translated into Latin in 1609, and an English translation appeared at Amsterdam in 1652. In 1819, the Rev. Thomas Rees published a new English translation, with an historical notice.

The works of Socinus are in Latin, and fill the first two folio volumes of the '*Bibliotheca Fratrum Polonorum quos Unitarios vocant*, Ireneopolis, 1656.' The first volume contains the exegetical and didactic works of Socinus, and the second his polemical writings. Socinus wrote in a pure perspicuous style, and the moderation with which he expresses himself contrasts favourably with the usual tone of polemical writings of that day.

('The Life of that incomparable Man, Faustus Socinus Senensis, described by a Polonian Knight,' *Harleian Miscellany*, vol. vi., p. 355 (this is a translation of the Life of Socinus, prefixed to his works, by Samuel Przypkowski); Bayle, *Socin (Fauste)*; Krasinski, *Historical Sketch of the Reformation in Poland*, London, 1840; Socini, *Opera*.)

SOCRATES, considered by some the founder of Greek philosophy, was born at Athens on the 6th of Thargelion, Ol. 77. 4 (B.C. 468). His father, Sophroniscus, was a sculptor; his mother, Phænarete, a midwife. He was originally destined for his father's profession, and we are told that he made no slight proficiency in his art; statues of the Graces, clothed in flowing drapery, were exhibited in the Acropolis as his work. He did not however devote himself to this profession; he carried it so far as to earn a decent subsistence from it, but as he inherited some little property on his father's death, he was content to devote the greater part of his time and talents to the study of philosophy, for which he had a strong natural inclination. While still engaged in statuary, and much more so after he had given it up, he spent a great part of his time in reading all the accessible works of former and contemporary philosophers. Crito supplied him with money to pay the masters who taught him various accomplishments at Athens, and he became an auditor of most of the great physical philosophers and sophists who visited Athens during his time, especially of Anaxagoras, who was expelled from the city when Socrates was thirty-seven years old, his successor Archelaus, and the luxurious and accomplished Prodicus, of whom Xenophon makes him speak in terms of the warmest affection ('*Mem.*' ii., 1, sects. 21, 24). In a word, he may be considered as having received the very best education which an Athenian could command in those days.

With regard to his public life, we know that he served his country faithfully as a soldier, according to the duty of all Athenian citizens. During the Peloponnesian war he made three several campaigns. In the first of these he took a part in the long blockade of Potidæa, and Alcibiades, in Plato's '*Symposium*' (p. 219, E, &c.) gives a full account, though perhaps rather a partial one, of his extraordinary hardihood and valour during this long service. He endured with the greatest indifference, hunger and thirst, heat and cold; in one of the skirmishes which took place, Alcibiades fell wounded in the midst of the enemy; Socrates rescued him, and carried him off, together with his arms, for which exploit the generals awarded him the civic crown as the prize of valour (*τὰ ἀπλοτεία*); this however he transferred to Alcibiades. The scene of his second campaign was Boeotia, where he fought for his country in the disastrous battle of Delium. Here he saved the life of another of his pupils, Xenophon, whom he carried from the field on his shoulder, fighting his way as he went. On his third campaign he served at Amphipolis.

On the merit of his civil services it is more difficult to form a decided opinion. As a member of the deliberative senate (*Βουλὴ*), he showed great firmness in voting against the iniquitous sentence by which the victors of Arginusæ were condemned to death. But there is too much reason to believe that he really belonged to the party of Theramenes, who was the chief mover in that and other unhappy proceedings. At any rate he did not leave Athens even when the tyranny of the Thirty had reached its height; he was employed by them as an agent in one of the most detestable murders which they perpetrated—that of Leon, and though he did not actually assist in

seizing the fugitive, his reluctance to do so arose probably from a goodness of heart quite consistent with a general adherence to the party which had selected him as their instrument. That Socrates favoured the aristocratic or oligarchical faction at Athens—that, at least, he was not well disposed to the democratic constitution of his country, is proved, to a certain extent, by the fact that the indictment on which he was condemned and executed was brought forward by Anytus, one of the chief of those citizens who assisted Thrasybulus in restoring the old state of things. We are of opinion (and the subject is one on which many opinions have been entertained) that Socrates, though a thoroughly good and virtuous man, endowed with great self-control, a strong sense of duty, wonderful amiability of disposition, and indeed with almost all those qualities which obtain for an individual the love and admiration of his fellows, was deficient in the higher kind of political virtue; that in fact he was not a good citizen, because with every wish to obey the laws of the state, he could not refrain from broaching theories at variance with the first principles of a democratic constitution, because he could not prevail upon his intellectual convictions to bow before the supremacy of public opinion. That in the abstract he might have been in the right, while all Athens was in the wrong, is not the question. As laws, in a democratic state, are made by the majority, the voice of one man, or of a small class of men, though they may be all philosophers, will never justify the speakers in breaking through those rules, to which, as members of the body politic, they are bound to submit. The Athenians were justified, by every principle of law which was acknowledged in those days, in the sentence which they passed upon Socrates, and it is only matter of wonder that the votes of the judges were so nearly divided. An opinion generally unfavourable to him had for a long time been prevalent in Athens, and it is no slight evidence of this opinion being well-founded, that it was, in part at least, supported by Aristophanes, who introduced Socrates into his celebrated comedy, 'The Clouds,' as a mischievous speculator on matters of religion, and as a corruptor of the youth of Athens—as, in fact, one of the class of Sophists. Although there can be no doubt that the comedy just mentioned had no share in producing the condemnation of Socrates, it is at least remarkable that the two principal charges brought against him on his trial constitute the leading features in the satirical censure of Aristophanes. The accusers, Meletus, Anytus, and Lycon, state their charges as follows: "Socrates is guilty of impiety in not acknowledging the gods acknowledged by the state, but on the contrary introducing new deities; and he also does wrong in corrupting the youth." It would be easy to confute the arguments by which Xenophon seeks to justify his master from these charges, and if we only put ourselves in the place of the Athenians, we cannot wonder that a small majority of judges were compelled by their duty to pronounce him guilty. It does not however follow that he would have been put to death in consequence of this conviction. But on being called up to receive his sentence, he treated the court with a contumelious disdain, which was not only at variance with Attic law, but also eminently calculated to provoke his judges, who were accustomed to the most humble and abject demeanour on the part of those who were brought before them, and who could ill brook the irony and ridicule of a condemned criminal. He was sentenced to death by a much larger number than those who had voted him guilty. The festival of the Theoria gained him a reprieve of thirty days, during which his friend Crito provided for him the means of escaping from prison, but he would not avail himself of the opportunity. His sentence was carried into execution at the end of the month Thargelion, Ol. 95, 1 (B.C. 399). If we may believe the account given us by a friend and disciple of his, he met his fate with the most heroic calmness and resignation, discoursing with and consoling his weeping friends, even after he had drunk the cup of hemlock, and expressing with his last breath his debt of gratitude to Æsculapius for having at length supplied him with a cure for all earthly ills.

The philosophical merits of Socrates are less doubtful than his political character. The mere fact that he is made the chief interlocutor in those wonderful dialogues which contain the whole system of Plato, is sufficient to prove that he exerted no slight influence on that great philosopher, and though he never committed any of his own thoughts to writing, he has left indisputable traces of the important innovations in science, of which he must be considered as the real and first author. We have three authorities for the doctrines of Socrates: Xenophon's 'Memorabilia'; the 'Dialogues' of Plato; and the 'Strictures' of Aristotle. With regard to the first work, too much reliance has been placed upon it as a faithful delineation of the sayings of Socrates. It is too much of an apologetic nature to deserve the title of a just and accurate exposition of the doctrines which it defends; and even if Xenophon had wished to give a full account of the philosophy of Socrates, it is not possible, from all that we know of him, that he would have been able to do so. His talents, such as they were, were all of a practical nature; he does not seem to have had any toleration for philosophy; he clearly did not understand the definition of terms or ideas; and at any rate had not originality enough to enable him to appreciate such a thoroughly original character as Socrates.

As to Plato, there can be no doubt that he never meant to pass off

as his own the doctrines and speculations which he puts into the mouth of Socrates; but we cannot help feeling that the Socrates, whom he represents with such dramatic truth, must have been a real person, and no creature of the imagination, and that Socrates must have been the philosophical as he is the formal basis of all that Plato has done for science. If then we seek to make up for the deficiencies of Plato and Xenophon, as exponents of the doctrines which their master actually promulgated, by turning to the criticisms of Aristotle, we shall find that Plato gives us a much truer conception of what he effected by his scientific labours, than we could have derived from Xenophon. Aristotle distinctly tells us that Socrates philosophised about virtue, and made some real discoveries with regard to the first principles of science. Now this is just the philosophical basis which we discern in the Socrates of Plato. We find him always endeavouring to reduce things to their first elements, stripping realities of their pompous garb of words, and striving to arrive at certainty as the standard of truth; and we also find that his philosophy is generally applied to ethics rather than to physics. He seems to have been convinced of the unity of virtue, and to have believed that it was teachable as a matter of science. In fact, with him the scientific and the moral run into one another, for knowledge is the final cause of the will, and good is the final cause of knowledge; hence he who knows what justice is, must needs be just, since no one wittingly departs from that which he knows to be good.

Socrates considered it to be his particular vocation to arouse the idea of science in the minds of men. This is clear from the manner in which he is said to have insisted upon the consciousness of ignorance, and also from the use which he made of the Delphic response *γνῶθι σεαυτόν*, 'Know thyself.' "For," says Schleiermacher (in his valuable paper on the 'Worth of Socrates as a Philosopher') "if he went about in the service of the god, to justify the celebrated oracle, it is impossible that the utmost point he reached could have been simply to know that he knew nothing; there was a step beyond this which he must have taken, that of knowing what knowledge is. For by what other means could he have been enabled to declare that which others believed themselves to know, to be no knowledge, than by a more correct conception of knowledge, and by a more correct method founded upon that conception? And everywhere, when he is explaining the nature of non-science (*ἀνεπιστημοσύνη*), one sees that he sets out from two tests: one, that science is the same in all true thoughts, and consequently must manifest its peculiar form in every such thought; the other, that all science forms one whole. For his proofs always hinge on this assumption—that it is impossible to start from one true thought and to be entangled in a contradiction with any other, and also that knowledge derived from any one point, and obtained by correct combination, cannot contradict that which has been deduced in like manner from any other point: and while he exposed such contradictions in the current conceptions of mankind, he strove to rouse those leading ideas in all who were capable of understanding or even of divining his meaning." In all the isolated particulars which are recorded of Socrates, this one object is everywhere discernible. His antagonistic opposition to the Sophists is one very strong feature of this. They professed to know everything, without the idea of science, or knowledge of what knowledge is, and as he had that idea without the mass of acquirements on which they prided themselves, he was naturally their opponent, and his strife with them is carried on entirely in this way, that he endeavours to nullify the effects of their acquired knowledge by shifting the ground from the objects to the idea of science, whereby he generally succeeds in proving their deficiency in the one thing needful to the philosopher. His irony, as it is called, is another remarkable proof of his devotion to his vocation as an awakener of the idea of science. The irony of Socrates has been well-described as the co-existence of the idea of science in him, with the want of clear and complete views on any objects of science—in a word, as the knowledge of his ignorance. With this is intimately connected the indirect dialogical method which he invariably adopted, and which may be considered as his method of extracting scientific truth from the mass of semblances and contradictions by which it was surrounded. His *dæmonion*, or secret monitor, which was a great puzzle to his contemporaries, as it has been to many of the moderns, seems to have been little more than a name which he gave to those convictions on practical subjects which sprung up spontaneously in his mind, and for which he could not find any satisfactory means of accounting, though he felt himself constrained to follow in the course which they prescribed, as when he felt convinced of the issue of an undertaking, or was restrained by some secret misgiving from taking a certain route on his retreat from a disastrous battle.

Such are the leading outlines of the philosophy of Socrates, so far as they are capable of being established with any certainty. The importance of his doctrines is most clearly perceived when we consider them as they were developed and applied by the various schools which acknowledged him as their founder, and especially as they were carried out by Plato. In all these schools, we find, along with the purely Socratic element, some foreign admixture which constitutes the diagnosis of the different systems, and it is not a matter of wonder that no school of Socratic philosophy merely adopted the principles and method of its great founder. A thoroughly original man like Socrates would naturally gather around him all the original and

thinking men who fell in his way, and his business was best done by making them all think for themselves and work by themselves on the idea of science which he had awakened in their minds. The Socratic impulse being once communicated, it would take a different direction according to the character and natural bias of the subject on which it operated, and though Socrates may be considered as the basis of the whole superstructure, he can have no more claim to the whole merit of the Platonic philosophy than he is entitled to be blamed for the reckless inconsistencies of Alcibiades or the selfish policy of Xenophon.

In person, Socrates was no less singular than he was in manners and dress. He had large projecting eyes, a sunken nose turned up at the end, with wide dilated nostrils, and a great unwieldy belly; so that his appearance was not unlike that of the Silens and Satyrs, whom he also seemed to resemble in the severe mockery of his ironical language. His dress was coarse and inelegant, and he seldom wore shoes. If we add to this, that as he walked along the streets he strutted about in a most haughty supercilious manner, staring to the right and left at every one he met, sometimes stopping suddenly in an absent fit and remaining for a considerable time fixed to the spot, we shall not wonder at the selection which Aristophanes made of him as a fit and proper subject for the caricature of comedy.

SOCRATES, the ecclesiastical historian, was born at Constantinople towards the end of the 4th century. He was instructed in grammar and rhetoric by Ammonius and Helladius, of Alexandria, and afterwards followed the profession of scholastic or advocate, on which account he is generally designated as Socrates the Scholastic. He appears however to have abandoned this profession in order to devote himself to the study of ecclesiastical history. He is generally considered the most exact and judicious of the three continuators of the history of Eusebius [EUSEBIUS]; he is less florid in his style and more careful in his statements than Sozomen [SOZOMEN] and less credulous than Theodoret. [THEODORET.] He is likewise the earliest writer of the three, and Sozomen is supposed to have borrowed somewhat largely from him. His history extends from the year 306 to 439; it has been abridged by Epiphanius the Scholastic in his 'Historia Tripartita,' and was published for the first time as a continuation of Eusebius, by Robert Stephens, in fol., Paris, 1544. There is a good French translation of it by the President Cousin. The history is divided into seven books; the five last are chiefly composed on the authority of Rufinus [RUFINUS], and on the relations he gathered from eye-witnesses of many of the events he records. The two first had also been composed on the same authority; but on reading the writings of St. Athanasius he found that Rufinus had omitted several of the principal circumstances in the life of this celebrated father of the church. [ATHANASIUS.] He therefore undertook the task of writing them anew, and took occasion of inserting several valuable documents and formularies of faith which throw much light on the Arian heresy.

Though the most exact of the continuators of Eusebius, he has nevertheless allowed himself to fall into error on several important points. For instance, he confounds the Emperor Maximianus with Maximinus (b. 1, c. 1), a mistake the more surprising as he was a native of Constantinople, and professes to relate the principal events which took place in that city. "The carelessness of writers of that age," says Gibbon, "leaves us in a singular perplexity" ('History of the Decline and Fall of the Roman Empire,' c. vii., note). He is mistaken also respecting the number of bishops who refused to sign the creed drawn up at the Council of Nice (b. 1, c. 8), as it appears clearly from the acts of the council and the authority of St. Jerome, Theodoret, and others, that there were only two, not five, dissentients, as Socrates asserts. His statements respecting a law passed by the Emperor Valentinian authorising bigamy (b. iv. c. 31) on the occasion of his marriage with Justina, rests on no other known authority, and bears the semblance of a fiction rather than a fact. His account of church discipline has been severely criticised by Baronius, Fleury, and other Roman Catholic writers; but he has on this point been very ably defended by Cousin in the preface of the translation to his history. "His impartiality is so strikingly displayed," says Waddington, "as to make his orthodoxy questionable to Baronius, the celebrated Roman Catholic historian; but Valesius in his life has clearly shown that there is no reason for such suspicion." We may mention another principle which he has followed, which in the mind of Baronius may have tended to confirm the notion of his heterodoxy—that he is invariably adverse to every form of persecution on account of religious opinions—*διωγμὸν δὲ λέγει τὸ ἀποσυντρεχεῖν τοὺς ἡγουμένους*: "and I call it persecution to offer any description of molestation to those who are quiet." (History of the Church, p. 104.) He is however very generally suspected of a leaning in favour of the schism of the Novatians, though he shows but little knowledge on the subject, and confounds Novatian, who was a priest of Rome, with Novatian of Africa. The date of his death is not ascertained.

(*Hist. de l'Eglise*, traduite par Cousin, vol. ii., Paris, 1775; Fleury, *Hist. Eccles.*, l. xxvi. c. 49; Waddington, *Hist. of the Church*, London, 1833; Moreri, *Dict. Historique*, art. Socrates.)

SOEUR, LE, HUBERT. This excellent sculptor, a Frenchman by birth, according to Walpole, was the pupil of the celebrated John of Bologna. He came to England probably shortly before 1630, in

which year he was then living in Bartholomew Close, and a son of his was buried on the 29th of November of that year in Great St. Bartholomew's.

Le Soeur must have been a man of about fifty years of age in 1630, for John of Bologna died in 1608 in Florence at an advanced age, and Le Soeur must have visited Florence therefore about the beginning of the 17th century if he were his pupil. The connection with John of Bologna, who was a native of Douay in Flanders, and his subsequent connection with Rubens in England, seem to indicate Flanders as the country of Le Soeur rather than France. Rubens is said to have designed the much-admired bronze or brass statue of William Earl of Pembroke in the picture gallery of Oxford, which was executed and cast by Le Soeur. William Earl of Pembroke was Chancellor of the University of Oxford from 1616 to 1630.

In 1633 Le Soeur cast the well-known equestrian statue of Charles I. at Charing Cross; it was cast in a spot of ground near the church of St. Paul, Covent Garden, but not being put up before the commencement of the great civil war, it was sold by the Parliament to a brazier of the name of John Rivet, living at the "dial near Holborn Conduit," who had orders to break it into pieces. Rivet, instead of breaking it up, buried it, and it remained concealed until the Restoration. It was placed in its present situation at the expense of the crown, in the year 1674, by an order from the Earl of Danby, afterwards Duke of Leeds. The statue is said by Walpole to have been made at the expense of the family of Howard-Arundel, but it was really made for the Earl of Portland, Lord Treasurer. There is a story about Le Soeur's destroying himself when, after the statue was set up, he found that he had omitted the saddle-girth; unfortunately for the truth of this story however the saddle-girth is there, and further, Le Soeur can never have seen the statue set up, as he must have died several years before 1678. The figure is dignified and expressive, but the horse is heavy and is generally deficient in modelling; the hinder quarters are especially void of character and motion. The pedestal was made by Grinling Gibbons. Walpole speaks of a bust at Stourhead by Le Soeur of Charles I. in bronze, with a helmet surmounted by a dragon à la Romaine, three feet high on a black pedestal. It is mentioned in Vanderdoort's Catalogue of Charles I.'s Collection. Le Soeur executed many other bronze or brass works in England, but they are now all lost or destroyed.

SOLANDER, DANIEL CHARLES, a celebrated naturalist, the pupil of Linnaeus, and the friend of Sir Joseph Banks. He was born in Nordland, in Sweden, where his father was a minister, on the 28th of February 1736. He studied at Upsal, under Linnaeus, and took his degree of M.D. at that university. After this he made a tour in Russia, and on his return was recommended by Linnaeus to go to England. For this purpose he embarked on board a vessel of war, which was suddenly ordered to the Canary Isles, taking Solander far away from his destination. He however made the most of it, for he not only shared the prizes taken by the vessel on this cruise, but made great accessions to his knowledge of natural history whilst at the Canary Isles. Shortly after his arrival in England, which was in October 1760, he was employed at the British Museum for the purpose of drawing up a catalogue of the collections in that institution. Three years afterwards he was appointed one of the assistants in the natural history department. In 1764 he was elected a fellow of the Royal Society. In 1766 he published a catalogue of the fossils presented to the British Museum by Mr. Brander. In 1768 Sir Joseph Banks proposed to Dr. Solander that he should accompany him in a voyage round the world, in search of discoveries in natural history. To this he assented, and the trustees of the British Museum having promised a continuance of his salary in his absence, the two naturalists started with Captain Cook in his celebrated first voyage round the world. During this voyage, Dr. Solander probably saved a large party from destruction, in ascending the mountains at Tierra del Fuego, by advising them on no account to give way to sleep when they arrived at the cold regions. He himself was the first affected amongst them, and was with difficulty kept awake during their perilous excursion, which was attended with the death of a negro and an English seaman, from the effects of the cold. They returned from this voyage in 1771, laden with treasures, which are still in the collection at the British Museum. It does not appear that Solander received any remuneration for his services in this expedition, unless it was from Sir Joseph Banks, whose munificence knew no bounds when forwarding in any manner the study of natural history.

Sir Joseph Banks and Solander wished to accompany Cook on his second voyage, but some misunderstanding having arisen with regard to their accommodation in the vessel, they abandoned the project. On his return from his voyage the University of Oxford conferred on Solander the degree of Doctor of Common Laws. In 1773 he was appointed under-librarian at the British Museum. He died in a fit of apoplexy, in the year 1782.

The following papers were published with his name during his lifetime:—1, An account of the *Furia infernalis*, and the disease which it produces. It was published in Latin, at Upsal, and appears to have been his inaugural dissertation; 2, An account of Cardenia, a plant belonging to the natural order Cinchonaceae, in the fifty-second volume of the 'Philosophical Transactions'; 3, A botanical description of the plant producing the Cortex Winteranus or Magellanicus,

published in the fifth volume of 'The Observations and Inquiries of a Society of Physicians.'

Although Dr. Solander published little with his name attached, his labours were by no means few or of little importance. He left behind him a large mass of manuscripts, which are still existing in the British Museum, and containing, as they do, a vast store of information on all that passed under his observant eye, they afford abundant materials for the further prosecution of the subjects to which he devoted his attention.

The arrival of Dr. Solander in England may be looked upon as an important era in the history of botany in this country, as by his means the sexual system of arrangement of plants, which was only imperfectly understood in Great Britain, became more widely extended. We will not stop here to inquire into the amount of benefit conferred on botany by this system, which is now pretty well exploded, but from the perfect knowledge of it possessed by Dr. Solander, and the ease with which it was acquired by others, there can be no doubt that during his lifetime the cultivation of the Linnæan system had a very favourable influence in developing and extending a taste for botany in this country.

But botany was not the only department pursued by Dr. Solander. In 1786, the important work of Ellis, on the 'Natural History of Zoophytes,' was published, in the preface to which the editor thus expresses himself:—"For the arrangements and the descriptions we are indebted to Dr. Solander, whose premature death prevented this and other valuable works from appearing in so complete a manner as they otherwise would have done, since it must be universally allowed that the world suffered in Dr. Solander the loss of one of the greatest naturalists ever known, while his more intimate friends that of an invaluable member of society."

SOLARIO, ANTONIO DE, called 'Il Zingaro,' or the Gipsy, was born in or about 1382, at Chivita, in the Abruzzi, according to Dominici ('Vite de' Pittori Napolitani'), but others have contended that he was a Venetian. He was a gipsy by birth, and in his youth was a sort of itinerant blacksmith. He was not a mere tinker, a mender of kettles and saucepans, for he is said to have been admitted into the house of the painter Colantonio del Fiore at Naples, on account of his skill in making implements of iron. Nearly the same story is related of Solario as of Matsys, the blacksmith of Antwerp. [MATSYS.] Solario fell in love with the daughter of Colantonio, and she fell in love with him. Solario made proposals, but Colantonio said that he would never consent that his daughter should marry any one but a painter of reputation at least equal to his own. The gipsy was not to be thus got rid of; he asked to be allowed ten years to study the art, and Colantonio, to satisfy his daughter, assented. Solario became a pupil of Lippo Dalmasi at Bologna, with whom he remained six or seven years, and afterwards travelled through the chief towns of Italy in order to study the works of other masters. In rather more than nine years he returned in disguise to Naples, and having presented to the Queen of Naples a picture of the Virgin, with the infant Jesus crowned by angels, and also been permitted to paint a portrait of the queen, Colantonio was then invited to view the productions of the unknown artist, of which he expressed the highest admiration. Solario then discovered himself, and soon afterwards became the son-in-law of Colantonio. His reputation was immediately established, and he was much employed, especially at Naples, in painting altar-pieces, and in decorating the walls of convents and other religious houses with frescoes. In the fine expression of his heads, and in the richness and harmony of his colouring, he has been compared to Titian. He is also praised for the graceful action of his figures, but is said to be defective in the drawing of the hands and feet. Solario was also distinguished as an illuminator of manuscripts, especially Bibles. He died in 1455. Vasari has not included Solario in his 'Lives.'

(Dominici, *Vite de' Pittori Napolitani*; Moschini, *Memorie della Vita di Antonio de Salario, detto Il Zingaro, Pittore Veneziano*, Venezia, 1828.)

SOLIMAN, EBN ABD-AL-MALEK, the seventh kalif of the race of the Ommyyades, succeeded his elder brother Walid I. A.D. 715 (A.H. 96). He acquired high popularity at the commencement of his reign by dismissing the various governors whom the inertness of Walid had suffered to oppress the people at their pleasure; and Kati-bah, the first Moslem conqueror of Transoxiana, who alone refused to acknowledge his authority, was seized and put to death by his own soldiers. Another of his lieutenants, Yezid Ibn Mohalleb, reduced the rugged and impenetrable provinces of Tabrestan and Jorjan, on the south coast of the Caspian, which had never before been completely subdued. But the principal military undertaking of his reign was the siege of Constantinople, commenced the year after his accession, by a vast fleet and army under his brother Moslemah. (Gibbon, c. 52.) The Saracen fleet was however destroyed by the Greek fire; the strength of the fortifications reduced the siege to a blockade; and the kalif was preparing to lead a second army to reinforce his brother when he died of a surfeit at Chalcis in Syria, A.D. 717 (A.H. 99), nominating in his last moments his cousin Omar Ebn-Abd-al-Azez as his successor, to the exclusion of his own sons and brothers. The reign of Soliman is said to have been the epoch of the first rise of the Barmecides, who afterwards became famous as the ministers of the Abbasides.

SOLIMAN, EBN AL-HAKEM, a Moorish chief, who, in the civil wars preceding the extinction of the kalifate of the Ommyyades at Cordova, possessed himself of the capital by the aid of the African troops whom he commanded, and proclaimed himself king A.D. 1009 (A.H. 400), under the title of Al-Mostain Billah. Though soon expelled by Mohammed, one of the Ommyyan competitors, he recovered Cordova in 1112, dethroning Hesham II., who had been replaced on the throne on the death of Mohammed; but his valour and abilities were not able to maintain him in his usurped authority: the *walis*, or governors of the African and Spanish provinces, refused obedience; and after various changes of fortune he was overthrown and slain, A.D. 1016 (A.H. 407), by Ali Ebn Hamid, wali of Tangier, who was proclaimed king in his room, but speedily perished by another revolution. The first discovery of the Azores has been attributed to the reign of this prince, on the authority of a passage in the 'Geography' of Sherif-Al-Edrisi; but it is not very clear that the Azores are the islands there alluded to as discovered by some Moslem adventurers from Lisbon. D'Herbelot erroneously mentions Soliman as the nephew of Hesham II., whereas he was a stranger to the blood of the Ommyyades.

SOLIMAN EBN CUTULMISH, a Seljukian prince who founded the first Turkish dynasty in Room, or Asia Minor. His father had perished in a revolt against Alp-Arsalan, the great Seljukian sultan of Persia; and Malek-Shah, the son of Alp-Arsalan, was glad to rid himself of the turbulent ambition of Soliman by furnishing him with an army for the conquest of the west, A.D. 1074 (A.H. 467). The internal dissensions of the Greeks facilitated his progress. In a few years he had subdued nearly all Asia Minor except the districts on the western coast and the isolated city of Trebizond; his capital was fixed at Nicaea, within 100 miles of Constantinople, and his Turkoman followers spread themselves all over the country, which was thenceforward permanently lost to Christendom. Antioch (which had been held by the Greeks since its capture by John Zimisces in 968) was betrayed to him (1084) by the son of the governor; but this acquisition brought on a rupture between Soliman and Moslem-Ebn-Koreish, prince of Aleppo, to whom the Greeks had paid a tribute for Antioch, which Soliman refused to continue. Moslem was defeated and killed; but in attempting to pursue his advantage and occupy Aleppo, Soliman was opposed and overthrown by Sultan Tutush, viceroy of Syria for his brother Malek Shah (whose vassal Moslem had been), and either fell in the battle, or, as some say, perished by his own hand, A.D. 1086 (A.H. 479). His sons were however restored by Malek-Shah to the kingdom of Room, where one of them, Kildj-Arsalan, was reigning at the appearance of the first Crusaders, who erroneously call him Soliman.

SOLIMAN (often mentioned with the surname of Tchelib, 'gentle or noble,' which is however the general title of the sons of the Ottoman sultans) was the eldest surviving son of Bayezid I. After the fatal battle of Angora, in which his father was defeated and made prisoner by Timour, A.D. 1402 (A.H. 804), he effected his escape to Europe with the vizir Ali Pasha, and reigned several years in tranquillity at Adrianople, while the fragments of Asia Minor were disputed by his three brothers. He was frustrated however in an attempt to possess himself of the Asiatic provinces (1406) by an insurrection excited against him at home by his brother Mousa, which recalled him to Europe. Mousa was defeated, and fled into Wallachia, but he returned in 1410 with a fresh army, and Soliman, surprised in Adrianople, was slain in his flight. Mousa was himself dethroned three years later by Mohammed I., under whom the Ottoman dominions were reunited.

Soliman is not generally included in the list of the Turkish sultans, the interval between the death of Bayezid and the final establishment of Mohammed being regarded as an interregnum. He was a brave and generous prince, and the first of the line of Othman who patronised literature; but his good qualities were obscured by his excessive indolence and indulgence in wine.

SOLIMAN (surnamed by the Turks KANOONI, or 'the Legislator,' and by European writers 'the Magnificent'), the tenth and greatest of the Ottoman sultans, succeeded his father Selim I., A.D. 1520 (A.H. 928), in the twenty-seventh year of his age; and as he was an only son, his succession was not disturbed, like those of his father and grandfather, by civil wars. His first exploit was an invasion of Hungary (1521), in which he captured Belgrade, the key of that kingdom, a conquest often attempted in vain by his predecessors; and in the following year Rhodes, which had defied all the efforts of Mohammed II., was, after an arduous siege, surrendered to him by the knights of St. John. The suppression of a rebellion in Egypt, and of a revolt of the Janissaries (as a counterpoise to whom the corps of Bostandjis was instituted), occupied the next three years; but in 1526 Hungary was again invaded; the king, Lewis II., and nearly all his army, slain in the fatal battle of Mohacz, and the whole kingdom overrun by the Turks. The Hungarian crown was conferred by Soliman on John Zapolya, who received it as a vassal of the Porte; but the rival pretensions of Ferdinand of Austria kindled the first of the long wars between the sultans and the German emperors; and in 1529 Vienna was besieged without success by Soliman in person. A war with Persia followed, in which Armenia and Irak, with the cities of Tabreez and Bagdad (1534), were subdued by the Ottomans;

while Yemen and the Arabian coast were subjugated by the pasha of Egypt, and armaments sent even into Guzerat to aid the Indian Moslems against the Portuguese: the fleets of the vassal states of Barbary, under the famous corsair Khairaddin, or Barbarossa, at the same time swept the Mediterranean, and laid waste the Italian coasts; and Croatia was conquered (1537) after a great victory over the Imperialists at Essek. The Turkish arms were everywhere triumphant, and the powerful friendship of Soliman was courted by Francis I. of France, the alliance with whom (1536) was the first between the Porte and any Christian power. The death of John Zapolya (1541) wrought a fresh change in the affairs of Hungary, great part of which was seized by the Turks; Buda became the seat of a pasha; and the war continued, generally to the advantage of the sultan, till a truce was concluded in 1547, by which Austria agreed to pay a tribute of 30,000 ducats for her remaining possessions in Hungary. In the same year a fresh invasion of Persia led to the capture of Ispahan; but this conquest was not long retained. The war with the house of Austria for Hungary again broke out in 1552; and Transylvania was subdued and made a principality under the suzerainty of the Porte. Persia was again attacked, and Erivan taken in 1554; but a peace was concluded with the shah in the following year, which became the basis of all subsequent treaties between the two powers.

A great naval victory was gained in 1560, over the combined fleets of the Christian powers at Djerbeh, on the African coast, by Piali, who had succeeded, on the death of Barbarossa, to the command of the Turkish navies; and a fresh truce with the empire (1562) left the Turks in possession of their Hungarian conquests. But the martial glories of Soliman were clouded by domestic dissensions. His eldest son, Mustapha, had been put to death in 1553, at the instigation of his stepmother Roxalana, who was solicitous to secure the succession for one of her own children; and jealousies of the two surviving princes, Selim and Bayezid, having ended in the rebellion of the latter, he was defeated and driven into Persia; but the shah surrendered the fugitive on the demand of Soliman, and he was put to death with his children (1561).

The united fleets of the Porte and of Barbary had ruled the Mediterranean since the battle of Djerbeh; but they were repulsed with great loss in the siege of Malta (1565) by the heroism of the grand-master John de la Valette. The war in Hungary meantime continued, notwithstanding frequent partial pacifications; and in 1566 Soliman headed his armies for the last time for its invasion; but he died in his tent before the walls of Szigeth, September 5, 1566 (Sefar 20th, A.H. 974), the day before the capture of the town, at the age of seventy-two solar (or seventy-four lunar) years. His only surviving son, Selim II., succeeded him.

Though the Ottoman empire did not fully attain its greatest territorial extent during the reign of Soliman, its military power was undoubtedly during this period at its greatest height and most complete organisation, and declined irreversibly in both these respects under his indolent and voluptuous successors. The personal energy of the sultan himself, and of the ministers and generals selected by him and trained under his eye, maintained the efficiency of every branch of the administration; and the Kanoun-Nameh, or code of regulations, which was drawn up under his own superintendence, completed the reform which his exertions had commenced. The finances, the military fiefs, the functions of the pashas and other employés, the police and administration of justice, are all treated at length in this elaborate compilation, which long formed the basis of both the jurisprudence and political science of the Ottomans. But Soliman was not less distinguished as a patron of literature and the arts than as a warrior and a legislator; the erection of the noble mosque of the Solimaneyeh, and of numerous public buildings both in the capital and the provinces, attest his architectural magnificence; and he is the only one of the Ottoman sovereigns who facilitated the internal communications of his dominions by the construction of roads and bridges. He was himself a poet of no mean rank; and the encouragement which he afforded to the employment of the Turkish language in place of the Persian, which the Ottomans had generally chosen as the vehicle of their sentiments, forms an era in the literature of the country. In an age remarkable for the eminent greatness of the monarchs filling the thrones of Europe, few of them equalled Soliman the Magnificent either in the union of princely qualities or in the glory and good fortune of their reigns.

SOLIMAN II., a younger son of Sultan Ibrahim, was placed on the Ottoman throne A.D. 1687 (A.H. 1098), on the deposition of his elder brother, Mohammed IV. He was nearly forty-six years of age at his accession, and had passed his whole life secluded in the seraglio and occupied by the study of the Korán. A prince thus unacquainted with active life was little fitted to stay the progress of the Imperialists, who in the last years of the preceding reign had almost expelled the Turks from Hungary. In the campaign of 1688 Belgrade and Agria were lost; and in 1689 the vizir Ragib was twice signally defeated by the Austrians, who penetrated into the heart of Servia and took Nissa. An abortive negotiation for peace followed; but the appointment of Mustapha-Pasha Kuprilu to the vizirat changed the face of affairs, and in the two succeeding campaigns the Ottomans recovered Belgrade and most of the frontier fortresses. Soliman however died at Constantinople in June 1691 (A.H. 1102), after a reign of

three years and nine months; and leaving no children, was succeeded by his next brother, Ahmed II.

SOLIME'NA, FRANCESCO, Cavaliere, called l'Abate Ciccio, a celebrated Neapolitan painter, was born at Nocera de' Pagani in 1657. He was originally intended for the law, but having a decided taste for art, he was first taught by his father Angelo, who was the pupil of the Cav. Massimo, and studied afterwards at Naples under Francesco di Maria, and in the academy of Pietro del Po. Solimena was one of the best and most correct painters of his time; he had great versatility of talent and executed works in every style, and had also very great facility of execution. But his style in all its varieties belonged to the elegant and ornamental; his drawing is uniform, and in a great degree merely academical; his heads are only graceful, but his light and shade is effective; his works however want expression, sentiment, and dramatic vigour. He was a great admirer of Pietro da Cortona and the Bolognese painters, one or other of whom he generally made his model. He died at Naples extremely wealthy and in the enjoyment of a great reputation in 1747, at the very advanced age of ninety.

Solimena was the rival and at the same time the friend of Luca Giordano, by whose death in 1705 he was left without a rival, and he raised accordingly the price of his pictures, which however in no way diminished the number of his commissions. His works, both in oil and fresco, are very numerous; the principal of them are the frescoes of the sacristy of the Theatines of San Paolo Maggiore; others, in oil, in the Church of the Apostles, and those of the Chapel of San Filippo Neri in the church dell' Oratorio: there are likewise by him many great altar-pieces and other pictures in oil in the churches of Naples and in other cities of Italy. His portraits likewise are very numerous, including those of some of the principal kings and princes of his time. Solimena was also a poet; his sonnets have been several times published. He was never married; his large property, which besides estates amounted to 300,000 scudi, went to his nephews, the sons of his brother Tommaso Solimena, who was a distinguished lawyer. Of his numerous scholars the principal were Sebastiano Conca, Giaquinto Corrado, Ferdinando Sanfelice, and Francesco de Mura.

SOLINUS, CAIUS JULIUS, a Roman writer of whose life and period nothing is known. It is however certain that he did not write in the Augustan age, as some have supposed, for his work, entitled 'Polyhistor,' is merely a compilation from Pliny's 'Natural History.' Indeed Salmasius says ('Prolegomena') that the work contains nothing which is not found in Pliny, and that he got together all that he could out of Pliny's work, and put it in his compendium, keeping the same arrangement and nearly the same words. Solinus however never mentions Pliny, though he cites near one hundred authors. Salmasius endeavours to show that he lived about two hundred years after Pliny. The first writers who mention him are Hieronymus and Priscian. It has often been said, and even in very recent works, that the researches of Salmasius prove that there were two editions of the 'Polyhistor.' But we certainly do not need the testimony of Salmasius to this point, as it is correctly observed in the article 'Solinus,' 'Biog. Univ.,' for Solinus, in his address to his friend Adventus (according to some readings) says that the first edition was a hasty performance, and that it appeared under the title of 'Collectanea Rerum Memorabilium;' and that he gave the name of 'Polyhistor' to his second and improved edition. The work of Solinus contains a great variety of miscellaneous matter, of which a large part is geographical. His style deserves no great commendation, but it is sufficiently perspicuous. Some fragments of a poem entitled 'Pontica' have been attributed to him; Wernsdorf and some recent critics have however attempted to show that this poem is the work of Varro Atacinus, but Wüllner, 'Comment. da P. Ter. Var. Atasini vita et Script. Monast.,' has fully met their arguments.

The first edition of Solinus is probably that of Rome about 1473; but one also appeared about the same date at Milan, edited by Bonini Mombriti. The pains that have been taken with a work of little value are shown by the number of editions. The principal edition is that of Salmasius, 2 vols. fol., Paris, 1629; and 2 vols. fol., Utrecht, 1689; a work, says Morhofius ('Polyhistor,' ii, c. 2), accompanied with a most enormous commentary, in which the editor has collected all that he could find in the ancient writers on the topics which Solinus discusses, and has given also his own opinions; but the editor, as usual, did his work in a hurry, and made various blunders, which a little more attention might have prevented.

There is an English translation of Solinus, by Arthur Golding, London, 1587 and 1590. The title of the former edition is, 'The Excellent and Pleasant Worke of Julius Ca. Solinus, Polyhistor, containing the Noble Actions of Human Creatures, &c.'

SOLIS, ANTONIO DE, was born at Placencia, July 18, 1610, of an ancient and illustrious family. His parents sent him to Salamanca to study the law; but having a natural turn for poetry, he gave it the preference, and cultivated the muses with great ardour and success. At the age of seventeen, and when still a student, he wrote a comedy called 'Amor y Obligacion' ('Love and Duty'), which was received with the highest applause. This introduced him to the notice of Calderon, with whom he was afterwards very intimate, occasionally writing the preludes to his dramas. At six-and-twenty Solis applied himself to ethics and politics, as well as to the history and antiquities of his native country. His great merit procured him a patron in the Count

of Oropesa, then viceroy of Navarre, and who appointed him his secretary. Solis seems to have taken particular delight in recording the virtues of his *Mecenas*, whom he highly praises in several of his poems. On the birth of one of his sons he composed an heroic drama called 'Orpheo y Eurydice,' which was acted at Pampeluna during the festivities celebrated by the municipality on that occasion. In 1642 Solis was appointed to a lucrative office in the secretary of state's department, and subsequently raised to the honourable post of secretary to Philip IV. It was then, and in order to celebrate the birth of a son of this king, that Solis composed one of his best comedies, 'Triunfos de Amor y Fortuna' ('Triumphs of Love and Fortune'), which met with the most brilliant success. After the death of Philip, Solis was named to the office of 'cronista de las Indias,' or first historiographer of the transactions of the Spaniards in both Indies. In this capacity he wrote his 'Historia de la Conquista de Mexico,' a work which has ranked him among the best prose writers of Spain, and which was greatly esteemed at home and abroad. It contains an account of the conquest of Mexico by Hernando Cortés, written with great spirit and in very elegant style, though it is deficient in the criticism which belongs to a true historical writer. The work is considered by the Spaniards as the last relic of their classic literature. It appeared for the first time at Madrid in 1682, folio, and went subsequently through several editions, of which the principal are: Barcelona, fol., 1691; Madrid, 4to, 1777 and 1783; Venice, 4to, 1704; London, 2 vols. 8vo, 1808. We have an English version of it by Townsend (London, 1724), and there are besides French and Italian translations.

Solis is better known out of Spain as an historian than as a dramatic writer, yet he occupies a prominent place among the poets of that nation. His plays do not display so much invention as those of Calderon, but his dramas are more regular than those of that poet, because he was less liable to be led away by the force of his imagination. Among his comedies, 'El Alcazar del Secreto' ('The Castle of Mystery'), and 'La Gitanilla de Madrid' ('The Gipsy-girl of Madrid'), which is partly founded on Cervantes's novel of the same title, are justly much valued. His comedy 'Un Bobo haze Ciento' ('One Fool will make a Hundred') has, with many others, been imitated by the French dramatic writers. A volume of Solis's plays and dramas, in all fourteen, appeared at Madrid in 1732, 4to. There is also a volume of Lyric Poems written by him on various subjects, 'Varias Poesias de Don Antonio de Solis,' Madrid, 4to, 1682; and some letters published by Mayans in 1732. At the age of fifty-six Solis entered into holy orders, and devoted himself almost exclusively to exercises of devotion. He now renounced all profane compositions, and wrote nothing but some dramatic pieces upon sacred subjects. He died April 19, 1686. His friend Juan de Goyeneche wrote an account of his life and writings, which appeared for the first time at Brussels in 1704, with the 'History of the Conquest of Mexico,' and has been prefixed to almost every subsequent edition of the same work.

SOLIS, JUAN DIAZ DE, a Spanish navigator, was born at Lebrisa, the ancient Nebrissa, in the province of Seville. In 1506 he sailed, in company with the celebrated pilot Vicente Yañez Pinzon, on an expedition, the object of which was to endeavour to find the strait or passage supposed by Columbus to lead from the Atlantic to a southern ocean. As no such passage exists, this of course proved unsuccessful, as did also another voyage which was undertaken by them for the same purpose in 1508. They however explored the northern coast of South America, and are supposed to have discovered Yucatan. On their return to Spain, Solis and Pinzon were appointed royal pilots, and again intrusted with the command of an expedition for the discovery of new lands. This time they doubled Cape St. Augustine, and sailing southwards along the coast, reached the 40° of S. lat. However, on their return to Seville in 1509, the court was so much displeased with the unprofitable result of the expedition, that they were both deprived of their offices and emoluments, and Solis was put in prison. In 1512 Solis applied for and obtained permission to sail on a voyage of discovery; but as the government would not grant him any assistance, he was obliged to raise among his friends the funds required for the expedition. After touching at Teneriffe, he surveyed Cape St. Roque, then Cape St. Augustine; continuing his route to the South, he discovered Cape Frio, and entered the Bay of Rio Janeiro. Thinking this to be the strait in search of which he had sailed, Solis took possession of the northern coast in the name of the king of Castile, and gave the name of Mar Fresca (Fresh sea) to that portion of the Atlantic which lay before him. Proceeding farther along the coast, he saw several Indians, who told him of a river called Paraguya, i.e. great water, on the banks of which gold was said to be found in large quantities. Satisfied with this information, Solis returned to Spain, and having obtained the requisite leave to undertake the conquest of the lands watered by that river, he sailed on the 8th of October, 1515, with three caravels, having seventy soldiers on board. On his arrival at Rio Janeiro, Solis left two of his ships behind, and sailed with the third in a south-western direction in search of the Indians with whom he had conversed on his first voyage. He found them; but scarcely had he landed with the greater part of his crew, when they were surrounded and put to death by the Indians. This catastrophe happened near a small river between Maldonado and Montevideo, which to this day is called 'El Rio de Solis.'

\*SOLLOGUB, COUNT VLADIMIR ALEXANDROVICH, a Russian writer of reputation, was born at St. Petersburg about 1815, the son of the master of the ceremonies at the imperial court, who was the descendant of an old Lithuanian family. After having passed some years as an attaché to the Russian embassy at Vienna, Count Sollogub, returning to St. Petersburg, made his first appearance as an author in 1841, and in 1845 wrote a novel which produced a strong impression on the Russian public, and has been translated into several languages. This novel entitled 'Tarantas,' from the name of a peculiar Russian travelling-carriage, chiefly consists of a series of conversations between two characters who are the representatives of ancient and modern Russia, and its principal intention seems to be to raise the country in the opinion of its natives. The book may have owed some of its reputation to its pictorial illustrations which were comic and characteristic, and some of which are reproduced in the English translation by Rosenstrauch, 'The Tarantas, Travelling impressions of young Russia, with eight illustrations,' London, 1850. It must be observed however that while the original consists of twenty chapters, the English translation contains only sixteen, four having been unceremoniously retrenched, apparently with the sole view of shortening the volume. A complete translation in German is given in Lippert's 'Nordisches Novellenbuch.' Sollogub wrote also some other novels, edited a collection of poems and essays entitled 'Vchera i Segodnia,' ('Yesterday and to-day'), and produced some plays, one of them 'Bieda od niezhnago Serdtsa,' ('The Sorrows of a Soft Heart'), in 1850. In the same year he received an appointment as State Counsellor in the government of Transcaucasia under Count Vorontsov or Woronzow, and has since resided at Tiflis, where he has communicated some articles of value to the Transactions of the Caucasian branch of the St. Petersburg Geographical Society. With some spirit and liveliness Count Sollogub's best works do not rise above the level of the clever fashionable novel.

SOLOMON, the son of David and Bathsheba, was born in the year B.C. 1033, and was named by God, through the prophet Nathan, "Jedidiah," that is, "beloved of the Lord." (2 Sam. xii. 24, 25.) In the old age of David, his son Adonijah attempted to seize the kingdom, upon which David had Solomon proclaimed and anointed king, B.C. 1015. (1 Kings, i.; 1 Chron., xxiii.) In the same year David died, after giving certain charges to Solomon. (1 Kings, ii.) The first acts of Solomon were to punish the enemies of David, especially Adonijah and his adherents. He then contracted a close alliance with Pharaoh, king of Egypt, whose daughter he married. Being thus strengthened in his kingdom, he assembled all the congregation of Israel at Gibeon, where the Tabernacle stood, and offered burnt offerings to God. In the same night God appeared to him, and commanded him to ask what he would. Solomon asked for wisdom and knowledge, that he might judge the people. God was pleased with the request, and promised him not only the wisdom which he asked, but also riches and long life, and power over his enemies. Solomon's wisdom was soon displayed in his decision of a singular case which came before him for trial. (1 Kings, iii.; 2 Chron. i.)

The kingdom of Israel was now at its highest pitch of prosperity and extent. It reached from Egypt and the borders of the Philistines to the Euphrates, and southward as far as the head of the Red Sea. With the neighbouring kings of Egypt and Tyre, which city then held the supremacy of Phœnicia, Solomon was in close alliance. The people of Israel were very numerous and prosperous; and enjoyed profound peace; and the court of Solomon was maintained on a scale of the greatest splendour, which was supported by the encouragement he gave to commerce, by which "he made silver and gold as stones, and cedar-trees made he as the sycamore-trees that are in the vale for abundance." The fame of his wisdom spread abroad, and people and kings came from all countries to hear it, for "he spake three thousand proverbs, and his songs were a thousand and five. And he spake of trees, from the cedar-tree that is in Lebanon even unto the hyssop that springeth out of the wall: he spake also of beasts and of fowl, and of creeping things, and of fishes." (1 Kings, iv., x.; 2 Chron. ii. 13-17; ix.)

In the fourth year of Solomon's reign, having secured the co-operation of Hiram, king of Tyre, he began to build the Temple of God at Jerusalem, for which David had already formed a plan and collected treasures, but which he had not been allowed to build because he was a man of blood. (1 Chron., xxii., xxviii.) In seven years (B.C. 1005) the building was finished and dedicated to God. (1 Kings, v., viii.; 2 Chron., ii.-vii.) On this occasion God appeared to Solomon in a vision the second time, and promised that if he continued in piety and uprightness, his family should be established on the throne; but that if he or his children should fall into idolatry, Israel should be cut off out of their land, and both they and the Temple itself should be made a proverb and by-word among all people. (1 Kings, ix. 1-9; 2 Chron., vii. 12-22.)

Josephus ('Antiq.' viii. 2, 8) states that copies of the letters which passed between Solomon and Hiram concerning the building of the Temple were preserved in his day among the archives of Tyre.

Solomon adorned Jerusalem with other magnificent buildings. He built a palace for himself, which took thirteen years to complete; and another palace, which was called the House of the Forest of Lebanon, probably on account of the quantity of cedar used in it, with porti-

coes where he sat in judgment; and also a palace for his wife, the daughter of Pharaoh. (1 Kings, vii. 1-12; 2 Chron., viii. 1.) He also built several cities, and among them Tadmor in the wilderness, which was afterwards called Palmyra; but the splendid ruins which still exist belong to the age of the Roman empire. (1 Kings, ix. 15-19; 2 Chron., viii. 1-6.) In all these buildings he used as workmen the descendants of the Canaanites who remained in the land, whom also he made to pay a tribute: the Israelites he employed in his armies, and in superintending the works. (1 Kings, ix. 20-23; 2 Chron., viii. 7-10.) He built a navy at Ezion-geber, which brought him the produce of Arabia and India. (1 Kings, ix. 26-28; x. 11, 12; 2 Chron., viii. 17-18.) [OPHIR.] He had also another navy in the Mediterranean, in company with a navy of Hiram, which made a voyage to Tarshish every three years, bringing gold, silver, ivory, apes, and peacocks. (1 Kings, x. 22, 23; 2 Chron., ix. 21.) From Egypt he imported horses and linen-yarn. (1 Kings, x. 28, 29.)

While Solomon was thus at the height of his prosperity, he received a visit from the Queen of Sheba, or Saba, in Ethiopia, who had heard of his wisdom and came to prove it with hard questions, to which Solomon gave such answers that she confessed that the half of his wisdom had not been told her, and departed after an exchange of presents. (1 Kings, x.; Matt. ii. 42.)

Solomon's prosperity was at length too much for him. Among his magnificent establishments was a large harem, composed, in direct opposition to the divine command, of women, from the remnant of idolatrous nations of Canaan. These women seduced him into idolatry, as a punishment for which God threatened to divide his kingdom after his death; and even during his life signs were given of the coming calamity in the rebellion of Hadad the Edomite, Rezon king of Syria, and Jeroboam the son of Nebat, who afterwards became king of the ten revolted tribes of Israel. (1 Kings, xi.; Nehem., xiii. 26.)

It is generally supposed that this threat had the effect of recovering Solomon from his idolatry, and that he then recorded in the book of Ecclesiastes his confessions of the vanity of worldly wisdom, riches, and honour. This supposition is rather favoured by the internal evidence of the narrative in the book of Kings, and by that of the book of Ecclesiastes itself. Among the other works ascribed to him are the Book of Proverbs, of which he must be regarded as the compiler rather than the author, the Song of Solomon, the Wisdom of Solomon, the Psalms lxxii. and cxxvii., and also a collection of eighteen psalms entitled 'The Psalter of Solomon,' which was found in Greek, in the library at Augsburg, by Schott, and translated into Latin by De la Cerda, and which are generally supposed to be the composition of some Hellenistic Jew, in imitation of the Psalms of David. Other writings ascribed to Solomon are mentioned by Suidas s. v. 'Εξεκίας, by Euseb. ('Praepar. Evang.' ix. 31). See also Fabric., 'Cod. Pseudepigraph.' i. 914, &c.; 1014, &c.; Bartolocc., 'Bibl. Rabb.' i. 490, &c. Solomon died in the year 975 B.C., after a reign of forty years. (1 Kings, xi. 42, 43; 2 Chron., ix. 30, 31.)

The reign of Solomon was the period of the highest prosperity of Israel and the commencement of its decline, both in its religious and civil state. At its commencement the kingdom had reached its utmost boundaries, and was in the enjoyment of profound peace and plenty, and the Temple of God was built and dedicated; but before its close the king had turned idolater, rebellion had broken out, and the kingdom was on the eve of a partition. The causes of this decline are obvious. They were in part judicial, for in the magnificent establishments of Solomon, especially in his treasures, his horses and chariots, and his concubines, he had transgressed the fundamental law which defined the duties of the king. [MOSES, vol. iv. col. 363.] But natural causes also may easily be found. The government of Solomon was calculated rather to promote the splendour of the court than the prosperity of the people. The wealth derived from commerce went into the king's treasury, and the people were even taxed in addition. (1 Kings, xii. 4, 10, 11.) The court set the example of luxury, which weakened and depraved the whole nation, besides training up that race of insolent young nobles whose bad advice to Rehoboam was the immediate cause of the partition of the kingdom. (1 Kings, xii. 6-11.) The subject nations were of course ready, especially after forty years of peace, to throw off the yoke, and it has even been doubted whether the splendid scale on which Solomon established the Temple worship was likely to support the national religion. On the whole, therefore, this period of the history of Israel must be regarded as far less solid than splendid.

Solomon has always had an extensive fabulous reputation in the East. As early as the time of Josephus magical powers were ascribed to him ('Antiq.' viii. 2, 5; comp. Origen, 'Ad Matth.' xxvi. 63; Nicet. Chon., 'Annal.' iv. 7). The similar traditions of the Arabians concerning him have been collected by Mr. Lane, 'Thousand and One Nights,' Index, under Suleymán Ibn Dáood.

SOLON, son of Execestides, and a descendant of the royal house of Codrus, was born about B.C. 638, in the island of Salamis. His father is said to have considerably diminished his property by his liberality, and that Solon in his youth engaged in mercantile undertakings in order to better his circumstances. For this purpose, or, according to others, in order to satisfy his thirst for knowledge, he visited various countries. The time when he returned and settled at Athens is not quite clear, but it seems very probable that it was soon

after the Cylonian conspiracy (B.C. 612), when he must have been about twenty-six years old. Athens at this time was in a deplorable condition: it was distracted by internal feuds, and unable to maintain itself against its hostile neighbours. It had shortly before been deprived of the island of Salamis by the Megarians, and in the ensuing war Athens had suffered such losses that at last a decree was made that any one who ventured to propose the continuance or renewal of the war should be punished with death. (Plut., 'Sol.' 8; Diog. Laert., i. 45.) Solon, indignant at the humiliation of Athens and the pusillanimity of her citizens, devised a plan by which he hoped to rouse the Athenians to renewed activity without incurring the penalty of the law. Being endowed by nature with considerable poetical talents, as appears from the fragments of his works, he composed an elegy upon the loss of Salamis (Müller, 'Hist. of the Lit. of Ancient Greece,' i. p. 117), and assuming the appearance of a madman, he rushed into the Agora, where a crowd soon gathered around him. Here he recited his poem to the multitude, and its inspiring influence, together with the probably preconcerted assistance of some of his friends, had such an effect upon the people, that they not only repealed the law respecting Salamis, but resolved to try once more to recover that island. Solon was placed at the head of the Athenian forces, and led them to victory by a stratagem which is differently described by ancient writers. (Plut., 'Sol.' 8, 9.) All the Megarians in Salamis were either slain or dismissed to their homes, and Salamis again came into the hands of the Athenians. This successful undertaking, in which the Athenians also appear to have gained possession of Nisaea, raised Solon to a very high degree of popularity. In the war between Delphi and Cirrha (about B.C. 600), Solon advised the Athenians to support the former city against the sacrilegious Cirrhaeans. His advice was followed and crowned with success, for Cirrha was destroyed, and Solon's fame now spread through all Greece.

In consequence of the massacre of the friends of Cylon, notwithstanding their having taken refuge in the temples and at the altars of the gods, the republic was at this time divided between two parties, which were as much the result of religious fears and scruples as of the political state of the country. A part of the Athenians were enraged against Megacles and his associates for their violation of all religious feelings, and the surviving friends of Cylon did their utmost to foster this hostility against their enemies. The Megacids were looked upon as a cursed race, and the Cylonids were gaining fresh strength every day. It was evident that peace could not be restored until the Megacids had atoned for their crime, and delivered the city from the curse they appeared to have brought upon it. Solon, who appears to have belonged to neither party, enjoyed the full confidence of his fellow-citizens; and when the dissensions had reached their highest pitch, he persuaded the Megacids to submit their case to the decision of a commission of 300 persons to be chosen from among the nobles. The sentence of this court was that the surviving Megacids should be sent into exile, and that the bodies of those who had died should be taken from their graves and be carried beyond the frontiers of Attica. During these troubles at Athens the Megarians renewed their attempts upon Salamis with success. Both the Megarians however and the Athenians were unwilling to engage again in a long and tedious warfare, and both agreed to request the Lacedaemonians to appoint a commission of five men to investigate the claims of the two states. Solon, who was the spokesman on the part of the Athenians, established by various means the legitimacy of the claims of his country, which thus again came into the possession of Salamis. (Plut., 'Sol.' 10, 12; Diog. Laert., i. 48.)

Notwithstanding the removal of the Megacids from Athens, the party feuds continued to rage as before. For besides the religious scruples arising from the crime of the Megacids, which still seemed to call down the divine wrath upon the city, there were other causes, which could only be removed by a reform of the constitution. This however could not be effected with any degree of success, unless all religious fears and apprehensions were allayed by a complete purification of the city. This was done by Epimenides of Crete, whom the Athenians invited for this purpose. The way was thus prepared for the legislation of Solon.

The three ancient local divisions of the country—the lowlanders (Πεδίαις, or Πεδίατοι), highlanders (δίακτοι), and the inhabitants of the coast (Πάρατοι)—formed three distinct political parties; the highlanders being the most democratical, the lowlanders the most oligarchical, and the men of the coast, who took a middle course, wishing to reconcile the two other parties. Besides these political parties, a struggle was going on between the wealthy and the poor. Many of the latter had not only lost their property, but, not being able to pay their creditors, had become the bondsmen of their wealthy oppressors, and some had even been sold as slaves into foreign countries. (Plut., 'Sol.' 13.) The most moderate and wisest among the Athenians saw that this state of things could not last, and that if no remedy was applied the time would soon come when the people would take the power into their own hands. Solon appeared to be the only man who was impartial and skilful enough to mediate between the hostile parties. In the year B.C. 594 he was invested with the office of archon, and requested to act as mediator and to frame a new code of laws. In considering the legislation which he undertook, it should constantly be borne in mind that he received from both parties

full power to arbitrate between them; and he acted in the name and on behalf of his country. The sincerity with which he acted is manifest from the fact that he resisted all temptations and exhortations of his friends to make himself tyrant of Athens, which he might undoubtedly have done without much difficulty, and that he himself lost a considerable part of his property by his own legislation.

The legislation of Solon consisted of two main parts: the one embraced those measures by which he intended to remove the evils under which the republic was actually labouring; the object of the second was to establish the constitution upon such a basis as would prevent the recurrence of these evils. The first step he took was to relieve those who were oppressed by debts. This was done in a manner which did not cause too great loss to the rich, and was yet a great relief to the poor, by a measure called *σεισάχθεια*, or a disburdening ordinance, by which he not only established a reduction of the rate of interest (which was probably made retrospective), but also lowered the standard of the silver coinage in such a manner that 73 old drachmæ became worth 100 new ones. (Plut., 'Sol.' 15.) He also released the pledged lands, and restored them to their owners, but it is not clear whether this was effected by a particular measure, or whether it was included in his disburdening ordinance. Those citizens who had been enslaved by their creditors were restored to freedom, and those who had been sold into foreign countries seem to have recovered their liberty at the expense of those who had sold them. Finally, the law which gave to the creditor a right to the person of his insolvent debtor was abolished. Some of the ancient writers state that he cancelled all debts, but the best authorities do not mention any such measure, which is the more improbable, as we read that the most violent democrats, who would certainly have been pleased with it, were not satisfied with his disburdening ordinance. If we except the extreme of both parties, the relieving measures of Solon were received with universal approbation, and sacrifices were offered to the gods for the happy change. Thus encouraged, Solon proceeded to the second and more difficult part of his task. The first thing he did was to abolish the bloody laws of Draco, with the exception of those relating to murder. The characteristic feature of his new constitution was, that he substituted property for birth as a title to the honours and offices of the state. The change brought about by this new standard could not at first be great, as the eupatrids were undoubtedly the wealthiest citizens. According to their property, he divided the whole population of Attica into four classes, and regulated their political rights and duties according to the amount of their income from their landed property. The first class comprised all those citizens whose estates yielded a yearly income of 500 medimni (a medimnus is a bushel, six pints and a fraction) of dry or liquid produce, whence they are called *πεντακοσιμέδμητοι*; the second, those who had 300 medimni, and could keep a war-horse, whence they were called *ἵππεις*, and formed the Athenian cavalry; the third contained those whose estates yielded 200 medimni. They were called *γεωῖται*, from the yoke of cattle for the cultivation of their fields, and formed the heavy-armed infantry in the Athenian armies. All the remaining population whose income did not amount to 200 medimni constituted the fourth class, with the name of *θῆτες*, that is, hired labourers, who were excluded from all the offices of the state, and formed the light-armed infantry in the armies, as subsequently they also manned the fleets. They had however the right of voting in the popular assembly, as well as the exercise of the judicial power, which Solon placed in the hands of the people. The archonship and the other great civil and military offices, which had before been held by the nobles alone, became now accessible to all the citizens contained in the first class, while the second and third classes had access to all the minor offices. The public burdens were distributed according to the classes; but as the lower classes had fewer political rights than the higher, the contributions to the necessities of the state were for the lower classes proportionately light, for the second and third classes were not taxed according to the real value of their property, but that of the second class was reduced by one-sixth, and that of the third class by one-third below its real value. (Böckh, 'Staatshaush.' ii., p. 29, &c.) The fourth class was altogether exempted from direct taxes. This distribution of power and duties was, as Solon himself expressed it, intended to give to the people as much power as would enable them to protect themselves, and to the wealthy as much as was necessary to maintain their dignity. (Plut., 'Sol.' 18.)

The four old tribes into which Attica was divided were left unaltered by the new constitution. The magistrates also appear to have retained the same power which they had had before, with the exception that they were now made responsible for the exercise of it to the people, and not, as before, merely to the order of the nobles. From the judicial sentence of a magistrate an appeal also was left to the popular courts of justice, which were numerously composed of citizens of all classes indiscriminately. (Thirlwall, 'Hist. of Greece,' ii., p. 39, &c.) Two other institutions, which were intended as bulwarks against democratical extravagance, the senate of four hundred and the council of the Areopagus, are almost unanimously ascribed to Solon. But as regards the senate, there can be no doubt that it existed previous to the legislation of Solon, and was composed of the nobles, but its number cannot be ascertained with any accuracy. Solon raised it to the number of four hundred, and threw it open to all

citizens belonging to the first three classes, in such a manner that each of the four tribes was represented in it by one hundred members. Whether these members were elected, as Plutarch states, or whether they were appointed by lot, as in subsequent times, is uncertain. Each member however had to give evidence of his qualification by an examination called *δοκιμασία*, and no person was eligible who had not attained the age of thirty. All members of the senate were changed every year, at the end of which they were liable to give an account of their conduct during the time of their administration. The senate was divided into sections, called *prytanies*, which succeeded each other in the management of the affairs throughout the year, and held their assemblies in the Prytaneum. The most important part of their business consisted in preparing those measures which were to be laid before the popular assembly, which had the power to accept, reject, or modify them. The senate however had other powers connected with the finances and other branches of the administration.

As regards the rights which Solon gave to the popular assembly, no measures could originate in it, but its discussions were confined to such measures as had been prepared by the senate. Every citizen, to whatever property-class he belonged, had a right to take part and to speak in it, so that the vote of the wealthiest nobleman had no more weight than that of the poorest labourer. No one however was allowed to speak who had not attained the age of twenty, and the oldest persons were called upon by the crier to vote first. Though the political power of the assembly was limited, the judicial power with which Solon invested it was considerable. Out of the popular assembly 6000 men above the age of thirty were chosen every year by lot, to form a supreme court of justice called the *ἡλιαία*, to which appeals were made from the sentence of magistrates, and which had in certain cases to take cognisance, independently of any other court, and in subsequent times assumed all judicial power in the state. The importance and influence of the *Heliæa* appears from the oath which the *heliasts* had to take at the time of their appointment, and which is preserved in Demosthenes (c. 'Timocrat,' p. 746.)

It would be impossible to give any detailed account of the civil and criminal legislation of Solon, although there were many materials for such a purpose. It may suffice here to state, that although he did not in the same degree as Lycurgus interfere with and regulate the private affairs and the mode of living of his fellow-citizens, yet, like most ancient legislators, he did not think any part of the life of the citizens unworthy of his attention. The education of the young, and the conduct of women as well as of men, were to him as important as any of those subjects which in modern times alone engross the attention of legislators. Plutarch ('Sol.' 18) states that Solon clothed his laws intentionally in obscure language, for the purpose of increasing the influence of the courts of justice. But surely nothing is more contrary to the whole spirit of his legislation than such a scheme, and the alleged obscurity, if it existed at all, was probably nothing more than the natural consequence of the state of the language in the days of Solon, in comparison with what it was two centuries later.

The Attic tribes had from early times been divided into forty-eight naucraries, and Solon is said to have established the law according to which each of these naucraries was charged with the equipment of a trireme and the mounting of two horsemen. If this is true, he must be regarded as the founder of the Attic navy. (Phot. s. v. *ναυκραπία*.) Solon also encouraged the arts and manufactures, and for this purpose he invited foreigners to settle at Athens. (Plut., 'Sol.' 24.) The calendar likewise received some improvements from Solon.

He had made such arrangements in regard to the observations of his laws, and their constant revision, that it is impossible to place any confidence in the statement of Plutarch, that he enacted them to remain in force unaltered only for a century. The laws were inscribed upon wooden tablets, put together in pyramidal blocks, which turned upon an axis. They were at first kept in the Acropolis, and afterwards in the Prytaneum. These axes were called *ἔξορες* and *κύρβεις*, and according to some authors the former contained the civil, and the latter the religious laws. (Plut., 'Sol.' 25.)

When his legislation was completed, Solon is said to have been so much annoyed at Athens by the remarks of the discontented, and the importunate inquiries of the curious, that he asked permission to leave Athens for ten years, hoping that during this period the people would become familiar with their new institutions. The permission was granted, and Solon is said to have visited Egypt, Cyprus, and Asia Minor. The beautiful story of his interview with Croesus, king of Lydia, which is told by Herodotus, Plutarch, and others, is inconsistent with chronology, as even some of the ancients have observed, for Croesus did not come to the throne till about B.C. 560, some twenty or thirty years later than the time at which Solon must have visited Asia Minor. (Voemel, 'Exercit. Chronolog. de Aetate Solonis, et Croesi,' Frankfurt, 1832.) On his return he found Athens again distracted by factions. The three parties of the highlanders, the men of the plain, and the men of the coast, were again engaged in hard struggles. The first of these parties was headed by Pisistratus, the friend of Solon, the second by Lycurgus, and the third by Megacles. Solon exerted all his powers to avert the threatening danger, and to reconcile the heads of the parties. But he laboured in vain, and although Pisistratus

listened to him respectfully, he secretly continued to work out his plan. [PISISTRATUS.] When Pisistratus had established himself as tyrant of Athens, Solon, who was probably convinced that the mild rule of one man was, after all, greatly preferable to the continuance of party struggles, is said to have supported the tyrant with his advice. At the same time, he withdrew from public life. How long he survived the ascendancy of Pisistratus is not certain, but according to the most probable account he died soon after, in the year B.C. 559. (Clinton, 'Fast. Hell.' ii. p. 301.) Respecting the constitution of Solon, see Thirlwall, 'History of Greece,' vol. ii., and Grote, vol. iii.

From the numerous works ascribed to Solon, it appears that he must have devoted all his leisure hours to the Muses; and he is said to have done so to the last moment of his life, for at the time when he died, he is said to have been engaged in writing a poem upon the state of Attica previous to the Ogygian flood, and its wars with the inhabitants of the island Atlantis, which was afterwards swallowed up by the Atlantic Ocean. (Plut., 'Sol.' 31, &c.) We are enabled to judge of his poetical powers from the few fragments which are still extant. They are distinguished by a graceful simplicity and great vigour. They have been collected by Fortlage, in a work entitled 'Solonis Carminum Fragmenta, Græcæ, cum variis lectionibus notisque,' Lipsiæ, 1776; and by N. Bach, in 'Solonis Carmina quæ supersunt, emend. atque annot. instr.' 8vo, Bonn., 1825.

SOMERS, JOHN, LORD SOMERS, was born at Worcester, where his father, of the same name, was an attorney in good practice. His mother was Catherine Ceaverne, of a good family in Shropshire. The year of Somers's birth is supposed to have been 1650; but some accounts make it to have been 1652. We are not aware upon what authority it has been sometimes stated, or assumed, that the day on which he was born was the 4th of March.

Somers's father, who was a zealous Commonwealth man, and had commanded a troop under Cromwell in the Civil War, intended to bring up his son to his own profession. He managed the estates of the Earl (afterwards Duke) of Shrewsbury, who often visited him, and in that way had his attention early attracted to the promising qualities of young Somers. He was also connected by electioneering services with the member for the city, Sir Francis Winnington, afterwards solicitor-general, in whom his son found another useful patron when he entered the profession of the law. He died in 1681, when the subject of the present article inherited a small estate in Gloucestershire, which had been for some generations in possession of the family.

Young Somers however is said to have been educated at the expense of his father's sister, who had married Mr. Blurton, an opulent Worcester clothier, and who, having no children of her own, had adopted him from his birth. At her house, and not at that of his father, he resided throughout his boyhood. He appears to have been placed first at the cathedral school of Worcester, and afterwards at a private school at Walsall in Staffordshire; and it has also been supposed that after leaving school he may have spent a year or two in his father's office. While at school he is said to have been remarkable for his gravity of demeanour, as well as his studious habits. It is stated, on the authority of his friend Winnington, that at this time "by the exactness of his knowledge and behaviour, he discouraged his father and all the young men that knew him; they were afraid to be in his company." This beginning would not lead us to expect the robust heartiness of character by which Somers was distinguished in after-life, nor the somewhat free or lax system of private morality as to certain points, of which indeed we have not a hint in the common formal biographies of the distinguished lawyer and statesman, but which nevertheless he is very well known to have adopted and practised.

Winnington has the credit of having advised that he should be sent to the bar. With this view he entered himself of the Middle Temple, and in 1674 was admitted a commoner of Trinity College, Oxford. In 1676 he was called to the bar, but although he never took any further degree than that of B.A., he continued to reside at the University for five or six years longer. To the latter part of this interval, between the completion of his studies and his removal to London and entrance upon the practice of his profession, belong the principal literary performances which he sent to the press:—1, 'The Memorable Case of Denzil Onslow, Esq., tried at the Assizes in Surrey, July 20, 1681, touching his election at Haslemere in Surrey;' 2, 'A Brief History of the Succession of the Crown of England, collected out of Records and the most authentic Historians,' 1681; reprinted 1714; 3, 'A just and modest Vindication of the Proceedings of the two last Parliaments' [in which the question of the exclusion of the Duke of York had been agitated], 1681 (a reply to the king's declaration), at first penned, according to Burnet, by Algernon Sidney, but afterwards drawn out anew by Somers, and finally corrected by Sir William Jones, who had been attorney-general a few years before; but, adds Burnet, "the spirit of that side was now spent; so that this, though the best writ paper in all that time, yet had no great effect;" 4, 'The Security of Englishmen's Lives; or the Trust, Power, and Duty of the Grand Juries of England, explained according to the fundamentals of the English government,' 1681, written on the failure of the charge against the Earl of Shaftesbury; "it passed," says Burnet, "as writ by Lord Essex, though I understood afterwards it was writ by Somers, who

was much esteemed and often visited by Lord Essex, and who trusted himself to him, and writ the best papers that came out in that time." He had before this time contributed poetical versions of Ovid's 'Epistles of Dido to Æneas, and of Ariadne to Theseus,' to Tonson's edition of Ovid's 'Epistles' in English; and a translation of Plutarch's 'Life of Alcibiades' to the English Plutarch, "by various hands," produced by the same publisher. And there is also attributed to him an original English poem, of some three hundred lines, entitled 'Dryden's Satire to his Muse,' a libellous attack on that poet, which from several allusions in it, must have been written early in 1682. It has a considerable portion of the strength, as well as the coarseness, of Dryden's most prosaic manner. Walpole, in his Royal and Noble Authors, expresses his opinion that "the gross ribaldry" of this poem "cannot be believed to have flowed from so humane and polished a nature as Lord Somers's;" but this, we apprehend, is to carry out too strictly, or too far, the figure with which Walpole introduces his notice of Somers—that he was "one of those divine men, who, like a chapel in a palace, remain unprofaned, while all the rest is tyranny, corruption, and folly." The poem is printed in part ii. of the 'Supplement to the Works of the Minor Poets,' pp. 3-11.

Somers, whose ability and professional learning were already well known to a circle of influential friends, at last came to London in 1682, and commenced practice at the bar. The first cause of public importance in which he was engaged was the prosecution of Pilkington and Shute, sheriffs of London, and other members of the Whig party, who were tried and convicted, in May 1683, for a riot at the last election of sheriffs, in which he appeared as junior counsel to his friend Winnington for the defendants. From this time, it is stated by the writer of the 'Memoirs of his Life,' 8vo, London, 1716, that his practice increased daily, so that in the reign of James II. his professional income already amounted to 700*l.* a year, which was in those days a large sum for a barrister of his standing; and, according to this authority, "he was looked upon as one of the most rising counsel in England, before he appeared at the trial of the Bishops."

But no doubt his being selected to be one of the counsel for the defence in that celebrated case, tried in the Court of King's Bench, in June, 1688, was what first brought him prominently before the public eye. He was selected, it is stated, on the strong recommendation of Mr. Pollexfen, one of the leading counsel for the bishops, and a lawyer of the highest eminence. "I have heard one of the bishops declare," says Bishop Kennett, in a note to his 'Complete History,' "that objection was made among themselves against Mr. Somers as too young and obscure a man; but old Pollexfen insisted upon him, and would not be himself retained without the other; representing him as the man who would take most pains, and go deepest into all that depended on precedents and records." Somers's speech occupies only about a column in the 'State Trials' (vol. xii., p. 396); but it is probable that his seniors were indebted for much of their matter to his learning and research.

From this time Somers is to be regarded as one of the leading political persons of his time. He is understood to have been associated with his friend Shrewsbury and the other chiefs of the Whig party in the negotiations and arrangements which resulted in the coming over of the Prince of Orange; and he was taken into the confidence of William from the first. He was returned as one of the representatives for Worcester to the Convention, which met in January 1689; and he took a distinguished part in the debates in the Commons and the conferences with the Lords, which terminated in the adoption, by both houses, of the decisive resolution that the late king had 'abdicated' the government. Somers indeed was a member of the first and chairman of the second of the two committees which prepared the Declaration of Right; and it was perhaps mainly drawn up by him, as is hinted by Burke, who in his 'Reflections on the Revolution in France,' says, "I never desire to be thought a better Whig than Lord Somers, or to understand the principles of the Revolution better than those by whom it was brought about; or to read in the Declaration of Right any mysteries unknown to those whose penetrating style has engraved in our ordinances, and in our hearts, the words and spirit of that immortal law."

Under the new government preferment flowed fast upon Somers. In the beginning of May 1689, he was made solicitor-general and knighted; on the 2nd of May 1692 he was made attorney-general; and on the 23rd of March, in the same year, he was promoted to the office of lord-keeper of the great seal. This last appointment, of course, though he was not yet raised to the peerage, removed him both from Westminster Hall and from the House of Commons. "All the people," says Burnet, "were now grown weary of the great seal being in commission; it made the proceedings in Chancery to be both more dilatory and more expensive; and there were such exceptions made to the decrees of the commissioners, that appeals were brought against most of them, and generally they were reversed. Sir John Somers had now got great reputation, both in his post of attorney-general and in the House of Commons; so the king gave him the great seal. He was very learned in his own profession, with a great deal more learning in other professions—in divinity, philosophy and history. He had a great capacity for business, with an extraordinary temper: for he was fair and gentle, perhaps to a fault, considering his post; so that he had all the patience and softness, as well as the justness and equity,

becoming a great magistrate. He had always agreed in his notions with the Whigs, and had studied to bring them to better thoughts of the king, and to a greater confidence in him." The most remarkable occasion on which Somers distinguished himself while holding the office of lord keeper, was what is called the case of the Bankers in the Court of Exchequer, in 1696. He delivered a judgment against the bankers, and reversing the decision of the Barons of the Exchequer, which has been characterised by Mr. Hargrave as "one of the most elaborate arguments ever delivered in Westminster Hall," and in collecting books and pamphlets for which he is said to have expended several hundred pounds. It is contained in the report of the case in *Howell's 'State Trials,'* vol. xiv., pp. 39-105. This judgment however, in which he was supported by Treby, chief justice of the court of Common Pleas, but opposed by Holt, chief justice of the King's Bench, was afterwards reversed by the Lords; and Lord Dartmouth, in a note to Burnet's *'History,'* asserts that when the decree which he had made was, after a very warm debate, set aside, Somers fell ill, and never appeared upon the woolsack more. This was in 1700.

Meanwhile, in 1697, Somers had been appointed lord-chancellor, and raised to the peerage by the title of Baron Somers of Evesham in the county of Gloucester. He appears to have had a seat in the cabinet from the time of his promotion to the place of lord keeper; and he was now generally regarded as one of the chiefs of the ministry, as well as one of the most attached and influential of the king's friends. This made him a principal object of attack on the part of the Tory opposition in the second, or last, session of King William's fourth parliament, which commenced in November 1699. After two successive charges brought against him had been negatived—the one for his having improperly, as was alleged, dismissed many persons from the commission of the peace; the other, founded on the affair of Captain Kid, who, after having been sent out in the command of an armament to destroy certain pirates in the West Indies, the expense of which had been very patriotically contributed by Somers, Shrewsbury, and some other noblemen, had taken to piracy himself,—a motion was made on the 10th of April 1700, the day before the king came down to prorogue the parliament, that his majesty should be addressed to remove Somers from his presence and councils for ever. But this attempt also failed: the numbers, according to Lord Hardwicke, in a note to Burnet, were 106 for the motion, and 167 against it. Immediately before this, the bill for resuming the king's Irish grants had been carried through both Houses, in spite of the most strenuous opposition by the court, and the determination which William was at one time understood to have come to rather to risk everything than give his consent to the measure. "While the bill was in suspense," writes Lord Dartmouth, in a note upon Burnet, "the whole city of London was in an uproar; Westminster was so thronged, that it was with great difficulty anybody got into either House. . . . All seemed under the greatest distraction. I heard the king was come to the Cockpit, and had sent for the crown, with a resolution to dissolve us immediately, which I communicated to the Earl of Shaftesbury, who ran full speed with it to the House of Commons; upon which they adjourned in great haste." It was this apprehension, according to Burnet, of the king's resorting to the violent measure of a dissolution in order to quash the bill, that provoked the second of the above-mentioned attacks of the Commons upon Somers. But the chancellor did not please either party in this unfortunate business. "During the debates about the bill," says Burnet, "he was ill, and the worst construction possible was put on that: it was said he advised all the opposition that was made to it in the House of Lords; but that, to keep himself out of it, he feigned that he was ill; though his great attendance in the Court of Chancery, the House of Lords, and at the council-table, had so impaired his health, that every year about that time he used to be brought very low, and disabled from business." Lord Hardwicke tells us, in a note on this passage, that for this conduct of Somers, in absenting himself from the House, and taking little or no share in the debates about the bill, "it is said the king was angry with him, and made easy to part with so wise a servant soon after." It is certain at any rate, that, shortly after this, William resolved to endeavour to rid himself of the incessant annoyance and obstruction he received from the aversion the Commons had taken up against the chancellor by the dismissal of Somers. Tindal, who says that the account was given to Mr. Oldmixon by a gentleman who had it from Somers's own mouth, tells us that the first time Somers came to court after his illness, the king stated that it seemed necessary for his service that he should part with the great seal, and expressed his wish that he would make the delivering of it up his own act. Somers replied, that he knew this was what his enemies were striving after; that the seal was his greatest crime, and that if he quitted that, he should be freed from their abuse and persecution; but that he was resolved, with his majesty's permission, to keep it in defiance of their malice; adding, that "he did not doubt but, if his majesty would be as firm to his friends as they would be to him, they should be able to carry whatever points he had in view for the public welfare in a new parliament." His majesty however shook his head, and said "It must be so." But Somers persisted in declining to offer the surrender of the seal; so that a few days after, on the 17th of April, the king sent Lord Jersey for it, with a warrant under his hand, on which, of

course, it was immediately given up. About a month after it was given to Sir Nathan Wright, with the title of lord-keeper.

After all, his ejection from office neither saved Somers from the enmity of the Commons, nor lost him the favour and confidence of the king. In the new parliament, which met in February 1701, the Tories found themselves in a majority in the Lower House; and they had not sat long before they proceeded to direct their power against the chief of the king's friends and ministers, the Duke of Portland, Lord Somers, the Earl of Oxford, and Lord Halifax, all of whom it was resolved to impeach. The resolution to impeach Somers was carried at a late hour on the night of the 14th of April, by a majority of 198 to 188, after he had come down to the House, and been heard in his own defence. The principal, and indeed at this stage of the proceeding, the only crime laid to his charge, was the concern he had had in the two treaties for the partition of the Spanish monarchy, which had been negotiated in 1698 and 1699 by King William, without consulting with his ministers, and for which Somers had forwarded at the king's desire, the necessary powers in blank under the great seal. We suppose there can be no question, but that, according to the modern practice of the constitution no minister would be held to be justified in acting as Lord Somers admitted he had done in this case; but ministerial responsibility was not so well understood or so completely established in those early days of the system introduced by the Revolution as it now is. The precise charge against Lord Somers too, as stated in the resolution for impeaching him, was, that he had advised his majesty to the treaties; and that certainly was not and could not be made out, being in truth contrary to the fact. Afterwards fourteen distinct articles of impeachment were drawn out and sent up to the Lords, which charged his lordship distinctly with having presumed to affix the great seal to the blank commissions, contrary to the duty of his office, and in violation of the great trusts reposed in him, "without communicating the same to the rest of the then lords justices of England, or advising in council with his majesty's privy council thereupon." His conduct in the affair of Captain Kid, which surely was the very reverse of blameable, was also made the subject of one of the articles; but the most remarkable of the charges brought against him related to various personal grants of land and money which he was asserted to have begged and obtained from the crown—"many great, unreasonable, and exorbitant grants," as they were styled, "of several manors, lands, tenements, rents, hereditaments, and revenues," besides the annual salary, or pension (as it is called), of 4000*l.*, which, "through his majesty's most abundant grace and bounty," he had received during all the time he was lord keeper and lord chancellor, over and above "the fees, profits, and perquisites of or belonging to the great seal, established by law as a sufficient and ample recompense and reward for the faithful discharge of that high station." The grants were alleged to consist of the manors of Ryegate and Howleigh, granted in 1697, to Joseph Jekyl, Esq., in trust for Lord Somers and his heirs—of certain fee-farm rents to the value in all of 33,000*l.*, granted at various times by the pretended contracts under which "there was not any sum of money whatsoever really and bona fide paid as the consideration of the conveyances of the said rents" from the trustees to whom they were granted for Somers's benefit—and of certain other rents to the yearly value of nearly 400*l.* obtained in a similar manner. Somers in his answer stated that the 4000*l.* a year was the same allowance that had been made to several of his predecessors; and as to the other grants, he pointed out certain deductions from their value to which the Commons had not adverted, and denied that there had been anything unlawful in the transactions, or that the grants had been obtained either in deceit of his majesty or in elusion of any acts of parliament. The affair ended after many messages and conferences between the two houses, by the Commons declining to appear to prosecute their impeachment on the day appointed by the Lords, under the pretence that the Lords had refused them justice in the matter; on which their lordships pronounced him acquitted, and dismissed the impeachment. (See *Howell's 'State Trials,'* xiv. 311.)

In October of this same year a negotiation was opened by the king with Somers, through Lord Sunderland, for bringing him again into power; but his majesty's death, in March 1702, put an end to the project after everything had been arranged. The speech with which William opened his last parliament, on the 31st December 1701, called by Burnet "the best speech that he, or perhaps any other prince, ever made to his people," was written by Somers; Lord Hardwicke mentions that he had seen the original in Somers's handwriting.

In 1702 Somers, unoccupied by the cares and toils of office, was elected president of the Royal Society. In 1706 he introduced and carried through parliament a bill "for the amendment of the law, and the better advancement of justice," which, although deprived of some useful clauses by the Commons, corrected various abuses in the courts both of Chancery and of Common Law. He also took a leading part in the discussion and arrangement of the great measure of the Union with Scotland, which was now at last brought to a conclusion, after having been again and again unsuccessfully attempted during more than a century. It may also be mentioned, that the learned and able statement of the famous Aylesbury Election Case, ordered to be printed by the House of Lords in 1703, was, according to Mr. Speaker Onslow, drawn up by Lord Somers. He too, it is stated by Lord

Hardwicke, was the author of the Act passed in 1705, for the security of the Protestant Succession. [GEORGE I.]

On the return of his party to power in 1708, Somers was made president of the council; and he held that office till the recovery of the cabinet by Harley and the Tories in 1710. He succeeded in making himself very acceptable to Queen Anne, notwithstanding her original prejudice against him. It is affirmed by Lord Dartmouth that he impressed her with a deep and grateful sense of his fidelity and integrity, by his acquainting her with and putting her on her guard against a scheme entertained by the Duke of Marlborough to get himself made captain-general, or commander of the forces, for life, which, without having so much as mentioned it to her majesty, his grace tried in 1709 to get proposed in the House of Commons, and expected the Whigs should all come into, in return for the great services he had lately done them. The following year, on occasion of the proposals for peace made by the French at Gertruydenberg, Somers strongly recommended the continuance of the war. He had of course gone along, apparently, with his colleagues in the prosecution of Sacheverell, in 1709; but Swift, in his 'History of the Four Last Years of Queen Anne,' tells us that he had heard from Lord Somers himself that he was against engaging in that foolish business, as foreseeing that it was likely to end in the ruin of the Whig party.

There is a curious note to Burnet's 'History of his own Time,' by Mr. Speaker Onslow, in which he relates some negotiations that were carried on with Harley by Somers, Halifax, and Cowper, a short time before the change of ministers in 1710, on the basis of an overture made by Harley for keeping them in place, if they would consent to the substitution of himself and some of his friends for the lord treasurer (Godolphin) and his dependants. Onslow says that he had his information from Sir Joseph Jekyl, "who," he adds, "had it very likely, and I think he said so too, from the Lord Somers, to whom he was brother-in-law." The negotiation was broken off in consequence of the opposition of Lord Wharton, who expressed his detestation of having anything to do with Harley.

Somers continued to take part occasionally in the debates of the House of Lords after his second dismissal from office; but the infirm state of his health is said by this time to have somewhat affected his intellect. In 1713 we find him joining in support of the factious motion brought forward by a section of the opposition, for leave to bring in a bill to dissolve the Union. "I had it," writes Onslow, "from good authority (the late Sir Robert Monroe, then of the House of Commons), that at a meeting upon it at my lord Somers's house, where Monroe was, nobody pressed this motion more than that lord." He resumed his place at the council-board after the accession of George I.; but his faculties were now almost gone. It is related however that he took an interest in the progress of the Septennial Bill, which he declared "he thought would be the greatest support possible to the liberty of the country." At last a stroke of apoplexy occasioned his death, on the 26th of April 1716.

Lord Somers was never married, though it is stated by the author of the 'Memoirs of his Life,' that when he was solicitor-general he paid his addresses to a daughter of Sir John Bawdon, a London alderman, and that he went so far in the matter as to deliver in a rental of his estate, after several meetings with the lady's friends; "but," concludes the story, "the treaty broke off on account of a difference about the marriage-portion and settlement, to the great regret of the lady, when she found him made lord keeper of the great seal in two years' time." His estates descended to the family of his sister, who was married to Charles Cocks, Esq., M.P., whose grandson was created Baron Somers in 1784.

The character of Lord Somers has been elaborately drawn by Addison in one of the numbers of the 'Freholder' (published May 14th, 1714), but with considerable wordiness, and something perhaps of the air of insincerity which commonly attaches to a formal panegyric. He had been an early and zealous patron of Addison, who had obtained his notice by inscribing to him his early poem on the campaigns of King William, and who afterwards dedicated to him his 'Travels in Italy' and the first volume of the 'Spectator.' There is much more force in the more shaded picture of him which Swift has given in his 'History of the Four Last Years of Queen Anne;' nor perhaps, taken with the proper allowance, does it convey a less correct notion of the man.

The collection commonly called the 'Somers Tracts,' which has been twice printed, first in 16 vols. 4to, 1748, secondly, in 13 vols. 4to, 1809-15, under the superintendence of the late Sir Walter Scott, consists of scarce pamphlets, selected, as the title intimates, principally from the library of Lord Somers. A valuable collection of original letters and other papers left by his lordship was unfortunately consumed in a fire which happened in the chambers of the Honourable Charles Yorke, then solicitor-general, in Lincoln's Inn Square, on the morning of Saturday, the 29th of January 1752. Mr. Yorke's father, the Lord Chancellor Hardwicke, married Lord Somers's niece, Miss Margaret Cocks.

SOMERSET, EDWARD SEYMOUR, DUKE OF. [EDWARD VI.]

SOMERSET, EARL OF. [JAMES I., vol. iii., col. 588.]

\*SOMERVILLE, MRS. MARY, was born about 1790 in Scotland, and her early years were passed at Musselburgh, a small sea-port near the city of Edinburgh. She is said to have been first married to an

BIOC. DIV. VOL. V.

officer of the British navy, who instructed her in the mathematical and physical sciences. She became afterwards the wife of Dr. Somerville, and attracted the attention of the philosophical world by some experiments on the magnetic influence of the violet rays of the solar spectrum. These experiments were conducted in a simple manner, without costly apparatus, and her statement of the results was free, unembarrassed, and unassuming. Mrs. Somerville's next appearance before the scientific public was at the instance of Lord Brougham, who, knowing her mathematical and astronomical qualifications, had engaged her to furnish for publication by the Society for the Diffusion of Useful Knowledge a popular account of the 'Mecanique Céleste' of Laplace. The work however outgrew its first destination, and was published in an independent form, under the title of the 'Mechanism of the Heavens,' London, 8vo, 1832. In the body of the work, the demonstrations of Laplace are in many cases given without alteration; in others they have been in some degree changed; and in a few instances they have been entirely superseded by others drawn from different sources. In a preliminary dissertation extending to seventy pages Mrs. Somerville has collected and detailed most of the striking facts which theory and observation have made known concerning the constitution of the universe.

This preliminary dissertation to the 'Mechanism of the Heavens' became the nucleus of her next work, 'On the Connexion of the Physical Sciences,' 12mo, 1834, which is dedicated by permission to the Queen. Portions of the original dissertation are introduced into the present work, but the whole has been recast, and additional subjects have been introduced, such as meteorology, electricity, magnetism, and others. She gives an account of the great law of gravitation, and treats of the mutual actions of the primary and secondary planets, of the figure of the earth, of the oceans and their tides. She afterwards treats of acoustics as connected with the constitution of the atmosphere, of light and colours, of heat, of electricity, and of comets. All these subjects are explained with great clearness and precision. In 1835 Mrs. Somerville was elected an honorary member of the Royal Astronomical Society.

Mrs. Somerville's next and last work, dedicated to Sir John Herschel, is entitled 'Physical Geography,' 2 vols. 12mo, 1848. She treats first of the under-surface of the earth, or geology, and then successively of the land-surface, of the great oceans and seas, of the river-systems, of the atmosphere, and lastly of the distribution of organic existence over the globe. The style is always simple and perspicuous, is often vigorous and elegant, and occasionally rises to a strain of eloquence suitable to the grandeur of the scenes which it has to describe.

Mrs. Somerville enjoys a pension of 300*l.* a year from the civil list fund, as a reward for her valuable literary services.

SOMERVILLE, WILLIAM, was born in 1692 at Edstone, in Warwickshire, which had been the residence of his ancestors from the time of Edward I. He studied at Winchester School, and at New College, Oxford. Having completed his education he resided during the rest of his life in the family mansion, partly occupied with the duties of a justice of peace, partly with the active pleasures of the sportsman, and partly with the cultivation of his poetical talents. His income, derived from the estate which he inherited from his father, was 1500*l.* a year, out of which his mother had a jointure of 600*l.* a year. Hospitable, convivial, and careless of economy, he became involved in debt, and in the latter part of his life, according to the account of his friend Shenstone the poet, "drank himself into pains of the body in order to get rid of the pains of the mind." He died July 19, 1742, and was buried at Wotton, near Henley-in-Arden, Warwickshire.

Somerville's 'Chase' is still a favourite with those who combine a taste for poetry with an attachment to the sports of the field, and has been frequently reprinted. It is written in tolerably harmonious blank verse; and as the poet was practically master of his subject, his descriptions are always accurate and frequently vivid, and he has given variety to them by comparing the rural sports of other countries with those of his own. Somerville has written another rural poem, called 'Field Sports,' which describes the amusement of hawking; and 'Hobbinol, or Rural Games,' a mock heroic. He has also written some Fables, which are mostly dull and uninteresting; some rather coarse Tales; and a few lyrical pieces, which display no great poetical power, but contain many beautiful lines.

SOMMERARD, A. DU. [DU SOMMERARD, A.]

SOMNER, WILLIAM, was born at Canterbury, according to the account given by his wife and son, March 30th, 1606; but according to the register of the parish of St. Margaret's, he was baptised there on November 5th, 1598. His father was registrar of the court of Canterbury under Sir Nathaniel Brent, who was then commissary. He was sent to the free-school of that city, where he acquired a competent knowledge of Latin. He was next placed as clerk to his father in the ecclesiastical courts of the diocese, and afterwards preferred to an office in the courts by Archbishop Laud. His natural bent was to the study of antiquities, in which he was encouraged by Dr. Merio Casaubon, one of the prebendaries. In 1640 he published 'The Antiquities of Canterbury,' 4to, a work which gained him considerable reputation, and which was afterwards reprinted and enlarged by Nicholas Batteley, fol., London, 1703. Somner's next production was an Appendix to the first part (all that was published) of Casaubon's

Commentary 'De Quatuor Linguis,' 12mo, London, 1650, showing the relation of the German with the Saxon language. In 1652 he added a most valuable Glossary to Sir Roger Twysden's 'Decem Scriptores.' He was now urged by his friends to make a Saxon Dictionary, but as this was a work which required time and great labour, it was necessary that he should have sufficient means of support while engaged upon it. Sir Henry Spelman had founded at Cambridge a lecture for 'promoting the Saxon tongue, either by reading it publicly or by the editing of Saxon Manuscripts;' and this lecture being vacant in 1657, Archbishop Usher recommended Somner to the then patron Roger Spelman, grandson of the founder. Accordingly Somner had the salary, and went on with the work, which was published at Oxford, in folio, in 1659.

A short time before the Restoration, Somner was imprisoned in the castle of Deal for endeavouring to procure signatures to a petition for a free parliament. In 1660 he was made master of St. John's Hospital, in the suburbs of Canterbury, and about the same time auditor of Christ Church. In this year he published in quarto his 'Treatise on Gavelkind,' his last publication. He died March 30th, 1669. He left behind him various manuscript collections, and two or three treatises, one of which, 'Of the Roman Ports and Forts in Kent,' was published at Oxford, 8vo, 1693, by Bromie. Another, 'De Portu Iecio,' translated into Latin by Mr. (afterwards bishop) Gibson, was published at Oxford, 8vo, 1694. To the former of these a Life of Somner is prefixed by White Kennet, afterwards bishop of Peterborough.

Somner was buried in the north aisle of St. Margaret's Church, Canterbury, where there is an inscription to his memory. His books and manuscripts were purchased by the dean and chapter of Canterbury, and they are still in the Cathedral library; a catalogue of them is appended to Kennet's Life of Somner. Somner gave great assistance to Dodsworth, in the first volume of the 'Monasticum Anglicanum.' Among his friends and correspondents were the Archbishops Laud and Usher, Sir Robert Cotton, Sir Symonds D'Ewes, Sir William Dugdale, Burton the antiquary, Sir John Marsham, and Elias Ashmole.

SONNINI DE MANONCOURT, CHARLES NICOLAS SIGISBERT, was born at Lunéville, February 1, 1751. He was the son of Nicholas Sonnini, seigneur of the fief of Manoncourt in Vermois, and councillor of Stanislaus, king of Poland. He was educated at the Jesuit University of Pont-à-Housson, and made rapid progress in his studies. At an early age he became acquainted with Buffon and Nollet, who encouraged his taste for natural history. Having a wish to travel, he obtained a commission in the marine engineer service, and in 1772 was sent to Cayenne in consequence. Here he showed great energy and courage in exploring the country and dislodging from their strongholds the savages with whom the colony was molested, and succeeded, at considerable personal risk, in making a passage by water from Cayenne to the mountain La Gabrielle, the accomplishment of which had been much desired by the colonists, but abandoned by reason of the natural difficulties of the route. He was, in consequence of this enterprise, promoted to the rank of lieutenant on his return to France. In 1775, after a visit to the western coast of Africa, he resumed his post as an engineer at Cayenne, and spent two years in researches in natural history. Returning to France, in consequence of ill health, he passed the winter of 1776 with Buffon, assisting him in his labours, till he joined the African expedition of Baron de Tott, in 1777. After remaining some time in Egypt, and exploring the country, he travelled in Greece, the Archipelago, and Asia Minor. He returned to France in 1780, and employed himself in the improvement of agriculture, introducing several valuable exotic vegetables into his country. At the beginning of the Revolution he was appointed one of the administrators of the département de la Meurthe; but being deprived of this office by St. Just, and reduced to poverty, on account of his noble birth, he employed himself in arranging and publishing the materials collected in his travels. He was afterwards placed at the head of the college of Vienne, in the département de l'Isère; but failing in his projects of reform there, gave up this situation after holding it two years, and returned to his literary labours. In 1810 he went to Moldavia, and, while traversing that country, caught a fever, from which he never recovered. He died at Paris, May 29, 1812. His principal works are, 'Voyage dans la Haute et Basse Egypte,' Paris, 8vo, 1799; 'Voyage en Grèce et en Turquie,' Paris, 8vo, 1801.

Buffon's 'Histoire Naturelle,' Paris, 1799-1808, to which he contributed 13 vols. of fishes and 1 vol. of cetacea, and, jointly with M. Latreille, 4 vols. of reptiles; and the 'Nouveau Dictionnaire d'Histoire Naturelle,' 8vo, 1803-4, were edited by him: in the latter he wrote the articles 'Man,' 'Quadrupèdes,' 'Birds,' and 'Cetacea.'

Sonnini deserves great praise for his labours as a naturalist. Like other great travellers, though eager and enthusiastic, he was somewhat inconstant in the direction of his energies, as we may infer from the events of his life, not less than from the remarks of his French biographer. In his 'Travels in the East' he treats of the natural and artificial productions of each country, and gives also archaeological and topographical notices not remarkable for their research or originality.

(*Biographie Universelle*, by the author of his 'Eloge Historique,' where is a list of his other publications.)

SOPHIA, PRINCESS OF RUSSIA. [PETER I.]

SOPHOCLES, son of Sophilus, was born in the Attic demus or village of Colonus, and, according to the most authentic accounts, in the year B.C. 495, fifteen years before the battle of Salamis, when Æschylus was thirty years old. He appears to have received as good an education as could be had at the time. In music he was instructed by Lamprus, and in this art, as well as in gymnastic exercises, he gained laurels even when a youth. At the age of fifteen, when the Greeks had defeated the Persians in the battle of Salamis (B.C. 480), Sophocles, on account of his beauty, was selected by those who had the management of the solemnities which followed the victory, as leader of the chorus which danced around the trophies in Salamis and sang the hymn of victory. (Athen., i., p. 20.) The anonymous Greek biographer of Sophocles states that Æschylus was his master in tragedy, but such a relation between the two poets is improbable, and is contradicted by a passage in Athenæus (i., p. 22), where Sophocles says of Æschylus, that he followed the rules of his art without knowing them. It is a favourite practice with ancient historians and grammarians to describe the relation of two persons who lived at the same time and practised the same art, as that of master and pupil, when there is no evidence of such fact, except that one was younger than the other. The first time that Sophocles produced a tragedy on the Attic stage was in the year B.C. 468, and the piece was probably the 'Triptolemus,' which is now lost. (Euseb., 'Chron.,' p. 167; Plin., 'Hist. Nat.,' xviii. 12.) Æschylus was at this time the great dramatist of the Attic stage, but his young rival, who ventured to contend with him for the prize, won the victory, which was attended by the following memorable circumstance. On the day when the drama was acted, Cimon had just returned from the island of Scyros, bringing with him the remains of Theseus, who was believed to have been murdered and buried in that island. When Cimon, with his nine colleagues, entered the theatre to offer the customary libations to Dionysus, he was detained by the chief archon Aphepsion, whose duty it was to preside at the dramatic performances and to nominate the judges. Aphepsion appointed no judges, but called upon Cimon and his colleagues to determine the prize. Cimon, recognising the great genius that the tragedy displayed, gave the prize to Sophocles. (Plut., 'Cim.,' 8.)

From this time twenty-eight years of his life passed without any memorable event being recorded, though Sophocles must have been extremely active in the exercise of his art, for during this period he is said to have composed thirty-one dramas, not including the 'Triptolemus.' (Aristoph. Byz., 'Argum. ad Antig.')

In the year B.C. 440 he brought out the 'Antigone,' his thirty-second drama; and he gained the prize. The Athenians, who perceived in this play the wisdom of a statesman and general, appointed him one of the commanders to conduct the war against the aristocrats of Samos, who, after being expelled from the island by the Athenians, had returned from Anæa in Caria (whence the Greek biographer calls it the war of Anæa), and endeavoured to induce the Samians to revolt against Athens. In this campaign Sophocles was the colleague of Pericles. No military feat is recorded of him, and it is only stated that he availed himself of the opportunity to enrich himself. In Samos he is said to have made the acquaintance of Herodotus, for whom he wrote a poem. (Plut., 'An Seni sit gerenda res,' 3.) Whether Sophocles, after this expedition, which ended in B.C. 439, took any further part in public affairs, is not certain. His life seems to have passed in the glorious career of a successful dramatist, and has left no traces in history; we only hear that several kings invited him to their courts, but that he preferred staying at home. He was married twice. His first wife was Nicostrate of Athens, by whom he had a son, Iophon; his second wife was Theoris of Sicyon, by whom he had a son called Ariston. Ariston again had a son called Sophocles, who is generally distinguished from his grandfather by the epithet 'the Younger.' Sophocles was very partial to this grandson, and it was believed that during his lifetime he intended to transfer to him a considerable part of his property. Iophon, fearing lest his inheritance should be diminished, brought a charge of mental incapacity against his father before the members of his phratry, and proposed that he should not be allowed to have any control over his property. Sophocles is said to have made no reply to this charge, but with a strong conviction of the excellence of the 'Edipus in Colonus,' which he had just composed, to have only read to his phratores, who had to examine him, the parodos of this play. The consequence was that he was allowed to retain the management of his property.

Sophocles died in the year B.C. 406, at the very advanced age of ninety. The accounts of the cause of his death are not consistent. Some state that he was choked by a grape, which stuck in his throat; others, that in the loud reading of the 'Antigone' he exerted himself so much that at last his voice failed him and he expired; and others again, that he died of joy at the announcement of a victory gained by one of his dramas. He was buried in the tomb of his fathers near Decælea.

As regards the private life of Sophocles we know nothing, except that he was addicted to sexual pleasures (Athen., xii., p. 510); but the anecdotes in Athenæus (xiii., p. 603, &c.) seem to belong to that sort of scandal from which no great man can escape.

Sophocles is said to have written 130 dramas, but Aristophanes of Byzantium declared seventeen of them spurious, which would leave

118 genuine dramas, which number includes his satiric dramas. At the age of forty-five he had written 32 dramas, so that more than two-thirds of his works were composed during the latter half of his life. The 'Œdipus in Colonus,' his last production, was written a short time before his death, but was not brought out till the year B.C. 401. With these plays he disputed the prize with the greatest dramatists of the day—Æschylus, Euripides, Chœrilus, Aristias, Iophon, and others; and gained twenty times the first prize, several times the second, but never the third. Of all his plays there only remain seven; of others we only possess some fragments, and sometimes no more than the titles. The earliest of the extant pieces is the 'Antigone,' and the probable chronological order in which the others followed is this:—'Electra,' 'Trachiniæ,' 'King Œdipus,' 'Ajax,' 'Philoctetes' (first acted in B.C. 409), and the 'Œdipus in Colonus,' which was first acted in B.C. 401.

The ancients themselves regarded Sophocles as the most perfect of all dramatic poets; they called him the tragic Homer, and the Attic bee, to express the unrivalled beauty and sweetness of his productions. Their admiration was well founded, for the tragedies of Sophocles, as far as we can judge, excel everything of the kind that appeared in Greece either before or after him. Sophocles abandoned the pomp, grandiloquence, and harshness of Æschylus, for which he substituted the noble simplicity and tenderness which the ancients admired: his heroes are not beings of a superior nature; his men are not the sport of an inscrutable destiny: the world which he represents is peopled by men, agitated indeed by sufferings and passions, but the good and the beautiful do not appear under the iron rule of destiny; all his characters are men in the truest sense of the word, beings with whom we can sympathise. Hence his dramas are of an ethical and practical character, while those of Æschylus are more calculated to inspire religious awe. Sophocles knew the laws of his art and what it required, as appears from an expression ascribed to him by Plutarch. ('De Prof. Virt., Sent.,' 7.) During his whole career he appears to have been striving to realise the idea which he had formed of tragedy. In the three earliest of the extant plays there appear occasionally traces of an artificial style and studied obscurity, but the remaining four are entirely free of this fault. But even the 'Antigone' is so different from any play of Æschylus in design and execution, that he must have long before been aware of the necessity of the changes which he introduced. The more particular changes to which we here allude are as follows:—Each drama of Sophocles turns upon one great action, the 'Antigone' perhaps excepted; and one idea, which is the leading idea of the drama, is perfectly developed in one play; while with Æschylus the three plays of a trilogy are like so many acts of one drama. Although therefore Sophocles may usually have brought out three tragedies at once, each of them was complete in itself. The lyric part, or the chorus, in Sophocles has no longer that prominent place which it has in Æschylus, nor does it take part in the action in the same degree; it no longer expresses the feelings supposed to be called forth in the audience; but the tragic development of the characters of the drama, or, in other words, the action, is the most prominent part of the drama. The chorus is subordinate, and it would seem that Sophocles used it as a means to let the spectator see what was going on in the minds of the actors rather than in that of the spectators. As the action was thus extended, Sophocles also introduced a third actor, or the *trigonistes*, so that now three actors might appear upon the stage at once, whereas before his time there had not been more than two at a time, which rendered the action, as well as the dialogue, monotonous. Lastly, Sophocles introduced several improvements in scene-painting and in other mechanical parts of stage performance. At first he is said, like Æschylus, to have acted in his own dramas, but as his voice was too weak he gave it up.

Besides his dramas, Sophocles also wrote an elegy, several poems, and other minor poems, and also a prose work on the chorus, which was directed against Thespis and Chœrilus. Several ancient grammarians, such as Didymus, Horapollon, Aristophanes of Byzantium, Androtion, Praxiphanes, and others, wrote commentaries upon the dramas of Sophocles.

Respecting the life and works of Sophocles, see the Life, by an anonymous Greek writer, which is prefixed to several editions of his works; Suidas, s. v. *Σοφοκλῆς*; the masterly treatise of Lessing, 'Leben des Sophocles,' which has unfortunately been left a fragment by the author; Ferd. Schultz, 'De Vita Sophoclis Poetæ,' 8vo, Bonn, 1836; Adolph. Schöll, 'Sophocles, sein Wirken und Leben,' 8vo, Frankfurt; Müller, 'Hist. of the Lit. of Ancient Greece,' i. pp. 837-856; A. W. v. Schlegel, 'Lectures on Dramatic Literature,' vol. i, lect. 4.

The works of Sophocles were first printed by Aldus, 8vo, Venice, 1502. The best of the subsequent editions are those of H. Stephens, 4to, Paris, 1568, with valuable notes; and that of Brunck, 2 vols. 8vo, Strasbourg, 1786, with a Latin translation and notes. In the same year Brunck published his great edition, in 2 vols. 4to or 4 vols. 8vo. It was reprinted in London, in 3 vols. 8vo, 1823, with some additions by Burney. The text of Brunck has served as the basis for all subsequent editions. The best among them are that of Musgrave, 2 vols. 8vo, Oxford, 1800, &c.; of F. H. Bothe, 2 vols. 8vo, Leipzig, 1806, the last edition of which appeared in 1827 and 1828; of Erfurt, 7 vols. 8vo, Leipzig, 1802, &c.; of Elmsley, 1826, reprinted at Leipzig

in 8 vols. 8vo; of Erfurt and G. Hermann, 7 vols. 12mo, Leipzig, 1823-25. An edition by G. Hermann, in 7 vols. 12mo, appeared at Leipzig in 1850-51. The most useful edition of Sophocles for students is that of E. Wunder, Gotha and Erfurt, 1831-41. An edition with a translation of Wunder's introductions and notes, and a collation of Dindorf's text, was published in London in 2 vols. 8vo, 1854. The editions of single plays and dissertations upon them are almost innumerable. The titles and remains of the lost pieces of Sophocles have been collected by Welcker, in his 'Die Griechischen Tragödien,' p. 59, &c. He has classed them according to the legendary cycles to which they belong, and also given the probable contents or the leading idea of each play, as far as this can be made out from the fragments.

The translations of Sophocles are very numerous. The best German is that by Solger, the last edition of which appeared at Berlin, 2 vols. 8vo, 1824. There are numerous English translations: in prose, by George Adams, 2 vols., London, 1729, and others subsequently; in verse, by Franklin, 2 vols. 4to, London, 1758-59; by Robert Potter, London, 1788; and by Thomas Dale, 1824.

SOPHRON, son of Agathocles, a native of Syracuse, was born about the year B.C. 420. He is believed to have been the inventor of a peculiar kind of poetry called 'mimes,' which were dramatic performances of irregular form, in which occurrences of real life were clothed in a poetical dress; and which usually consisted of a single scene, mostly comic, sometimes with such dialogue added as the excitement of the moment prompted. Sophron wrote his works in the vulgar dialect of the Doric Greek as spoken in Sicily, and in a kind of rhythmical prose. Plato, who had become acquainted with the productions of Sophron through Dion of Syracuse, valued them very highly, and is said to have made the Athenians acquainted with this species of poetry. (Quintil., i. 10, 17.) Besides the few fragments of the mimes of Sophron which yet remain, we only know the titles of some others of his poems, so that we are scarcely able to form an exact idea of this species of poetry. The circumstance that Sophron wrote in a popular dialect full of peculiarities and solecisms, was probably the reason why his works were studied by the grammarians. Apollodorus of Athens wrote a commentary upon them.

The fragments are collected by C. J. Blomfield, in the 'Classical Journal,' vol. iv., p. 380, &c., to which a supplement and some corrections were added by the same scholar in the 'Museum Cliticum,' No. vii., p. 640, &c. Compare Grysar, 'De Sophrone Mimographo,' Coloniae, 1838.

SORANUS, an eminent ancient physician, the son of Menander, was born at Ephesus, probably about the end of the 1st century after Christ, and raised the sect of the Methodici to its highest degree of reputation. He had been brought up at Alexandria, but under the reign of Trajan and Hadrian he came to Rome, where he taught and practised medicine with great success. (Pseudo-Gal., 'Introduct.,' cap. 4, p. 184, tom. xiv., ed. Kühn; Suidas.) He passed some time also in Aquitania, and very successfully treated the leprous diseases which prevailed there. (Marcell. Emp., 'De Medicam.,' cap. 19, p. 321, ed. H. Steph.) In his time the leprosy, which had been brought from the East into Italy and Gaul, was making there the greatest ravages; and the physicians, who were not yet well acquainted with this disease, were anxious to recommend certain preparations against each of its particular symptoms. Some of those employed by Soranus have been preserved to us by Galen. (Galen., 'De Compos. Medicam.,' sec. Loca,' lib. i., cap. 2, 8, p. 414 et sq., 493 et sq., tom. xii.) Their object was in a great measure to effect a metasynonism, or the re-establishment of the pores in their natural state. To him we are indebted for the first observations (Paul. Ægin., 'De Re Med.,' lib. iv., cap. 59, p. 73, ed. Ald.) upon the species of worm called by the Greeks *δρακόντιον*, by the Latins Gordius, Filaria, or Vena Medinensis; for an account of which see a dissertation by Justus Welhe, entitled 'De Filaria Medinensi Gmel. Commentariolum,' 8vo, Berol., 1832, and especially the very learned work by Georg. Hieron. Velschius, entitled 'Exercitatio de Vena Medinensi, ad Mentem Ebsinæ (i.e. Avicennæ), sive De Draconculis Veterum,' 4to, August-Vindeli, 1674. He made the interesting remark, that children while at the breast are sometimes attacked with hydrophobia. (Coel. Aurel., 'De Morb. Acut.,' lib. iii., c. 11, p. 221, ed. Amman.) His theory on the Nightmare (Id., 'De Morb. Chron.,' lib. i., c. 3, p. 289), and his opinion on the use of magical songs and incantations in the treatment of diseases, prove how little he was imbued with the prejudices of his age. He seems to have been the first to reduce the opinions of his predecessors to certain principles (Id., 'De Morb. Acut.,' lib. ii., cap. 9, p. 91), and therefore did not, like them, show contempt for the ancients, but tried to refute them by the arguments of the Methodici. (Id., *ibid.*, cap. 19, p. 127; cap. 29, p. 142.) Indeed he was the first who gave a plausible reason for the necessity of rejecting purgatives, in saying that they evacuated indiscriminately the healthy humours as well as the bad ones. (Id., *ibid.*, cap. 9, p. 91.) He always employed venesection in pleurisy, because it proceeds evidently from the strictum, and had no regard to the difference of climate. (Id., *ibid.*, cap. 22, p. 132.) In pneumonia he considered that the whole body suffered, but that the lungs are particularly affected; for Soranus did not admit a single local disease, in the strict acceptation of the term. (Id., *ibid.*, cap. 28, p. 139.) The cholera morbus, said he, is a relaxation of the stomach and intestines, accompanied with imminent danger. (Id., *ibid.*, lib. iii., cap.

19, p. 254.) Sprengel ('Hist. de la Méd.') thinks that he is not the Soranus who is mentioned by Cœlius Aurelianus ('De Morb. Chron.', lib. ii., cap. 10, p. 391) as having recognised three causes of hæmorrhage, viz. eruption, lesion, and putrefaction, because the study of these particular causes would not agree with the spirit of the school of the Methodici. We know also from Suidas that at least two different physicians bore the name of Soranus. His work, *Περὶ Γυναικείου Παθῶν*, 'De Arte Obstetricia Morbisque Mulierum,' shows that he possessed very considerable anatomical knowledge, though he introduces the description of the sexual organs by saying that the study of anatomy is quite useless, and that he only inserted these chapters in order that people might not say he disparaged anatomy because he was himself ignorant of it (cap. 3, p. 5, ed. Dietz). Indeed he described the uterus in such a manner as to prove (what he himself assures us) that he derived his ideas of anatomy from the dissection not of animals, but of human bodies. (Ibid., cap. 4, 5, p. 11, 13.)

A fragment by Soranus, *Περὶ Σπυλίου Καταγμάτων*, 'De Signis Fracturarum,' was published by Cocchi, in his 'Græcorum Chirurgici Libri,' Gr. et Lat., fol., Florent., 1754. It is also inserted by Jul. Lud. Ideler, in his 'Medici et Physici Græci Minores,' 8vo, Berol., 1841, Gr. His work 'De Arte Obstetricia Morbisque Mulierum' consisted originally of one hundred and sixty-four chapters, of which only one hundred and twenty-seven remain, which were first published, Regim. Pruss., 8vo, 1838, Græce, from a manuscript prepared for the press before his death, by the late learned professor F. R. Dietz. An anatomical fragment of this work, *Περὶ Μήτρας καὶ Γυναικείου Αἵματος*, 'De Utero et Pudendo Muliebri,' was published in Greek, together with Rufus Ephesius, 8vo, Paris, 1554, and is to be found in Ideler's collection mentioned above. A Latin translation is added to the edition of Orisbasius, by Rhasarius. There is also a dissertation by H. Hæser, 'De Sorano Ephesio, ejusque Περὶ Γυναικείου Παθῶν, Liber nuper reperto,' 4to, Jenæ, 1840. Whether the Life of Hippocrates, that goes under the name of Soranus, was written by the author who is the subject of this article, is uncertain; and indeed the writer is not quite sure that all that has been said refers to the same individual. The Life of Hippocrates (which is of little or no authority) is prefixed to several editions of his works, and is also inserted by Fabricius in his 'Biblioth. Græca,' vol. xii., p. 675, ed. Vet., and by Ideler in his collection above mentioned. A work which exists only in Latin, and which bears the title 'In Artem Medendi Isagoge,' is undoubtedly the production of a later writer, as Galen is mentioned in it by name (cap. 13). It is in the collection edited by Torinus, fol., Basil., 1528, and in that published "apud Aldi Filios," fol., Venet., 1547.

\*SORBY, HENRY CLIFTON, F.R.S., F.G.S., a rising geologist, who has become advantageously known by his researches into the structure of rocks, and by his inquiries in physical geography, both pursued in a novel manner, was born at Sheffield, where his father was an eminent manufacturer of edge-tools, on the 10th of May 1826. He was first educated in the collegiate school of that town, and subsequently received instruction from a private tutor, the Rev. Walter Mitchell (now chaplain of St. Bartholomew's Hospital, London). He was elected a Fellow of the Royal Society on June 11th, 1857. Being in independent circumstances, he is wholly devoted to the pursuits of science, and is the author of papers relating to the structure of rocks, investigated by the union of mineralogical, chemical, physical, and microscopical examinations, and on the former physical geography of various localities, as evinced by the disposition, mutual relations, and structure of the strata now occupying them, in the following works:—the 'Transactions' of the Sections of the British Association; the 'Journals' of the Geological, Chemical, and Microscopical Societies of London; the 'Edinburgh New Philosophical Journal'; the 'Philosophical Magazine'; the 'Proceedings' of the Geological and Polytechnic Society of the West Riding of Yorkshire; and those of the Literary and Philosophical Society of Sheffield. Of the latter body Mr. Sorby is senior vice-president, and in 1852 was appointed to the chair.

SOSIGENES, an Egyptian astronomer, who was brought to Rome by Julius Cæsar, to superintend the correction of the calendar. He is said to have lived at Rome till the time of Augustus, and to have assisted in the further correction which took place in the reign of that emperor. But beyond this nothing is known of his life, death, or pursuits.

SOTHEYBY, WILLIAM, was born in London, November 9, 1757. He was the eldest son of Colonel Sotheby, of the Guards, and Elizabeth, daughter of William Sloane, Esq., of Stoneham, in Hampshire. His father died when he was only seven years old, and he was placed under the guardianship of the Hon. Charles Yorke (afterwards lord chancellor) and of his maternal uncle Hans Sloane, Esq., and by them he was sent to Harrow School, where he remained till he was seventeen years of age. Instead of completing his studies at either of the universities, he entered the army, and purchased a commission in the 10th Dragoons, from which he immediately obtained leave of absence, and passed several months at the military academy at Angers for the purpose of studying the principles of his profession, England at that time having no similar institution for military instruction. On leaving Angers he passed a winter and spring in Vienna and Berlin, and rejoined his regiment at the end of 1777, at Knarborough, in Yorkshire, where, besides attending to his military duties, he studied,

critically and assiduously, Shakspeare and the other masters of English poetry. In 1786 he married Mary, youngest daughter of Ambrose Isted, Esq., of Ecton, in Northamptonshire; he immediately afterwards quitted the army and purchased Bevis Mount, near Southampton, where he continued to reside for the next ten years, amusing himself with poetical studies and writing. In 1788 he made a pedestrian tour through Wales with his only brother Admiral Sotheby, of which he published a poetical narrative under the title of 'A Tour through North and South Wales.' His mother died in 1790, and in 1791 he removed from Bevis Mount to London, where he afterwards chiefly resided, passing however a considerable part of every year at Fair-Mead Lodge, in Epping Forest, of which he was one of the master keepers. Soon after he settled in London he became a Fellow of the Royal Society, of the Antiquarian Society, and of the Dilettanti Society; and was in the habit of receiving at his house persons distinguished in literature and politics without any regard to party distinctions.

The language and literature of Germany had been for some time advancing in favour in England. Taylor, of Norwich, had chiefly contributed to this result; and Sotheby's friend Spencer had translated Bürger's 'Lenore' with more success than Taylor had done previously. Sotheby studied the language, and in 1798 published a translation of Wieland's 'Oberon,' which immediately became popular. In 1799 he published a short poem on the battle of the Nile, and in 1800 a translation of the 'Georgics' of Virgil. In 1801 he addressed Sir George Beaumont in 'A Poetical Epistle on the Encouragement of the British School of Painting.' In 1802 he published 'Orestes,' a tragedy, on the model of the Greek drama, accompanied by a mask, entitled 'Huon de Bourdeaux,' founded on the story of 'Oberon.' His next work, on which he was occupied the greater part of two years, and which appeared in 1807, was an epic poem, in blank verse, under the title of 'Saul.' In 1810 he produced 'Constance de Castille,' a metrical Poem, in Ten Cantos, in the style of the 'Lady of the Lake' and 'Marmion.' In 1814 he republished 'Orestes,' together with four other tragedies. Sotheby travelled through France, Switzerland, and Italy in 1816, in company with Mr. Elmsley and Professor Playfair. He returned through Germany to England at the close of 1817. In 1827 he published a corrected edition of his translation of the 'Georgics,' together with the original text, and the translations of De Lille, Soave, Guzman, and Voss, in folio; of which he presented copies to several of the sovereigns of Europe, and received medals from them in acknowledgment.

When he was in his seventieth year he commenced a poetical translation (in rhyme) of the 'Iliad,' of which he completed a portion every day, even during a tour which he made to Scotland in the summer and autumn of 1829. On his return to London he pursued his task with unabated diligence, and completed the 'Iliad' in September 1830. He immediately commenced the 'Odyssey,' which he finished in July 1832.

He died December 30, 1833, in the seventy-seventh year of his age. His eldest son, William, who was a colonel in the First Regiment of Guards, died in 1815, in consequence of injuries which his constitution had suffered in the Walcheren expedition and the war in Spain. His third son George, who was assistant-resident at Nagpoor, in Hindustan, was killed in repelling an attack of the Pindares, November 27, 1817. Another son, Hans, who had been in the civil service in India, died in London, April 27, 1827.

Besides the works already mentioned, Sotheby published, in 1828, 'Italy and other Poems,' fcap 8vo, consisting chiefly of descriptions of Italian scenery, most of which were probably written while he was travelling in 1816-17, and a few other small compositions.

Sotheby's original poems made little impression on the public, and are now nearly forgotten. His thoughts are pleasing, but faint, and frequently indistinct, from the polished diffusiveness of his style. He has little originality or strength of imagination, but he has great facility and elegance of diction and versification, and hence his poetical translations are among the best which have been made in English. His 'Oberon' is an excellent version of Wieland's romantic poem, tolerably close, and no bad substitute for the original to those who cannot read German. His version of the 'Georgics' seems to have been a favourite work, and to have occupied much time in correction and improvement, and is perhaps superior to any other which has been made in our language. The folio edition was published at five guineas, and is a splendid specimen of typography. His versions of the 'Iliad' and 'Odyssey' are closer than that of Pope, but have less animation and energy, and have certainly no chance of superseding Pope's.

SOTO, DOMINGO, a learned Spanish ecclesiastic, was born at Segovia, in 1494. His father, who was a gardener, destined him for the same occupation, but seeing him make rapid progress in his studies, he gave him as good an education as his means could afford, and placed him as sacristan to the church of a neighbouring village. Having, whilst there, rendered himself qualified for the study of philosophy, Soto repaired to the university of Alcalá, where he made the acquaintance of a young nobleman named Saavedra, who took him to Paris as one of his suite. Soto pursued his studies there, and received the degree of master of arts. On his return to Spain, in 1519, he taught philosophy, first at Alcalá, and then at Salamanca;

and in 1524, entered into the Dominican order. It was about this time that he published his treatise on the Dialects and Physics of Aristotle, entitled 'Summula,' 4to, Salamanca, 1525. So high was his reputation for ecclesiastical learning, that in 1545 the Emperor Charles V. sent him as his first theologian to the Council of Trent, where he became one of the most active and esteemed members of that assembly. As he spoke frequently, and was consulted on different points of canon law, he was one of the members charged with recording the decisions of the assembly and drawing up its decrees. This peculiar distinction was the more remarkable, as there were above fifty bishops and several eminent theologians of the same order as his in the assembly. Finding that a brother of his own order, named Catharin, dissented from him on several material points, he composed his 'Apologia contra R. Patrem Ambrosium Catharinum, qua ipse de certitudine gratiae respondet,' which was afterwards published at Antwerp, fol. 1556, and Salam., fol. 1574. On his return from the council Charles V. appointed him his confessor, and offered him the bishopric of Segovia, which he declined. He was soon after chosen by that monarch to arbitrate in a dispute pending between Las Casas and Sepulveda respecting the Indians, which he decided in favour of the former. [SEPULVEDA.] In 1550 Soto left the court and retired to Salamanca, where he died on the 17th December 1560, at the age of sixty-six. Besides the above-mentioned works, Soto wrote the following:—'In Dialecticam Aristotelis Commentarii,' fol. Salmanticae, 1580; 'In Categorias Aristotelis Commentarii,' 4to, Venetiis, 1583; 'De Natura et Gratia Libri iii.,' Antwerp, 1550; 'De Justitia et Jure,' Antwerp, 1568 (in this last treatise Soto defends the proposition which he had maintained at the council, 'that the residence of bishops is of divine right'); 'De Cavendo Juramentorum Abusu,' Salmanticae, 1552, and several more, a list of which may be seen in Nicolas, Ant., 'Bib. Hisp. Nova,' vol. i. p. 232.

SOUBISE, BENJAMIN DE ROHAN, baron of Frontenai, and brother to the Duc de Rohan. He was born in 1589. Under Maurice of Nassau, in Holland, he learnt the art of war. Soubise was through life a zealous reformer, and figures in all the assemblies of the Huguenots for putting in force the Edict of Nantes. In 1615 he joined the party of the Prince de Condé, but the civil war terminating soon after, he had little opportunity for exhibiting that audacity and those talents for intrigue which he subsequently displayed in the religious wars which commenced in 1621. His reputation for courage and his talents as a leader induced the assembly of Rochelle to give him the general command in Bretagne, Anjou, and Poitou. Undazzled by the brilliant offers which had seduced so many of the corrupt chiefs to submit to the court, Soubise, with his brother, the Duc de Rohan, remained true to their party. But seeing themselves deserted by their friends and reduced to despair, they resolved on a decisive blow, and proclaimed open war against the king. Louis XIII. marched against them in person, and commenced the siege of Saint Jean d'Angeli. Soubise undertook its defence, and with his usual audacity, when summoned to surrender, he wrote the following reply:—'I am his majesty's very humble servant, but the execution of his commands is not in my power. Benjamin de Rohan.' The siege was vigorously pressed, but it was not until after a month's hard fighting that the place surrendered. On the entrance of the royal army, Soubise, throwing himself upon his knees before Louis, vowed inviolable fidelity. 'Serve me better than thou hast done hitherto,' replied the king, and pardoned him.

The 'inviolable fidelity' of Soubise disappeared with the absence of danger, and accordingly we find him very soon after flying to Rochelle, there to form new intrigues. He was not so warmly seconded however as he had anticipated. He soon after collected a few troops and seized Royan; and in the winter of 1622 made himself master of Bas-Poitou, together with the isle of Ré, Perier, and Mons. This success drew 8000 men to his standard, with whom he seized Olonne, and threatened Nantes. Louis again marched to meet him, and routed his army after a short conflict. Soubise escaped to Rochelle, whence he passed over to England to ask for succour, but failing, he went to Germany, and with no better success. The king declared him a rebel, but by the edict of pacification published at Montpellier, October 19, 1622, he was restored to his honours and estates.

Peace tired him, inactivity was abhorrent to him; and restless unless plotting, Soubise soon recommenced intriguing with Spain and England, and, in the beginning of 1625, he again appeared as a traitor; and publishing a manifesto, seized the isle of Ré, with 300 soldiers and 100 sailors. Encouraged by this success, he descended on Blavet in Bretagne, where the royal fleet was at that moment; and suddenly attacking one of the largest ships, boarded it, sword in hand. He took the other ships in succession, and then attacked the fort. He was repulsed in his attack on the fort; and after a fruitless siege of three weeks, he set sail for the isle of Ré with fifteen ships. He seized the isle of Oleron, and was the master of the sea from Nantes to Bordeaux.

His daring had surprised every one; and the Huguenots, who had hitherto regarded these exploits as those of a brigand, now acknowledged him as chief of the reform. The king, occupied with the Spanish war, offered him the command of a squadron of ten ships in an expedition against Genoa, as an honourable way of returning to his allegiance. Soubise refused the offer; and naming himself admiral of

the Protestant church, persisted in the war. Attacked by the Royalists near Castillon, he regained his ships with a precipitation very unfavourable to his reputation for courage. We may observe that his life exhibited a contrast of audacity and cowardice. He was more reckless than bold, more vehement than courageous. On his return to the isle of Ré, he was met by the royal fleet, augmented by twenty Dutch vessels. As he was still in negotiation with the court, he obtained a suspension of arms, and the two admirals exchanged hostages. Without awaiting the result of the negotiation, Soubise redemanded his hostages, which were returned by the Dutch admiral, on the condition that the suspension of arms should not terminate till news was received from the court; but Soubise suddenly attacked the fleet, and fired the admiral's ship. The result of this perfidy was the confirmation of Louis in his pacific intentions with regard to the Protestants; but the people of Rochelle were exacting in proportion to the concession of the court, and the war continued. On the 15th of September, after a sharp conflict, Soubise was beaten by the royal fleet; and quitting his ship, he regained the isle, where the victorious Royalists had landed, and attacked them with 3000 men. Here too his army was vanquished, and he saved himself by flight.

He again came to England. Charles I., interposing on behalf of the French Protestants, obtained for them a new edict of pacification April 6, 1626. Soubise was created a duke; but he still remained in England, endeavouring to win over the Duke of Buckingham to support the Huguenots, and he succeeded. Louis seriously determining to besiege Rochelle, Soubise prevailed on Buckingham to put himself at the head of a fleet, which Soubise conducted to Rochelle; but the Rochellois refused to admit the English ships into their port, or Soubise within their walls. Soubise returned to England, and solicited a second fleet, which, commanded by Denbigh, Buckingham's brother-in-law, was equally unsuccessful. Nothing daunted, he again returned to England; and after pressing Charles for some time, had a third fleet granted, under the command of Buckingham. The fleet was at Plymouth, ready to start; but Buckingham, having quarrelled with Soubise, annoyed him by all sorts of delays. On the 2nd of September 1628, the two had an animated discussion in French on the point, which the officers who were present, not understanding the language, viewed as a quarrel. A few hours after this Buckingham was stabbed by Felton. In the first moment of horror at the murder, the officers accused Soubise and the deputies of the deed, and the infuriated people were about to sacrifice them, when Felton declared himself.

The command of the fleet was then bestowed on the Earl of Lindsey. When they arrived before Rochelle, Lindsey repulsed all Soubise's proposals, and it was found impossible for them to act in concert. Meanwhile Rochelle capitulated; but Soubise, refusing the conditions proposed by Louis, returned to England, where he ceased not to intrigue against his country. His restless career was terminated in 1641, when he died, regretted by few and less respected.

SOUBISE, CHARLES DE ROHAN, born July 16, 1715, was an inefficient general, but a fortunate courtier; for, befriended by Louis XV., he became *maréchal* of France, minister of state, and allied to royalty itself. His life was tinged with many licentious and foolish acts, but his bravery and generosity gilded over his faults and vices. He married Mlle. de Bouillon, daughter of the chamberlain of France. She died soon after the birth of her first child, a daughter, whom he subsequently (1753) married to the Prince de Condé. In 1745 Soubise married the Princess Christina of Hesse-Rheinfels. He served Louis as aide-de-camp in all the campaigns from 1744 to 1748. His services were rewarded by the appointment of field-marshal in 1748, and in 1751 with the government of Flanders and Hainault. Being defeated by the Prussians at Rosbach, he returned to court, the object of a thousand malicious epigrams. The favourite of Madame Pompadour, he was hated as a favourite by all the other courtiers; but Louis remained firm in his attachment to him, and made him minister of state, with a pension of 50,000 livres.

In 1758 he commanded a new army, burning to efface the disgrace of Rosbach, and defeated the Hessians, Hanoverians, and English, first at Sondershausen (July 13) and next at Sutzenberg (October 10), by which he completed the conquest of the landgraviat of Hesse. When Louis XV. had taken Madame Dubarry as his mistress, and presented her at court, the ladies refused to receive her, or acknowledge her presence, except in the most distant manner. Soubise induced the Comtesse de l'Hôpital, his mistress, to receive her at her house. This delighted Louis, and made Madame Dubarry his friend. Soubise indeed carried his venality so far as to consent to the marriage of his cousin Mlle. de Toromon with the Vicomte Dubarry, the favourite's nephew; but we must add, as a set-off to this baseness, that on the death of Louis, Soubise alone of all the courtiers followed the funeral procession, which consisted only of a few valets and pages, and never left the remains of his kind master till he saw them fairly deposited in the tomb. He had resolved to retire from the court, but Louis XVI., touched with his fidelity, requested him to retain his place as minister, which he did. He died on the 4th of July 1787.

SOUFFLOT, JACQUES GERMAIN, an eminent French architect, was born at Irancy, near Auxerre, in 1713. His parents gave him a good education, but without any intention of bringing him up to the profession to which his own inclination strongly prompted him. Fortunately, however, instead of attempting to thwart this bias, his

father assisted him in pursuing the requisite preparatory studies. At what time he went to Rome, where, through the influence of M. de Saint-Aignan, the ambassador, he was admitted as a pensionary at the French academy, is not precisely known, but he remained there three years, after which he spent several more at Lyon where he commenced the practice of his profession; and besides the Exchange (afterwards converted into the Protestant church), and some other works of less importance, he executed one of the largest public edifices in that city, the Great Hospital, the façade of which is somewhat more than 1000 feet in extent. The distinction he thus acquired caused him to be invited to Paris, where he was admitted into the Royal Academy of Architecture. Within a short time an opportunity presenting itself of revisiting Italy, in company with M. de Marigny (Madame Pompadour's brother), the superintendent of the crown buildings, he availed himself of it, and examined the antiquities of Paestum in 1750. In 1754 he was again employed at Lyon to erect the Grand Theatre, which was capable of containing 2000 spectators, and was considered to be excellently contrived in every respect, but has since been replaced by another structure.

It having been determined to rebuild the ancient and greatly decayed church of St. Gervais, several architects presented designs for the new edifice, among which those by Soufflot obtained the preference; and in 1757 the works commenced, but they proceeded so slowly, that the ceremony of laying the first stone by Louis XV. did not take place till the 6th of September, 1764. In this work Soufflot entirely changed the system which had till then prevailed in all the modern churches of Paris; and although he could not attempt to rival the magnitude of St. Peter's at Rome, or St. Paul's, London, his aim seems to have been to produce greatness of effect of a different kind, together with decided difference of character. Avoiding two orders, as in the latter building, and the attached columns and heavy attic of the former, he has employed a single order of insulated columns 60 feet high as a pro-style, occupying the entire width of the façade at that extremity of the cross; and has moreover confined the order to that feature of the building, the entablature alone being continued along the other elevations, which else present little more than unbroken surface of solid wall, a circumstance that gives the whole a degree of severity, not to call it nakedness, that contrasts most strongly with the breaks and multiplicity of parts in the two other buildings. The portico itself is therefore a feature which strikingly distinguishes this from both the Italian and the English churches. Like St. Paul's, Soufflot's edifice has a Corinthian peristyle of thirty columns, encircling the tambour of the dome, with the difference that all the columns are insulated, whereas in the other instance eight of them are attached to four massifs, or piers. Another marked distinction in regard to the effect of the dome in the exterior composition generally is, that the plan of the building being a Greek cross, it comes in the centre, consequently is not thrown so far back from the front as in the other two instances. In the interior, again, Soufflot's design differs from them still more: it has colonnades, comparatively shallow as to depth, instead of aisles separated from the naves by massive piers and arches; neither has it any windows, except in the tambour of the dome and the arches in the vaultings of the roof, so that the light is admitted entirely from above. In consequence however of settlements and fractures taking place, it was afterwards found necessary to deviate from the original plan, filling up the spaces between the columns at the four angles beneath the dome, so as to convert them into solid piers.

Soufflot did not live to see his great work completed, for he died on the 29th of August, 1781, after which period many repairs in the construction took place, an account of which, and criticisms upon the building, may be found in Wood's 'Letters of an Architect,' vol. i. At the time of the Revolution, the destination of the building was changed, and it was then called the Pantheon, by which name it is still generally spoken of, although now restored to its original purpose, and the dome, &c. decorated with paintings by Gros and others. Among other buildings by Soufflot may be mentioned the École de Droit (1775) in the Place du Panthéon (which last formed part of his plan for a uniform architectural area round the church), the Orangery at the Château de Menars, the sacristy of Notre Dame, and several private hotels.

SOULIÉ, MELCHIOR-FRÉDÉRIC, one of the most fertile writers of the French Romantic school, was the son of a teacher of philosophy at Toulouse, and was born at Foix, in the department of Ariège, December 23, 1800. In 1808, his father having obtained employment at Nantes, Frédéric Soulié commenced his studies at the Lycée of that city; and afterwards completed them at Poitiers, Paris, and Rennes, so migratory was his early life. In 1820 he accompanied his father to Laval, where the elder Soulié had received an appointment in a public office, and in this office the future novelist laboured also assiduously for several years. The object of his father had been to prepare him for the bar, and young Soulié having spent several years in the study of law, was admitted an avocat, and waited for his briefs, like other barristers. But his inclinations were for literature; he wrote pretty verses for his amusement, his letters already displayed an elegant style, and a vein of exquisite pathos, if not of deep reflection, pervaded all he produced. About the year 1825 his father's desultory life brought the family once more to Paris; when the young

poet published a volume of fugitive pieces under the title of 'Amours Françaises.' The book did not sell; but several of the poems it contained have since been well spoken of. Frédéric Soulié at once took his resolution, and unwilling to trust for his maintenance to literature alone, sought for and accepted a situation as foreman to an upholsterer. In this laborious employment he passed ten hours a day, and at night he devoted one or two more to the production of his first drama, 'Romeo et Juliette.' This play, though founded on the great tragedy of Shakspeare, which consequently afforded its adapter nearly all his materials, took him three years to prepare. Nearly another year was spent in vain endeavours to obtain from the managers permission to read it; at last he was fortunate enough to secure the intervention of Jules Janin, who had read and admired some of his poems, and Soulié's drama was represented with some éclat at the theatre in 1828. From that day he took his place as a man of letters. In 1829 he produced at the Odeon his 'Christine à Fontainebleau,' but it failed; and in 1830 he began to write critical articles for the 'Mercure,' the 'Figaro,' and the 'Voleur,' in all of which his genial spirit sought consolation for his own failure, by his cordial panegyrics of other dramatists. His 'Lusigny,' which was produced at the Théâtre Français in 1831 with better success, was followed in 1832 by his 'Clotilde,' the triumph of which, both on the stage and in the drawing-room, was absolute.

Shortly after his 'Clotilde,' which established his reputation as a dramatic writer, Frédéric Soulié began to contribute a series of romances in the shape of feuilletons to the newspapers. In this new and lucrative class of literature, he became and continued for twelve years, 1833-45, the most popular of French romancists. The 'Deux Cadavres' was published in this form in 1833; the 'Vicomte de Beziers' in 1834; the 'Comte de Toulouse' in 1835; the 'Comte de Foix' in 1836; 'Un flic à Meudon' and 'Deux Séjours: Provence et Paris' in 1837; 'L'homme de Lettres' in 1838. In this manner upwards of thirty fictions, some of them of considerable length, were produced. In 1842 appeared his 'Mémoires du Diable,' the sale of which was immense. It was the universal popularity of this novel which stimulated Eugène Sue to undertake his 'Mystères de Paris.' Soon after this the success of Sue and Dumas in the same class of writing somewhat obscured the fame of Frédéric Soulié, who witnessed their sudden popularity without jealousy. But he never gave up his connection with the newspapers, whose proprietors to the last paid him liberally for his works. In 1846 he bought an estate at Bièvre, where he died September 22, 1847.

SOULT, NICOLAS JEAN-DE-DIEU, MARÉCHAL DUC DE DALMATIE, was born at Saint Amand-du-Tarn, on the 29th of March 1769, or, according to some biographers, in 1765. He was the son of a notary, but not being inclined to follow his father's calling, and having made, it is said, but little progress at college, it was considered best to devote him to a military life, for which he manifested more inclination. Consequently he was allowed to enlist as a private in the regiment of the Royale-Infanterie, on the 15th of April 1785. So slow was his early advancement, that six years after, in 1791, he had reached no higher grade than that of sergeant. In that year he was noticed by old Marshal Luckner, who appointed him to discipline a regiment of volunteers of the Upper Rhine, giving him a commission of sub-lieutenant for that service. The great war shortly after opened new paths to talent, and men of true capacity and courage were no longer prevented, by court favour to high birth and family interest, from ascending by degrees to the highest ranks for which nature had fitted them.

On the 29th of March 1793, Lieutenant Soult obtained credit for his conduct at the combat of Oberfelsheim, under General Custine. In November 1793, Hoche placed him on the staff of the army of La Moselle, when, as captain, Soult led the attack of the left at the battle of Weissenberg, and repulsed a body of Austrians. His next service was in the Palatinate under General Lefebvre, who entrusted him with the post of chief of the staff in the vanguard of his army. In 1794, Soult was created colonel, and was one of the most distinguished officers present at the great battle of Fleurus, June 26. He displayed great skill by his dispositions in this action, and in the very crisis of it, when General Marceau, deserted by his troops, had resigned himself to despair, Soult arrested the panic, and restored the battle. For this feat of arms he was promoted to a brigade, October 11, 1794, in the division of General Harty, and assisted at the blockade of Luxemburg. At the battle of Altenkirchen, in 1796, he commanded the attack of the left against the Austrians, who were entirely defeated. Shortly after this victory, being detached with 500 horse to cover the left of the army at Herborn, he was suddenly hemmed in by the enemy's cavalry, amounting, it is said, to 4000; repulsed seven charges without his ranks being broken; and at length drew off his troop without the loss of a single soldier. This brilliant retreat covered him with honour, and has always been cited among the most memorable actions of the war. His excellent manoeuvres at the battle of Friedberg, in 1796, contributed most effectually to its success. At this epoch, and during the whole period of the Revolution, Soult was a constant frequenter of the clubs, a flatterer of the men then in power, and no voice more loudly denounced the "ancien régime;" conduct which was not forgotten in after days.

In 1799 he joined the army on the Upper Rhine, under Jourdan,

and at the head of the vanguard of the left wing was present and acted with distinguished bravery and ability at the battle of Stockach, March 25. Though the battle was eventually won, after a fierce struggle, by the Archduke Charles and the Austrians, such was the opinion entertained of Soult's skilful conduct, that the Directory promoted him to a division on April 21st, whilst Jourdan, the commander-in-chief, lost credit and command by the same action. Soon after, he found himself under the orders of Massena, who, besides his own army in the Alps, had lately succeeded to the command of that on the Rhine, after Jourdan's disgrace. Under that able general he took part in the battle of Zurich, June 4, 1799, when the Austrians were defeated, and France preserved from invasion. In 1800, when Massena shut himself up in the walls of Genoa, General Soult was one of the most active of its defenders during the siege, distinguishing himself highly in the numerous skirmishes which took place beneath its walls. He was wounded and taken prisoner in one of these sorties, but recovered his liberty after Napoleon's victory of Marengo.

After the battle of Marengo, June 14, 1800, the military command of Piedmont was conferred upon General Soult; who was next despatched with a corps of 15,000 men to occupy the peninsula of Otranto; but after the peace of Amiens, he was superseded in this government by General Saint-Cyr. Soult returned to France during the suspension of hostilities, and though, for some unexplained cause, he was not personally a favourite with Bonaparte, on the recommendation of Massena he became one of the four colonels of the Consular Guard. The rupture between England and France soon followed, and it was General Soult who organised the vast armament collected on the heights of Boulogne, known as the Army of England. Meanwhile, the French Empire had been formed, and so assiduous had been the court paid by Soult to the First Consul during the short period of transition, that although he had served neither in the first campaigns in Italy, 1796-97, nor in that of Egypt, 1798-99, nor even yet fought under Napoleon, nor commanded an army in the field, his name was included in the list of French marshals created at the coronation.

In the campaign of 1805 Marshal Soult obtained still greater distinction; his services at the battle of Austerlitz, December 2, being so efficient, that Napoleon thanked him on the battle-ground, before his whole staff, calling him one of the first of living strategists. Thenceforward, and until the end of the war, he ranked as one of the leading generals of France, to whom the greatest undertakings might be committed when Napoleon himself was elsewhere. With the same success, he took part in the campaigns of 1806 and 1807. After the battle of Jena, October 14, 1806, he defeated Marshal Kalkreuth, captured Magdeburg, and put to flight the Prussian general Blücher, and the Russian General Lestocq. Again he signalled himself at the battle of Eylau, February 8, 1807, and captured Königsberg the same year. He had now been fifteen years in constant service in the field, and had fought under the ablest and most experienced commanders, with all of whom he had enjoyed the same confidence. He had now fully acquired the confidence of Napoleon himself, who for the rest of his career treated Soult as his lieutenant, by honouring him with the chief command he had to bestow after the one he filled in his own person.

When the ambition of the French Emperor had turned towards Spain, Marshal Soult was appointed to command the 2nd corps, with which he was despatched, in November 1808, to attack Belveder's corps of 20,000 men, at Burgos. In this battle, fought on the 10th of November, the Spanish army was defeated, although one of Soult's divisions alone (Maison's) was engaged. Madrid having surrendered to the French, after its fall Napoleon marched against the British army under Sir John Moore, then on its way from Portugal. Marshal Soult was at first directed upon Sahagun; but Sir John Moore, seeing the risk to which he was exposed of being intercepted and hemmed in, lost no time in commencing his retreat upon Corunna. Napoleon was averse to dilatory war, and was moreover unwilling to fatigue the troops under his command unnecessarily; he therefore recalled the marshal, with injunctions to pursue Sir John, and "drive the English into the sea." At the same time Marshal Ney was commanded to support the operation with the 6th corps. Some French generals, and other military historians, with the anxiety so common with them to explain away any failure of the French arms, have, on this occasion severely censured Marshal Soult for inactivity and negligence, "in halting at every defile to collect the sick and loiterers, by which the almost total destruction of the British army," according to them, was prevented. On the other hand, the marshal always expressed his astonishment at the skilful retreat of his enemies. At length, on the 16th of January 1809, the British army, having approached Corunna, the place intended for their embarkation, made a stand, and a bloody engagement ensued. In this action Sir John Moore was mortally wounded, but the French met with a decisive repulse [MOORE, SIR JOHN]. The British troops effected their passage to their ships unmolested by the French, and it was not until the 20th that the Spanish governor capitulated.

Soon after, Marshal Soult entered the Portuguese territory with the 2nd and the 8th corps; and having defeated the Portuguese troops under Romana, he appeared before Oporto, which was carried by storm on the 29th of March 1809. Instead of marching at once upon Lisbon, the marshal lingered at Oporto, where he is said to have con-

ceived the plan of making himself king of Portugal, and to have postponed the interests of his imperial master, whilst indulging this intrigue.

Meanwhile, Wellington had landed, collected his forces, and made his preparations; on the 8th of May, he reached Coimbra with the English army, whilst Beresford at the head of the Portuguese troops was advancing towards Chaves and Amarante to turn the French army. After passing the Douro with his usual boldness and promptitude, Wellington fell upon the marshal, drove him from his position, and captured his sick, his baggage, and almost all his guns. Soult then retreated upon Galicia, with a loss upon his route of 2000 men; whence, after leaving Ney, with his single corps, to defend that province, he continued his retreat to Zamora. The retreat was conducted in a manner creditable to his military talent, but he suffered his troops to commit atrocities on the helpless peasantry which have left an ineffaceable stain on his memory.

After the battle of Talavera, July 28, 1809, Soult was appointed to replace Marshal Jourdan as Major-general of the army in Spain, the chief command being nominally left in the hands of King Joseph, a man without any capacity for war, but faithful and devoted to his brother's plans. On the 19th November 1809, he won the battle of Ocana, and soon after resolved upon an expedition into Andalusia, one of the richest provinces in Spain. Accordingly, in January 1810, he collected a strong army, consisting of four corps, and taking his way through Andujar and Seville, appeared before Cadiz on the 5th of February; but was disappointed of taking the place. Soon after this check, King Joseph returned to Madrid, leaving the marshal in command of the army of the South, consisting of the 1st, 4th, and 5th corps. The year 1810 was almost entirely occupied by the marshal in establishing his position in Andalusia; but the wide cantonments over which his troops were dispersed, constantly exposed them to loss in petty skirmishes with the enemy, who, supported by the strong fortress of Badajoz to fall back upon, had a great advantage over him. In the beginning of 1811, Napoleon, who felt the urgent necessity of supporting Massena in Portugal, ordered Soult to besiege Badajoz. The marshal obeyed; but although he captured the place on the 11th of March 1811, the Prince of Essling, unable to penetrate the strong lines of Torres Vedras, had found it necessary to abandon Portugal.

The departure of Massena having relieved the English army from one of their most formidable opponents, Lord Wellington determined to recapture Badajoz, for which purpose he despatched Beresford to invest it. The siege was opened on the 7th of May 1811; Soult came to its relief, and on the 16th had to fight the battle of Albuera, in which—though by means of his great superiority in numbers he inflicted great loss upon Beresford's army—he was thoroughly defeated. The fall of Badajoz now appeared inevitable, when Napoleon, apprised of Soult's recent defeat, ordered Marshal Marmont, who had superseded Massena in the command of the army of Portugal, to push forward to his support. This movement rendered it necessary for Wellington to raise the siege on the 16th of June. However, in the following spring, encouraged by the capture of Ciudad Rodrigo, Wellington laid siege a second time to the fort of Badajoz, and—though not without terrible loss—the place was carried on the 6th of April 1812. Soult was in consequence compelled to retreat from Seville, his rear-guard being severely cut up at Villa Garcia.

The subsequent defeat of Marmont at the battle of Salamanca (July 22, 1812), and the surrender of Madrid to the British general, compelled Joseph Bonaparte to withdraw behind the Tagus with his army, and Marshal Soult received orders to join him. Accordingly, to his deep regret, he marched out of Andalusia, and on the 10th of November took the command of the three combined French armies stationed on the Tormes. This junction of forces was too powerful to be attacked; Lord Wellington therefore fell back upon Ciudad Rodrigo, with a heavy loss of troops on his route, and went into winter quarters. After his departure from the rich province of Andalusia, which he had occupied for nearly three years, the strongest charges were brought against Marshal Soult for the cruel extortions levied on the people by himself and his agents, and his shameless and unbridled robbery of pictures and articles of value. The reports of military men of every army engaged in the Peninsular war have fully corroborated the charges; while the enormous wealth which he ostentatiously displayed after the peace seemed to indicate that he did not feel the disgrace his atrocious conduct had drawn down upon his name. For a few months during the year 1813 Soult was employed in the German campaign, having been summoned by Napoleon to take the command of his guard, after the death of Marshal Bessières at Weissenfels.

But the disastrous defeat of Marshal Jourdan at Vitoria, on the 21st of June 1813, having threatened, not only the loss of Spain, after an occupation of five years, but the security of the French soil, Napoleon was once more compelled to employ Soult in the Peninsula, though it was not without some sense of shame that he sent him there. Accordingly, in July, Soult returned to Spain as commander-in-chief of the French armies. Then followed the most arduous period in his career; and although—overmatched by the genius of Wellington—nearly every enterprise was a failure, and every battle a defeat, we cannot refuse to Soult the credit due to resolute perse-

verance and dauntless bravery. The fall of Pampeluna, the battles of San Marcial and Sorauren, succeeded, in all of which the marshal was worsted; then he took up a strong position on the banks of the Bidassoa, but was driven from it by the leader before whom so many marshals had succumbed. The losses of Napoleon in Champagne required some relief, and thousands of Soult's veterans were drafted off; his German troops deserted him. Still, wherever the ground enabled him to defend himself the marshal formed a new position. First, he fortified himself on the Nivelle; driven from that river, he took up a new position on the Nive, whence his impetuous enemy dislodged him; but without being depressed, he offered the English battle at St. Pierre, and was again defeated. Wellington had at last entered the French territory in the south, whilst in the north Napoleon was falling back before the allied armies. But even then he did not despair. A truce of a few weeks was forced upon the opposing armies after November, when both sought winter quarters. But early in February 1814 the war was renewed. The battle on the Adour, the battle of Orthes, the battle of Tarbes, succeeded each other, and were lost by the marshal. To complete his embarrassment, he had been informed of the surrender of Bordeaux to the Bourbons, and the subsequent capitulation of Paris. Yet, even when the three allied armies were in possession of the capital, when Lyon had submitted, when so many marshals and generals were deserting Napoleon at Fontainebleau, he fell back upon Toulouse, and formed that admirable position which not even the impetuous valour of British troops could force without a carnage so fearful as almost to balance their own victory. The loss of the French was however more than commensurate, and their defeat was complete. This was Soult's last and the greatest of his battles; it was fought with consummate skill, April 10, 1814, eleven days after the fall of Paris: Soult evacuated Toulouse on the 11th.

On the escape of Napoleon from Elba, Soult, who had attached himself to the restored king, and who was then in office as minister of war, published an order of the day, March 8, 1815, calling on the army "to rally round their legitimate and well-beloved sovereign, and resist the adventurer, who wanted to seize again that usurped power of which he had made so pernicious a use." But on the 25th of March he saw the emperor at the Tuileries, was easily reconciled to him, and accepted the post of quarter-master-general to the army preparing to open the campaign. In this quality he was present at the battle of Waterloo, on the 18th of June 1815. Soult was banished from France in July; but in 1819 he was once more permitted to return, and his baton was restored to him. Charles X. showed him great favour throughout his reign: he created him a peer on the 5th of November 1827. During the reign of Louis-Philippe he was made Minister of War, Ambassador Extraordinary to Queen Victoria's court at her coronation, and on two occasions President of the Council, or prime minister. Whilst filling this office for the second time, in September 1847, he wrote to the king requesting leave to resign. His request was granted; but in order to mark his appreciation of the services of the marshal, Louis-Philippe re-established in his favour the ancient but disused dignity of Marshal-General of France, which had not been borne by any subject since the death of Marshal Turenne. From that time the marshal went to live in retirement, to which he confined himself more closely still after the revolution of February 1848. His health and strength had long been severely shaken; the marshal grew worse during the year 1851, and breathed his last at the castle of Soult-Berg, on the 26th of November in that year. After his death his splendid gallery of Spanish pictures collected by him during his Spanish campaigns was sold by auction, and realised a very large sum: several of the best of these pictures are now in the Imperial Galleries of France. The *'Mémoires du Maréchal General Soult, duc de Dalmatie, publiés par son fils. 1ère partie. Histoire des guerres de la Révolution,'* appeared in 3 vols. 8vo, with an atlas, Paris, 1854.

\* SOUTH, SIR JAMES, F.R.S., L. & E.; Hon. M.R.I.A., F.L.S., F.R.A.S., the eminent astronomer, is the eldest son of a chemist and druggist who carried on business in Blackman Street, Southwark, was educated for the medical profession, received the diploma of the Royal College of Surgeons of London, and practised as such for some years. But he was devoted to astronomical science, and possessing visual organs of remarkable sensibility and accuracy, he acquired distinction as an observer. In the year 1820, he assisted in founding the "Astronomical Society of London," which, during his occupation of the Chair, received a charter from the crown, and became the "Royal Astronomical Society." On the 15th of February, 1821, he was elected a Fellow of the Royal Society.

In the Report of the Council to the Sixth Annual General Meeting of the Astronomical Society, February 10, 1826, prior to stating the award of the Gold Medal to Mr. (now Sir) John F. W. Herschel [HERSCHEL, SIR JOHN F. W.] and Mr. South, for their laborious and valuable researches and observations relative to double stars, is the following passage:

"The indefatigable ardour of Mr. South in the cause of Astronomy, induced him to follow up his researches on the same subject whilst he was in France; and he has recently made a communication to the Royal Society of some new observations, of equal, if not superior importance, and which will appear in a subsequent volume of the

'Philosophical Transactions.'" On the same occasion, the late Mr. Baily [BAILY, FRANCIS], then president, in his address on presenting the medals, stated that Mr. Herschel having determined to follow up the intentions of his father, by a review of all the double stars inserted in his catalogues, Mr. South, "being disposed to pursue the same inquiry, suggested the plan of carrying on their observations in concert, and, with the aid of two excellent achromatic telescopes, belonging to the latter, they employed the years 1821, 1822, and 1823 in this research. The result of their labours was presented to the Royal Society, and published in the 'Philosophical Transactions' for 1824 at the expense of the Board of Longitude." The number of double stars observed jointly by these two astronomers amounted to 380, many thousand measurements of distance and position having been made to obtain accurate results. In his personal address to Mr. South, Mr. Baily said, "The ardent zeal which you have always evinced in the cause of astronomy, the patience and perseverance which you have shown in conducting so many and so valuable observations, of no ordinary kind, and the skill and accuracy which you have displayed in these delicate measurements, are subjects that are duly estimated by this Society. Possessed of a princely collection of instruments, of exquisite workmanship and considerable magnitude, such as have never yet fallen to the lot of a private individual, you have not suffered them to remain idle in your hands, but have set an example to the world how much may be done by a single person, animated with zeal in the cause of science." The "new observations" alluded to by the Council in the Report, consisting of the apparent distances and positions of 458 double and triple stars, were published in the 'Philosophical Transactions' for 1826. For this "noble series of measures" as they were termed by Sir J. F. W. Herschel, the Council of the Royal Society awarded the Copley medal, which was presented to Mr. South, accordingly, by the president, Sir Humphry Davy, at the anniversary meeting of November 30, 1826. About this period he removed his collection of instruments to the Observatory at Campden-Hill, Kensington, London, where he still resides.

At the annual meeting of the Astronomical Society on February 8th, 1828, Mr. South, as one of the vice-presidents, addressed the Society on presenting the gold medal to Miss Caroline Herschel, the sister of Sir William, and the aunt of Sir John Herschel, for her observations and discoveries in astronomy during half a century, the office of president being then filled by the latter. In the same year he was again associated with Sir John in the endeavour to verify M. Schwabe's observation of the inequality of the dark space between the body of the planet Saturn and its ring. This however they were unable to do; but the superior micrometrical means in the possession of M. Struve enabled him to confirm the accuracy of Schwabe.

The views which were entertained by certain cultivators of natural knowledge, shortly after the first quarter of the present century had elapsed, respecting the alleged decline in this country not merely of the public encouragement of science, but of science itself, were deeply participated in by Mr. South. He contemplated, in consequence, about 1830, a removal to France, whither he intended to transport his collection of instruments. He wrote to the French government on the subject, and received a grant of free ingress and egress, without the payment of any duty or even the examination of his packages. But this intention was arrested by the patriotic conduct of the English government. King George IV., shortly before his demise, had signified to the late Sir Robert Peel "his intention of taking the first opportunity of marking his high sense of Mr. South's honourable and disinterested zeal in the cause of science, and especially of his unwearied and successful exertions to perfect and increase our knowledge of the position, distances, and relations of the heavenly bodies." On the accession of William IV., accordingly, the honour of knighthood was conferred upon him (on the 21st of July 1830), and the letter from Sir R. Peel just cited was accompanied by another, intimating the pleasure of that monarch that the sum of 300*l.* per annum should be placed at Sir James South's disposal, "to be applied by him to the promotion of astronomy." Sir R. Peel expressed in this letter his own desire that the country should bear some portion of the enormous expense which Sir J. South had incurred in pursuing his researches; not, he said, with a view of depriving Sir James of the honour and reputation which such services insured, but "to relieve the country from the charge of perfect indifference to subjects of a scientific nature."

Sir J. South had taken an active part in the discussions which had, for some years, taken place with Dr. Young [YOUNG, THOMAS], on the state of the 'Nautical Almanac,' just complaints of which had been made, as not keeping pace with the progress of astronomy and navigation. After the decease of Dr. Young, which occurred in 1820, pending these discussions, the Board of Admiralty requested the opinion and advice of the Astronomical Society on the alterations and additions that it would be proper to make in the national work alluded to. The Society appointed a numerous committee to consider the subject, of whom a sub-committee undertook the practical details; of this sub-committee Sir J. South was an active member. The result, as is well known, was the production of the present 'Nautical Almanac,' which is fully worthy of our national pre-eminence in nautical astronomy and navigation, and with which, even for pure astronomy, only the French 'Connaissance des Temps' and the Berlin Astronomical Ephemeris are alone comparable.

In February 1829, Sir James was elected President of the Astronomical Society, which office, in conformity with the statutes, he held for the two following years. During this term, as already stated, the Society received its charter; and while occupying this conspicuous position, Sir James became the possessor by purchase from M. Couchoux of Paris, of an object-glass of eleven inches and three-quarters in diameter, of exquisite perfection and corresponding power. We refrain from entering here into the history of the series of unfortunate circumstances and painful discussions, to which this acquisition eventually led; it must suffice to say that, in consequence of them, scarcely any observations made with this beautiful lens have been recorded.

In the years 1831 and 1832 he communicated to the Royal Society two papers on the extensive atmosphere of the planet Mars, which were published in the 'Philosophical Transactions' for those years.

The following communications by the subject of this notice are inserted in the 'Memoirs of the Royal Astronomical Society':—"Observations on the best mode of examining the double or compound Stars; together with a Catalogue of those [479 in number] whose places have been identified' (produced in due preparation for the author's own observations of these objects); 'Observations on the Collimation Adjustment of a Transit Instrument,' &c. Vol. iii., 'On the Occultation of  $\delta$  Piscium by the Moon; references to recorded Observations of Occultations, in which peculiarities have been apparently seen, either at the Moon's limb, or upon her Disk; with an Enquiry into Hypotheses on the subject.' (To the interesting subject of which this paper gives a general view, as then known, the results of Professor Hansen's recent investigations on the structure of the moon, indicating a possible constitution of her atmosphere, which might give rise to the peculiarities in question, would appear to impart a new interest.) Vol. iv., 'Observations of Cache's Comet.' Vol. v., other communications.

For some years he communicated to the 'Annals of Philosophy,' tables of the mean places of certain stars, important in practical astronomy, and he is also the author of similar communications to the 'Quarterly Journal of Science and the Arts,' formerly conducted by Professor Brande. In addition to the British societies indicated in the title of this article, Sir James South is a member of the Imperial Academy of Sciences of St. Petersburg, and of the Royal Society of Sciences of Brussels.

\*JOHN F. SOUTH, brother to Sir James, one of the surgeons of St. Thomas's Hospital, sometime President of the Royal College of Surgeons of England (London), is the author of a 'Description of the Bones,' 'Dissector's Manual,' a valuable popular guide in cases of accidental injury, entitled 'Household Surgery, or Hints on Emergencies,' and of some zoological works.

SOUTH, ROBERT, D.D., was the son of Mr. South, an eminent London merchant. He was born at Hackney, in Middlesex, in 1633. In 1648 he was a king's scholar in the college of Westminster, at which time Dr. Busby was master of the school. He read the Latin prayers in the school on the day of the execution of Charles I., and prayed for his majesty by name; apparently an indication that even then he had embraced those principles of attachment to the established form of government in church and state, of which he was all through his long life a most strenuous and able champion. In 1651 he was admitted a student of Christchurch, Oxford, having been elected at the same time with John Locke. In 1655, in which year he took his degree of Bachelor of Arts, he wrote a copy of Latin verses for the purpose of congratulating Oliver Cromwell on the peace which he had made with the Dutch. Those who have reflected upon South for this compliment to the Protector, need to be informed that the copy of Latin verses was a university exercise of the kind which was then usually imposed on bachelors of arts and undergraduates. He met with some opposition to taking his degree of Master of Arts, in 1657, from Dr. John Owen, who then filled the place of dean of Christchurch, and was favourable to the principles of those who were then in power. In 1658 South was ordained by a deprived bishop, and in 1660 he was made University orator, for which he was perhaps partly indebted to his excellent sermon preached before the king's commissioners, entitled the 'Scribe Instructed.' (Matth. xiii. 52.) After describing the qualifications of a scribe as the result of habitual preparation, by study and exercise, he takes the opportunity of observing on the qualifications of the sectarists then lately in power, and this passage is a good sample of the kind of warfare which he carried on to the end of his life against those who dissented from the ecclesiastical constitution as established by law, and also of his style. The teachers of those days, he says, "first of all seize upon some text, from whence they draw something (which they call doctrine), and well may it be said to be drawn from the words, forasmuch as it seldom naturally flows or results from them. In the next place, being thus provided, they branch it into several heads, perhaps twenty or thirty or upwards. Whereupon for the prosecution of these, they repair to some trusty concordance, which never fails them; and by the help of that they range six or seven scriptures under each head; which scriptures they prosecute one by one: First amplifying and enlarging upon one for some considerable time, till they have spoiled it; and then that being done, they pass to another, which in its turn suffers accordingly. And these impertinent and unpremeditated enlargements they look upon as the motions, effects, and breathings of the spirit, and therefore much

beyond those carnal ordinances of sense and reason, supported by industry and study; and this they call a saving way of preaching, as it must be confessed to be a way to save much labour, and nothing else, that I know of." The Chancellor Clarendon made South his domestic chaplain, in consideration of an oration delivered by South as public orator on the occasion of Clarendon being installed chancellor of the University of Oxford. In 1663 he was made a prebendary of Westminster, and took his degree of Doctor in Divinity; and in 1670 he was made a canon of Christchurch, Oxford.

Charles II. having appointed Lawrence Hyde, son of the Chancellor Clarendon, and afterwards Earl of Rochester, as ambassador extraordinary to congratulate John Sobieski on being elected king of Poland, the ambassador took South with him as his chaplain. South had been his tutor, and Hyde was much attached to him. A long letter from South, dated Danzig, December 16th, 1677, to Dr. Edward Pococke, Regius Professor of Hebrew in Oxford, contains his remarks on Poland: it is printed in the volume of his posthumous works. This letter, from a man of South's observation and ability, is a very curious and valuable historical record. He says that Sobieski spoke Latin with great facility, and was acquainted with French, Italian, German, and Turkish, besides his own language. Altogether the doctor formed a high opinion of Sobieski's abilities. South's remarks on the ecclesiastical state and constitution of Poland are marked by his usual penetration and good sense.

Soon after his return from Poland, South was presented to the rectory of Islip in Oxfordshire by the dean and chapter of Westminster. He rebuilt the chancel of the church, as appears from a Latin inscription over the entrance; and also the parsonage-house. In 1681 he preached before Charles II., being then one of his majesty's chaplains in ordinary, on these words, "The lot is cast into the lap, but the disposing of it is of the Lord." This sermon, which is a good specimen of his vehement invective, contains the following singular passage, which is not much in favour of the doctor's good taste, particularly considering the occasion:—"And who that had beheld such a bankrupt beggarly fellow as Cromwell, first entering the parliament-house with a threadbare-torn cloak and greasy hat (perhaps neither of them paid for), could have suspected that in the space of so few years he should, by the murder of one king and the banishment of another, ascend the throne." On which the king fell into a violent fit of laughter, and turning to Lord Rochester, said, "Ods fish, your chaplain must be a bishop, therefore put me in mind of him at the next death." But the chaplain did not preach in order to please those in power, or with a view to promotion in the church. He would not take any preferment either during the reign of Charles or James, or after the Revolution of 1688, though he was often pressed to accept the highest dignities in the church.

South strongly disapproved of all James's measures towards the restoration of the Roman Catholic religion, being a most zealous upholder of the Protestant Church. But he had also strong opinions of the duty of submission to his lawful prince; and accordingly, when the Archbishop of Canterbury and the bishops who signed the invitation to the Prince of Orange to come over, wanted him to do the same, he replied that "His religion taught him to bear all things; and however it should please God that he should suffer, he would, by the divine assistance, continue to abide by his allegiance, and use no other weapons but his prayers and tears for the recovery of his sovereign from the wicked and unadvised councils wherewith he was entangled." On the abdication of James and the settlement of the crown on the Prince and Princess of Orange, South at first made some opposition, but ultimately he acknowledged the new government; yet he would accept nothing, though certain persons when in power offered to exert themselves in his behalf on the vacating of several of the sees by the bishops who refused the oath of allegiance to King William and Queen Mary. He declared "that notwithstanding he himself saw nothing that was contrary to the laws of God and the common practice of all nations to submit to princes in possession of the throne, yet others might have their reasons for a contrary opinion; and he blessed God that he was neither so ambitious, nor in want of preferment, as for the sake of it to build his rise upon the ruins of any one father of the church who, for piety, good morals, and strictness of life, which every one of the deprived bishops were famed for, might be said not to have left their equal."

South did not like the Act of Toleration, and he vigorously exerted himself with the commissioners appointed by the king in 1689 for a union with dissenting Protestants, in behalf of the Liturgy and forms of prayer, and entreated them to part with none of its ceremonies. He continued to preach against dissent, exposing the insufficiency of the dissenting ministers, and pouring forth upon them his inexhaustible sarcasm, ridicule and contempt. One of his strongest sermons to this effect was preached in the Abbey Church of Westminster in 1692, on the text, "Now there are diversities of gifts, but the same spirit" (1 Cor., xii. 4). His controversy with Dr. Sherlock, then dean of St. Paul's, who had written a book entitled 'A Vindication of the Holy and Ever-blessed Trinity,' was carried on with great power of argument, and infinite wit and humour, more indeed than suited the solemnity of the subject. South was admitted to have the better in the discussion. The king at last interposed by his royal authority, by directions addressed to the archbishops and bishops, that no

preacher should in his sermon or lecture deliver any other doctrine concerning the Trinity than what was contained in the Holy Scriptures, and was agreeable to the three Creeds and the Thirty-nine Articles of Religion. A ballad, which was much circulated at the time, beginning—

“A dean and prebendary  
Had once a new vagary,” &c.

turned the two combatants into ridicule, together with Dr. Burnet, master of the Charter-House, who, about the same time, published his ‘Archæologia.’

South lived till the 8th of July 1716. He was buried in Westminster Abbey near the grave of his old master Busby. Neither children nor wife are mentioned by his biographers. By his will he disposed of a good deal of his property for charitable purposes, having all through life been a most generous giver. The residue, after the legacies and charities were satisfied, he gave to his executrix Mrs. Margaret Hammond, his housekeeper, who had lived with him above five and thirty years. There is a *Life of South* in a volume of his ‘Posthumous Works,’ London, 1717, which is the authority for what has been stated. This volume also contains three of his sermons, his will, and his Latin poems and orations delivered in his capacity of public orator in the University of Oxford.

Though South is only known by his sermons, he must be viewed both as a political and a theological writer. He defended by argument and by his example he enforced, passive obedience and the divine right of kings. He says that the “absolute subjection” which men yield to princes comes from “a secret work of the divine power.” He believed the Church of England to be perfect, and the express image of the primitive ordinances. Many of his sermons are directed against the Puritans, whom he attacks with the keenest wit and the bitterest sarcasm. According as a man’s affections are disposed, he will view South as a furious bigot, or as an uncompromising defender of the state and the church as established.

As a writer he is conspicuous for sound practical good sense, for a deep insight into human character, for liveliness of imagination, and exuberant invention, and wit that knew not always the limits of propriety. In perspicuity, copiousness, and force of expression he is almost unrivalled among English writers; and these great qualities fully compensate for the “forced conceits, unnatural metaphors, absurd similes, and turgid and verbose language which occasionally disfigure his pages.” With all his faults he was a truly honest man, a firm friend, and a generous benefactor. The sincerity of his principles is shown in the purity of his life, and the vigour of his understanding is stamped on all that he wrote.

SOUTHCOTT, JOANNA, was born in Devonshire about the year 1750, of humble parents. She was employed, chiefly at Exeter, as a domestic servant, and up to the age of forty or thereabouts seems to have aspired to no higher occupation; but having joined the Methodists, and become acquainted with a man of the name of Sanderson, who laid claim to the spirit of prophecy, the notion of a like pretension was gradually communicated to Joanna. She appears to have first put forth her claims to the character of a prophetess in 1792. She wrote prophecies, and she dictated prophecies, sometimes in prose and sometimes in rhymed doggerel; her influence extended, and the number of her followers increased; she announced herself as the woman spoken of in the 12th chapter of Revelations, and obtained considerable sums by the sale of seals, or sealed packets, which were to secure the salvation of those who purchased them. Her confidence increased with her reputation, and she challenged the bishop and clergy of Exeter to a public investigation of her miraculous powers, but they treated her challenge with contemptuous neglect, which she and her converts imputed to fear. By degrees Exeter became too narrow a stage for her performances, and she came to London on the invitation and at the expense of Sharp the engraver. [SHARP, WILLIAM.] She was very illiterate, but wrote numerous letters and pamphlets, and her prophecies, nearly unintelligible as they were, had a large sale. In 1803 she published ‘A Warning to the whole World, from the sealed Prophecies of Joanna Southcott, and other Communications given since the Writings were opened on the 12th of January 1803,’ 8vo, London. In 1804 appeared ‘Copies and Parts of Copies of Letters and Communications written from Joanna Southcott, and transmitted by Miss Townley to Mr. W. Sharp in London.’ In 1813-14 she published ‘The Book of Wonders, in Five Parts,’ 8vo, London; and also, in 1814, ‘Prophecies concerning the Birth of the Prince of Peace, extracted from the works of Joanna Southcott,’ 8vo, London. Of the Prince of Peace she announced that she was to be delivered on the 19th of October 1814, at midnight, being then upwards of sixty years of age. There was induced the external appearance of pregnancy, and in consequence the enthusiasm of her followers, who are said to have amounted at that time to not fewer than 100,000, was greatly excited. An expensive cradle was made, and considerable sums were contributed, in order to have other things prepared in a style worthy of the expected ‘Second Shiloh.’ On the night of the 19th of October a very large number of persons assembled in the street where she lived, to hear the announcement of the looked-for advent; but the hour of midnight passed over, and the crowd were only induced to disperse by being informed that Joanna had fallen into a trance. On the 27th of December 1814, she died, having a short time previously

declared that “if she was deceived, she was at all events misled by some spirit, either good or evil.” Her body was opened after her decease, and the appearance which had deceived her followers, and perhaps herself, was found to have arisen from dropsy. Dr. Reece, one of the medical men by whom she had been examined, and who had publicly expressed his belief in her pregnancy, published, ‘A correct Statement of the Circumstances that attended the last illness and Death of Mrs. Southcott; by Richard Reece, M.D.,’ London, 1815. The number of her followers continued to be very great for many years after her death; they believed that there would be a resurrection of her body, and that she was still to be the mother of the promised Shiloh. There are still (1857) believers in Joanna Southcott. At the census of 1851 there were in England four congregations of persons holding this belief: the attendance at their four places of worship on the census Sunday (March 30, 1851) was in the morning 68, and in the evening 198 persons.

SOUTHERN, THOMAS, an English dramatist, was born at Oxmantown, in the county of Dublin, in 1660. He was admitted a student of Trinity College, Dublin, in his seventeenth year, March 13, 1676, and in 1678 entered the Middle Temple, London. Preferring poetry to law, he became a popular writer of plays, the first of which was the ‘Persian Prince,’ acted in 1682: in the character of the Loyal Brother in this drama, a compliment to the Duke of York was intended, according to the biographer of Southern, in the *Life* prefixed to his works, 1774. At the time of the Duke of Monmouth’s landing Southern served in the king’s army as ensign in Lord Ferrers’s regiment, and was afterwards presented with a company by the Duke of Berwick, to whom he had been recommended by Colonel Sarsfield. At the duke’s request he wrote the ‘Spartan Dame,’ which however was not acted till 1721. For the copyright of this play he received 120*l.*—a large sum in those days. After quitting the army Southern continued to write plays, enjoying great popularity as an author, and living on terms of intimacy with those of his contemporaries most distinguished for wit or rank. Dryden, for whom he finished the play of ‘Cleomenes,’ and afterwards Pope, were among his friends. Southern died on the 26th of May 1746, at a very advanced age.

In the delineation of character, the conduct of plots, and all the niceties of dramatic art, Southern shows but little skill; he is neither imaginative, as were the elder English dramatists, nor witty in his comic dialogues, like Congreve and others, his contemporaries. But his language is pure, and free from affectation; his verse has a pleasant fluency, and he has been successful in the expression of simple and natural pathos, particularly in the last scenes of the ‘Fatal Marriage,’ a tragedy which has been much and deservedly admired, and which was popular on the stage in the last century, under the title of ‘Isabella.’ Some of his plays were published by Tonson, 12mo, 1721, a complete edition of his works in 1774; they consist of comedies, and of tragedies with an infelicitous mixture of comic scenes. There is a short account of Southern prefixed to this edition, and in the prefaces to the plays are a few particulars of his life, stated by himself. He is wrongly inserted in the ‘*Athenæ Oxonienses*’ by Wood. See his *Life* in that work, ed. Bliss, where will be found a letter from Southern to Dr. Rawlinson, denying that he ever was at Oxford. See also Malone, ‘*Life of Dryden*,’ i. 176.

SOUTHEY, ROBERT, was the second but eldest surviving son of a linen-draper in Wine-street, Bristol, where he was born on the 12th of August 1774; but from his second year he lived chiefly at Bath, in the house of an aunt, Miss Tyler—a lady of very eccentric habits, and possessed with a perfect passion for the theatre, of whom he has given an amusing description in his autobiographic sketch. His first teacher was a Baptist minister named Foote, to whose school at Bristol he was sent when he was six years old, and who treated him with much cruelty. He was next sent to a Mr. Flower, at Corston, near Newton St. Loe, where, he says, “one year of my life was spent with little profit, and with a good deal of suffering. There could not be a worse school in all respects;” though Flower himself he describes as “a remarkable man, worthy of a better station in life, but utterly unfit for that in which he was placed.” He then went to another Bristol school, kept by a Mr. William Williams, a Welshman. At last, in 1788, he proceeded to Westminster School (having first been placed for preparation with Mr. Lewis, a clergyman in Bristol, for a brief space), the expense of his education from this time being borne by the Rev. Herbert Hill, chaplain to the British Factory at Lisbon, a brother of his mother. From Westminster School he was dismissed however in 1792. A periodical called the ‘*Flagellant*’ had been started by Southey and some of the other youths in the upper classes of the school, and in the ninth number was printed a sarcastic attack upon corporal punishment, then practised with great severity in the school. The head-master, Dr. Vincent, immediately commenced a prosecution for libel against the publisher, upon which Southey avowed himself the author, and offered an apology; but the master was implacable, and Southey, though he had made a distinguished reputation in the school, was ignominiously dismissed. About the same time his father’s affairs became hopelessly embarrassed, and the old man died broken in spirit a few months later. Southey’s uncle did not however desert him: in January 1793 he went up to Oxford, but the Dean of Christchurch (Cyril Jackson) refused to admit him, on account of his dismissal from Westminster, and he was entered of

Balliol College, his uncle's intention being that he should enter the Church. But the treatment he met with from those in authority was little adapted to fit him for a college life; and it was almost unavoidable that his enthusiastic temperament should precipitate him into the so-called liberal opinions both in religion and politics which the French revolution, yet in its morning of promise, had spread both in France and in this country. He went to the extreme of free-thinking on both subjects; and in 1794 he left Oxford, with neither the discipline nor the learning of which he was very favourably impressed. "Two things only," he used to say, "he learned at Oxford—to row and to swim." But he worked hard and read much while there, and if he derived little from his tutors he gained much from his own labours. He had moreover already become a most indefatigable writer of verse. In one of his letters, written during a temporary absence from college, in December 1793 (some time after the completion of 'Joan of Arc'), he says "I have accomplished a most arduous task, transcribed all my verses that appear worth the trouble, except letters. . . . Upon an average 10,000 verses are burnt and lost, the same number preserved, and 15,000 worthless." He had already at least commenced the course of almost unparalleled industry which he maintained as long as his faculties lasted. But the future was dark before him. With his present sentiments he could not enter the Church, and he could not expect much further aid from his uncle. His strong political opinions shut him out from any public employment, and from indulging the hope of much success in any profession. It was in these circumstances that the 'pantisocratic' scheme was started. He and a fellow-townsmen, a young Quaker named Robert Lovell, published in this same year a volume of poems, under the names of Bion and Moschus. It was just before this too that Southey became acquainted with Coleridge. Lovell had married a Miss Fricker of Bristol; and in November 1795 Southey and Coleridge on the same day united themselves to her two sisters. The three, with two college friends of Southey, had formed a plan to go out together to the wilds of North America, and there to set up what they called a 'Pantisocracy,' in which they were to live without either kings or priests, or any of the other evils of Old World society, and to renew the patriarchal or the golden age. But this fancy was never even attempted to be practically carried into effect. The friends were without money, and their grand scheme necessarily came to an abrupt close. For awhile Southey supported himself by delivering public lectures on history in Bristol. Cottle the bookseller gave him 50 guineas for his unpublished 'Joan of Arc,' and he set hard to work to compose more verses, by which he now calculated he should be able to maintain himself according to his present modest hopes. A visit of his uncle to England removed Southey from his precarious position. On his return to Portugal Mr. Hill took Southey with him; but after a stay of six months he came back to England, his uncle having found it impossible to alter his resolution against entering the Church, though he seems by this time to have become reconciled to her doctrines. His journey however had been the means of turning the current of his thoughts, and it had enabled him to lay the foundation of his knowledge of the language and literature of Spain and Portugal, which afterwards proved of so much value to him.

He returned to Bristol in the summer of 1796, and having stayed there long enough to prepare for the press his volume of 'Letters from Spain and Portugal,' he, in the following February, removed to London, and entered himself a student of Gray's-inn. For a little while he fancied that he should make a lawyer, but he did not for a day relinquish his poetic studies. We find him (March 1797) writing to his friend Cottle, "I advance with sufficient rapidity in Blackstone and Madox. I hope to finish my poem and begin my practice in about two years." In little more than two years he had finished his poem, but all of law he ever acquired had been ended long before. After about a year's trial he gave up the pursuit as utterly impracticable, and he began to think seriously of literature as his occupation. His uncle however invited him to make another visit, with his wife, to Lisbon, and he made good use of his stay there in extending his acquaintance with the literature of the south. Meanwhile his friends had been trying to find some official appointment for him, and shortly after his return to England in 1801 Mr. Rickman obtained him the post of private secretary to Mr. Corry, at that time chancellor of the exchequer for Ireland, with a salary of about 350*l.* a year, of which half was specified as travelling expenses. His office required his presence in Dublin, but its duties were extremely light, and after awhile Mr. Corry proposed to add as a make-weight the tuition of his son; but as this was an employment for which he had not bargained and had little inclination, Southey threw up, after holding it in all little over six months, what he called "a foolish office and a good salary," and determined to trust to literature for his support. From the booksellers he now found little difficulty in obtaining employment enough, in reviewing and the like, to enable him to satisfy his still modest wants, and to assist the relatives who were even less prosperous than himself. He about this time too collected and edited an edition of Chatterton's works, for the purpose of providing a fund for Chatterton's sister, Mrs. Newton, who, with her family, was in very distressed circumstances. The edition was published by Southey's friend Cottle in three volumes at the close of 1802, and the friends had the delight of knowing that Mrs. Newton obtained 300*l.* through

their generous labours. This was however only one of a long list of noble yet thoroughly unostentatious services of a similar kind which Southey willingly rendered, when he thought that labour and effort would be usefully bestowed.

In 1804 he established himself at Greta Hall, near Keswick, Cumberland, and there he spent the remaining forty years of his life. Coleridge was already living with his family at Greta Hall, and Wordsworth at Rydale, near Ambleside, some fourteen miles distant; whence the three poets came to be for many a year commonly spoken of as the Lake poets—though their poetry had in truth not much in common. Coleridge however after a very irregular residence eventually left Keswick in September 1803, never to return, though his wife and children remained under Southey's hospitable roof; which also sheltered his wife's other sister, Mrs. Lovell, who had recently been left a widow, and who remained an inmate of Southey's house till his death.

Long before this time Southey had abandoned his democratic creed, and taken up with one diametrically opposite. For all the rest of his life, as is well known, he was an ardent, uncompromising, and somewhat intolerant monarchist and churchman, promulgating and maintaining doctrines, both ecclesiastical and political, which were in some respects even something beyond conservative.

Having now fairly adopted literature as his profession, he devoted himself to it with a resolute and untiring industry, of which in the biography of English literary men there is scarcely a parallel. He says, writing about this time to a friend: "My actions are as regular as those of St. Dunstan's quarter-boys. Three pages of history [of Portugal] after breakfast (equivalent to five in small quarto printing); then to transcribe and copy for the press, or to make my selections and biographies [for 'Specimens of the English Poets'], or what else suits my humour till dinner-time; from dinner-time till tea I read, write letters, see the newspaper, and very often indulge in a siesta. . . . After tea, I go to poetry [he was now writing the 'Curse of Kehama'], and correct and rewrite and copy till I am tired, and then turn to anything else to supper. And this is my life." And such his life continued to be, "finding his highest pleasure and his recreation in the pursuits necessary for earning his daily bread" as long as he could guide a pen. The following list of his publications shows the result of this steady unbroken diligence,—to make the list complete, we have included those which he wrote prior to his settlement at Keswick, though some of them have been already mentioned:—

In 1794, 'Poems,' in conjunction with his friend Lovell, 1 vol. 8vo.—1795, 'Joan of Arc,' an Epic Poem, 4to.—1797, 'Minor Poems,' 2 vols. 8vo.; 'Letters written during a short residence in Spain and Portugal,' 1 vol. 8vo.—1799 and 1800, 'The Annual Anthology' (a miscellaneous collection of poetry, of which he was the editor and principal writer), 2 vols. 8vo.—1801, 'Thalaba the Destroyer, a Metrical Romance,' 2 vols. 12mo.—1803, 'Amadis de Gaul' (a prose translation from the Spanish version by García Ordoñez de Montalvo of that romance, which Southey contends to have been originally written in Portuguese by Vasco de Lobeira), 4 vols. 12mo.; the works of Thomas Chatterton (in conjunction with Mr. Amos Cottle, the 'Life,' originally printed in the second edition of the 'Biographia Britannica,' being by Dr. G. Gregory), 3 vols. 8vo.—1805, 'Metrical Tales and other Poems,' 8vo.; 'Madox, a Poem, in Two Parts, 4to.—1807, 'Specimens of the Later English Poets, with Preliminary Notices,' 3 vols. 8vo.; 'Palmerin of England,' translated from the Portuguese, 4 vols. 8vo.; 'Letters from England' by Don Manuel Velasquez Espriella (pseudonymous), 3 vols. 12mo.; 'Remains of Henry Kirke White, with an account of his Life,' 2 vols. 8vo.—1808, 'The Chronicle of the Cid, Rodrigo Diaz de Bivar, from the Spanish,' 4to.—1810, 'The Curse of Kehama,' a poem, 4to.; 'The History of Brazil,' vol. i. 4to.—1812, 'Omniana,' 2 vols. 8vo.—1813, 'Life of Nelson,' 2 vols. 8vo.—1814, 'Carmen Triumphale for the commencement of the year 1814, and Carmina Aulica,' 'Odes to the Prince Regent, the Emperor of Russia, and the King of Prussia,' 1 vol. 4to.; 'Roderick, the last of the Goths,' 4to.—1815, 'Minor Poems,' (re-arranged, &c.) 3 vols.—1816, 'The Lay of the Laureate,' 'Carmen Nuptiale' (a poem on the marriage of the Princess Charlotte), 12mo.; 'A Poet's Pilgrimage to Waterloo,' 8vo.; 'Specimens of Later British Poets,'—1817, 'Wat Tyler, a Dramatic Poem' (written in a vein of ultra-Jacobinism, in 1794, and now surreptitiously published), 12mo.; 'A Letter to William Smith, Esq., M.P.' (on the subject of the preceding publication), 8vo.; 'Morte d'Arthur (a reprint of Sir Thomas Malory's prose romance, with Introduction and Notes,' 2 vols. 8vo.; 'History of Brazil,' vol. ii. 4to.—1819, 'History of Brazil,' vol. iii. 4to.—1820, 'Life of John Wesley,' 2 vols. 8vo.—1821, 'A Vision of Judgement' (a poem in English hexameters), 4to.; 'The Expedition of Orsua and the Crimes of Aguirre' (partially printed in 1812, in the Second Part of the Third Volume of the 'Edinburgh Annual Register,' (for 1810), 12mo.—1822, 'Remains of Henry Kirke White,' vol. iii. 8vo.—'History of the Peninsular War,' vol. i. 4to (an expansion of what had been originally published in the 'Edinburgh Annual Register,' 1810, &c.).—1824, 'The Book of the Church,' 2 vols. 8vo.—1825, 'A Tale of Paraguay' (a poem), 12mo.—1826, 'Vindiciæ Ecclesiæ Anglicanæ,' &c., 8vo.—1827, 'History of the Peninsular War,' vol. ii. 4to.—1829, 'Sir Thomas More; or Colloquies on the Progress and Prospects of Society,' &c., 2 vols. 8vo.; 'All for Love, or the Sinner Well Saved,' and 'The Pilgrim to Compostella, or A Legend of a Cock and a Hen,'

12mo.—1830, 'Life of John Bunyan,' prefixed to an edition of the 'Pilgrim's Progress.'—1831, 'Attempts in Verse by John Jones; with Introductory Essay on the Lives and Works of our Uneducated Poets,' 8vo; 'Selections from the Poems of Robert Southey, Esq. LL.D.,' 12mo; 'Select Works of British Poets, from Chaucer to Jonson, edited with Biographical Notices,' 1 vol. royal 8vo.—1832, 'Essays, Moral, and Political,' 2 vols. 8vo; 'Selections from Southey,' Prose, 12mo; 'History of the Peninsular War,' vol. iii. 4to.—1833, 'Naval History of England,' vol. i. 12mo. (in Lardner's 'Cabinet Cyclopædia'), completed in 5 vols. 1840.—1834, 'Dr. Watts's Poems, with a life of the Author' (in Cattermole's 'Sacred Classics'), 12mo; 'The Doctor' (anonymous), vols. i. and ii. 8vo.—1835, 'The Doctor,' vol. iii. 8vo; 'The Works of William Cowper, with a Life of the Author,' vol. i. 12mo, completed, in 15 vols. in 1837 and 1838.—1837, 'The Poetical Works of Robert Southey,' collected by himself, 10 vols. 12mo; 'The Doctor,' vols. iv. and v., 8vo.

To these works, making in all above a hundred volumes of various sizes, are to be added numerous papers (his son gives a list of 126) upon history, biography, politics, morals, and general literature, published in the 'Quarterly Review,' to which he was a constant contributor from its establishment in 1809, till head and hand would work no longer. He also wrote for some years the historical portion of the 'Edinburgh Annual Register,' and contributed other matter to that work, which began to be published in 1810, and was discontinued in 1824. He likewise wrote 52 papers in the first four volumes (1802-5) of the 'Critical Review,' and three in the 'Foreign Quarterly.' After his death there appeared 'The Doctor,' vols. 6 and 7, edited by his son-in-law the Rev. J. Wood Warter, who has likewise edited a reprint of that work in 1 vol. 8vo, 1847; 'Oliver Newman, and other Fragments,' edited by his son-in-law the Rev. H. Hill, 1 vol. 8vo, 1845; 'Robin Hood,' a fragment, published by his widow in 1847; and the first volume of the 'Life of Dr. Andrew Bell,' completed by his son in three volumes. He was besides one of the most regular and voluminous of letter-writers. Of the large collections formed by his friends, some appeared in Robberd's 'Memoirs of the Life and Writings of William Taylor, of Norwich,' 2 vols. 8vo, 1843; and a very large number more were embodied in Southey's 'Life and Correspondence,' but a still more complete collection has been undertaken by Mr. Warter, of which four volumes appeared in 1856 under the title of 'Selections of the Letters of Robert Southey,' &c. To complete the idea of his wonderful literary industry however it is necessary to mention that not only was he a most regular and omnivorous reader, but that he used to make extracts from all he read with the diligence of the dustiest of collectors. From these voluminous collections (which he had already largely employed in the notes to his poems, his 'Omniana,' and still more profusely in the mosaic pages of his 'Doctor'), Mr. Warter has formed and published four thick volumes (sq. 8vo, double columns), under the title of 'Southey's commonplace Books,' consisting of vol. i., 'Choice Passages;' ii., 'Special Collections;' iii., 'Analytical Readings;' and iv., 'Original Memoranda.'

In 1807 Southey received a pension for literary services, amounting to 160*l.* a year clear, which he set aside to meet the premiums on an insurance which he now effected on his life. In November 1813, on the death of Mr. Pye, Southey was appointed poet-laureate; and in 1821 he received the degree of LL.D. from the University of Oxford. In 1835 a pension of 300*l.* a year was bestowed upon him by the government of Sir Robert Peel. Sir Robert had offered him a baronetcy; but his circumstances did not permit him to accept of it, and for the same reason he had also more than once declined being brought into parliament. Indeed till he received his last pension, with all his industry he had only been able, as he expressed it, "to live from hand to mouth." He lost his first wife in 1837, she having been for many years suffering from mental alienation; and he contracted a second marriage on the 4th of June 1839, with Miss Caroline Bowles, a lady long well known in the literary world, and of whom a brief notice will be found below. But soon after this his hitherto incessantly active and probably overtasked mental faculties began to give way, and he sank into a condition which gradually became one of deeper unconsciousness till death removed him, on March 21, 1843. He left a son and three daughters. His valuable library, in its way almost unrivalled, was afterwards disposed of by auction in London.

As a poet, Southey can hardly be placed in the first rank even of the poets of his own time. Wordsworth and Coleridge, Shelley and Keats, Byron and Scott, Moore and Crabbe, and Campbell, whatever differences of opinion there may be as to their relative merits or their positions in reference to one another, will be generally admitted to have each and all evinced more or less of a *mens divini* which was wanting in him. The light which was original and self-sustained in them, seemed, even when it shone the strongest, to be only reflected light in him. In mere fertility he was equal to any of them; but his mind, although a teeming, was not an inventive or creative one. It returned manifold the seed deposited in it, but communicated to it comparatively little of any new nature or quality. His imagination might even be said to be both opulent and gorgeous; still there was wanting the true spirit of life—that which distinguishes a real thing from a painted show. No natural human voice coming from the poet himself animated his verse; but rather an artificial sound, as from a

flute or an organ. Such poetry may be both beautiful and majestic; but it fails permanently to interest, and will not live; for there is nothing so alien from and so fatal to poetry as any admixture of the mechanical. It acts like a dead substance imbedded in a living body. Witness such an instance as that of Darwin, who however was almost immeasurably inferior to Southey. There is in truth much rhetorical splendour in parts of Southey's poetry, especially in his 'Curse of Kehama,' and in his 'Roderick,' and some of his ballads and other shorter pieces, flowing on as they do in the easiest and purest English, are very happy.

In his prose writings the great merits of his style show to all advantage. It is essentially a prose style, and one unsuited to poetry, at least to poetry of a high order, by some of the very qualities that constitute its characteristic excellence. Its facility and fluency, running into some degree of diffuseness; its limpid perspicuity; its equability and smoothness; even its very purity, are unsuited for the passion, the rapidity, the boldness, the novel combinations of poetry. Both in its merits and in its defects Southey's style may be compared to glass, which perfectly transmits the light, but refuses to conduct the lightning. It does not often rise to any splendour of eloquence; it has little or no brilliancy of any kind; but whether for narrative, for exposition, or for animated argumentation, it was perhaps the most effective English style of the time. It combines in a remarkable degree a somewhat lofty dignity with ease and idiomatic vigour, and is equally pliable to the expression of sprightly and playful as of severe and indignant sentiment.

He certainly was not nearly so great a thinker as he was a writer. He had little subtlety of intellect, and he took rather a passionate than a reasoning view of any subject that greatly interested him. Much of his political and economical speculation is now probably regarded as altogether wrong-headed, even by the most ardent of his admirers. But there can be no question that he was thoroughly honest and in earnest in whatever opinions he at any time professed. He was, by the universal testimony of those to whom he was best known, of a sincere, generous, high-minded nature, and in all the relations of private life a man worthy of the highest estimation.

(*Life and Correspondence of Robert Southey*, edited by his son, the Rev. Charles Cuthbert Southey, M.A., 6 vols., 1849-50; and *Southey's Writings*.)

CAROLINE ANNE SOUTHEY (better known as CAROLINE BOWLES), the second wife of Robert Southey, was the only child of Captain Charles Bowles, of Buckland, near Lymington, Hampshire, where she was born December 6, 1787, and where she spent the whole of her days, with the exception of the four years of her married life. Her early days spent in the comparative solitude of a retired village of the New Forest, and a feeble state of health, induced a morbid shrinking from society, which she never in later life endeavoured to shake off, even when her poems had made her name widely known, and her friendship eagerly sought after. Miss Bowles first appeared before the public as an authoress in 1820, when her poem 'Ellen Fitz-Arthur' was published, but without her name. Indeed it was not till many years later that any of her works were issued with her name, though their authorship was no secret in literary circles. In 1822 she published 'The Widow's Tale, and other Poems;' in 1826 'Solitary Hours' (prose and verse); and in 1829, in two volumes, 'Chapters on Churchyards,' which had already appeared in 'Blackwood's Magazine,' where they had excited much interest. In June 1839, as already mentioned, Miss Bowles was married at Boldre Church, in the New Forest, to Robert Southey. Some twenty years before, and whilst they were quite unknown to each other, a literary correspondence had commenced between them, and it was continued with little interruption, their mutual respect gradually strengthening into warm friendship. Their marriage was a melancholy one, at least for the lady. Southey's mental faculties were already beginning to fail, and they soon gave way altogether. But she never permitted a murmur to escape her at her heavy lot. During his few remaining years she ministered to him with unwearied devotion, and her devotedness deserved a somewhat different notice than the ungenerous reference made to it in Mr. Cuthbert Southey's life of his father. She survived her husband somewhat over ten years, but her health had entirely broken down under her affliction, and her last years were years of constant suffering. She found at first occupation in completing a poem on Robin Hood, commenced by Southey, which she published in 1847, and afterwards in collecting her husband's letters, which have since been edited by Mr. Warter. The poetry of Caroline Bowles is of a kind that will always give pleasure to persons of a reflective turn of mind, but is scarcely fitted for continuous popularity. It is tender, graceful, and, though somewhat melancholy, pervaded by a fine moral tone; but it is diffuse, and wanting in strength of thought and passion.

SOUTHWELL, NATHANIEL, became a Jesuit in 1624, and twenty-four years afterwards was made secretary to the general of the Order, which office he held during seventeen years. He died at Rome in 1676, in which year he published his continuation of the Jesuits' 'Library,' 'Bibliotheca Scriptorum Societatis Jesu, Opus inchoatum à R.P. Petro Ribadeneira, et productum ad Annum 1609; continuatum à Philippo Alegambe ad Annum 1643; recognitum et productum ad Annum 1675, à Nathanaelo Sotwello,' Rome, folio, 1676. Southwell's continuation is considered inferior to that of Alegambe. The work

was afterwards continued by Oudin, who commenced his task in 1733, and performed it to the general satisfaction of the Society.

SOUTHWELL, ROBERT, descended from an ancient family in Norfolk, was born in 1560. He was educated on the Continent, and in 1578 entered the Society of Jesuits at Rome. In 1585 he was appointed prefect of the English Jesuits' College in that city, and was soon afterwards sent to England as a missionary. He resided chiefly with Anne, countess of Arundel, who was imprisoned in the Tower of London, and died there. Southwell was apprehended in July 1592, and was strictly examined by Queen Elizabeth's agents as to a supposed plot against the queen's government. No disclosures could be obtained from him, and he was committed to the Tower, where, in the course of three years, he is said to have been ten times subjected to the torture. At length he admitted that he was a Jesuit, and that he came to England for the purpose of making proselytes to the Roman Catholic faith. By an act passed in 1585 (27 Eliz., c. 2) an Englishman who was a Jesuit and refused to take the oath of supremacy was declared to be guilty of treason. It was probably under this act that, on the 20th of February 1595, he was brought to trial in the Court of King's Bench. Our authorities however do not state what was the precise charge against him, but he was found guilty, was condemned to death, and on the following day was executed at Tyburn. His demeanour was firm, he declared that he was proud to profess himself a Jesuit, and thanked God that he had been called upon to suffer martyrdom. His writings, which are both in prose and verse, were once very popular among the Roman Catholics. He writes rather elegant English for the age in which he lived, but the matter will hardly repay the trouble of perusal, at least to Protestants.

Southwell's principal works are the following:—'A Consolation to Catholics imprisoned on account of Religion,' and a 'Supplication to Queen Elizabeth,' London, 1593; 'St. Peter's Complaint; with other Poems,' 1593; 'Mœonia; or Certain excellent Poems and Spiritual Hymns,' 4to, 1595, 4to 1600, 12mo, 1620, 1630, 1634; 'The Triumph over Death,' 1595, 1596; 'A Short Rule of Good Life,' 8vo; 'Mary Magdalen's Funeral Tears,' 1609; 'Epistle of Comfort to those Catholics who lie under Restraint,' 8vo, 1605; 'Peter's Complaint,' 'Mary Magdalen's Tears,' and the 'Triumph over Death,' were printed together in 8vo, London, 1620.

SOUTZO. [SUTZOS.]

SOUESTRE, EMILE, one of the most able writers of the modern French school, was born at Morlaix, in Brittany, on the 15th of April 1806. His father was an engineer officer employed in repairing the roads and bridges of his district. Educated at the college of Pontivy until he had reached the age of seventeen, he began to evince a decided taste for literature. But his father's death in 1823 induced him to select the bar as his profession. He therefore studied the law, and in 1827 was formally received as an advocate at Rennes. He soon however grew weary of waiting for practice and proceeded to Paris, with a strong determination of setting up as an author. His first efforts in this way were not encouraging. Having written a drama, the 'Siege of Missolonghi,' it remained unnoticed at the theatres until M. Alexandre Duval, a Breton like himself, and already known as a successful dramatist, supported him with his interest. After this his tragedy was read, accepted at the Théâtre Français, and put into the prompter's hands. But then came the 'censure' with its pruning knife, and such was the mutilation of his piece, as to scare the very managers who had before applauded it. Thus disappointed of his hopes, he returned to his family, and being left without resources, accepted a situation as shopman with M. Mellinet, a bookseller at Nantes. In this situation he was living when the July revolution of 1830, and the fall of Charles X., gave so much stimulus to the young generation.

He began in 1830 to write for the provincial press, and in 1832 was appointed managing editor to a liberal journal published at Brest. Whilst living with M. Mellinet, Emile Souvestre was frequently noticed by the customers who frequented the library, for his unobtrusive good sense, and one of these, the deputy Luminais, a gentleman devoted to the reform of national education, conceived a friendship for him. The deputy soon perceived that Emile Souvestre felt an unusual interest in the same object, and having founded a school at Nantes, for the illustration of his new plan, he entrusted the management of it to young Souvestre, and another youthful reformer, M. Papot, under whom its success was from the first decided. In 1835 M. Souvestre was made régent de rhétorique at the college of Mulhouse, in Alsace; he did not however continue many months in this situation.

For several years he had been quietly collecting materials to produce a work on his own province, to which he was extremely attached. This he did in 1836, under the title of 'les Derniers Bretons,' a book which at once established his name. It is one of the best descriptions of Brittany, full of vivid yet unexaggerated painting, and affords a just idea of the customs, manners, and literature of the "Wales of France." His 'Echelle des Femmes' appeared at the same time, and was likewise successful. Encouraged by this change of fortune, Emile Souvestre returned to Paris to fix himself there. He was then thirty, and his future lot was decided.

For the next twelve years, 1836-48, he took a prominent part in the 'rédaction' of the 'Révue de Paris,' and the 'Révue des Deux Mondes;' he also contributed many notices and feuilletons to the

'Temps,' the 'National,' the 'Siècle,' and the 'Journal du Commerce.' His style is very pleasing; his matter thoughtful and instructive. His articles, tales, and books have none of the levity, or persiflage, so lamentably common in too many of his countrymen in the present day; they may be taken up with full reliance on their taste and tendency. Among his numerous writings may be cited: his 'Voyage dans le Finistère,' 'La Maison Rouge,' 'Le Mat de Cocagne,' 'Pierre et Jean,' and 'Les Confessions d'un Ouvrier.' This last especially is a work of incontestable value, full of maxims of the soundest character, especially as relates to the industrious classes. He has also produced several successful dramatic pieces, amongst others: 'Le Filleul de tout le Monde,' 'Le Riche et le Pauvre,' 'Henri Hamelin,' 'Ainée et Cadette,' 'L'Oncle Baptiste,' 'Maitresse et Fiancée,' and 'Un Enfant de Paris.' He is also the author of a good history of the Revolution of 1848.

In 1848, Emile Souvestre, who never lost sight of the principle of educational reform, was appointed by M. Carnot, then minister of public instruction, a lecturer in one of the schools established for the civil service. He likewise gave gratuitous lectures in the evenings to large audiences, consisting of working men and their families. These lectures were well calculated to produce a beneficial effect, and were always crowded.

In 1853 he spent the summer months in lecturing in the principal towns in Switzerland. These lectures were also very successful. He seemed to have found a new vocation, and had begun to diffuse new and more rational ideas among a class, who do not always think for themselves, when his health gave way, and death put an end to his useful labours, on the 5th of July 1854. Having married a second time, he left behind him a widow and three daughters.

SOUZA, JEAN DE, was born at Damascus in Syria, in 1730, of Roman Catholic parents. He came to Lisbon with some French Capuchins in 1750, and was there protected by the house of Saldanha. Gaspar Saldanha presented him to the Marquis of Pombal, who appointed him interpreter and secretary to the embassy which Joseph I. sent in 1773 to the Emperor of Morocco. He was often employed in such negotiations, and always acquitted himself with credit. The queen having founded a chair for the Arabic language in the University, named Souza professor, and he composed for it the Grammar which is still in use. He was made correspondent of the Royal Academy of Sciences, and retiring to the convent of Jesus, died there on the 29th of January 1812.

SOUZA-BOTELHO, DOM JOSE-MARIA, was born at Oporto March 9th, 1758. His father was governor-general of the province of St. Paul in Brazil. Souza was educated at the University of Coimbra, and in 1778 he entered the army, where he served till 1791. He was then nominated ambassador-plenipotentiary to Sweden. From Stockholm he passed in 1795 to Copenhagen in the same capacity. His father's death recalled him in 1799 to Lisbon. He was next sent on a mission to England, but the object of his mission was frustrated by the French not admitting him to the congress at Amiens in order to look after the interests of Portugal. On the general peace in 1802, Souza went to France as plenipotentiary, and stayed there till 1805, where he had every possible exercise for his diplomatic ingenuity. It was a perilous position; and, disgusted with public affairs, he resolved to confine his attention to literature, for which he had always manifested a strong disposition. Camoens, the pride of Portugal, had ever been his favourite author, and he resolved on producing an edition of his works which should be a lasting monument. He spared neither time, trouble, nor expense. He corresponded with all the learned, and after twelve years' labour he had the satisfaction of completing it in 1818. He prefixed a dedication to the king of Portugal, a mass of curious bibliographical researches, and a critique on Camoens, where in his editorial enthusiasm he extols Camoens over all modern poets, and even implies that he equals Homer and Virgil. He formed the project of writing a History of Portugal, but his declining health only allowed him to finish some fragments of it. He died in 1819.

SOUZA, MANUEL FARIA E, was born at Souto in Portugal, in 1590, of a noble and ancient family. He manifested great precocity, and when nine years old was sent to the university of Braga, where he distinguished himself. In 1605 he was taken as secretary by one of his powerful relations, and then commenced his diplomatic education. In 1618 he married and went to Madrid; but though well recommended, his rough manner hindered his advancement at court. In 1632 he was sent on an embassy, under the Marquis Castel Rodrigo, to Rome, where his learning attracted the attention of Urban VIII. and the men of letters at the pontifical court. Having some quarrel with the marquis, he quitted him and returned to Spain; but he was arrested at Barcelona by order of the marquis, and was only released by the powerful intercession of some friends. He then renounced politics, and devoted himself exclusively to literature. Such was his activity, that he himself states that he daily wrote forty-eight pages, each page containing thirty lines; and he possessed such rhetorical facility that in one day he could compose a hundred addresses of congratulation and condolence, all different from each other. (Bouterwek, 'Hist. of Port. Lit.,' 278.) He obtained a small pension from Philip IV., and the cross of chevalier; but to his pen he trusted for subsistence. He died in 1649, at Madrid. His manners were very eccentric, and his dress the same: among his other peculiarities it is

mentioned that neither the entreaties of his wife nor of his friends could prevail on him to cut off an immense beard which rendered him very conspicuous. He was proud, independent, and vehement, but affectionate and amiable.

As a poet Souza ranks high in Portugal, though most of his works are written in Spanish; but his works are little relished by foreigners, nor have they been translated. His talents were vitiated by the bad taste of the age. He was but a reflex of the extravagances and conceits of Lope de Vega, Marino, and Gongora. Prodigious facility and fertility of images and rhymes he certainly displays, but they are of themselves vices when not corrected by a refined judgment. Most of his ideas are intolerably fantastic, as where he speaks of the "ten lucid arrows of crystal which were darted from his Albania's eyes, which produced a rubious effect on his pain, though the cause was crystalline;" yet he sometimes hits a very fanciful image, as where he says of his mistress's eyes, "Love has written my fate in the beauty of those eyes, which are as large as my pain and dark as my destiny."—

"Ojos, en cuya hermosura  
Cifro mi suerte el Amor,  
Grandes como mi dolor,  
Negros como mi ventura."

But when we add that he wrote six hundred sonnets, besides eclogues, and all in this strained fanciful style, it may be conceived how tedious his works became.

As a critic he has been long revered as an oracle—"De ser venerado por Oraculo," says Machado; but an inspection of his treatises on the sonnet and on poetry will show the worthlessness of them. They are curious evidences of what a nation will consent to as regards criticism. Souza also published a 'Commentary on the Lusiad,' which is interesting for the same cause as his treatises, and which Bouterwek thinks "a production more calculated to obscure than illustrate the original." Souza's works are—1, 'Discursos Morales y Politicos,' Madrid, 1623; 2, 'Commentarios sobre la Lusitada,' 1639; 3, 'Defensa por los Comentarios sobre la Lusitada,' 1640; 4, 'Rimas varias de Luis de Camoes, comentados por Manuel de Faria y Souza,' Lisbon, 1635; 5, 'Epitome de las Historias Portuguesas,' 1626; 6, 'Europa Portuguesa,' 1666; 7, 'Imperio de la China, y Cultura Evangelica por los Religiosos de la Compania de Jesus,' 1643; 8, 'Fuente de Aganipe, varias Rimas,' 1646.

SOYUTL, a philosopher, called by Wüstenfeld ('Geschichte der Arabischen Aerzte und Naturforscher,' 8vo, Göttingen, 1840, p. 156) ABUL-FADHL ABD EL-RAHMAN BEN ABU BEKR BEN MOHAMMED JELAL ED-DIN EL-SOYUTI, or OSYUTI, was born on the 1st of Rajeb A.H. 849 (2nd of October A.D. 1445), at Cairo. He received a good education, so that in his fifteenth year he entered the academy, where he heard the most distinguished teachers, and at the same time began to give instruction himself in some departments. He was most deeply versed in the exposition of the Korán, the criticism of traditions, jurisprudence, and the syntax of the Arabic grammar. His studies embraced almost all the sciences; but he himself confesses that his knowledge of medicine was very slight and superficial, and to attempt to solve a mathematical problem seemed to him as if he were obliged to carry a mountain: notwithstanding this, he composed some works on medical subjects. He was so voluminous a writer, that the number of his writings is said to have amounted to 560; of these however some are said to have consisted of a single sheet, many were nothing more than a pamphlet, and others were only extracts and compilations from larger works. His extensive learning is duly acknowledged by his contemporaries, but at the same time he is justly reproached for being too much taken up with himself, and thinking himself equally raised above the scholars of his own time and his predecessors. Although on this account he had few friends, he succeeded in being appointed professor at the Academia Sheichunia, A.H. 872 (A.D. 1467), as his father had been before him; and besides other appointments, he afterwards received also the professorship at the Academia Bibarsia. However, he was deprived of the latter appointment A.H. 906 (A.D. 1500), and when it was offered him again, A.H. 909 (A.D. 1503) he refused it. He died on the 18th of Jomada I. A.H. 911 (17th of September A.D. 1505).

The following list of such of his works as relate to medicine, or have been published, is given by Wüstenfeld:—1, 'Codex Animalium,' an extract out of Demiri's 'Historia Animalium,' with a sketch of the medical uses to be obtained from animals, and an appendix; printed in Latin, with the title 'De Proprietatibus et Virtutibus Medicis Animalium,' ed. Abraham Ecchellensis, Paris, 1647; and again, with remarks by John Eliot, London, 1649, or Leyden, 1699. 2, 'Inscriptio Codicis de Nominibus Animalium,' a continuation of the former. 3, 'Tractatus de Febre ejusque Speciebus.' 4, 'Revelatio Nubis de Praestantia Febris.' 5, 'Hortus Mundus de Puritate à Menstruis.' 6, 'Via Plana et Loca Adequationis Irriguna, de Dietis, Factisque Mohammedia ad Medicinam Spectantibus.' 7, 'Liber Classium Virorum qui Korani et Titulorum Cognitione excelluerunt, Auctore Abu Abdalla Dahabio, in Epitomen coegit et continuavit Anonymus, e Cod. Goth.,' ed. H. F. Wüstenfeld, Göttinge, 1833; the Anonymous author is Soyuti. 8, 'Conversatio Pulchra de Historia Misrae et Cahire; Fragmenta quaedam Auctore Ghal-eddino Sojuthensi e Cod. Upsal. excerpt. Car. Joh. Tornberg,' Upsalia, 1834. 9, 'Sojuthi Liber de

Interpretibus Korani,' ed. Alb. Meursinge, Lugdun. Batav., 1839. 10, 'Veth liber as-Sojuti de Nominibus,' 2 parts 4to, Lugd. Bat., 1840-42, and 'Veth Supplementum annot. in lib. as-Sojuti cont. nov. codd. collat. exc. ex. As-Sam,' anio et Ibn 'I-Athiro,' 4to, ib., 1850. 11, 'Sayuti's Itqan on the exegetic Sciences of the Quran, in Arabic, edited by Mawlawies Bah-rood-Deen and Noorool-Haqq, with an Analysis by Dr. A. Sprenger,' in the 'Bibliotheca Indica' of the Asiatic Society of Bengal, 10 fasc. published, Calcutta, 1854, &c. Wüstenfeld considers that the work translated by Reynolds, with the title 'History of the Temple of Jerusalem,' by Jalal Addin al-Siuti, 8vo, Lond., 1836, is not to be attributed to the subject of the present article.

SOZOMENUS, HERMIAS, called by some of Salamis in Cyprus, otherwise named SALAMANES HERMIAS SOZOMENUS, or HERMIAS, son of Sozomenus, a church historian of the 5th century, was born in Palestine, probably at Gaza. He was educated in a monastery, and, after studying law at Berytus, went to Constantinople, where he practised as an advocate, and also wrote in Greek his 'Church History,' which consists of 9 books, and embraces a period of 117 years, from A.D. 323 to 439. He is superior to his contemporary Socrates in his style, which is modelled upon that of Xenophon; but in other respects there is such a close resemblance between the works that Sozomenus, who was the younger of the two, is supposed to have seen the work of Socrates, and to have used it without acknowledgment. He sometimes mentions facts that are not in Socrates; but these are generally of little importance, and relate chiefly to the hermits and monks, of whom he expresses unbounded admiration. He is deficient in judgment, and makes many chronological errors. His ninth book relates chiefly to political history. Sozomenus lived in the reign of Theodosius II., to whom he dedicates his History. He had previously written an epitome of church history from the ascension of Christ to the defeat of Licinius, which is not now extant.

The history of Sozomenus is printed with all the editions of Socrates.

(Valesius, *De Vit. et Script. Socratis et Sozomeni*; Lardner, *Credibility*; Schoell, *Geschichte der Griechischen Literatur*, vol. iii., p. 517.)

SPA'DA, LIONELLO, a distinguished painter, both in fresco and in oil, of the early part of the 17th century, and one of the best colourists of the Bolognese school. He was born in Bologna, of very poor parents of the labouring class, in 1576. He was employed whilst a boy as a colour-grinder by the Caracci; but through an observing mind and an ambitious disposition, he was led himself to attempt design, and incited to an endeavour to emulate the great works by which he was surrounded. He at first copied in the school of the Caracci, but afterwards became the scholar of Baglione, and contracted a friendship with his fellow-scholar Dentone. From Dentone Spada learnt perspective, and most probably acquired that correct taste and true feeling for chiaroscuro for which his works are conspicuous, and which prevented him from being carried away by the hard contrasts of Caravaggio, when he adopted the style of that master.

Stung by a contemptuous remark of Guido's upon a picture that he had painted, Spada determined to avenge himself by opposing a bold and natural style to the delicate and ideal style of Guido. He accordingly went to Rome and became the scholar of Caravaggio, who then, as the rival of Cesari, was at the height of his reputation. Spada accompanied Caravaggio to Malta, and returned to and established himself at Bologna, master of a new style much after the manner of Caravaggio; as bold as Caravaggio's, but less vulgar, and softer and more harmonious. His design is natural, though not choice; his chiaroscuro powerful and rich; his colouring brilliant and true, though rather red in the shadows, but this may be the effect of time, for Malvasia appears to have considered him unsurpassed as a colourist.

Spada's works were much admired by Tiarrini, with whom he painted in competition several times; but some of his rivals in Bologna contemptuously styled him 'La Scimia,' or the ape of Caravaggio. He however soon earned the reputation of being one of the best painters of his time, and he received several orders for great works in Reggio, Modena, Parma, and other neighbouring cities; and in consequence of the successful execution of these works, Spada was appointed his court painter by Ranuccio, duke of Parma. His fortune now equalled his reputation, and he spent the remainder of his life, which was however not a long one, at the court of Ranuccio. He appears to have been of a very humorous and satirical disposition (many specimens of his humour are recorded by Malvasia), and presuming upon the great esteem and friendship of the duke for him, he made himself much disliked by the courtiers and nobles of Parma; and upon the sudden death of Ranuccio by apoplexy, Spada found himself deserted. This appears to have had a great effect upon his mind, and although in the prime of life, he shortly followed the duke to the grave. He died in 1622, in the forty-sixth year of his age.

Spada superintended the decorations of the celebrated and at that time unrivalled theatre of Parma. The generality of his compositions are half-figures, of the natural size, after the manner of Caravaggio and Guercino. Holy Families by Spada are not rare in the galleries of Bologna and Lombardy; the Execution of John the Baptist was also a favourite subject of his. His masterpiece is generally con-

sidered to be the great picture of 'San Domenico burning the proscribed Books of the Heretics,' in the church of that saint at Bologna. The following works also gained him great reputation:—'The Miracle of St. Benedict,' at the monastery of S. Michele in Bosco, a picture which so pleased Sacchi when he saw it that he took a sketch of it; 'Susannah at the Bath,' and the 'Return of the Prodigal Son,' at Modena; a 'Madonna,' at Reggio; and a 'St. Jerome,' and a 'Martyrdom of a Saint,' at Parma: the two last pictures are painted more in the style of the Caracci than any of his earlier works. Spada wrote verses, some specimens of which have been preserved by Malvasia. He left several scholars, and has had some imitators; Pietro Desani of Bologna, and Orazio Talamì and Sebastiano Verzellesi of Reggio, were the most distinguished.

SPAGNOLETTI. [RIBERA.]

SPALDING, JOHANN JOACHIM, was born on the 1st of November 1714, at Triebsee, in Swedish Pomerania, where his father had a school, and was afterwards appointed preacher. Young Spalding studied at the universities of Rostock and Greifswalde; and although theology was the department to which he chiefly devoted himself, he paid great attention to other branches of learning. In 1745 he was appointed secretary to the Swedish embassy at Berlin; but he remained in this post only for two years, as he preferred the office of preacher at Lassahn, in Swedish Pomerania, which was offered to him. In 1757 he was appointed to the office of prepositus and first preacher at Barth; and it was about the same time that he began his numerous theological works, which are no less distinguished for clearness of style than of thought, and were received with general approbation. Owing to the reputation which he gained as an author and an orator, he was in 1764 appointed first pastor and provost to the Nicolaikirche at Berlin, where some time afterwards he was also elected a member of the chief consistory. In this new and extensive sphere of action he showed so much mildness of character combined with dignity that he won the affection and veneration of all who came in contact with him. Through his sermons however he exercised the greatest influence: they were full of deep feeling and profound thought; and in point of style they ranked, and still rank, among the best specimens of German pulpit oratory. There is little in them that will remind a reader that Spalding lived at a time when the German language was just entering upon its new career of development. In 1788, when the king Frederic William II., instigated by Wöllner and others of the mystic and pietistic party, issued an edict (Religions-edict) condemning all freedom of thought in religious matters, Spalding, who belonged to the opposite party, was in some degree obliged to resign his offices. This firm adherence to his principles raised Spalding still higher in public estimation: he spent the last years of his life in retirement. He died on the 2nd of March 1804, at the age of ninety.

The works of Spalding are very numerous: they are partly on philosophical and ethical subjects, and partly on theology. The principal, which have all gone through several editions, are—'Ueber die Bestimmung des Menschen,' Greifswalde, 1748; 'Gedanken über den Werth der Gefühle in dem Christenthum,' Berlin, 1761; 'Ueber die Nutzbarkeit des Predigtamtes,' Berlin, 1772; and 'Religion eine Angelegenheit des Menschen,' Berlin, 1797. His sermons were published in various collections at several times. The 'Life of Spalding' was written by himself, and edited with notes by his son Georg Ludwig, Svo, Halle, 1804.

SPALDING, GEORG LUDWIG, son of the former, was born in 1762, at Barth. He was educated at one of the gymnasia of Berlin, under Büsching. From 1779 to 1781 he studied philology and theology at the universities of Göttingen and Halle. He continued his studies in private after he had left the universities; and in order to improve his knowledge, he undertook a journey through Germany, Switzerland, France, England, and Holland. On his return to Berlin he was appointed tutor to the children of Prince Ferdinand of Prussia, and in 1787 he obtained a professorship at the gymnasium Zum grauen Kloster in Berlin. The Religions-edict, on account of which his father had given up his offices, induced the son, who held the same opinions, to abandon the study of theology altogether, and to devote himself entirely to philology. In 1792 he obtained from the University of Halle the degree of Master of Arts; and on this occasion he wrote a dissertation, 'Vindiciæ Philosophorum Megaricorum,' &c. A short time after a Leipzig publisher requested him to revise the text of Quintilian, and to prepare a new edition of this writer. Spalding agreed, thinking that the work could be accomplished in a short time; but when he had once entered upon his task he found much more to do than he had anticipated; and that it was necessary, if the work was to be done well, to devote all his time to it. This was indeed henceforth the great object of his life. In order that he might not be disturbed in his work, he even refused the directorship of his gymnasium, which had become vacant, and was offered to him. In 1803 he was elected a member of the Berlin Academy. In 1805 he made a journey to Italy in order to collate a Florentine manuscript of Quintilian. During the latter part of his life he held the high office of counsellor in the ministry for public instruction. He died in 1811, after he had spent the greater part of the last nineteen years of his life upon the critical study of Quintilian; and yet the work was not finished at his death, for only the first three volumes had been published at Leipzig, in the years 1798, 1803, and 1808; the remaining

two volumes were edited by Buttman and Zumpt, 1816 and 1829. Spalding has not written much, but what he has done is masterly. He was a man of very mild though lively temperament, and beloved and esteemed by men like Buttman and Niebuhr. A memoir, or rather eulogium, on Spalding by Buttman, was printed in the 'Transactions of the Berlin Academy of 1814 and 1815.'

SPALDING, SAMUEL, was born in London on the 30th of May, 1807. He furnished an example of success attendant on the persevering pursuit of knowledge, in the absence of any remarkable ability or aptness for its attainment. According to the testimony of his friends, it was only by means of great labour that he could perform his daily tasks while at school; though his steady application, resulting very much even at this early period of his life from a sense of duty, the effect of moral and religious training, enabled him to acquire himself with great respectability; and the moderate estimate he always entertained of his own powers appears to have done much towards forming those habits of unremitting application which constituted one of the strongest features of his intellectual character. At a suitable age he was placed in a mercantile house; but his mind soon became too deeply interested in the study of theology to allow him to entertain the idea of spending his life in a secular profession. He now examined the evidences of Christianity with the most assiduous care, and the work of Dr. Chalmers on this subject, together with the discourses of the same writer on the relation of revelation to the discoveries of modern astronomy, inspired his mind with such elevated views of the grandeur of Christianity and the expansive benevolence of its design, that he resolved to devote himself to the pastoral office in the religious connection to which he belonged, that of the Congregational Dissenters. He consequently applied himself to study with fresh ardour, though he had to contend with a naturally feeble constitution, in which there is little doubt that the seeds of organic disease early existed.

With a view to promote his object of qualifying himself for the ministry, Spalding devoted his time, for two years, to the study of the Greek and Latin languages, in private; and afterwards entered as a student at University College, London, where he made himself an exact Greek scholar. During his academical course here he obtained, in addition to high certificates of honour in other classes, five first prizes in the classes of Hebrew, French, Natural Philosophy, and the Philosophy of the Mind and Logic. Of the last subject his pursuit was ardent, his diligence and ability, as manifested in his essays and examinations, being such as to mark him out as a student of unusual merit. In the year 1839, symptoms of incipient pulmonary disease induced him to try the effect of a warmer climate, and he spent the winter in the South of France. On his return he underwent the examination for the Master's degree in the University of London, in May, 1840. In the Transactions of the University, his name is mentioned with honour for his examinations in Animal and Vegetable Physiology, and in the Hebrew and Greek originals, and the History of the Holy Scriptures. He is also recorded as having 'passed a distinguished examination' in Logic, the Philosophy of the Mind, and Moral Philosophy. In consequence of this success he was urged by the examiners to write on some of these subjects; and this recommendation encouraged him to compose his work, entitled 'The Philosophy of Christian Morals.' In the autumn of 1840 Spalding went to Italy, where he remained nearly two years. It was during this period that the above-mentioned work was written, the subject of which however had occupied his mind for many years. On his return to England, in 1842, he purposed superintending the publication of his Treatise, but was prevented by the progress of his disease; and as a last resource he tried a sea-voyage, and went to the Cape of Good Hope, where he died on the 14th of January, 1844, about three weeks after his arrival. His work was published during the same year, by his friends, in one volume, octavo. We have not space for any criticism of Spalding's theory of morals: we must restrict ourselves to a bare summary of his principal doctrines. They are as follows:—Our primary notions of virtue and vice are derived from those feelings of moral approbation and disapprobation which we experience in viewing the conduct of others. These notions acquire new force and become more distinct in consequence of the emotions which we experience in the review of our own conduct. The objects of moral obligation are, first, virtue itself; and, secondly, the mode in which virtue ought to be displayed in the outward conduct. The great rule of action is the will of God, either as supernaturally revealed or as inferred from the end and object of the virtuous affections themselves. The notion of moral obligation is an immediate consequence of the testimony of our moral emotions. The great object of moral approbation is the principle of benevolence, chosen as the highest and most valuable principle in our nature. All other virtues are necessarily contained in this principle of benevolence; apart from which even sympathy itself is merely pathological, not moral. The moral character of volition depends entirely on the object of choice. In short, Spalding's theory may be characterised by its referring conscience ultimately to emotion, not to moral judgment; by its asserting the necessity of there being other moral agents in existence besides ourselves, before we can have the notion of virtue or of vice, and by its reduction of all the forms of virtue to the one principle of benevolence. Without pronouncing either one way or the other on the merits of this theory, we will only add that the work possesses considerable originality, and abounds with

passages of genuine power and beauty; and that it is characterised throughout by an elevation of thought and sentiment which distinguish it even among books on ethical subjects. The author writes with the glowing warmth of one whose heart is in his work, sometimes with an intense ardour of feeling. The book is therefore of a popular cast, though it often discusses principles ably and profoundly. It exhibits also in a striking manner the real harmony subsisting between the Christian precepts and the genuine dictates of the moral faculty, notwithstanding apparent or supposed discordances. It is wholly free from all sectarian and party feeling, and exhibits very advantageously the benevolence which was a distinguishing characteristic of the author's mind.

SPALLANZANI, LAZARO, was born at Scandiano, a small town near Reggio, in the duchy of Modena, on January 12th, 1729. His early education was directed by his father, J. N. Spallanzani, who had considerable reputation as a lawyer; and when he had reached the age of fifteen, he was sent to the Jesuits' College at Reggio, where he remained during several years. He then repaired to the University of Bologna; and while there his studies were directed by his kinswoman the celebrated Laura Bassi. He had early imbibed a fondness for the natural sciences; but his family insisted on his embracing his father's profession, and he had completed the studies necessary for obtaining the degree of doctor of laws before he could obtain permission to abandon a pursuit which was extremely distasteful to him. Immediately on quitting the profession of the law he embraced the ecclesiastical habit, and applied himself to the study of languages so diligently, that in the year 1754 he was chosen to fill the vacant chair of logic, metaphysics, and Greek literature in the University of Reggio. He held the appointment for six years, during which time he published his first and only philological work, a critique upon a translation of Homer in Italian verse by A. M. Salvini, in which there are many important errors.

During his stay at Reggio Spallanzani's name had become known in many parts of Europe; and he received invitations from the Universities of Coimbra, Parma, and Césène, all of which he declined from his desire not to be separated from his family. In 1761 however he accepted a professorship at Modena, which was only a few miles distant from his native town, and from this time dates the commencement of the high reputation which he acquired by his investigations into different branches of natural science. In 1766 he published a sketch of a work on the reproduction of animals; and though during his subsequent life he completed only a part of the researches which he had planned, yet his labours are most valuable. In opposition to the opinion of Buffon, which had been eagerly embraced by our countryman Needham, he maintained and proved that the Infusoria are really endowed with animal life, not mere organic molecules, as those authors had supposed. In 1768 he published the result of his investigations into the action of the heart and the circulation of the blood, a subject which had engaged his attention for many years. A translation of Bonnet's '*Contemplations de la Nature*,' which appeared in 1769, was the last work published during his stay at Modena; and in the ensuing year he was chosen professor of natural history at Pavia, which appointment he continued to hold till his death.

His treatise on the circulation of the blood had led to his being invited to Pavia; and on entering on his new duties, to which those of director of the museum were soon added, he entirely gave up literary pursuits. The labours in which he now engaged are too extensive, and of a character too purely scientific, to admit of an analysis here. They were principally directed to elucidating the subject of the circulation of the blood, and the functions of respiration, digestion, and generation, on all of which he published treatises after his removal to Pavia. The number and ingenuity of his experiments are not more striking than his close and logical reasoning—excellences which procured for him one of the greatest honours that a scientific man of that day could receive, in the dedication to him, by the illustrious Haller, of the second volume of his physiology. Besides his larger works, Spallanzani contributed numerous papers on natural history to the Transactions of various learned societies. Nor did he rest content with that knowledge only which could be acquired by books, or which the museum of Pavia or the surrounding country might afford, but he undertook journeys to different parts of Europe. In 1799 he travelled through the greater part of Switzerland. In 1781 he visited the coasts of the Mediterranean from Leghorn to Marseille, and remained in the latter city for six weeks. In the year 1782 and 1783 he visited Istria, traversed the shores of the Adriatic and Ægean seas, and explored the Euganean Mountains. All these journeys yielded some fruit to the scientific traveller; but in 1785 he undertook a longer voyage than any he had before made, and visited Constantinople. In his route thither he visited Corfu and Cerigo; and to him, and his companion Zuliani, the Venetian ambassador, we owe a description of the geology of these islands. Various objects of interest engaged his attention during a stay of eleven months at Constantinople; after which he quitted that city, and returned through Germany to his own country, from which he had been absent one and twenty months.

During his absence, the envy of some of his colleagues at Pavia had been at work, defaming his character and accusing him of having stolen various specimens from the museum. Spallanzani heard of this while at Vienna, from which place he sent an answer to the charges

against him. His defence overwhelmed his enemies with shame, and the return of Spallanzani to Pavia was a sort of triumphal entry; the students met their professor outside the walls, and conducted him with acclamations to his own house.

Three years afterwards he visited Sicily and Naples, and various parts of the Apennines, in order to obtain geological specimens, in which the museum at Pavia was very deficient. On his return he devoted himself to lecturing, to arranging his numerous notes, and to cultivating his style, which he endeavoured to form on that of Buffon. The French republic offered him the professorship of natural history in the Jardin des Plantes at Paris, but he declined to accept it, and passed his latter years at Pavia, in the enjoyment of every honour which a man of science could desire. The comfort of his declining age was interrupted by severe bodily suffering, and after having experienced frequent attacks of apoplexy, he died from the effects of a fresh seizure, on February 12, 1799, aged 70 years.

A catalogue of Spallanzani's numerous works, many of which have been translated into English, is given at the end of his life, in vol. vii. of the '*Biographie Médicale*;' and a lengthened analysis of his labours will be found in the '*Eloge*,' by M. Alibert, which is contained in vol. iii. of the '*Mémoires de la Société Médicale d'Emulation*.'

SPANHEIM, EZECHIEL, the son of Frederic Spanheim, a theologian of some note, was born at Geneva, on the 7th of December 1629. Respecting his early education nothing is known; but from the knowledge which he displayed when yet a young man, we must infer that it was well regulated, and supported by considerable talents on the part of the youth. When he was thirteen years old his father was appointed professor of theology in the university of Leyden, whither he removed with his whole family. Ezechiel here devoted himself first to the study of antiquity, and afterwards to that of theology, and attracted the attention of D. Heinsius and Salmasius, who guided and encouraged him in his studies. He also studied the Oriental languages, especially Hebrew and Arabic; and the first time that he appeared before the public as an author was in a controversy respecting the original characters of the Hebrew alphabet, which he denied to have been preserved by the Samaritans, as L. Capell had maintained. The work he wrote on this occasion bears the title of '*Theses contra L. Capellum pro Antiquitate Literarum Hebraicarum*,' 4to, Leyden, 1645.

In 1649 his father died, after having shortly before written a work on Universal Grace, which was now severely attacked by Amyrauld. Spanheim fulfilled his filial duties towards his father by replying to this unseemly assault; but shortly after this event he returned to Geneva, where the chair of professor of eloquence was offered to him, which he accepted in 1651. This title of professor was however merely an honorary distinction conferred upon him by his native city, and he is not known ever to have undertaken the functions of a professor in the university of Geneva. He only delivered two occasional discourses in Latin, which however he published in French, under the title, '*Discours sur la Crèche et sur la Croix de Not. Sauv. Jesus Christ*,' 8vo, Geneva, 1655, a new and corrected edition of which was published by the author at Berlin in 1695. In the meanwhile however the fame of his great acquirements was spreading and had reached the ear of the elector-palatine Louis Charles, who appointed him tutor to his son Charles. He discharged his duties to the perfect satisfaction of the elector, and devoted all his leisure hours to the study of the ancients, and of the German law, on which he published a dissertation during this time. He also translated from the Greek into French the *Cæsars* of Julian, illustrated by coins and other ancient documents. (8vo, Heidelberg, 1660; reprinted at Paris in 1683, and at Amsterdam in 1728.) As a translation, this work is of little value. The great prudence which Spanheim had shown during the time he stayed at the court of Heidelberg, induced the elector to send him to Italy to renew his connection with the princes and states of that country. In 1659 Spanheim thus set out for Italy, where he visited Florence, Mantua, Parma, Modena, and Rome, and was everywhere received with great distinction. The chief study which he pursued in his leisure hours was that of numismatics; and in 1664 he published his first work on this subject at Rome. For the purpose of prosecuting his antiquarian studies still further, he also visited Naples, Sicily, and Malta. In 1665 he returned to Heidelberg, and was henceforth employed by the elector in the most important political and diplomatical affairs. He was successively sent by the elector to the conferences of Oppenheim and Spire, and to the congress of Breda. Afterwards he was appointed minister resident of the elector in Holland, and then in England, at the court of Charles II. During his stay in England the ambassador of the elector of Brandenburg was recalled, and Spanheim was requested and undertook, with the consent of the prince palatine, to manage also the affairs of the elector of Brandenburg. He discharged the duties of his twofold office so well, that the elector of Brandenburg desired him to enter his service exclusively. This Spanheim did, with the consent of his former master, though not without his regret. Shortly after, in 1680 the elector of Brandenburg sent him as his extraordinary ambassador to Paris, at the court of Louis XIV., which post he held for nearly nine years. In 1689 he went to Berlin, where for some time he gave himself entirely up to his favourite studies, which he had never abandoned during his public life. At Berlin he wrote his celebrated Letters to

Beger and Morel, on some numismatical subjects, and some of the Commentaries on ancient writers, which we shall mention hereafter.

After the peace of Ryswick, in 1697, Spanheim returned as ambassador to Paris, where he remained till the year 1701. After the elector of Brandenburg had assumed the title of king, and was recognised as such by the other powers, Spanheim was raised to the rank of a baron, and was sent, in 1702, as ambassador of the new king of Prussia, Frederic I., to England. Here he remained until his death, on the 7th of November 1710.

The principal works of Spanheim, besides those already mentioned, are—1, 'Dissertationes de Præstantia et Usu Numismatum Antiquorum,' which was first published in one volume, 4to, Rome, 1664, and reprinted at Paris in 1671. The last and best edition is that published in fol., London, 1706, to which Verburg, in 1717, added a second volume from the papers of Spanheim. The whole work consists of thirteen dissertations, addressed to his friend Falconieri. It contains a store of information, though very inconveniently arranged. 2, 'De Nummo Smyræorum inscripto Σαυραλων πριυράveis, scilicet de Vesta et Prytanibus Græcorum Diatriba,' Paris, 1672. This work is reprinted in Grævius's 'Thesaurus,' v., p. 660. 3, 'Lettre sur l'Histoire Critique du Vieux Testament,' par Richard Simon, Paris, 1678. 4, 'Orbis Romanus, seu ad Constitutionem Imperatoris Antonini, de qua Ulpianus leg. xvii. Dig. de Statu Hominum Exercitationes Duæ,' the best edition of which is that published in London, 1704. This work is still of great value; it is also contained in the eleventh volume of Grævius's 'Thesaurus.' Besides these works Spanheim wrote a number of Commentaries upon ancient authors, some of which may still be consulted with great advantage. Among them we shall mention his Commentaries on the Callimachus, in the edition of Grævius, and reprinted in that of Ernesti, Lugd. Bat., 1761; on Strabo, Amsterdam, 1707; on the first three comedies of Aristophanes, in Kiester's edition of 1707-9; or 'Ael. Aristides,' in Jebb's edition, Oxford, 1722; on Josephus, Leyden, 1726; on Thucydides, in Duker's edition, Amsterd., 1731, and others.

Compare the 'Acta Eruditor.' of the year 1711; and the Memoir of Spanheim, by Verburg, prefixed to the second volume of his 'Dissert. de Præst. et Usu Num. Ant.,' p. viii.-xix.

\*SPARKS, JARED, an eminent American biographer, was born in Connecticut towards the close of the last century. Having graduated at Harvard University in 1815, he acted for a time as tutor there while pursuing his theological studies in the divinity school. On the completion of these, he was in 1819 ordained minister in the First Unitarian church in Baltimore, on which occasion Dr. Channing preached his celebrated sermon on 'Unitarian Christianity.' The earlier publications of Mr. Sparks were theological, and chiefly on controversial matters. Among them, that which attracted most attention appears to have been 'An Inquiry into the comparative Moral tendency of Trinitarian and Unitarian Doctrines, in a series of Letters to the Rev. Dr. Miller of Princeton,' Boston, U. S., 1823. A work which he commenced about the same time formed a sort of connecting link between his theological and biographical studies. 'A Collection of Tracts in Theology from Various Authors, with Biographical and Critical Notices,' 6 vols, 12mo, Boston, 1823-26. In 1823 he became editor of the 'North American Review,' a work which he continued to conduct for about five years, and to which he has been a frequent contributor since.

His earliest biographical work, unconnected with theology, was the 'Life of John Ledyard, the American traveller, comprising Selections from his Journals and Correspondence,' 1 vol. 12mo, 1828, 2nd edition, Cambridge, U. S., 1829. This was followed by a work of considerable historical importance, the 'Diplomatic Correspondence of the American Revolution, published by order of Congress and Edited by J. S.,' 12 vols, 8vo, Boston, 1829-30. His next work was a 'Life of Gouverneur Morris, with selection from his Correspondence,' 3 vols, 8vo, Boston, 1832. The intimate acquaintance with the documents relating to the period of the American revolution, afforded by his researches, in connection with the Diplomatic Correspondence, induced him to enter upon a much more onerous task—the collection and classification of the letters and despatches of Washington. To render this work as complete as possible, Mr. Sparks not only thoroughly examined the official archives of the American government, and the private collections of his countrymen, but visited Europe, and obtained access to the state papers of England and France, which were liberally laid open to him. The full title of this great national work will best explain its scope. 'The Writings of George Washington; being his Correspondence, Addresses, Messages, and other Papers, Official and Private, selected and published from 200 folio volumes of Original Manuscripts, purchased by Order of Congress; with a Life of the Author, Notes and Illustrations. By Jared Sparks. With Portraits, Maps, Plans, Fac-Similes,' &c., 12 vols, 8vo, Boston, 1833-42.

The importance of this great work was of course immediately recognised by historical students in Europe as well as in America, and a translation of the more important documents was published in Paris under the direction of M. Guizot (who prefixed an essay on Washington), in 6 vols, 8vo, and in German by Von Raumer. A serious charge was however brought against the accuracy of Mr. Sparks. Lord Mahon, in an appendix to the sixth volume of the first edition of his History of England, printed side by side various

passages, as given by Mr. Sparks with the same as (avowedly) transcribed from the original manuscripts for the 'Life and Correspondence of Joseph Reed,' and upon these and other variations which he had traced, inferred that Mr. Sparks had made "omissions, corrections, and additions," in printing the Letters of Washington. Similar charges were, about the same time, brought forward in America, and there the matter made a considerable noise. Mr. Sparks speedily published a 'Reply to the Strictures of Lord Mahon and others on the mode of editing the Writings of Washington,' to which Lord Mahon issued a rejoinder. Mr. Reed then published a 'Reprint of the original Letters from Washington to Joseph Reed during the American Revolution, referred to in the Pamphlets of Lord Mahon and Mr. Sparks;' in which all the variations were pointed out. It now appeared that the 'additions' on which the more serious charges were founded, were really no additions at all, Mr. Reed's transcriber having by some accident omitted the passage printed by Mr. Sparks, while the omissions were explained by Mr. Sparks, in a reply on the whole controversy, entitled 'Remarks upon a Reprint of the original Letters from Washington,' &c., to have been made because of their being parallel passages to others printed in letters of about the same date; and the enormous quantity of materials rendered it necessary to omit such parts as could be best spared, in order to comprise the work within any reasonable limits. The correction of grammatical errors, verbal inaccuracies, and the softening of a few vulgarisms and strong expressions in the private letters, he acknowledged and justified.

Lord Mahon has since amply exonerated Mr. Sparks from the more serious charges he originally preferred, but continues to "differ widely from him on the privileges and duties appertaining to an editor;" whilst he adds, "that difference does not prevent me from recognising and respecting your high attainments, your unwearied industry, and the valuable service which, in many of your notes and illustrations, you have rendered to the cause of historic truth." We have noticed this controversy thus fully because of the importance of the principle at stake, and because the work to which it immediately refers is in itself the most important collection of documents yet published relating to the American Revolution. And whilst we cannot but feel that an exact verbal reprint of such documents, with a careful indication where a passage was for any reason omitted, is what ought always to be given, we are bound to say that we believe the alterations of any kind have been very few, and we have no doubt that Mr. Washington Irving is perfectly accurate in stating (Preface to his Life of Washington), with reference to this controversy, "A careful collation of many of them [the documents in the 'Writings of Washington'] with the originals has convinced me of the general correctness of the collection, and of the safety with which it may be relied upon for historical purposes; and I am happy to bear this testimony to the essential accuracy of one whom I consider among the greatest benefactors to our national literature." The 'Life of Washington,' which formed the first volume of the Writings, &c., Mr. Sparks afterwards published separately (Boston, 1839), and again in an abridged form, 2 vols. 12mo, 1843.

The 'Writings of Washington' were followed by the 'Works of Benjamin Franklin,' 10 vols. 8vo, Boston, 1835-40, in which he published for the first time a vast number of original letters, as well as several political and historical tracts which had not been included in any previous collection of Franklin's works, and he added a valuable body of notes and illustrations. Franklin's autobiography was also given for the first time correctly in this edition, the life being completed by Mr. Sparks. The autobiography has since been published separately under the editorship of Mr. Sparks, and likewise 'A Collection of Letters and Papers by Benjamin Franklin.'

In 1835 was commenced 'The Library of American Biography. Edited by Jared Sparks, assisted by several of the most distinguished American writers,' including Messrs. Everett, Prescott, &c., of which the first series in 10 vols. 12mo, was completed in 1839; a second series consisting of 15 vols. appeared in 1844-47. Of these lives a large proportion was from the pen of Mr. Sparks himself. Another important work which we owe to his industry is the 'Correspondence of the American Revolution, being Letters of Eminent Men to George Washington,' 4 vols. Boston, 1853, forming a sequel to his 'Writings of Washington.'

Mr. Sparks is deservedly regarded as one of the chief authorities on all matters connected with the history of American Independence, and the History of the American Revolution on which he has long been understood to be engaged, is expected with much interest, though in the works he has hitherto published he has shown rather the qualities which belong to the diligent collector, than those which are looked for in the historian. Mr. Sparks was in 1839 appointed Professor of Ancient and Modern History in Harvard University, and in 1849 he was elected president of that institution, an office he held till 1853.

SPARRMANN, ANDREW, the pupil and friend of the elder Linnæus, and the companion of the Forsters in their voyage round the world, was born in the province of Upland in Sweden, about the year 1747. He appears to have entertained from childhood a great fondness for the study of natural history, which was increased by a voyage which he made to China in the year 1765, in a vessel commanded by Captain Ekeberg, one of his kinsmen.

On his return to Sweden he repaired to the university of Upsal, and there applied himself to the study of medicine, but more especially of botany, in which science he had the advantage of the instruction of the celebrated Linnæus. Under the auspices of that distinguished man, he now published his 'Amoenitates Academicæ,' which gave ample proof that his voyage to China had not been made in vain. His scanty means presented an insurmountable obstacle to the accomplishment of his wishes, which would have led him to investigate the natural productions of foreign countries. The kindness of his friend and relation Ekeberg at length procured for him an appointment which afforded him some prospect of being able to accomplish his favourite project, and he left Gottenburg on January 10, 1772, in order to become tutor to the children of M. Kerste, then resident at False Bay, near the Cape of Good Hope. He reached the Cape on April 30th, and soon after his arrival met his countryman Thunberg, whose zeal for botany had led him to visit those southern regions. Although Sparrmann's time was much occupied by duties in which he took no interest, he made some researches, which he was planning to extend, when Captain Cook touched at the Cape with the ships *Resolution* and *Adventure*. Messrs. Forster, naturalists to the expedition, being desirous of obtaining an assistant, gave him the offer of accompanying them, of which he gladly availed himself, and having with them sailed round the world, he returned to Africa, in March 1775, after an absence of twenty-eight months.

He now practised his profession at Cape Town for a few months, in order to obtain the means for his projected journey into the interior of Africa. During his voyage he obtained sixty ducats by translating a Swedish medical work into English, and with that money and the fruits of a four months' practice, he started for the interior on July 25, 1775, in company with a young man named Immelman, who was born in Africa. He first visited Mossel Bay; then striking more into the heart of the country, he penetrated as far as the banks of the Great Fish River; and afterwards taking a direct northerly course he advanced as far as 28° 30' S. lat., and 350 leagues from the Cape. On February 6, 1776, he turned southward, and occasionally varying a little from his former track, reached Cape Town on the 15th of April, laden with specimens of plants and animals.

In the course of the same year he returned home, and found that the degree of Doctor of Medicine had been conferred upon him during his absence. He was next elected a member of the Academy of Sciences at Stockholm; and on the death of Baron Geer, the entomologist, was appointed his successor in the office of conservator of the museum. His love of enterprise tempted him from his retreat to join Wadstroem's projected expedition to the interior of Africa [WADSTROEM, CARL BERNIS]; but on its failure he returned from Senegal, and continued at Stockholm till his death, on July 20th 1820.

Sparrmann's reputation is founded chiefly on his travels, which have been translated into English and several other European languages. In them he appears as a persevering traveller, an able naturalist, and a truth-telling narrator; and it is no small merit that the map attached to his book is the first in which the coast from the Cape to the Great Fish River is laid down with any degree of accuracy. The younger Linnæus gave the name of *Sparrmannia* to species of plants belonging to the order *Tiliaceæ* of Jussieu.

#### SPARTIANUS ÆLIUS. [AUGUSTA HISTORIA.]

SPECKTER, ERWIN, was born in 1806, at Hamburg, where his father, a native of Hanover, was settled as a merchant. During the siege of Hamburg, in the winter of 1813-14, his parents took refuge with their family in the house of the banker Dehn, in Altona, where there was a good collection of pictures, and where Erwin made the acquaintance of the painter Herterich, who was also living in the banker's house, and had a studio there. In this studio, in which he spent nearly all his time, Erwin Speckter acquired his first instruction in art, and his natural taste rapidly developed itself. In 1818 his father and the painter Herterich erected a lithographic press, the first which was established in North Germany, and young Speckter made some attempts in portraits, and in drawings to illustrate the old Reineke Fuchs, or Reynard the Fox.

In 1822 Von Rumohr returned to Hamburg from his second visit to Italy, and, being struck with admiration of the promising talents of Speckter, urged him on in his career, and particularly advised him to study the monuments of art in and about the neighbourhood. This led to an artistic tour which he performed in 1823, with his brother Otto and another artist friend, through Schleswig and the neighbouring country. The chief objects of this journey were the carved altar-piece of Hans Brüggman at Schleswig (lithographed by Böhndel) and the picture of Memling at Lübeck, the latter of which Erwin and Otto Speckter published in lithography. These early works gave Speckter's mind the peculiar bias which at that time characterised the majority of the younger artists of Germany, and the arrival of Overbeck's picture of 'Christ's Entry into Jerusalem,' for the Marien Kirche of Lübeck, confirmed this tendency, and for a time enlisted Speckter among the young enthusiasts who appear to be devoted to the restoration of the old German religious art, with the addition of academical drawing. [OVERBECK.] Overbeck's picture has been lithographed by Otto Speckter. At this time Speckter's chief labours were indiscriminate studies from nature of every descrip-

tion, and portraits: his first oil-picture was a view of the town-house of Mölln. His adoration of Overbeck's picture seems to have kept him by a species of awe from attempting such high subjects himself; he was also always guided in his studies by Rumohr.

In 1825 he visited Munich, and placed himself under the direction of Cornelius, who expressed great admiration for his ability; and, after the completion of his cartoon of the 'Resurrection of Lazarus,' allotted him one of the vaults or loggie in the corridor of the Pinakothek, which were to be painted in fresco with incidents from the lives of the greatest modern painters. Cornelius selected Fra Giovanni da Fiesole for Speckter, as peculiarly suited to his taste. Speckter, then about twenty-one years of age, received the commission with exultation, but he did not live to execute it, for the Pinakothek was not ready for the frescoes until many years after this date. [CORNELIUS.]

In 1827 Speckter returned to Hamburg, chiefly to be in the vicinity of the above-mentioned work by Overbeck, while he painted his picture of 'Christ and the Woman of Samaria;' but the deep impression made upon him by Overbeck's picture had a prejudicial effect upon him, through his inordinate striving after abstract ideal representation. His own dissatisfaction with this work may be inferred from his immediate but still gradual change of manner; for in his next work, the 'Women at the Tomb,' there is a far greater attention to dramatic probability, and a more prominent part given to colour. He painted at this time also several beautiful miniatures from sacred subjects. In 1830 he appeared in entirely a new character in his arabesque and mythologic decorations of the house of the Syndicus Sieveking near Hamburg. In September of this year, after the completion of these decorations, he set out by Berlin and Munich upon his long-intended journey to Italy. The taste which had hitherto possessed him, though it was gradually yielding to his own experience, was finally subjected by the contemplation of the great Italian works in the Museums of Berlin and Dresden, especially those of Fra Filippo Lippi, Raffaele, and the great Venetian masters. Speckter arrived in Rome in January 1831, after a short stay at Venice, from which is dated the first of his very interesting series of Letters from Italy, which, by the advice of Rumohr, were published some time after his death. He remained in Italy, chiefly at Rome and Naples, until the summer of 1834, when he was called to Hamburg to paint in fresco the villa of Dr. Abendroth, then recently constructed by A. de Chateaufeuf. In Rome Speckter confined his labours almost exclusively to studies, and these are in the general spirit of Italian art, and quite in a different style from his early efforts. The only oil-paintings he painted in Rome were two of Albano Women, in ideal characters, and a large picture of Samson and Delilah, which was purchased by Rumohr.

In the spring of 1835, though suffering greatly from asthma, Speckter commenced his frescoes; he had in the interim completed three of the principal cartoons: the subjects are from Grecian mythology, and the figures are half the size of life. The three subjects were—1, Minerva receiving the winged Pegasus from the Muses, and the Hippocrene fountain which sprang from the kick of the horse; 2, the Graces, in a grove of laurels, decorate the bow and quiver of Cupid, and offer him a cup of ambrosial drink; and 3, the Fates, lulled by the lyre of Cupid, have ceased their labours, and recline on cushions; the distance is concealed by a curtain. The first of these designs, distinguished for the exquisite beauty of its forms, was completed in fresco, and the second was partly executed; the third was not commenced. His weak state forced Speckter to leave his work at the beginning of November, and he died on the 23rd of that month in 1835, deeply lamented by his friends, and by none more than Rumohr, who wrote a short account of the character of his genius, which is inserted in the biographical notice of him which precedes his letters. These letters, published in 1846, under the title of 'Letters of a German Artist from Italy' ('Briefe eines Deutschen Künstlers aus Italien'), 2 vols. 12mo, Leipzig, 1846, are full of interesting matter and reflections on art. Speckter's whole career is a remarkable instance of the power of nature over convention, where the love of art was real. The essential attractions of art itself gradually drew him from an abstract conventional system, in which art was only secondary to a peculiar sentiment independent of it, to the art itself, and for its own sake. Speckter's transition from convention to nature is not singular in the history of modern German art. [LESSING.]

\*SPECKTER, OTTO, brother of Erwin, was born in Hamburg in 1807. Having adopted the profession of an artist, his studies were at first pursued along with his brother, and the brothers went together to Lübeck to study the picture of Memling, of which they published a lithographic print. When Erwin was a devoted disciple of Overbeck, Otto made an elaborate lithographic drawing of that artist's picture of 'Christ's Entry into Jerusalem,' painted for the Marien Kirche at Lübeck. Otto followed his brother in his admiration of the severe and allegoric style of sacred art, then at the height of its vogue among the younger painters of Germany; but he subsequently gave free play to his own inclinations, and struck out for himself a lower but pleasanter and almost untrodden bye-path—making the habits of animals the special subject of his observations, and with his faithful pencil giving many a quaint and naïve delineation of them. These, by means of the etching-needle and lithographic crayon, he largely multiplied, and the name of Otto Speckter has everywhere become a favourite one with

children as well as students of art. His best known works perhaps are his 'Zwölf Radirungen zum gestiefelten Kater' ('Twelve etchings to Puss in Boots'), 4to, 1843—a work of which there is an English edition; and his 'Fabeln für Kinder' ('Fables for Children'), 2 vols. 12mo, each containing 50 plates. But he has also published numerous other designs, either etchings or drawings on stone; and though he is most successful in his original sketches of animals, many of his lithographic prints consist of landscapes and arabesques, or of copies from the works of other artists.

SPEED, JOHN, an English historical writer of the reigns of Elizabeth and James I., was born at Farrington in Cheshire, in 1542, but came early in life to London, where the rest of his days were spent. He was brought up to the business of a tailor, and seems to have supported himself by it during the greater part of his life, for he does not appear as an author before the year 1603, when he was in the sixty-sixth year of his age. He was however, during that time, amassing treasures of curious historical knowledge, the possession of which brought him into the acquaintance of Sir Fulk Greville, who drew him forth from his obscurity, and, it is supposed, afforded him the means of publishing the large works of which he is the author or editor. The first of these is a collection of maps of the English and Welsh counties, with plans of cities, and engravings of various antiquities, said to have been first published in 1603; but when formed into the work entitled 'The Theatre of the Empire of Great Britain, printing an exact geography of the Kingdoms of England, Scotland, and Ireland, and the isles adjoining. With the shires, hundreds, cities, and shire-towns, within the Kingdom of England, divided and described by John Speed,' folio, bearing the date of 1611. In this work he owed much to the labours of Camden, Christopher Saxton, and John Norden. There have been several editions of it. The other work of Speed's is a history or chronicle of England, entitled, 'The History of Great Britain under the Conquests of the Romans, Saxons, Danes, and Normans,' originally published in 1611. In this work are engravings of coins, and also of the great seals of England, then for the first time published; but on the whole it is a compilation of no great merit. He was also the compiler of a set of Tables of Scripture Genealogy, comprising much of the genealogical information contained in the sacred books, exhibited in the form of pedigrees; and several theological works, as 'The Cloud of Witnesses,' &c., of small value are ascribed to him. He died July 28, 1629, and was buried in the church of St. Giles's, Cripplegate, where a monument was raised to his memory. By his wife Susannah, to whom he was married for fifty-seven years, he had twelve sons and six daughters.

SPELMAN, SIR HENRY, died 1641, one of the most distinguished of the band of English antiquaries who lived in the reigns of James I. and his successor; the friend of Camden, Cotton, Selden, Dodsworth, Dewes, Dugdale, and others. He was born in 1562, and was the son of a gentleman of ancient family at Congham in Norfolk. He was educated at Walsingham in that county; whence he removed to Trinity College, Cambridge, and at the age of eighteen was entered of Lincoln's Inn, with the design of studying the law. Instead however of proceeding to the practice of the law as a profession, he determined early in life to devote himself to historical and antiquarian research, the study of ancient manuscripts and records, with a particular view to two objects, the elucidation of the history and antiquities of the county of Norfolk, and the investigation of the origin of the laws and institutions of the country. He did not keep himself wholly unconnected with public affairs, serving the office of sheriff of his county, and acting as a commissioner for determining disputed claims to lands and manors in Ireland. For his various services he received the honour of knighthood from James I., who is said to have held him in great esteem. But in 1612 he withdrew from all public employment, and settled in London as the most favourable field in which to pursue his researches; and it was not till this time, when he was fifty years of age, that he began to bring before the public any of those works, the result of his long studies, which are the secure basis of his fame. The earliest of them is his treatise 'De non Temerandis Ecclesiis,' the object of which is to inculcate respect for the property belonging to the church. This involved him in controversies, in which he appears as the author of two tracts in defence of the principles of his work. In 1626 appeared the first part, which is all that he himself published, of a most valuable glossary of terms which occur in records and other ancient historical writings. This work he entitled 'Glossarium Archaeologicum'; but it contains only as far as the letter L. The work was however completed from his manuscript after his death, partly by his son, but principally by Sir William Dugdale, under whose superintendence it was published. His other great work he left in like manner incomplete. This is his 'Concilia, Decreta, Leges, Constitutiones in Re Ecclesiastica Orbis Britannici,' of which the first volume was printed in 1639, and the second in 1664. Another posthumous work is his 'Villare Anglicanum,' 1656, a work of no great value. In 1698 there was printed at Oxford a folio volume entitled 'Reliquiæ Spelmannianæ,' or his posthumous work relating to the laws and antiquities of England. Among his manuscripts he left one which he entitled 'Archæismus Graphicus,' being a collection of the contrasts which he had observed in the old writings, with the explanation of them. This manuscript has been often transcribed, and is

useful to those who have occasion to read early writings. He died in 1641, at the house of his son-in-law Sir Ralph Whitfield, in the Barbican; and his body was interred, by the special order of Charles I., in Westminster Abbey, near the monument of Camden.

His son, Sir John Spelman, inherited the taste and a portion of the learning of his father. He is the author of a 'Critical Life of King Alfred,' fol. Oxford, 1678. Sir Henry's youngest son, Clement Spelman, practised the law, and on the restoration of Charles II. was made a baron of the Exchequer. He wrote some pieces on government, and a long preface to his father's 'De Non Temerandis Ecclesiis.' He died in 1679.

SPENCE, JOSEPH, was born at Kingsclere, Hampshire, April 25, 1699. His father was rector of Winnal, near Winchester, at which school Spence was educated, and became fellow of New College, Oxford, in the year 1722. In 1728, having entered into orders, he was chosen professor of poetry, and was presented to the rectory of Birchanger, in Essex. At the close of the year 1730, he accompanied Charles, Earl of Middlesex, afterwards Duke of Dorset, on a tour through France and Italy, and returned in July 1733, having been in his absence re-elected professor of poetry. His essay on Pope's translation of the 'Odyssey,' published some years before, had introduced him to the notice of that poet, with whom he became very intimate, and published, at his request, in 1736, Sackville's tragedy of 'Gorboduc,' with a prefatory account of the author. In 1739 he made another tour to the Continent, with Henry, earl of Lincoln, afterwards Duke of Newcastle, and returned to England in 1742. In the same year he was presented by his college to the rectory of Great Horwood, Bucks, and succeeded to the vacant professorship of modern history. In 1747 he published his 'Polymetis; or an Enquiry concerning the Agreement between the Works of the Roman Poets and the Remains of the Antient Artists, being an attempt to illustrate them mutually from each other,' the sale of which work was very profitable to him. In 1754 he was made a prebendary of Durham cathedral.

The latter years of Spence were passed in retirement in the country, where he indulged his favourite taste for gardening. He was drowned—it is believed accidentally—August 20, 1768. Johnson ('Life of Pope') has observed of him with truth, that he was "a man whose learning was not very great, and whose mind was not very powerful. His criticism however was commonly just; what he thought he thought rightly; and his remarks were recommended by his coolness and candour." The 'Polymetis' has been considered worthy of some discussion by Lessing in his 'Laocoon,' who shows that the author has not distinguished with sufficient accuracy the boundaries of the several provinces of art, and has consequently attempted to make the range and power of the sculptor exactly commensurate with that of the poet in treatment and choice of subject. The design however of such a work is valuable, and, with the more exact knowledge and extensive views of modern archaeology, might be successfully carried out.

Spence also collected a volume of 'Anecdotes of Books and Men,' to which the biographies of Pope are much indebted for records of his conversations. It was published by Malone, and also by Singer in 1820, with a Life of the author, and many letters from distinguished contemporaries and friends. This correspondence exhibits Spence's private character in a favourable light, and shows him to have been of an affectionate and benevolent disposition, and of simple manners. A few smaller publications are noticed in the above-mentioned biography. See also Nichols's 'Literary Anecdotes of the Eighteenth Century,' ii. 373-7.

\*SPENCE, WILLIAM, a celebrated living entomologist, whose name is inseparably connected with that of Kirby in the production of one of the most classical works on natural history in the English language, entitled, 'An Introduction to Entomology, or Elements of the Natural History of Insects.' [KIRBY, REV. WILLIAM.] In the early part of his life Mr. Spence was engaged in business at Hull, and here it was that he first acquired a taste for the pursuit of natural history which led to his acquaintance with the Rev. Mr. Kirby. This took place in 1805 by the mutual exchange of entomological specimens. The acquaintance thus begun ripened into the warmest friendship, and no two men perhaps ever pursued the same field of inquiry together so long, remaining so firmly attached as Kirby and Spence. Previous to the publication of the Entomology, Mr. Spence published several papers on entomology, and also since, amongst others, the following:—'A Monograph of the British Species of the genus *Choleva*,' Linnæan Trans., vol. xi.; 'On the Disease in Turnips, termed in Holderness Fingers and Toes,' Hull, 1812; 'Observations relative to Dr. Carus's discovery of the Circulation of Blood in Insects,' Mag. Nat. Hist., vol. iii.; 'On some Peculiarities in the Construction of the Nets of the *Epeira diadema*,' Ibid., vol. v.

During the latter part of his life Mr. Spence has lived in London, and has taken an active part in the proceedings of the societies devoted to the cultivation of natural history. He is a Fellow of the Royal, Linnæan, and Entomological societies; of the latter society he was formerly president. During the war at the beginning of this century he sat in parliament, and was distinguished for maintaining that Britain might become independent of foreign produce. He also wrote a pamphlet on the same subject, which gained much attention at the time of its publication. Mr. Spence has recently edited a seventh edition of the 'Introduction to Entomology,' which embraces

the matter of the first two volumes of the original work, which was published in four. This work comprises all the matter of the previous ones on the habits and economy of insects, and was published by Mr. Spence in a cheap form with the wish to make the science he has cultivated so ardently through his life more popular. It also contains an appendix from the pen of Mr. Spence, giving an account of his friendship with Mr. Kirby, and a detailed history of the production of their great work on the Natural History of Insects.

SPENCER, JOHN CHARLES SPENCER, THIRD EARL, will be best remembered by the title of courtesy, VISCOUNT ALTHORP, which he bore from his birth, through, it may be said, the whole of his public life, and until within a few years of his death. He was the eldest son of George John, second Earl Spencer, and Lavinia, eldest daughter of Charles Bingham, first Earl of Lucan; and was born on the 30th of May 1782. Like his father, who was distinguished for his love of literature and his munificent expenditure in the collecting of rare books, he was educated at Harrow; whence he was sent to Trinity College, Cambridge, where he took the honorary degree of M.A. in 1802.

In April or May 1804, towards the close of the second session of the second Imperial Parliament, Viscount Althorp entered the House of Commons as one of the members for Oakhampton. A vacancy appears to have been made for him by the resignation of James Strange, Esq. On the 11th of February 1806, on the formation of the Whig ministry of Mr. Fox and Lord Grenville, in which his father Earl Spencer took office as Secretary of State for the Home Department, Lord Althorp was appointed one of the Junior Lords of the Treasury; and this appointment having vacated his seat he offered himself for the University of Cambridge, which had been represented by the late premier, William Pitt; the other candidates being Lord Henry Petty (now Marquis of Lansdowne), who was the new Chancellor of the Exchequer, and the present Lord Palmerston. The votes were, for Lord Henry Petty 331, for Lord Althorp 135, for Lord Palmerston 128. To the next parliament, which met in December 1806, Lord Althorp was returned at the head of the poll for the county of Northampton, after a severe contest. The numbers were, for his lordship, 2085; for the other member, William Ralph Cartwright, Esq. 1990; for Sir William Langham, Bart. (the defeated candidate), 1381. After this his lordship continued to be returned for Northamptonshire to every parliament down to the passing of the Reform Bill. In the first Reformed Parliament, which met in January 1833, he sat as one of the members for the southern division of that county.

Lord Althorp, of course, lost his seat at the Treasury Board when the Grenville administration was dissolved in March 1807; nor did he again hold office till the accession of Lord Grey and his friends to power in November 1830. During all this interval, although he did not come forward in debate so frequently as some other members, he was regarded as one of the steadiest supporters of the Opposition in the House of Commons; and, while he was making his way to the highest place in the confidence of his party, there was no man on either side of the House whom the public generally held in greater respect for patriotism and freedom from the narrowness and rancour of faction. Yet he was no half-and-half politician. On all the great questions of the day he took a decided part; and on most of the occasions on which his party made a stand against the government, he went as far with them as any other. In 1817, for instance, we find him supporting an address to the throne for a reduction of the number of the Lords of the Admiralty, and opposing the suspension of the Habeas Corpus Act, the maintenance of so large a standing army in time of peace, the continuation of the Alien Act, and the additional grant to the Royal Dukes; in 1819 moving for an inquiry into the State of the Nation; in 1823 moving for a repeal of the Foreign Enlistment Bill, and opposing the renewal of the Irish Insurrection Act; in 1824 moving for a Committee of Inquiry into the general state of Ireland; in 1825 opposing the Suppression of the Catholic Association; in 1828 moving the first reading of the bill to repeal the Test and Corporation Acts, and opposing the grant of 2000*l.* per annum to the family of the late Mr. Canning.

Lord Althorp was also prominent for several years, about this period, in a series of economical attacks upon the Tory administration, and his house was the resort of a powerful section of the Whig party, who considered him their leader in the House of Commons. There were few questions of public importance, over and above those already mentioned, in which he did not take a practical share; and his sound judgment, under all the vicissitudes and excitement of Parliamentary affairs, amply justified the confidence and attachment with which he was regarded by the party. There was about him, indeed, so much reality of purpose, such unostentatious manners, a bearing and simplicity so characteristic of the English nation, that a few sentences from him were equivalent to eloquent orations from less consistent statesmen; and when he left politics, he was not less in charity with all men than they were in charity with him; 'Honest Lord Althorp' was the current phrase by which his lordship was recognised by the House of Commons and the public for many years.

In November 1827, the Whig section of the Goderich cabinet fixed upon Lord Althorp to be Chairman of a Committee of the House of Commons, which it was proposed to appoint to take into consideration the general state of the national finances. But it was defeated, after

a communication had been made to Lord Althorp, and his lordship had signified his conditional acceptance of the intended nomination, by the opposition of Mr. Herries, the chancellor of the Exchequer. This affair led to the resignation of their offices both by Mr. Herries, and Mr. Huskisson, secretary for the colonies, and to the breaking up of the administration on the 8th of January 1828.

On the accession to power of the Grey administration in November 1830, Lord Althorp was appointed chancellor of the Exchequer. His position, and the sound ability which he evinced in the management of economical questions, with the universal confidence in his integrity, made him the ministerial leader in the House of Commons. No man probably had ever filled the latter post who possessed less of the gift of oratory; but the clearheadedness and sound sense of Lord Althorp were considered amply sufficient to make up for that deficiency. Nor were the expectations of his friends disappointed. The task of carrying through the House both the Reform Bill and the Poor Law Amendment Bill devolved principally upon him; and not only the candour and patience and complete command of temper (often in very trying circumstances) which he never failed to evince, but his mastery of the details of both measures, the readiness and accuracy of his recollection, and even the talent of exposition and advocacy which he displayed, produced a general conviction that the difficult work he had undertaken could hardly, looking to all considerations, have been placed in better hands.

The appointment of Lord Althorp to a high ministerial office in the House of Commons was attended with the serious drawback, that his father, Earl Spencer, having already attained to the age of seventy-two, Lord Althorp was very liable to be soon and suddenly called away both from the House of Commons and from his office, which could only be held by a member of that House. The death of Lord Spencer, which took place on the 10th of November 1834, by occasioning this change, broke up the ministry. [WILLIAM IV.] When the administration of Sir Robert Peel and the Duke of Wellington, which succeeded, was obliged to resign in April following, and the Whigs came again into power under the premiership of Lord Melbourne, Lord Althorp, now Earl Spencer, was, as well as Lord Brougham, left out of the new cabinet. It was understood that he declined to take office again; and indeed that he had been reluctantly induced to resume the chancellorship of the exchequer after giving in his resignation when Lord Grey finally retired in July of the preceding year. There can be no doubt that in losing him, the remnant of the original Reform cabinet, now deprived also of Lord Durham, Lord Stanley, Sir James Graham, Lord Ripon, the Duke of Richmond, Lord Carlisle, Earl Grey, and Lord Brougham, lost one of its chief stays, notwithstanding that Lord Lansdowne, Lord Melbourne, Lord Palmerston, Mr. Grant, Lord Auckland, Lord Holland, and Lord John Russell still remained.

Earl Spencer had always been strongly attached to agricultural pursuits; and now that he was not only relieved from official occupation, but had nearly withdrawn altogether from politics and public life, he devoted his greater leisure with more eagerness than ever to practical farming, the rearing of cattle, the patronage of agricultural associations, and whatever promised to advance his favourite science. For many years president of the Smithfield Cattle Club, he in the course of his address to its members in 1837, suggested the formation of the Royal Agricultural Society; and on its formation he was chosen its president, 1838-39, and again in 1844. He was also foremost in the formation and operations of the Yorkshire Agricultural Society, of which he was president in 1843.

Lord Spencer was one of the original members of the Roxburghe Club (for the reprinting of rare and curious tracts), of which his father was the first president. He was also vice-chairman of the council of the Society for the Diffusion of Useful Knowledge; and he was a liberal contributor to the fund raised for the 'Biographical Dictionary' which the Society commenced. Lord Brougham dedicated to him his 'Discourse on Natural Theology,' published in 1835, in an address in which he says, "I inscribe the fruits of those studies to you . . . because you have devoted much of your time to such inquiries—are beyond most men sensible of their importance . . . and had even formed the design of giving to the world your thoughts upon the subject." Lord Brougham's 'Dialogues on Instinct,' first published in his 'Supplement to Paley's Natural Theology,' in 1839, are also supposed to be carried on with Lord Althorp, neither whose political nor agricultural pursuits, he says, had "ever at any time prevented him from cultivating a sound philosophy, in the study of which much of his leisure is always consumed."

Lord Spencer died at his seat of Wiseton Hall, in Nottinghamshire, on the 1st of October 1845. He had married, on the 14th of April 1814, Esther, only daughter and heiress of Richard Acklom, Esq., of Wiseton; but she died on the 11th of June 1818 without issue; and his lordship was succeeded in the peerage by his next surviving brother, Frederick.

SPENER, PHILIP JAKOB, one of the most active reformers of the Protestant Church, and the founder of the sect of Pietists in Germany, was born on the 13th of January 1635, at Rappoltstein in Alsace (now in the department of Haut-Rhin in France), where his father was counsellor and registrar to the last independent Count von Rappoltstein. He received his early education from the chaplain of the countess, who was his godmother, and took much interest in him.

From these two persons he early received strong religious impressions, which never left him. At fifteen he was sent to the gymnasium at Colmar, whence, after a residence of a twelvemonth, he proceeded to the University of Strasburg, where he pursued his theological studies under Sebastian Schmidt and J. C. Dannhauer, both zealous Lutherans and strenuous opponents of Calvinism. While attending the lectures of these professors, Spener did not neglect his other studies. He improved his acquaintance with the classical languages, in which he had been tolerably well grounded; studied Hebrew, and also, which was at that time more rare, Arabic; read much in philosophy, and with great attention the works of Grotius, the influence of whose writings can be traced in his works. He also took a vivid interest in the history of his own country. In 1654, after delivering a thesis against the errors of Hobbes, he took his academical degree in philosophy, and was appointed tutor at the university to the two sons of the Prince of Birkenfeld, with whom he remained two years, during which time he delivered lectures on philosophy and history. From 1659 to 1662, to increase his knowledge, he visited the universities of Basel (where he studied Hebrew under Buxtorf), Tübingen, Freiburg, Geneva, and Lyon. At Lyon he became known to Père Ménéstrier, who inspired him with a taste for heraldry, which he imported into Germany, where it found a fruitful soil. This taste occasioned the production of his earliest works, and they were continued at intervals till 1689. They are genealogico-historical, and, though some have gone through more than one edition, possess a limited interest now.

On his return to Strasburg he resumed his lectures, and in 1662 the senate offered him the situation of public preacher, which he accepted, and rapidly acquired so great a reputation by his eloquence, his piety, and the purity of his life and manners, that after taking his degree of D.D. in 1654 the senate of Frankfurt-am-Main invited him to accept the office of chief preacher of that city. Here he maintained the reputation he had previously acquired; his admirers and followers were numerous. His earnestness, sincerity, and zeal however, though procuring him devoted disciples, made him enemies; for, in accordance with the spirit of the times, his zeal was untempered with tolerance, and his denunciations, which were mainly directed against the Calvinists, who were a powerful and wealthy body in Frankfurt, occasioned them to remonstrate with him. This had a remarkable effect, and it displays the excellence of his character; for thenceforward he ceased to contend against the minor differences of faith with his Protestant brethren, and restricted his reprehensions to the vices, the immoralities, and the formal coldness of the sermons, and of the religious feelings of the attendants on them, which then prevailed. His change gave offence to his own party; he was now accused of favouring and sanctioning heterodoxy.

He however held on his course; and in 1670 he instituted his 'Collegia pietatis,' which, unintentionally on his part, became the foundation of the sect of Pietists. In these assemblages he repeated in a summary manner the substance of his sermon; and, after explaining some passage from the New Testament, invited the inquiries of his auditors as to anything which seemed to them to need further explanation. To these meetings females were admitted, but they were not allowed to ask questions, and were kept out of sight. For many years while under his direction the good effects of these meetings were palpably evident; but they degenerated when they began to be held in various places, and frequently not under the direction of a clergyman. Complaints were made, but Spener found no difficulty in justifying his own proceedings. Still pursuing the object he had ever in view—the improvement of his fellow-men—he published in 1675 his 'Pia Desideria,' demonstrating the need of a general reform, and pointing out the mistake of preachers declaiming on points of doctrine, instead of inculcating Christian charity and a humble faith.

In 1686, at the special request of the Elector of Saxony, and in the hope of being beneficial in a wider sphere than at Frankfurt, he accepted the office of court preacher and member of the consistory at Dresden, where he was very soon involved in a religious dispute, which in the end elevated Spener into the chief of a sect considered heterodox if not heretical. A number of clergymen proposed that they should enter into an agreement upon oath to withstand any innovation in their creed or discipline. The adherents of Böhm were chiefly pointed at, but Spener was indirectly included, whose inclination towards mysticism and opinions on the millenium were not approved of. Spener held that such an agreement trenching upon the Protestant doctrine of the right of private judgment, refused to consent, and published in 1691 'The Independence of Christians from all Human Authority in matters of Faith,' a work which greatly contributed to the extension of tolerance among the sects of Germany. Another dispute however which he had with the theological teachers in the University of Leipzig, where one who had adopted his doctrines was persecuted by the others, and where the nickname of Pi-tists was first bestowed on his followers, led to an appeal by him to the elector. His opponents had been able to prejudice the elector against him; the religious meetings were forbidden, and were stigmatised as conventicles. Spener upon this accepted the office of provost and inspector of the church of St. Nicholai, and assessor of the Consistory at Berlin, in 1690, where he enjoyed universal respect. In 1692 the Elector of Brandenburg founded the University of Halle, and Spener's adherents from Leipzig being appointed its theological professors, Halle became

the central point of Pietism, and Lutheranism split into two sects. The theological faculty at Wittenberg published a work denouncing 264 heretical opinions propounded by Spener, who replied in 1695 in the 'True Agreement with the Confession of Augsburg.' Soon after a violent dispute arose in consequence of some preachers refusing to hear confession before administering the sacrament and giving absolution. The dispute was so violent that a riot was apprehended; but Spener restored peace by deciding that it should be free to believers either to confess or abstain from the formality, according to their own opinion—a truly Protestant decision, and, as a consequence, confession among Lutherans has fallen into desuetude. In 1694, Friedrich August I. of Saxony, on his accession to the electorate, urgently solicited Spener to return to Dresden, but he declined; and, after pursuing his accustomed course, distinguished for his goodness, charity, and piety, he died at Berlin, on the 5th of February 1705.

Several memoirs of him have been published, partly founded on a manuscript of his own life found after his decease; and he left a number of works unprinted, of which some have since appeared. In 1700-1 he had published—'Theological Answers and Consultations,' in 4 vols., to which after his death was added 'The Last Theological Answers,' in 1 vol., 1715; and in 1709 'Concilia et Judicia Theologia Latina.' The six volumes are said to form the best collection of Protestant casuistry extant, the answers not treating of vain subtleties, but discussing matters of grave importance and of practical utility.

SPENSER, EDMUND, the "prince of poets," as the inscription on his monument terms him, is usually ranked with Chaucer, Shakspeare, and Milton. Like them, very little seems to be known of his personal history, and that little is contradictory and obscure.

He was born in the year 1553, in East Smithfield, London. He appears to have been well connected, but as to this there is no certainty, though an attempt has within the last few years been made to show that he belonged to the Spencers of Hurstwood, near Burnley, Lancashire. (See 'Gent. Mag.' August, 1842, and March, 1828, also Mr. Craik's work referred to below.) The circumstance of some of his minor poems being addressed to Anne, daughter of Sir John Spenser, who married Lord Mounteagle, and at his decease Henry, Lord Compton, and also her sister Elizabeth, wife of George Cary, who was created Lord Hunsdon in 1596, furnish some foundation for the opinion that there may have been some family connection. Nothing is known of Spenser's parents. We find him entered as a sizar at Pembroke Hall, Cambridge, on the 20th May, 1569, in his sixteenth year. In 1572 he took the degree of A.B., and in 1576 that of A.M. He soon afterwards left Pembroke Hall, in consequence, it is stated, of an unsuccessful competition for a vacant fellowship with Launcelot Andrewes, bishop of Winchester. But some of his biographers state that no such competition ever occurred; others, that he left college immediately after taking his degree. On quitting Pembroke Hall, he went to reside with some friends in the north. During this retirement he wrote his first work, the 'Shepheard's Calendar,' and fell in love with his 'Rosalind,' who is by some supposed to have been a real personage. This work was first published in quarto in 1579, and dedicated to the "ever-memorable" Sir Philip Sidney.

Dr. Birch, in his 'Life of Spenser,' asserts that the dedication of the 'Shepheard's Calendar' was Spenser's first and only introduction to Sir Philip Sidney. The common story of Sir Philip's ordering five pounds to be given to the author, who waited without, and gradually increasing the sum in proportion as his admiration was awakened, is treated with discredit by all Spenser's later biographers. Sidney appears to have warmly patronised the poet; for Spenser dates the letters to Gabriel Harvey from Leicester House, Sir Philip's ordinary residence, and many expressions indicative of warm attachment on the part of Spenser and friendship on that of Sidney, are contained in them. It is remarkable that some of Spenser's contemporaries seem to have believed, and the belief seems to have been general, that Sir Philip Sidney himself was the author of the 'Shepheard's Calendar.' This subject is briefly discussed in Mr. J. P. Collier's 'Poetical Decameron,' to which the reader is referred. The fact of the work being published anonymously, no doubt, greatly aided the general belief in this report.

In 1580 the 'Four Epistles' which passed between Spenser and Gabriel Harvey appeared. The subjects of these letters were an earthquake which happened at that time in London, and satirical poetry. Spenser is addressed under the name of 'Immerito.' Nash, in his 'Have with you to Saffron Walden,' 1596, speaks of these letters as 'ragged remnants.' This and other satirical cuts produced a tract from Harvey in the ensuing year, called 'The Trimming of Thomas Nash;' but Spenser's fame being by this time well established, Nash's satire may be considered as confining itself to Harvey's share in the letters.

In the latter part of the year 1580, Spenser was sent to Ireland as secretary to Lord Grey of Wilton, by the Earl of Leicester, Sir Philip Sidney's uncle. His services in that capacity procured him, in 1586, a grant from the crown of 3028 acres of land forfeited by the Earl of Desmond. Killoolman, in the county of Cork, was the name of this estate. In the same year (1586) he lost his kind friend and patron Sir Philip Sidney, a mournful event which produced 'Astrophel,' a pastoral elegy on Sir Philip. This work was not published until the year 1595.

During his residence at Kilcolman, the 'Faerie Queen' was most probably begun. In 1590 the first three books appeared. In 1591 'Colin Cloute's come Home again,' was published. This poem is dedicated to Sir Walter Ral-igh, who appears to have become, after Sir Philip Sidney's death, Spenser's principal friend and patron, and who is generally believed to have introduced him to Queen Elizabeth. Mr. Malone discovered, among the records deposited in the Rolls' chapel, a grant of fifty pounds per annum from the queen to Spenser. It is not easy to reconcile his possession of this annuity with Ben Jonson's account of his death, as given by Drummond of Hawthornden.

In 1591 were also published a collection of minor poems, entitled 'Complaints,' and the second part of the 'Faerie Queen.' The 'Complaints' comprise 'Mother Hubbard's Tale,' 'Tears of the Muses,' 'Virgil's Gnat,' 'Petra's Visions,' 'Bellay's Visions,' and the printer of the edition of 1679 says that various other minor poems are "either wholly lost or unkindly concealed from the public by private hands," an assertion of still earlier date. The title-page of the Second Part of the 'Faerie Queen' mentions that the work would be in twelve books. The six books which were wanting to complete the work, are stated to have been lost in their passage from Ireland by the carelessness of Spenser's servant; but Fenton the poet denies this. Two 'Cantos of Mutability,' which were first published in the collection of 1609, appear to be all that remain to us of the missing six books.

In 1594 he married, but who the lady was is unknown. He alludes to the progress of his passion in the 'Amoretti,' but so obscure is this portion of his history, that it is uncertain whether this was a first or second marriage. In 1596 he published four 'Hymns,' addressed to the countess of Cumberland and Warwick. In the same year he wrote his masterly 'View of Ireland,' published by Sir James Ware in 1633. His 'Prothalamion,' a nuptial poem, appeared about the same time. The close of Spenser's career was lamentable. Tyrone's rebellion broke out in 1598. Spenser had been nominated sheriff of Cork a little time previously, by the queen; and to this circumstance, and not to his cupidity, as some writers have asserted, should the awful event detailed by Jonson to Drummond of Hawthornden be ascribed. Ben Jonson said that "the Irish having robbed Spenser's goods and burnt his house and a little child new born, he and his wife escaped; and after he died for lack of bread in King Street, and refused twenty pieces sent to him by my lord of Essex, adding, 'He was sorrie he had no time to spend them.'"

Spenser died on the 16th of January, 1598-1599, in King Street, Westminster, though let us hope, for the honour of his numerous friends, not for lack of bread, and indeed various circumstances seem to render such an event extremely improbable. He was buried, at his own request, near Chaucer, in Westminster Abbey, at the charge of the Earl of Essex. Thirty years after, the Countess of Dorset erected a monument to him, which, in 1778, was restored by the Fellows of Pembroke Hall.

Spenser left two sons, Sylvanus and Peregrine. Hugolin, the son of Peregrine, was restored to the estate in Ireland by Charles II.; but adhering to the cause of James II., he was outlawed, and the estate reverted to the crown. A William Spenser petitioned the House of Commons for its restoration about the year 1700, pleading his ancestry and services as a guide to the royal troops in Ireland; and also that Hugolin "is very old and unmarried." He obtained the grant of the estate through the interest of the Earl of Halifax.

Pope observed of Spenser, "There is something in Spenser that pleases us as strongly in one's old age as it did in one's youth. I read the 'Faerie Queen' when I was about twelve, with a vast deal of delight." Campbell calls Spenser "The Rubens of English poetry." Objections have been raised against the allegory of the Faerie, and it has been remarked that "with all its beauties, a continuous perusal of the poem is wearisome to many readers," but as Mr. Craik has well said in his 'Sketches of Literature and Learning in England,' iii. 99, "These peculiarities—the absence of an interesting story or concatenation of incidents, and the want of human character and passion in the personages that carry on the story, such as it is—are no defects in the Fairy Queen. On the contrary, the poetry is only left thereby so much the purer. Without calling Spenser the greatest of all poets, we may still say that his poetry is the most poetical of all poetry. Other poets are all of them something else as well as poets, and deal in reflection, or reasoning, or humour, or wit, almost as largely as in the proper conduct of the imaginative faculty; his strains alone, in the Fairy Queen, are poetry, all poetry, and nothing but poetry. It is vision unrolled after vision to the sound of endlessly varying music. The 'shaping spirit of imagination' considered apart from moral sensibility—from intensity of passion on the one hand, and grandeur of conception on the other—certainly never was possessed in the like degree by any other writer; nor has any other evinced a deeper feeling of all forms of the beautiful; nor have words ever been made by any other to embody thought with more wonderful art. On the one hand, invention and fancy in the creation or conception of his thoughts; on the other, the most exquisite sense of beauty, united with a command over all the resources of language, in their vivid and musical expression—these are the great distinguishing characteristics of Spenser's poetry. What of passion is in it lies mostly in the melody of the verse; but that is often thrilling and subduing in the highest degree. Its moral tone, also, is very captivating; a soul of nobleness

gentle and tender as the spirit of its own chivalry, modulates every cadence."

Of Spenser's minor poems it is unnecessary to say much. The 'View of Ireland' will well repay perusal. The style is bold, and the handling of the subject very masterly. The 'Daphnoida,' usually printed with the 'Astrophel,' is a poem of much merit. Sir Philip Sidney, in his 'Defence of Poesie,' says he finds much good poetry in Spenser's works, but can hardly allow the use of the antiquated language. Warton's learned dissertation on the model of the 'Faerie Queen,' and the reasons for the adoption of an antiquated style, are well known.

There are a vast number of editions of Spenser's works. Lowndes, in his 'Manual,' enumerates thirty-two different editions of his works, and thirteen publications relative thereto, and several other editions of his works, or of the 'Faerie Queen' have since been published. The first collections were those of 1609, folio, and 1679, folio. Notices by contemporaries occur in the 'Skialetheia,' 1598, a satirical poem, in the very rare 'Eclogue upon the Death of the Right Honourable Sir Francis Walsingham,' by Watson, 1590; in a 'Discourse of English Poesie,' by Webbe, 1586; an 'Eclog,' addressed to him by Lodge, 1595; Notices, by Camden, in his 'Annals,' and by Sir James Ware, in 1633; and he is eulogised by almost every poet of the Elizabethan era. For the most ample collection of particulars relating to Spenser, and a rare critical examination of his poetry the reader is referred to 'Spenser and his Poetry,' by George L. Craik, 3 vols. 8vo, 1845.

SPERANSKI, MICHAEL, was born in 1771, in the government of Vladimir. His father, a clergyman of influence, designed him for the church, and sent him to the ecclesiastical academy of St. Petersburg, after a course of preliminary studies in the seminary attached to the convent of Rozhdestvenski. Young Speranski however felt no inclination for theology, and devoted most of his time to the study of mathematics, in which he made such proficiency that at the age of twenty-one he was appointed to the professorship of mathematical and physical sciences attached to the academy. He retained this professorship until 1797, when, owing to ill-health, he left his situation, retired to a village in the neighbourhood of St. Petersburg, and turned his attention to political science. During this period he formed the acquaintance of Count Kotchubey, who, upon the accession of Alexander, obtained for him the office of secretary to the Imperial council. In 1802 Speranski proceeded to organise the ministry of the interior under the direction of his patron. His plans were not completed till 1806, but were then adopted with the complete approbation of the emperor and his advisers. It was further determined that all the departments of government should be organised on the principle laid down by the young statesman, who had so completely gained the confidence of the government, that in 1808 he was named assistant-minister of justice and governor of Finland. The latter situation comprised the chancellorship of the university of Abo; but before he proceeded to execute his intended improvements in the system of national education, he re-organised the legislative commission, which had resumed its labours in 1804. In the same year his plans for reforming the public schools were taken into consideration, and by his advice all the funds for public instruction received large additions. In the following year he had already obtained power enough to propose a new system of finance, an improved organisation of the council of the empire, and a diminution of the power of the senate. All these measures were carried into execution; and Speranski, having thus brought all the chief branches of administration into the hands of the Imperial council, found himself in the capacity of its secretary, at the head of the affairs of the empire.

In the space of two years the whole system of government was changed; a new penal code was introduced; the law for the protection of commerce greatly improved; much of the paper money in circulation was replaced by a new coinage; and the whole method of taxation was remodelled. Speranski enjoyed in the highest degree the confidence of the emperor, who approved of all the changes proposed by him, and seems to have left everything in his hands. In 1809 Speranski had become a member of the privy council. The period between 1808 and 1812 was that of Speranski's greatest prosperity, and it is to these years of his almost unlimited power that some of the best institutions in Russia owe their origin. The nobility, who had lost many of their privileges under his reforming administration, insisted on his dismissal in 1812. The approaching invasion of Napoleon I. intimidated the emperor, who was in want of money, and felt that unanimity was indispensable in so critical a moment.

In the middle of March 1812, Speranski was carried off to Nischnei Novgorod with the utmost precipitation, under the pretext that his life was in danger from the French. Six months after he was exiled to Perm, where, suffering from want and vexations of all kinds, he was obliged to apply to the government for a small pension, which was granted, and enabled him to live in retirement. Two years afterwards a country-seat in the neighbourhood of St. Petersburg was restored to him; and he also obtained permission to live there. In 1817 he was unexpectedly appointed to the government of Pensia, and two years afterwards to that of Siberia. He devoted the first two years of his administration to a journey through the provinces which were entrusted to him, and he was thus led to project a new system of administration for Asiatic Russia. In 1821 he delivered his plan into

the hands of the Emperor Alexander, who received him with the greatest distinction, and restored him to his seat in the Imperial council, of which his exile had deprived him. In 1825 the Emperor Nicolas nominated him to the presidency of his chancery, and it was under his able direction that the celebrated 'Svod Zakonov' (or 'Corpus Juris'), which contains the laws and ordinances from 1694 to 1833, was completed. About this time he published his work, 'Précis des Notions Historiques sur la Réformation du Corps des Lois Russes,' &c. (Petersburg, 1833). Speranski died in 1840, at the age of sixty-nine years. His manners were pleasing, and his aspect indicated genius and commanding power.

**SPEUSIPPUS**, the son of a sister of the philosopher Plato, was born in Attica, in the demus of Myrrhinus. He was a disciple of his uncle Plato, whose general principles he adopted in his philosophy; but he differed from his master, as he mixed up empiricism with the idealism of Plato, and consequently attributed more importance to the senses, and also combined with his system several Pythagorean principles. In some of his works, which are mentioned by Diogenes Laertius and Athenæus, he wrote about plants, animals, and natural objects, into which he inquired more deeply than Plato. (Sext. Empir., 'adv. Math.,' vii. 145.) But on the whole he must be regarded as the continuator of the Platonic philosophy, and as the founder and the head of the old Academic school of philosophy, in which light he was always considered by the ancients themselves. Among his disciples several females are mentioned. Some ancient writers blame him for having taken money for his instruction, and for having indulged in sensual pleasures more than was becoming to a philosopher. A long list of his works, of which only few fragments are preserved, is given by Diogenes Laertius (iv. 1).

(Brandis, *De Perditis Aristot. Libris, de Ideis et Bonis*, p. 46, &c.; Ritter and Preller, *Historia Philosophiæ*, &c., p. 228, &c.)

**SPIGELIUS, ADRIAN**, was born at Brussels in 1578. He studied philosophy and medicine at Louvain, and afterwards pursued the latter science at Padua, where he received his diploma of doctor. He practised first in his own country, and then in Moravia; but in 1616 he was invited, at the recommendation of his former preceptor Fabricius ab Aquapendente, to take the principal professorship of anatomy and surgery at Padua. He seems to have filled the post with great honour both to himself and to the university, for its reputation was greater in his time than even when Fabricius and Casserius were professors. He died in 1625, of a disease said to have been caused by an accidental wound in the hand, leaving several works which were published after his death by his son-in-law and by Bueretius. The most important of them was that 'On the Structure of the Human Body,' an excellent and well-written system of anatomy, in ten books, in which however there is contained little that was unknown to his predecessors; even the lobe of the liver, which is called after his name, having been before described by Vesalius and others. Haller's judgment of Spigelius, that he commends himself chiefly by the purity of his style and by his practical annotations ('Biblioth. Anatom.,' i. 357) is probably correct; and may explain why, as a professor, he had more repute than his two predecessors, both of whom were certainly more learned anatomists. The whole works of Spigelius were published by Van der Linden, folio, Amsterdam, 1645.

\* **SPINDLER, KARL**, one of the most prolific of German novelists, was born in Breslau about 1795. He was removed early to Strasburg, where his father practised as a musician, and where he received his education, but with his father visited in succession Hanau, Stuttgart, Munich, and Baden-Baden. His first novel, 'Eugen von Kronstein,' was published in 1824, and displayed considerable talent, with decided proofs of a juvenile judgment and taste. To this followed in rapid succession a host of others. 'Der Bastard' was the first, issued in 1826, a lively and tolerably correct picture of the manners of the times of the Emperor Rudolf II., which is one of his best, and established his reputation. It has been translated into English by Lord Conyngham, under the title of 'The Natural Son.' His next was 'Der Jude' ('The Jew'), probably his best, published in 1827, depicting the manners of the first half of the 15th century. In 1829 appeared 'Der Jesuit,' which was highly popular, and has been translated under the title of 'The Jesuit, a Picture of Manners and Character,' of which the period is the first quarter of the 18th century. Among the more noticeable of his others are 'Der Invalid,' 'Der Enthusiast,' which has also appeared in English; 'Der Vogelhändler von Imbst,' a picture of domestic life, and others; with numerous translations from the French. Spindler has invention and facility, but has written far too much for his own fame. Most, if not all of his later works, are greatly inferior to his earlier productions. Since 1830 he has been editor, and a principal contributor to 'Das Vergessene' ('The Forget-Me-Not'), a pocket-book somewhat on the plan of our own annuals, and he has produced a number of dramatic pieces which, possessing some of the better qualities of his novels, have little dramatic capabilities. His collected works have been published in several editions, and occupy now upwards of 100 volumes.

**SPINELLI, PARRI**, a celebrated old Italian painter, was the son of Spinello Aretino, and was born at Arezzo, apparently about 1388-90, though his father was then very old, upwards of seventy. [ARETINO, SPINELLO.] This conjecture however rests only upon Vasari's statement respecting the age of Spinello, and the assertion that Parri died

when he was fifty-six years of age, and on the date 1444, which is on the altar-piece of San Cristofano at Arezzo, which is attributed to him.

He was first instructed by his father, and was afterwards employed by Lorenzo Ghiberti in Florence as an assistant in preparing the celebrated gates of the Baptistery of San Giovanni, which were executed between 1402 and 1424. He painted chiefly in Arezzo, and Vasari enumerates many of his works, but few now exist. He returned to Arezzo, says Vasari, upon the death of his father, and after many years' absence, from which it would appear that the father lived further in the 15th century than is at present supposed: he is known to have been living in 1408, and his death is believed to have happened about this time. Vasari's statement that he died in 1400 is probably a misprint as well as an error, as the account of Parri's assisting Ghiberti and returning to Arezzo at the time of his father's death and after many years' absence, is a complete contradiction to it. Parri was an excellent colourist, and was the best practical fresco-painter of his time; his draperies were also good, but his figures were too long in proportion; Vasari says some of them measured as many as eleven heads in height, and yet they were not ungraceful.

**SPINOLA, AMBROSIO, MARQUIS OF**, was born at Genoa in 1569. His family were originally from Spinola, a small town on the confines of the duchy of Milan and the Monferrat; but one of his ancestors removed to Genoa, where he amassed considerable wealth by engaging in mercantile speculations. On the death of his father, Ambrosio followed his pursuits, while his younger brother Frederic embraced the military profession. Having in 1598 entered the service of Philip III. of Spain, with six galleys equipped and armed at his own expense, Frederic was employed against the Dutch, over whom he gained several victories, ruining their trade, and capturing or sinking their ships. In 1601 Frederic was appointed admiral of the Spanish fleet on the coast of the Netherlands, and shortly after was invested with full powers to raise a body of troops to operate against the insurgents of Flanders. He then went to Genoa, and prevailed on his brother Ambrosio to take the command of the land forces, whilst he scoured the sea with his fleet. The army was to be raised in the duchy of Milan and to consist of 9000 men, Italians and Spaniards, whom the two Spinolas were to arm and pay, after the manner of the old 'condottieri,' to be afterwards reimbursed by the Spanish treasury. This circumstance, at a time when the conduct of wars depended so much upon the troops being regularly paid, contributed in a great degree to the success which afterwards rendered Spinola so celebrated. While the Spanish troops in Flanders were disorderly and mutinous, those under the command of Spinola were always a pattern of obedience and discipline. Ambrosio left Milan in May 1602, and entered the Low Countries. He served at first under Mendoza, who sent him to the relief of Grave, besieged by Maurice; but he was defeated in an attempt to break through the enemy's lines, and Grave surrendered on the 20th of September 1602. The ensuing year (May 1603) his brother Frederic was killed in a naval engagement with the Dutch. Shortly after Spinola was appointed general-in-chief of the Spanish forces in the Netherlands. He began the campaign by an attempt to relieve the town of Sluys, which was besieged by the Prince of Nassau; but in this he failed, the place having capitulated on the 19th of August 1604. The Archduke Albert of Austria, governor of the Netherlands, having employed him in the capture of Ostend, which had long been besieged by the Spaniards, it fell into his hands after it had sustained a siege of three years and two months. Although Spinola obtained possession of a mere heap of ruins, his reputation was at once established throughout Europe. After this he repaired to Madrid, where he was received by King Philip with the respect due to his talents, and appointed commander-in-chief of all the Italian and Spanish forces in the Netherlands. On his way back to the theatre of war, he passed through Paris, where he had an interview with Henry IV. This king having asked him what were his plans for the ensuing campaign, Spinola, who penetrated his motives, entered without hesitation into the detail of his projects, and of the military operations which he intended to perform. Taking for granted that Spinola wished to deceive him, Henry wrote to Maurice the very contrary of what he had been told; and when he saw that by performing exactly what he had stated, Spinola had deceived both him and his antagonist, he is said to have exclaimed, "Others have deceived me by falsehood, but Spinola by telling the truth." Maurice at length saw the artifice, and changed his plan of operations, but he was unable to gain any decisive advantage over his adversary, who dexterously availed himself of the fortresses and of the nature of the ground to keep him in check. A decisive naval action, in which the Dutch admiral Heemskerk destroyed the Spanish squadron near Gibraltar (1607), induced the cabinet of Madrid to propose an armistice, which was concluded between Spinola and Maurice for twelve years (1609). The war was renewed in 1621, owing to the disputed succession to the duchy of Cleves, and Spain, by her connection with the house of Austria, and the hope of recovering her lost dominion over Holland, entered into it. Spinola commanded the Spanish forces, and Maurice was again his opponent. The advantage however remained entirely with the former. Juliers was invested and taken, and the siege of Breda was commenced. Whilst trying to relieve this city, the Prince of Nassau [MAURICE] died of a fever occasioned by the

noxious air of the marshy soil, and Spinoza himself was reduced to a weak state of health, owing to the same cause; but after ten months' siege, Breda opened its gates (June 1625). This was Spinoza's last achievement, his health obliging him soon after to resign the command. In 1629 he was employed against the French in Italy, but he was unable to gain any decisive advantage, and he died soon after (1630) of vexation and disappointment caused by the complete disregard of his pecuniary claims by the court of Madrid. Spinoza was doubtless one of the ablest generals of his time, being second only to his antagonist, Prince Maurice, in military talent.

SPINOZA, BENEDICT, the son of a Portuguese Jew at Amsterdam, was born in that city the 24th of November 1632. He was named Baruch, but on his renouncement of Judaism he always called himself Benedict. From his infancy he exhibited remarkable indications of mental acuteness, and his frail sickly constitution forced him to find solace in study. He became well versed in the Hebrew language, and learnt also Italian, Spanish, German, and Dutch. His early studies were principally the Bible and Talmud; and his penetration was so keen, and the logical tendency of his mind was so great, that he won the admiration of Mortiera, the chief rabbin, who became his instructor. His studies however led him to speculate curiously on certain points which were received in the Jewish religion. The immortality of the soul, for example, he nowhere found confirmed in the Old Testament, a matter which has called forth great discussion. Among the most celebrated of the treatises on this subject are Dr. William Sherlock's 'Discourse of the Immortality of the Soul and a Future State,' and Warburton's 'Divine Legation of Moses.' Spinoza made no secret of his opinions on this matter, and two of his young friends soon disseminated the report of his infidelity. Spinoza was in consequence summoned before the synagogue, where his judges, after deploring that one who had given such hopes should have wandered from the right path, informed him that he was summoned to give a profession of his faith. He was accused of having treated the law and religion of Moses with contempt, which he denied, but he maintained his opinions. Long discussions took place, in which Mortiera, who was enraged at his disciple, used all his endeavours to get him excommunicated, in which he subsequently succeeded.

A physician called Vanden Ende, who was himself accused of scepticism, instructed Spinoza in Latin and Greek. Vanden Ende had also a daughter, not prepossessing in appearance, but well acquainted with Latin, and an excellent musician. Spinoza took lessons in Latin and love at the same time; and would have married her, had not a young merchant from Hamburg, with the more potent seductions of pearl necklaces, rings, and other articles, won her heart. Spinoza's Latin however was useful in his new philosophical studies, for which he had abandoned theology; and the works of Des Cartes falling into his hands, he read them with avidity. A new world was opened to him, and he always declared that to Des Cartes he owed whatever knowledge he had of philosophy. He had now quite freed himself from the shackles of Judaism, was reserved with the Jewish doctors, and absented himself from the synagogue. It has been asserted that he professed Christianity and frequented the Calvinist and Lutheran churches, and that he embraced Mennonism, but this is erroneous. It is true that he held many conversations with learned Mennonites and other sectarians, but never declared himself for any one. ('Vie de Spinoza,' prefixed to Boulainvillier's 'Réfut. de Spinoza.') His attacks on the Jewish doctrine so alarmed the rabbins, that they offered him a pension of a thousand florins if he would consent to comply outwardly with their ceremonies and from time to time present himself at their synagogue. "Not if the pension were tenfold," indignantly exclaimed Spinoza.

With such a man there was only one remedy—excommunication; but before that was put in practice assassination was attempted. Coming one night from the theatre, he was attacked by a Jew, who stabbed him in the face. The wound was fortunately slight; but he saw the danger of staying in Amsterdam, and determined to leave it. The day of excommunication at length arrived. The people were assembled in the synagogue to assist in that extraordinary proceeding. A vast quantity of black wax candles were lighted, and the tabernacle wherein are deposited the books of the law of Moses was opened. From the elevated chair, the chanter chanted in lugubrious tones the dreadful words of execration, whilst another sounded the trumpet. The candles were then held over a large tub filled with blood, and melted into it drop by drop, during which the people awed by this spectacle, and animated with religious horror, cried out Amen.

Spinoza however found an asylum with his friend Vanden Ende; and there he practised himself in the art of making glasses for telescopes, microscopes, &c., in which he soon excelled, and thereby procured an humble subsistence. But Mortiera, who pursued him with unabated rancour, got him exiled from Amsterdam, and he retired to Rhynsburg near Leyden, where he followed his trade, devoting every spare hour to his studies. In 1664 he published his 'Abridgment of the Meditations of Des Cartes,' with an appendix in which he expressed opinions wholly inconsistent with those of Des Cartes. He then went to the Hague, where he remained the rest of his life. He lived as a perfect recluse, and with the most rigid economy. His time was spent in study, or in correspondence with the celebrated men of his day. He would frequently not leave his

room for three or four days together. His habits were sober, quiet, and retired. The occupation of his life was philosophy; and the only relaxation he allowed himself was his pipe, a little conversation with the people in his house, or watching spiders fight—an amusement which would cause the tears to roll down his face with laughter. His doctrines excited the indignation of theologians, but his virtues endeared him to all who knew him personally. He died in 1677 of consumption, in the forty-fifth year of his age.

His published works are:—'Renati Descartes Principiorum Philosophiæ, pars prima et secunda More Geometrico demonstrata,' 1663; 'Cogitata Metaphysica,' 1664; 'Tractatus Theologico-Politicus,' 1670; and 'Opera Posthuma,' 1677. The last contain 'Ethica More Geometrico demonstrata; Politica; De Emendatione Intellectus; Epistolæ et ad eas Responsiones; et Compend. Gram. Ling. Hebr.' The materials for this notice have been drawn from the 'Vie de Spinoza' which precedes Boulainvillier's 'Réfutation de Spinoza,' in which the Life by Colerus is incorporated, and augmented by many curious matters derived from a manuscript memoir by one of Spinoza's friends.

The system of Spinoza is generally identified with atheism, both in France and England, so that it has become a term of extreme odium; with what propriety it will be seen from the exposition of his doctrines, which, from their celebrity, and from their having been so frequently mis-stated and misunderstood, it will be useful to give correctly. The one work of Spinoza which attracts the attention of metaphysicians is the 'Ethica,' which appeared among his posthumous works. "No treatise," says Mr. Hallam, "is written in a more rigidly geometrical method. It rests on definitions and axioms, from which the propositions are derived in close, brief, and usually perspicuous demonstrations. The few explanations he has thought necessary are contained in scholia. Thus a fabric is erected astonishing and bewildering in its entire effect, yet so regularly constructed that the reader must pause and return on his steps to discover an error in the workmanship, while he cannot also but acknowledge the good faith and intimate persuasion of having attained the truth which the acute and deep-reflecting author everywhere displays." ('Introd. to Lit. of Europe,' vol. iv., p. 243.) Spinoza is indeed the Euclid of metaphysicians; and however widely we may dissent from his doctrines, yet the rigid, close, and perspicuous reasoning, the elaborate construction of his system, and the obvious deduction of his consequences from axioms, recommend it to all thinkers as a great and intellectual gymnastic.

The eight definitions and seven axioms which contain his whole system are the following:—

*Definitions.*—1. By cause of itself I understand that the essence of which involves its existence; or that the nature of which can only be conceived as existent.

2. A thing finite is that which can be bounded (*terminari potest*) by another of the same nature; for instance, body is said to be finite, because it can always be conceived as larger. So thought (*cogitatio*) is limited by other thoughts. But body does not limit thought, nor thought limit body.

3. By substance I understand that which is in itself, and per se, conceived: that is, the conception of which does not require the conception of anything else as antecedent to it.

4. By attribute I understand that which the mind perceives as constituting the very essence of substance.

5. By modes I understand the accidents (*affectiones*) of substance by means of which it is conceived.

6. By God I understand the being absolutely infinite; that is, the substance consisting of infinite attributes, each of which expresses an infinite and eternal essence. Whatever expresses an essence and involves no contradiction, may be predicated of an absolutely infinite being.

7. That thing is said to be free which exists by the sole necessity of its nature, and by itself alone is determined to action; but it is necessary, or rather constrained, when its existence is determined by something else, and its acting by certain and determinate causes.

8. By eternity I understand existence itself, as far as it is necessarily conceived to follow from the sole definition of an eternal thing. For such existence, as eternal truth, is conceived as the essence of a thing, and therefore is not to be explained by duration or time, though duration, beginning, and end may be conceived.

*Axioms.*—1. All things which are, exist in themselves or in others.

2. That which cannot be conceived per aliud, must be conceived per se.

3. From a given determinate cause the effect necessarily follows; and vice versa, if no determinate cause be given, no effect can follow.

4. The knowledge of an effect depends on the knowledge of the cause, and includes it.

5. Things that have nothing in common with each other cannot be understood by means of each other; that is, the conception of one does not involve that of the other.

6. A true idea must agree with its original in nature—with its object (*idea vera debet cum suo ideato convenire*).

7. Whatever can be conceived as non-existent, does not in its essence involve existence.

These fundamental principles of his philosophy will to some appear truisms, to others absurd. But when their language (and we have

adhered as closely as possible to Spinoza's barbarous but energetic and expressive Latin) is rightly understood, and their signification seized, which a very slight study of their development will assist, they will appear as some of the most curious positions of speculative philosophy.

Two substances, having different attributes, have nothing in common with each other; hence one cannot be the cause of the other, since one may be conceived without involving the conception of the other; but an effect cannot be conceived without involving a knowledge of the cause (per Axiom 4). This must be understood as meaning a complete conception of the effect, which necessarily depends on a complete conception of the cause, not that the relation of cause and effect itself depends on our conception of them. Two or more things cannot be distinguished except by the diversity of their attributes, or by that of their modes. For there is nothing out of ourselves except substances and their modes. But there cannot be two substances of the same attribute, since there would be no means of distinguishing them except their modes or affections; and every substance, being prior in order of time to its modes, may be considered independently of them; hence two such substances could not be distinguished at all. One substance therefore cannot be the cause of another, for they cannot have the same attribute, that is, anything in common with another. Every substance is therefore self-caused; that is, its existence is implied in its essence. It is also necessarily infinite, for it would otherwise be terminated by some other of the same nature and necessarily existing; but two substances cannot have the same attribute, and therefore cannot both possess necessary existence. The more existence anything possesses, the more attributes are to be ascribed to it. This follows from the definition of an attribute. The more attributes we ascribe to anything therefore, the more we are forced to believe in its existence; and from this is derived the existence of God. God, or a substance consisting of infinite attributes, each expressing an eternal and infinite power, necessarily exists, for such an essence involves existence. If anything does not exist, a cause must be given for its non-existence. If only twenty men exist, an extrinsic reason must be given for this number, since the definition of man does not involve it or any number.

There can be only one substance, God. Whatever is, is in God, and without God nothing can be conceived. For he is the sole substance, and modes cannot be conceived without substance; but besides modes and substance nothing exists. God is not corporeal, but body is a mode of God, and therefore uncreated. God is the cause of all things, and that immanently, but not transiently. He is the efficient cause of their essence as well as their existence, since otherwise their essence might be conceived without God, which is absurd. Thus all particular and concrete things are only the accidents or affections of God's attributes, or modes in which they are determinately expressed. God's power is the same as his essence; for he is the necessary cause both of himself and of all things, and it is as impossible for us to conceive him not to act as not to exist. God viewed in the attributes of his infinite substance is the same as nature, that is, to use his fine and subtle expression, the 'natura naturans'; but in another sense, nature, or 'natura naturata,' expresses only the modes under which the divine attributes appear. An intelligence considered in act, even though infinite, should be referred to 'natura naturata'; for intelligence in this sense is but a mode of thinking, which can only be conceived by means of our conception of thinking in the abstract, that is, by an attribute of God. The faculty of thinking, as distinguished from the act, as also those of desiring, loving, and the rest, have no existence. This is an anticipation of Hume's doctrine. There is, says Spinoza, an infinite power of thinking, which, considered in its infinity, embraces all nature as its object, and of which the thoughts proceed according to the order of nature, being its correlative ideas. This agrees with Plato, who says a law of nature is an idea in its objective reality; that is, idea and law (in this sense) are correlations. This opinion is indeed as old as philosophy itself, and is found in every country. The universe is taken as the manifestation of the Deity; not, as many suppose, as the Deity himself, but, to use the words of Cousin, "the Deity passing into activity, but not exhausted by the act." ('Cours de Phil. Intro.') It is owing to the abstract and subtle nature of Spinoza's method that his system has been so often misunderstood. The positions, for example, which we have set down require patient meditation and an acquaintance with metaphysical language to be intelligible, and some of them are open to the grossest misinterpretations. Thus Spinoza is usually accused of atheism, while not only are his doctrines found in St. Augustin and the Greek writers, but all the modern German philosophy, from Kant downwards, owns him as its master.

Spinoza does not confound God with the material universe; his words distinctly absolve him from such a charge: "God is the identity of the natura naturans and the natura naturata" (natura naturans et natura naturata in identitate Deus est). God and nature are not two distinct entities, but one living whole. God is the "idea immanens," the true spiritual existence, the living principle which permeates the whole. The material universe is only one phase of his infinite attributes, namely, extension; but Spinoza rigidly and universally teaches that the One Infinite Substance has two infinite attributes, extension and thought. Extension is visible thought, and

thought is invisible extension. The use of the word substance, by which he signifies existence, the 'prima materia' of the schoolmen, has led to much misunderstanding, and his adversaries have replied as if he meant by substance what we express by matter and body. When Spinoza therefore says that God is the infinite substance, he does not mean the material universe, which is only one attribute of existence, namely, extension; he simply gives the Platonic expression (*τὸ ὕψος καὶ τὸ πᾶν*), the unique conception of the All. When Spinoza asserts thought to be the other infinite attribute of substance, he follows Parmenides, of whom Ritter says, "Thought appeared to him to exhibit merely one aspect of the All." ('Geschichte der Philos.,' vol. i., p. 460.) It should be observed that the attribute of thought is not proved. He demonstrates the necessity for extension by saying that we cannot conceive substance without conceiving it as extended; but as we can conceive substance without thought, we may demand a demonstration of the necessity of this attribute, which Spinoza has not given. In other words, from the definition of substance, extension follows as a necessary attribute; but in the definition of substance, there is no necessity involved for thought as an attribute.

God then, according to Spinoza, is the "idea immanens," the fundamental fact and reality of all existence, the only power, the only eternity. What we name the universe is only the visible aspect, the realised form of his existence. All concrete things change and perish; they are only modes of the infinite Being, who alone remains unchangeable. It is a gross error (the origin of which may be traced to the misconception of his word 'substance') to assert, as it often has been, and on which Bayle founds his refutation of Spinoza, that this system is pantheistic, in the common acceptance of the term, that it identifies all things with God, and consequently that every concrete thing is a part of God. Such a conception is purely material and superficial. Schelling has well refuted it: "God is that which exists in itself, and is comprehended from itself alone; the finite is that which is necessarily in another, and can only be comprehended from that other. Things therefore are not only in degree, or through their limitations, different from God, but *totò genere*. Whatever their relation to God on other points, they are absolutely divided from him on this, that they exist in another, and he is self-existent or original. From this difference it is manifest that all individual finite things taken together cannot constitute God; since that which is in its nature derived cannot be one with its original, any more than the single points of a circumference taken together can constitute the circumference, which as a whole is of necessity prior to them in idea." ('Philosophische Schriften,' p. 104.)

We have not space to go through the ideological and moral parts of Spinoza's 'Ethics,' as we have done the metaphysical, but a few of the more important propositions may be usefully quoted.

The mind does not know itself, except so far as it receives ideas of the affections of the body. But these ideas of sensation do not give an adequate knowledge of an external body, nor of the human body itself. The mind therefore has but an inadequate and confused notion of anything so long as it judges only by fortuitous perceptions; but it may attain it clear and distinct by internal reflection and comparison. This is the doctrine of Hobbes and Locke explicitly stated. No positive idea can be false; for there can be no such idea without God, and all ideas in God are true, that is, correspond with their object. Falsity therefore consists in that privation of truth which arises from inadequate ideas; an adequate idea being one which contains no incompatibility, without regard to the reality of its supposed correlative object. Error is imperfect truth. It seizes one aspect of the truth to the neglect of the rest.

All bodies agree in some things; and of these all men have adequate ideas; hence common notions which all possess, such as extension, duration, number. The human mind however can only form a certain number of distinct images at the same time; if this number be exceeded they become confused: and as the mind perceives distinctly just so many images as can be formed in the body; when these are confused the mind also will perceive them confusedly, and will comprehend them under one attribute, as man, horse, dog, &c.; the mind perceiving a number of such images, but not their differences of stature, colours, &c. Thus are universal ideas formed: first, by singulars, which the senses represent confusedly and imperfectly; secondly, by signs, that is, by associating the remembrances of things with words, which Spinoza calls imagination; thirdly, by reason; and fourthly, by intuitive knowledge. Knowledge of the first kind is the source of error; the second and third are necessarily true. It is important to distinguish images from words. Those who think ideas consist in images which they perceive, fancy that ideas of which they can form no image are arbitrary. They look at ideas as pictures on a tablet, and hence do not understand that an idea, as such, involves an affirmation or negation. And those who confound words with ideas fancy they can will something contrary to what they perceive, because they can affirm or deny it in words. But thought does not involve the conception of extension; and therefore an idea, or mode of thought, neither consists in images nor in words, the essence of which consists in corporeal motions not involving the conception of thought.

Men can have an adequate knowledge of the eternal and infinite being of God, but cannot imagine God as they can bodies; and hence have not that clear perception of his being which they have of that of

bodies, and have perplexed themselves by associating the word God with sensible images, which it is hard to avoid. The existence of God can be conceived; indeed it is a necessary conception from which no mind can escape; but the manner of his existence can never be conceived. The source of error in this case is that men do not name things correctly; for they do not err in their own minds, but in this application; as men who cast up wrong see different numbers in their minds from those in the true result.

The mind has no free will, but is determined by a cause, which itself is determined by some other cause, and so on for ever. For the mind is only a mode of thinking, and therefore cannot be the free cause of its actions. Will and understanding are one and the same thing; and volitions are only affirmations or negations, each of which belongs to the essence of the idea affirmed or denied. This subtle opinion is also adopted by Malebranche, Cudworth, and Fichte.

Spinoza's moral system is as rigidly deduced from premises as his metaphysical. Most men who have written on moral subjects, he says, have treated man as something out of nature, as a kind of 'imperium in imperio,' rather than as a part of the general order. They have conceived him to enjoy a power of disturbing that order by his own determination, and ascribed his weakness and inconstancy not to the necessary laws of the system, but to some strange defect in himself, which they cease not to lament, deride, or execrate. But the acts of mankind, and the passions from which they proceed, are in reality but links in the series, and proceed in harmony with the common laws of universal nature. Men finding many things in themselves and in nature, serving as means to a certain good, which things they know to have not been provided by themselves, have believed that some one has provided them, arguing by analogy of the means which they in other instances employ themselves. Hence they have imagined a variety of gods, and these gods they suppose to consult the good of men in order to be worshipped by them, and have devised every means of superstitious devotion to ensure the favour of these divinities. Finding also in the midst of so many beneficial things in nature not a few of an opposite effect, they have ascribed them to the anger of the gods on account of the neglect of men to worship them. Nor has the experience of calamities falling alike on the pious and impious cured them of this belief; they choose rather to acknowledge their ignorance why good and evil are thus distributed, than give up their favourite theory. But all things occur by eternal necessity. Moreover were God to act for an end, he must desire something which he wants; for it is acknowledged by theologians that he acts for his own sake and not for the sake of things created.

Men having thought that all things were created for them, have invented names to distinguish that as good which tends to their benefit; and believing themselves free, have got the notions of right and wrong, praise and dispraise. And when they can easily apprehend the relations of things, they call them well ordered, if not, ill ordered; as if order were anything except in regard to our imagination of it.

We are said to act when anything takes place within us, or without us, for which we are an adequate cause; that is, when it may be explained by means of our own nature alone. We are acted upon when anything takes place within us which cannot wholly be explained by our own nature. Passions are the affections of the body, which increase or diminish its power of action, and they are also the ideas of those affections. Neither the body can determine the mind to thinking, nor can the mind determine the body to rest or motion. For all that takes place in body must be caused by God, considered under his attribute of extension, and all that takes place in mind must be caused by God, considered under his attribute of thought. The mind and the body are but one thing considered under different attributes; the order of action and passion in the body being the same in nature with that of action and passion in the mind. But men, though ignorant how far the natural powers of body reach, ascribe its operations to the determination of the mind, veiling their ignorance in specious words. For if they allege that the body cannot act without the mind, it may be answered that the mind cannot think till impelled by the body, nor are all the volitions of the mind anything else than its appetites, which are modified by the body.

All things endeavour to continue in their actual being, this endeavour being nothing else than their essence, which causes them to be until some exterior cause destroys their being. The mind is conscious of its own endeavour to continue as it is, which is, in other words, the appetite that seeks self-preservation; what the mind is thus conscious of seeking, it judges to be good, and not inversely. Many things increase or diminish the power of action in the body, and all such things have a corresponding effect on the power of thinking in the mind. Thus it undergoes many changes, and passes through different stages of more or less perfect power of thinking. Joy is the name of a passion, in which the mind passes to a greater perfection or power of thinking; grief, one in which it passes to a less. From these two passions, and from desire, Spinoza deduces all the rest of the passions in a curious but questionable manner.

Such is the substance of Spinoza's celebrated system; a system which has excited so much odium as to have become synonymous with atheism. We have pointed out the source of this error; but we cannot refrain from adding the testimony of the pious Schleiermacher to his religious earnestness. "Offer up with me," he exclaims, "with

reverence a lock of hair to the manes of the holy but repudiated Spinoza! The great spirit of the world penetrated him; the Infinite was his beginning and his end; the universe his only and eternal love. He was filled with religion and religious feeling; and therefore is it that he stands alone, unapproachable, the master in his art, but elevated above the profane world, without adherents, and without even citizenship." ('Rede über die Religion,' p. 47.) Göthe thus speaks: "The mind that wrought so powerfully on mine, and had so great an influence on the whole frame of my opinions, was Spinoza's. After I had looked round the world in vain for means of shaping my strange moral being, I fell at length on the 'Ethics' of this man. What I read in this work—what I thought I read in it—I can give no account of; enough that I found there a calm to my passions; it seemed to open to me a wide and free view over the sensuous and moral world. But what particularly riveted me was the boundless disinterestedness that beamed forth from every sentence. The all-equalising serenity of Spinoza contrasted with my all-agitating vehemence; his mathematical precision, with my poetical way of feeling and representing." ('Dichtung und Wahrheit,' xiv.)

These testimonies from such unquestionable sources will not be without benefit in directing men to look calmly into Spinoza, and meditate upon him. The student will derive great help from Boulainvilliers' 'Refutation de Spinoza,' Bruxelles, 1731, in which the doctrines are popularised and divested of their mathematical precision, which repels many readers; also from Jacobi's 'Briefwechsel mit Mendelssohn,' Breslau, 1789; and from Hallam's 'History of the Literature of Europe,' vol. iv., pp. 243-63.

SPIX, JOHANN BAPTIST VON, was born at Höchststadt, in the circle of Upper Franconia in Bavaria, on February 9, 1781, and after being educated at Bamberg, was entered at the theological seminary at Würzburg to study divinity. After pursuing this course for two years he abandoned divinity for medicine, and in 1806 received the degree of M.D. He had paid particular attention to human and comparative anatomy, and in 1809 he was sent, at the cost of the Bavarian government, to pursue his investigations in Paris. On his return to Munich he was admitted an associate of the Academy of Sciences, which, after the issue in 1811 of his 'Geschichte und Beurtheilung aller Systeme der Zoologie,' made him conservator of its natural history museum. In 1815 he published his 'Cephalogenesis,' in which he traces the head in its development from that of the insect to that of man, following it through all the various classes and families of animals. In 1817 he was commissioned by the Bavarian government to accompany C. F. P. von Martius in the exploration of Brazil. They landed at Rio Janeiro, traversed the provinces of San Paulo and Minas Geraes, proceeded thence by land to Bahia, and through Piahy to Maranhão. They then sailed to the province of Pará, where Spix ascended the Amazonas to the borders of Peru, while Martius explored the Yapura. On their return they examined several other of the rivers, and reached the town of Pará in June 1820. The health of Spix had greatly suffered from the climate and the labour he had undergone, but he completed in 1824-25, with some help from other zoologists, five illustrated works on the apes, bats, birds, and reptiles of Brazil, which contain much that is new and valuable, but with some hasty views and incorrect conclusions to be attributed to his desire of completing the works before his death, which took place on May 13, 1826. His papers relating to Brazil he bequeathed to Von Martius, and he left a considerable legacy to the Academy of Sciences at Munich.

SPOFFORTH, REGINALD, a composer in whom were united much originality, and very elegant taste, and a thorough knowledge of his art, was born in 1768, at Southwell in Nottinghamshire, and there received his early musical instructions from his uncle, organist of the collegiate church of that place. Repairing to London, he took lessons on the piano-forte from the celebrated Steibelt, and completed his studies in harmony under Dr. Benjamin Cooke. It was his fate, as unhappily it has been the fate of the English musicians generally, to depend during the greater part of his life almost wholly on his practice as a teacher, and he was in considerable repute as a piano-forte master. As a composer, he is now, and will be hereafter, known only as a gleewriter. Two of his earliest glees gained, in the year 1793, the prize gold medals given by the Catch-Club. This merited success established his reputation, and encouraged him to produce other works of the same kind, the best of which were published by himself, and most of these have taken their station among the classical musical productions of this country. On the death of his uncle, Mr. Spofforth came into the possession of considerable property, but did not long enjoy his independence; for his devotion to his profession and his unrelaxing industry brought on a nervous disease, which terminated in paralysis, and in 1826 deprived music of one of its most ingenious votaries, and society of one of its most amiable members.

SPOHN, FRIEDRICH AUGUST WILHELM, a German philologist, was born May 16, 1792, at Dortmund. He was educated at the University of Wittemberg, and afterwards went to Leipzig, where he was, in 1817, made professor extraordinary of philosophy, and in 1819 professor in ordinary of ancient literature. He was a scholar of the greatest industry, and died at an early age, January 17, 1824, worn out by the severity of his studies. He illustrated antiquity by a variety of works in the several departments of criticism, philology,

and geography. He published an edition of the 'Odyssey,' with valuable dissertations prefixed, entitled 'De Agro Trojano in Carminebus Homeri descripto,' Leipzig, 8vo, 1814; 'Commentarius de extrema Odyssee parte inde à rhapsod. v. 297, avo recentiore orta quam Homericò,' Leipzig, 1816. He revised the text of Hesiod with great care; the edition was commenced in 1819, but never completed. In 1817 he edited the 'Panegyricus' of Isocrates; and in the last year of his life published 'Lectiones Theocritee.' He projected also Annals of the reign of Augustus, deduced from a chronological arrangement of the various passages in Latin authors illustrative of this period.

As a geographer, he made great additions to the materials collected by Bredow. His researches into the mythology of the ancients led him to study Egyptian hieroglyphics; some remarks of his on this subject appeared in a German publication called 'Amalthæa.' In 1822 he was employed in examining and arranging the Egyptian antiquities brought to Berlin by Minutoli. His untimely death arrested the publication of his work on hieroglyphics, which has since been edited by Seyffarth, of Berlin, under the title 'De Lingua et Literis veterum Ægyptiorum, cum permixtis tabulis lithographicis literas Ægyptiorum tum vulgari tum sacerdotali ratione scriptas explicantibus atque interpretationem Rosettanæ aliarumque inscriptionum et aliquot voluminum papyraceorum in sepulchris repertorum exhibentibus. Accedit Glossarium Ægyptiacum,' Leipzig, 1825, with a life and portrait of Spohn. This work did not however contribute very much to solve the difficulties attending the interpretation of hieroglyphics. There is a life of Spohn in the 'Zeit-genossen, Neue Reihe,' heft xv.

\*SPOHR, LUDWIG, a great German musician, was born at Seesen, in the Duchy of Brunswick, in the year 1783. His father was an eminent physician. In early youth he showed no signs of the talents which afterwards distinguished him, being rather remarkable for apparent slowness of intellect. Few particulars of his quiet and uneventful life have been recorded; and there is no account of the manner in which his genius for music began to develop itself or how it was cultivated. He betook himself especially to the study of the violin, and obtained an engagement as chamber musician in the service of the Duke of Brunswick. In 1804 he travelled over different parts of Germany, giving concerts, and acquiring the reputation of being one of the greatest violinists of the time. In 1805 he became Concert-master to the Duke of Saxe-Gotha; and while he held this situation, made various professional tours, during one of which he was present at the Congress of Vienna in 1814, where he eclipsed all his rivals. His earliest compositions consisted chiefly of music for his own instrument, Concertos, Quartets, &c. In 1817 he travelled in Italy; and after his return from that country became director of music at the theatre of Frankfurt-am-Main. He now turned his attention to dramatic composition; and, at this period of his life, produced those fine Operas, 'Faust,' 'Jessonda,' and 'Zemira and Azor,' which have become popular throughout Europe.

When he left Frankfurt-am-Main, he became Maestro di Capella to the Duke of Hesse Cassel and took up his residence at Cassel, where he still lives. During the latter part of his life he has devoted himself principally to the composition of sacred music; and his oratorios, 'The Last Judgment,' 'The Crucifixion,' and 'The Fall of Babylon,' are deservedly classed among the greatest works of this description which have appeared since the days of Handel.

Spohr has paid many visits to England. The first, we believe, was in 1819, when he came on the invitation of the Philharmonic Society of London; and several of his orchestral pieces were performed at their concerts. His oratorios were first made known to the English public by their production at the Norwich musical festivals; and it was for one of those great music-meetings that one of them, 'The Fall of Babylon,' was expressly composed.

He is a voluminous composer. Besides his oratorios, and his operas on which his permanent fame will chiefly rest, he has produced a multitude of orchestral symphonies, concertos, quartets, and other instrumental works, together with numerous vocal pieces—cantatas, songs, ballads, &c., which are popular throughout Germany. Many years ago, when he became engrossed by composition, he discontinued performing on the violin; but he has left to the lovers of that instrument a most valuable gift, in his 'Violin-School,' the best and most complete work of its class. He has not lately produced any new work: and though he enjoys a serene and happy old age, the reward of a well-spent life, we may regard his artistic career as closed.

SPON, JACOB, the son of Charles Spon, an eminent French physician, was born at Lyon, 1647, and educated at Strasburg. He took the degree of Doctor of Medicine at Montpellier, and returning to his native place in 1669, studied medicine and archaeology. In 1673 he published 'Recherches des Antiquités et Curiosités de la Ville de Lyon,' 8vo, and the following year endeavoured to draw attention towards the remains of antiquity in Greece, by the publication of 'Relation de l'État Présent de la Ville d'Athènes, avec un Abrégé de son Histoire et de ses Antiquités,' Lyon, 1674, written by the Père Babin, a Jesuit, who had been resident there. In 1675 he went to Italy, and spent some time at Rome studying ancient art. At Venice he met with an English traveller, Sir George Wheler, and set out with him on a tour to the East. Their route lay through Dalmatia, the Archipelago, Constantinople, and Asia Minor: they then visited Athens

and the Peloponnesus. From Negropont they set sail for Venice, whence Spon returned to Lyon in the middle of the year 1676. In 1678 he published his 'Travels,' printed at Lyon, 3 vols. 8vo; reprinted Amsterdam, 2 vols. 12mo, 1679. The third volume contains inscriptions, great numbers of which relate to the demi of Attica. In the same year he published 'Miscellanea eruditæ Antiquitatis, in quibus Marmora, &c., Græco et Urino ignota referuntur et illustrantur,' Lyon, folio, published in tom. 4 of the 'Thesaurus' of Polenus, and containing much interesting matter. About this time, having noticed the falsehood of Guillet's account of Athens, published under the name of La Guilletière, he became engaged in a controversy with him, and succeeded in exposing him as a literary impostor. (Leake's 'Athens,' 2nd ed., i. 94, contains a full account of this matter.) In 1683 appeared a work of his, entitled 'Recherches Curieuses d'Antiquité,' Lyon. He continued to practise as a physician, and published several medical treatises. Being a Protestant, he quitted Lyon before the revocation of the Edict of Nantes, and went to Geneva, and thence to Vevay, where he died in great distress on the 25th of December 1685. His archaeological works are very valuable: his 'Travels' show great learning, as well as accuracy of observation; and the fidelity of his descriptions has been confirmed by the testimony of later travellers, and by recent discoveries at Athens. (Dr. Ross, 'Die Acropolis von Athen.') Spon and his companion were among the first European travellers who visited the Parthenon before its destruction during the siege of Athens by the Venetians in 1687.

The 'Biographie Universelle' gives a list of Spon's works, but omits several which are in the Catalogue of the British Museum.

(Jöcher, *Allgemeines Gelehrten-Lexicon*.)

SPONTINI, GASPARD, a celebrated Italian dramatic composer, was born at Jesi, in the Roman States, in the year 1778. After studying the principles of music under Padre Martini at Bologna, he entered, at the age of thirteen, the Conservatory of La Pietà at Naples, then a music school of great renown. At seventeen he composed his first opera, 'I Puntigli delle Donne,' which spread his name over Italy, and led to the favourable reception of a long series of dramatic productions. He visited Paris in 1804, and from that time became much connected with the music of the French opera; his principal works, 'La Vestale,' 'Olympia,' and 'Fernand Cortez,' having been composed for and produced at the Académie Royale de Musique. Of these works, 'La Vestale' acquired the greatest celebrity. Having been adapted both to the Italian and the German stage, it was performed in every great musical theatre in Europe, and for a time had almost as much popularity as the works of Rossini himself. Spontini passed many years of the latter period of his life at Berlin, as director of music at the Prussian court, and held this office at the time of his death, January 21, 1851.

SPOTSWOOD, (or SPOTISWOOD,) JOHN, Archbishop of St. Andrews, was born in 1565, in what is now the parish of Mid-Calder, in the county of Edinburgh, of which, and of West Calder, then forming one parish, his father, a descendant of the ancient family of Spotswood of Spotswood in Berwickshire, still subsisting, was parson. The spelling of the name which we have adopted is that given on the title-page of Spotswood's 'History of the Church of Scotland,' and is also that followed by his contemporaries Calderwood and Martine. But it is often written Spotiswood; that is the spelling of the writer of the biographical memoir prefixed to the 'History,' and also in the inscription on the archbishop's monument. The parson of Calder (whose father had fallen at Flodden Field) was soon after his induction to that benefice invested with the office of superintendent of Lothian, Merse, and Teviotdale (a sort of bishopric under what was thought a less odious name), which he held till his death in 1585. Spotswood's mother was Beatrix Crichton, described by the English writer of his Life, prefixed to his 'History of the Church of Scotland,' as "a grave and a discreet matron, daughter to the laird of Lugton, an ancient baron of Scotland."

Spotswood was educated at the University of Glasgow, where he is stated to have "received his degrees" in his sixteenth year. At the age of eighteen Spotswood was appointed to take the place of his father, who was disabled by age and infirmities, as parson of Calder; and for several years he confined himself mostly to the duties of his parish. During this period of his life however, he appears to have been considered as belonging to the ultra-presbyterian party, and to have gone along with the majority of the church in their opposition to the attempts of the government to restore episcopacy. Calderwood seems to assert ('History of the Church of Scotland,' p. 369) that the remarkable paper published by Bruce, one of the ministers of Edinburgh, in 1697, as his apology or defence for refusing to subscribe the bond demanded from the clergy by the king, engaging that they would not hold themselves privileged to utter sedition or treason in their pulpits, was written, or at least revised, by Spotswood; "he would seem," says Calderwood, "so frank in the cause, that he would needs write it with his own hand, and give it a sharper edge." It is in truth sharp and also sly enough in various passages. Latterly however symptoms of a tendency to defection may be detected. We find him mentioned (Calderwood, p. 394) as one of twenty-one ministers appointed by the General Assembly, which met at Perth in 1597, to confer with the king's commissioners upon certain articles propounded by his majesty; but, in the notion of the zealous historian

the acts and proceedings of that and several subsequent Assemblies "were framed as best might serve for advantage to the corrupt party." In the Assembly again, which met at Burntisland in 1601, which, says the historian, "began with small contentment to either party," and ended, he intimates, in not much more, Spotswood was one of twenty-five members commissioned to act with the king's ministers, or any nine of them, in supplying ministers to churches in burgh-towns. And perhaps there may be other occasions on which he is mentioned that may have escaped us, for Calderwood's large volume is without an index.

Spotswood's father had, before becoming minister of Calder, been employed by Matthew, earl of Lennox (afterwards regent, and the father of Darnley); and now, 1601, when the earl's descendant Ludowick was sent on an embassy from King James of Scotland to France, Spotswood was appointed to attend him as his chaplain. While in Paris, according to Calderwood, the parson of Calder "made no scruple to go to mass." Spotswood has himself given a detailed account of the embassy ('History,' pp. 465-6), but does not descend to such particulars. He returned in the duke's retinue through England, "having, while in France," according to his biographer, "so discreetly carried himself as added much to his reputation, and made it appear that men bred up in the shade of learning might possibly endure the sunshine, and when it came to their turns might carry themselves as handsomely abroad as they whose education being in a more pragmatic way usually undervalue them." At the last General Assembly however Spotswood was delated (or indicted) for his attendance at mass while in France; and Calderwood says, "he was removed, notwithstanding the opposition of the king and some ministers; many voting that he should be suspended or deposed." We should conjecture the word 'removed' here to be a misprint for 'reproved.' "The king and commissioners," it is added, "packed it up." There is no hint of this little affair either in Spotswood himself or his biographer.

When James set out for England, in April 1603, Spotswood was one of five Scotch clergymen whom he appointed to attend him on his journey, along with the Bishops of Ross and Dunkeld, the Duke of Lennox and other noblemen and gentlemen. While his majesty was at Burleigh House, near Stamford, he received intelligence of the death, at Paris, of James Bethune, archbishop of Glasgow; on which he immediately nominated Spotswood to that see, which he had never hitherto regarded as vacant, although Bethune had been out of the country for many years, and continued to adhere to the old religion as long as he lived. Spotswood thus elevated, was, as he tells us himself, immediately sent back to Scotland to attend the queen on her journey, and serve her for 'elemosinar,' or almoner. He was also made a privy councillor for Scotland. It is remarkable however that none of the Scotch bishops were consecrated till 1610, when Spotswood and the Bishops of Brechin and Galloway were summoned to London for that purpose, and, being consecrated at London House, on the 21st of October, by the Bishops of London, Ely, Bath and Wells, and Rochester, conveyed their new character in the same manner to their brethren on their return home. The Bishop of Ely (Andrews) would have had them be ordained first deacons and then priests before their ordination as bishops, as was in fact done in the case of Sharp and Leighton, when they were appointed to the sees of St. Andrews and Glasgow, after the Restoration; but in the present case, according to the relation of Spotswood himself, "the Archbishop of Canterbury, Dr. Bancroft, who was by, maintained that thereof there was no necessity, seeing, where bishops could not be had, the ordination given by the presbyters must be esteemed lawful; otherwise that it might be doubted if there were any lawful vocation in most of the reformed churches." This was applauded by the other bishops, and Andrews acquiesced. Burnet's account is that Andrews's objection was overruled by the king himself, "who thought it went too far towards the unchurching of all those who had no bishops among them." Neither of the archbishops were appointed to officiate in the consecration of Spotswood and his brethren, to prevent its being supposed that there was any intention to revive the old claims of the sees of Canterbury and York to a supremacy over the Scottish Church; this was James's own arrangement, and the same precaution was taken in the consecration of Sharp and Leighton in the next age.

The next year Spotswood returned to London, bearing a letter or petition from the Synod of Lothian, supplicating the king for a General Assembly, a prayer which his majesty did not grant, and which the archbishop probably did not very earnestly urge. "Returning from court," writes Calderwood, "he rideth out of Haddington when the people were repairing to the kirk to hear sermon upon the Lord's day. And it was always the custom of this profane bishop to cross the ferries or to ride upon the Lord's day in time of sermon" (p. 487). The historian afterwards inserts some Latin verses on the Scotch bishops, which, he says, were spread in Edinburgh, in January 1609, beginning, 'Vina amat Andreas, cum vino Glasgva amores' (p. 601).

Spotswood, as might be expected, employed his best exertions in re-edifying and strengthening the ecclesiastical system, of which he had thus been appointed one of the chief overseers; but the detail of the proceedings in which he bore a part must be sought for in the histories of Scotland and of the Scottish Church. "At his entry to

the archbishopric of Glasgow," says his biographer, "he found the revenues of it so dilapidate, that there was not one hundred pounds sterling of yearly rent left to tempt to a new sacrilege; but such was his care and husbandry for his successors, that he greatly improved it, and yet with so much content to his diocese, that generally both the nobility and gentry, and the whole city of Glasgow, were as unwilling to part with him as if he had been in the place of a tutelary angel to them." Yet, "part with him they must," as this cordial panegyrist proceeds to relate; for in June 1615, on the death of Archbishop Gladstones, Spotswood was appointed to the metropolitan see of St. Andrews. According to Calderwood, "when he returned from London to Glasgow on the 10th of that month, he seemed to be altogether ignorant who had obtained the gift [of the vacant mitre], till one of his servants, attending in Edinburgh upon the king's patent, sent to him advertisement to come in haste to Edinburgh. When he came, he seemed to be discontent, as desirous to stay still at Glasgow; but in the meantime his gift passeth the seals." He had previously (in 1609) been appointed an extraordinary lord of session, when it was proposed to restore that court to its ancient constitution of a mixed civil and ecclesiastical tribunal; but this design was abandoned the following year, on the erection of the two courts of High Commission, over one of which Spotswood was appointed to preside, and which were united under his presidency on his removal to St. Andrews.

As soon as he obtained the primacy, his biographer informs us, "he, by his favour with the king, procured three hundred pounds sterling of yearly rent (being by the sacrilege of former times swallowed up in the crown revenues) to be restored to his see;" and, continues the same authority, "all King James his time he lived in great favour with him, and was the prime instrument used by him in several assemblies for the restoring the antient discipline, and bringing that church to some degrees of uniformity with her sister church of England. . . . Nor was his industry less for the recovery of some remnants and parcels of the church's patrimony, which, although they were but as a few crumbs in comparison of that which at a full meal sacrilege had swallowed, he found to be a hard province; yet by his zeal and diligence he overcame many difficulties, and so little regarded his own ease, that, for the effecting of this, and what else conducted to the recovery of that church in patrimony and discipline, they who knew the passages of his life have computed that he made no less than fifty journeys from Scotland to London." Spotswood was succeeded in the see of Glasgow by Law, bishop of Orkney. "Here it is to be observed," writes the acrimonious Calderwood, "that Mr. John Spotswood and Mr. James Law, both sometime ministers within the presbytery of Linlithgow, two pretty foot-ball men, are now the only two archbishops in Scotland, and have now, as we use to say, the ball at their foot. They were both near the point of suspension in the purer times for the profanation of the Sabbath; now they have power to suspend, deprive, imprison, fine, or confine any minister in Scotland. Out of preposterous pity they were spared then; but now they spare not the least and the most blameless." (p. 655.)

The same royal favour that he had enjoyed in the time of James, Spotswood retained under the new king Charles I., whom he crowned in the abbey church of Holyrood on the 18th of June 1633. The writer of his 'Life' states, that besides procuring the revenues of the priory of St. Andrews, which were then in lay hands, to be added to his see, he prevailed with the king to separate so much of his diocese as lay to the south of the Forth, and to erect it into the new bishopric of Edinburgh. This was in 1633. Within two years after, on the death of the Earl of Kinnoul, Spotswood was made Lord High Chancellor of Scotland.

He had not yet attained this last height of promotion when in 1634 he drew upon himself a storm of popular odium by his conduct in instigating the oppressive proceedings against Lord Balmerino, who, on the ground of his having had in his possession a petition, considered to be seditious, which had been drawn up with the design of being presented to the king by a number of the opposition peers, and the knowledge of which had been betrayed to the archbishop, was arraigned for the then capital crime of leasing-making (verbal sedition), brought to trial before the court of judicatory (in which Spotswood's second son, lord president of the court of session, sat as one of the assessors to the justice-general), found guilty by an intimidated jury, condemned to death, and only pardoned at last, after a long imprisonment, in consequence of the government becoming afraid to permit the execution of the sentence—much, it was understood, to the disappointment of the archbishop and the other prelates. The part that Spotswood took in this business excited the greater disgust from his notorious hereditary enmity to Balmerino, whose father also had been disgraced and destroyed six-and-twenty years before, chiefly through his management. The prosecution of Lord Balmerino contributed as much perhaps as any other single cause to produce the general dissatisfaction in Scotland which a few years later broke out into so wild a flame. It was followed in 1637 by the ill-managed attempt to impose a liturgy on the Scottish church, which was the immediate provocation of the rebellion against the government. This scheme too has been attributed to Spotswood by some of his indiscriminating admirers: Martine, in his 'Reliquiæ Divi Andree' (p. 251), describes this "grave, sage, and peaceable prelate," as deserving "a singular note and mark of

honour," among other things, "for composing one excellent liturgie." But in truth, Spotswood appears to have been all along disinclined to the innovation, though, possibly, as the project was one upon which Charles himself had set his heart, he did not openly oppose it. It was pushed principally by Laud, who had formed a party among the younger Scottish bishops; and the new liturgy and book of canons were compiled by three or four members of this party, whose adherence to the English primate had for some time thrown them into opposition to the head of their own church. Spotswood, who was constitutionally of a temporising disposition, and could gain nothing by any disturbance of the established state of things, did what he could to check the precipitation of these zealots, and, in recommending delay and caution, is believed to have entertained the hope of being able to prevent the perilous experiment altogether. But of course he shared with the rest in the destruction brought upon their whole order by its failure. Deposed from his 'pretended' office of a bishop, declared infamous, and excommunicated by the famous Assembly which met at Glasgow in November 1638, he fled to England, "where," says his biographer, "age and grief, with a sad soul in a crazy body, had so distempered him, that he was driven to take harbour in Newcastle, till by some rest, and the care of his physicians, he had recovered so much strength as brought him to London." Laing, in his 'History of Scotland' (iii. 154), says—we do not know upon what authority—that he now "resigned the seals for a pecuniary consideration:—if so, the money was probably all he had to subsist upon. The writer of his 'Life' expressly affirms that he enjoyed the honour of the chancellorship "to his death." But, however this may be, he soon fell ill again, and died on the 26th of November (6to 'Calendas Decembris') 1639. "The manner of his burial," concludes his biographer, "by the command and care of his religious king, was solemnly ordered; for, the corpse being attended by many mourners, and at least 800 torches, and being brought near the abbey church of Westminster, the whole nobility of England and Scotland then present at court, with all the king's servants and many gentlemen, came out of their coaches, and conveyed the body to the west door, where it was met by the dean and prebendaries of that church in their clerical habits, and buried according to the solemn rites of the English church, before the extermination of decent Christian burial was come in fashion."

Burnet, in his 'History of his own Time' (i. 26), has described Spotswood as "a prudent and mild man, but of no great decency in his course of life; for," he adds, in a passage first printed in the Oxford edition of 1823, "he was a frequent player at cards, and used to eat often in taverns; besides that all his livings were scandalously exposed to sale by his servants." This version of the gossip of the day may be taken as giving us a tolerably correct view of the archbishop's character. Like the generality of the members of the Scottish episcopal church in that age, he appears to have signalled his aversion and contempt for the precisianism of the Puritans by a laxity of manners which would now be accounted indecorous in a churchman; but those were the days when even the puritanical Abbot, wearing the mitre of Canterbury, was wont to join in the diversion of the chase; and there is no evidence that Spotswood led in any respect an actually immoral life; on the contrary, writers of his own party warmly eulogise the piety and simplicity with which he demeaned himself. "In his life," says his biographer; "he had set so severe a watch upon himself, that his conversation was without reproof, even in those times when the good name of every clergyman was set at a rate, as formerly were the heads of wolves." He was no doubt an ambitious man; and he was probably chargeable with the carelessness as to money matters, and something of the unscrupulousness in other respects, which are the frequent concomitants of political ambition. Of the superiority of his general talents, or at least of the skill with which he turned undoubted talents to account, his success in the world may be taken as a sufficient evidence; of his learning and literary abilities we have a sample in his 'History of the Church of Scotland, from the year 203 to the end of the reign of James VI.,' a folio volume of about 550 closely printed pages, published at London in 1655. It was undertaken, we are told, in obedience to the command of King James, and it is dedicated by the author to Charles I. in an epistle dated "from the place of my peregrination, 15th November, 1639." This would be only eleven days before the archbishop's death, according to the common account; yet the dedication, which extends to three pages, contains no allusion either to the illness or the exile of the writer. On the contrary, he speaks throughout as if he were still in Scotland. All but the first 120 pages of this work, which bring down the history of the Scottish Church to the Reformation, may be regarded as the narrative of a contemporary; and it contains some details not elsewhere to be found: but its chief value consists in its giving us the views of public events entertained by one of the principal actors; and in this way even its suppressions and perversions of facts are not without interest. It is written in a clear enough but in a poor and unimpressive style. Spotswood's biographer says that he had heard of no other works which he had left behind him; but Martine, in his notice of him in the 'Reliquiæ,' attributes to him likewise "a like tract, in good and refined Latin, called *Refutatio Libelli de Regimine Ecclesiæ Scoticæ*, dedicated to King Charles I., a learned and eloquent piece, pitifully refuted by Mr. David Calderwood, under the name of Dido Clavius."

By his wife "Rachael Lindsay, daughter to David Lindsay, bishop of Ross, of the house of Edzell, an honourable family in Scotland," Archbishop Spotswood left two sons and a daughter. Of the eldest, Sir John Spotswood, his father's biographer, writing in 1655, says that he was then alive, "though not in a plentiful, yet in a contented condition, not any way cast down or ashamed of his sufferings, but comforting himself rather, that, in this general ruin brought upon his country, he hath kept his conscience free, though his estate hath suffered." These are like the expressions of a man speaking of himself, and would lead us to conjecture that Sir John Spotswood was the writer of this sketch of his father's life, and the editor of his 'History.' The archbishop's second son, Sir Robert Spotswood, after having been made a lord of session by James VI., and lord president of that court by King Charles, was removed from the bench by the Covenanters in 1641, and in January 1646, after the defeat of Montrose at Philiphaugh, was executed at St. Andrews, along with other adherents of that royalist general. A son of one of these brothers was also put to death at Edinburgh, in March 1650, a few days after the execution of Montrose. The archbishop's daughter was married to Sir William Sinclair of Rosslyn.

In the neighbourhood of his residence at St. Andrews, Archbishop Spotswood has left a memorial of his taste in the church of the parish of Dairsie, "which," his biographer tells us, "he publicly at his own charges built, and adorned . . . after the English form;" adding that "if the boisterous hand of a mad reformation hath not disordered" it, it "is at this time one of the beautifullest little pieces of church-work that is left to that now unhappy country." The church still stands, though disfigured in the interior, and stripped of whatever decoration it had that could be torn down without pulling the building to pieces. There is a view of it, and also of a house (now, we believe, entirely demolished) built by the archbishop in the neighbourhood of the church, in the last edition of Sir Robert Sibbald's 'History of Fife and Kinross,' 8vo, Cupar-Fife, 1803. Spotswood had purchased the estate of Dairsie.

SPRAGGE, SIR EDWARD, was a distinguished commander in the naval battles between the English and Dutch during the reign of Charles II. Of his parentage, the date of his birth, and the circumstances of his early life, there are no records. He fought as a captain in the battle between the English and Dutch, on the 3rd of June 1665, and for his gallantry on that occasion received the honour of knighthood. He was engaged in the four days' battle which took place in June 1666, and also in the following one of July 24th. When Van Tromp sailed up the Thames in 1667 he defended Sheerness, which however, from the weak state of the garrison, he was compelled to abandon. He afterwards collected a few frigates and fire-ships, and when the Dutch admiral Van Nes sailed up the Thames, Spragge engaged him, burnt some of his ships, and chased him out of the river. In 1671 Sir Edward Spragge fought against the Algerines, burnt several of their vessels, and did considerable damage to the castles and towns on the coast of Algiers. In the battle of Solebay, May 28, 1672, he sunk a Dutch ship of 60 guns. In 1673 he was made admiral of the blue, and on the 28th of May in that year another fight took place, in which Spragge and Van Tromp were compelled to change their ships two or three times in consequence of the damage done to them. On the 4th of June he fought Van Tromp again, and the two admirals were once more compelled to leave their shattered vessels. On the 11th of August another similar contest took place between them, when Spragge, passing in a boat from the battered St. George to the Royal Charles, was drowned, a shot having struck and sunk the boat. He was buried in Westminster Abbey. Sir Edward Spragge has been highly praised by his contemporaries, not only for his courage and skill as a commander, but for his gentlemanly manners and amiable disposition.

SPRANGER, BARTOLOMÆUS, a great mannerist, but a celebrated painter in his time, was born at Antwerp in 1546. His father was a wealthy merchant, and after he had received instruction from several masters at Antwerp he visited Paris and Italy, where at Milan he placed himself with Bernardo Gatti, called Soiaro. From Milan he went to Rome, where he found a patron in the Cardinal Farnese, who introduced him to Pope Pius V., who commissioned Spranger to paint him a picture of the 'Last Judgment,' gave him apartments in the Vatican, and appointed him his painter. This picture of the 'Last Judgment,' which contained about 500 heads, was painted on a large sheet of copper, and after the death of the pope it was fixed over his tomb in the church of Santa Maria Maggiore, but must have been long since removed.

In 1575 Spranger left Rome to enter the service of the Emperor Maximilian II., at Vienna, to whom he had been recommended by John of Bologna. After the death of Maximilian he remained in the service of Rudolph II., who ennobled him in 1588. He visited his native place in 1602, after an absence of thirty-seven years, and was treated with great distinction by his countrymen. He returned again to Prague, and died there about 1625, according to Von Mechel. There are many pieces by Spranger in the gallery of Vienna, and in other German collections. He painted with facility, but his figures are heavy, gross, and distorted; he was fond of allegorical and mythological subjects, which were utterly unfit for his style.

SPRAT, THOMAS, was born in 1636, at Fallaton in Devonshire.

He was the son of a clergyman, and was educated at Wadham College, Oxford, of which foundation he became fellow. He took the degree of M.A. in 1657. In 1659 he published a poem on the 'Death of Oliver Cromwell,' and another, 'The Plague of Athens.' Having been ordained after the Restoration, he was made chaplain, first to the Duke of Buckingham, whom he is said to have assisted in writing 'The Rehearsal,' and afterwards to the king. At this time he was made one of the original fellows of the Royal Society, and in 1667 published its history. In 1668 he was made prebendary of Westminster, in 1683 dean of Westminster, and in 1684 bishop of Rochester. In return for these marks of royal favour, Sprat in 1685 published a history of the Rye-House plot, entitled 'A true Account and Declaration of the horrid Conspiracy against the late King, his present Majesty, and the present Government;' but he repented of having written this work, and when requested by James, after Monmouth's execution, to add a second part, he refused, on the ground that the lives of many innocent persons would be endangered thereby. (See his letter to the Earl of Dorset, written in 1689, printed in 1711, 4to.) In the following year he was appointed one of the commissioners for ecclesiastical affairs: he voted in this office for the acquittal of the Bishop of London; and in 1688, though he had himself acknowledged the king's declaration of Toleration, he refused to take part in any proceedings against the disobedient clergy, and withdrew from the commission. On the abdication of James, Sprat was one of those who in the convention held on that occasion proposed the appointment of a regent; but after the settlement of this question he did not refuse allegiance to William. In 1692 an attempt was made to implicate the bishop in a pretended plot for restoring James, his signature having been fraudulently obtained by two men of infamous character, Robert Young and Stephen Blackhead. He succeeded after some little time in triumphantly establishing his innocence and the villany of his accusers. From this time till his death—May 30, 1713, at Bromley in Kent—he lived undisturbed by any political troubles. His property was bequeathed to his son Thomas Sprat, archdeacon of Rochester.

Burnet, who appears to have viewed Sprat with the jealous eye of a rival, speaks, after his manner, slightly of his moral character; but his conduct on many occasions shows an integrity superior to the feelings of personal gratitude towards the king. There is a list of his works in Wood's 'Athenæ Oxon,' among which is a brief 'Life of Cowley'—of no great merit, but which is the basis of all the subsequent lives of the poet—and some sermons and letters. There is also a letter of his among the Lansdowne Manuscripts, British Museum. His prose style is remarkable for choiceness of expression and beauty of structure: he is styled by Wood a commanding and eloquent preacher, and this praise is confirmed by Burnet. He wrote a few short poems, in the manner and with all the faults of the school of Cowley. The longest of them, 'The Plague of Athens,' is, to borrow Sprat's own words in the dedication of it, "an example how much a noble subject is changed and disfigured by an ill hand." (See 'Some Account of the Life and Writings of the Right Reverend Father in God Thomas Sprat, D.D.,—with a true copy of his Last Will and Testament,' London, printed for E. Curll, 1715; and Johnson's 'Lives of the Poets.')

SPRENGEL, CURT, one of the most learned physicians and botanists of the last and present century, was born on the 3rd of August 1766, at Bolderkow in Pomerania, where his father was a clergyman. His early studies were entirely directed by his father, and he is represented at the age of fourteen as being conversant not only with the Latin and Greek classics, and some modern languages, but to have made considerable progress in Hebrew and Arabic. Nor was his attention confined to languages, for at this age he published a little work on botany, in a series of letters, entitled 'Botany for Ladies.' In 1784 he commenced his studies at Halle, and devoted himself to both theology and medicine; but he soon gave up the former for the latter. In 1787 he took his degree in Medicine, and on this occasion presented as his thesis a paper entitled 'Rudimenta Nosologiæ Dynamicæ.'

During his medical studies he kept up his acquaintance with the ancient languages, and extended his knowledge of those of the east, and was thus remarkably qualified for the study of the history of medicine. To this department he applied himself, and in 1789 was appointed extraordinary professor of medicine in the University of Halle. In 1795 he was made ordinary professor of the same department. Although his application to the study of medicine was great, and he had already commenced his work on the 'History of Medicine,' and had published his 'Manual of Pathology,' he yet found time to cultivate his acquaintance with plants, and in 1797 was appointed professor of botany. To this department he applied the same learning that he had done to medicine, and his prolific pen furnished the most complete history of botany extant.

Through his works he became celebrated throughout his native country, and was called upon to fill very important chairs. In 1803 he was invited to Marburg to fill the chair vacated by Baldinger; in 1809 to Dorpat; and on the death of Willdenow in 1812 he was invited to occupy his place at Berlin. All of these he refused, and remained his whole life at Halle. The fame of his learning however was not confined to Germany; almost every country in Europe sought to

confer honours upon him. Upwards of seventy learned societies and academies sent him their honorary diplomas, and many kings conferred upon him their orders of distinction. These however were objects at which he never aimed, and which he never allowed to divert him from his favourite studies. He was one of the most industrious and learned men of his age; but whilst his great learning enabled him to become perfectly conversant with what had been done by previous writers, he did not neglect to observe for himself, and add the fruit of his own experience to that which had been previously produced.

The early part of Sprengel's life seems to have been more particularly directed to medicine. In 1788 he published a defence of Galen's doctrine of fever, and in 1798 an apology for Hippocrates. In 1792 the first part of his 'History of Medicine' appeared, and was not completed till 1820. These works were followed by smaller ones on various departments of the science of medicine, a complete view of which was given in his 'Institutiones Medicæ,' a work in six volumes, which appeared at various intervals from 1809 to 1816. In this work the whole field of medical science is gone over, and each department displays the author's characteristic learning. As a botanist Sprengel stands very high. He had in early life contracted a love for botany, and after his appointment to the professorship of that science in Halle, he never ceased, till disabled by disease, contributing important additions to its literature. In 1798 he published his 'Antiquitates Botanice,' which was followed in 1808 by his 'Historia Rei Herbariæ.' In these works he has brought his knowledge of ancient languages to bear upon the illustration of botany in the earliest times, and in the latter work the history of the science is brought down to the period at which it was written. To descriptive botany he made great additions, especially in the 'Flora Halensis,' published in 1806, and subsequent editions. These works were illustrated by many plates from his own pencil. Besides these he has published many other papers in this department of botany. He took a part with Schultes in preparing an edition of the 'Systema Vegetabilium' of Linnaeus, and subsequently, in 1824, published an edition of that work himself, with an appendix. He also described a part of the Brazilian plants, collected by Sellow, in his 'Neue Entdeckungen im ganzen Umfang der Pflanzenkunde,' published in 1820. In the systematic arrangement of plants he established many improvements, both in the Linnæan and natural systems, the principal of which are contained in his works on descriptive botany. In 1811 he published a work on physiological and descriptive botany, entitled 'Von dem Bau und der Natur der Gewächse,' in which he has given the result of the labours of others, and added many new observations of his own. In 1822 he published a German translation of Theophrastus's 'Natural History of Plants,' and in 1829 a new edition of 'Pediani Dioscoridis Anazarbei de Materia Medica Libri v.' His last work was an edition of the 'Genera Plantarum' of Linnaeus, in 1830.

His eldest son William was professor of surgery at Greifswald, and died in 1828. This loss affected the father very severely, and he never recovered the stroke. He was attacked by several apoplectic fits, and died in one of these seizures on the 15th of March 1833.

\*SPRUNER, KARL VON, was born at Stuttgart in 1803, but, left an orphan early, resided with some relatives at Ingolstadt and Salzburg till 1814, when he was admitted to the corps of cadets at Munich, where he quickly distinguished himself by his addiction to historical and geographical studies. In 1825 he obtained his commission as lieutenant, and while in garrison at Munich, Bamberg, and Würzburg, he prosecuted his favourite researches with great zeal and industry. His first production, 'Baierns Gaue' (the Country of Bavaria), appeared in a periodical work in 1831. His next was published at Bamberg in 1833, 'Gaukarte der Herzogthums Ostfranken' (District Map of the Duchy of East Franconia). In 1837 he commenced the publication of his most important work, the 'Historisch-geographische Handatlas,' completed in three parts, on 118 sheets, in 1852, and of which a second edition was commenced in 1853. It gives a most laborious and carefully prepared comparative abstract of the history of Europe and Asia, affording assistance of the greatest utility to every historical student, and its merit has been recognised throughout the educated world. This important work however did not occupy all his time; in 1838 he published an 'Historischer Atlas von Baiern,' and also some handbooks for travellers in the district of the Main, and in the mountain region of Lower Franconia. His 'Tabellen zur Geschichte der deutschen staaten' (Historical Tables of the German States), commenced in 1846, was brought to a premature termination in 1848 through unfavourable circumstances. His labours had procured him in 1843 the degree of Doctor from the university of Erlangen; in 1842 he was chosen corresponding member of the Academy of Sciences in Munich; and in 1853 actual member.

Spruner had for some time been patronised by the crown-prince Maximilian, who soon after his accession to the throne made him a captain, and placed him on the staff in 1851. In 1852 he was further advanced to the rank of major, and employed by the King of Bavaria on special commissions, among which may be named a comprehensive historical chart of Bavaria, and a comparative historical chart of Europe. To him has also been confided the instruction of the higher classes in the cadet corps in military geography. Spruner has also endeavoured to extend the general usefulness of his researches by publishing an abridgement of his 'Historischen Handatlas,' an

'Allgemeinen historischen Schulatlas,' and a 'Leitfaden zur Geschichte von Baiern' (Guide to the History of Bavaria), of which a second edition appeared in 1853.

SPURINNA VESTRITIUS, a Roman poet, who lived in the time of Pliny the younger, who in one of his letters (iii. 1) speaks of him as one of the most delightful persons that he ever met with, and states that he wrote lyric poetry both in Latin and Greek. He further adds that his poems were distinguished for their extraordinary sweetness, elegance, and cheerful spirit. At the time when Pliny wrote this letter, Spurrinna was seventy-seven years old, and enjoyed in his old age the leisure and comforts which he had earned by a long and active life, during which he had held several offices, and had also distinguished himself in the administration of the provinces. (Compare Plin., 'Epist.,' i. 5; ii. 7.)

There are extant four odes bearing the name of Spurrinna, which however, as some critics think, were written by another person, as they do not possess those merits which Pliny assigns to the poetry of Spurrinna. But the whole letter in which Pliny speaks of the poet is written with such an enthusiastic admiration of the man, that nothing is more natural than to conceive that he greatly overrated his poetical powers. The odes were first edited by Caspar Barth, in 1613, in his collection of 'Poetæ Latini Venatici et Bucolici,' from an ancient manuscript in the library of Marburg. They are also contained in Wernsdorf's 'Poetæ Latini Minores,' iii., p. 326, &c.

SPURZHEIM, JOHANN GASPAR, was born in 1776, at Longwich, near Treves. He was educated in the University of Treves, and in 1799 went to study medicine at Vienna, where he first became acquainted with Dr. Gall, the founder of the system of phrenology. Spurzheim attended his lectures for the following four years, and then associated himself with him for the prosecution of his researches. In 1805 they left Vienna and visited the principal parts of Germany, France, Prussia, and Denmark, to confirm and promulgate their doctrine. In 1807 they settled at Paris, and there first delivered their joint courses of lectures. They pursued their subject together till 1813, when they separated; and Spurzheim, after taking the degree of Doctor of Medicine at Vienna, came to this country and continued for three years, lecturing in many of our principal towns, and actively engaged in publishing works on phrenology, and in defending it against the severe criticisms to which it had been subjected. From 1817 to 1825 he resided and lectured at Paris; and when the French government prohibited the delivery of lectures except with special permission, he returned to England. At this visit he found his doctrines entertained with much more favour than during his former residence here; but he still occupied himself with the greatest energy in their promulgation by lecturing in nearly all the large towns of the whole kingdom, and by repeated publications. In 1832 he embarked on a similar mission for America; and in a few months after his landing, he died at Boston.

In the article GALL we have referred to the difference between the systems of Spurzheim and his preceptor. The scientific reputation of Spurzheim must rest chiefly on his having proved the fibrous structure of the brain, and many other very important facts in its anatomy, which, though published in his name jointly with that of Gall, were certainly due to the researches of Spurzheim alone. These indeed have no certain application in phrenology; yet Spurzheim must be regarded as having exercised an important influence on the progress of that system. He claims the merit of having discovered eight new cerebral organs, of analysing and classifying the mental powers, of pointing out the moral and religious relations of phrenology, and the relation of natural language or bodily actions to it, and of having made many improvements in the mode of investigating the facts bearing upon it. Admitting these claims however to their fullest extent, the scientific merit of Spurzheim (whether phrenology be true or not) must stand far below that of Gall. The great influence which he has had in giving the predominant character to the phrenology of the present day must be ascribed entirely to his power of rendering it a subject of popular study. For this purpose he was admirably adapted. He was an eloquent lecturer, and a most agreeable companion; his style both of speaking and of writing was fluent, bold, positive, and unhesitating; his illustrations were pointed and amusing; his arguments, though very often quite illogical, were very easy of apprehension; his conclusions general and indefinite; and he always treated his subject with an enthusiasm which satisfied his hearers of his own conviction of the truth of his cause, and which was enough in itself to carry conviction to the minds of all who were not well-disciplined in the fallacies of science. That which Gall discovered and invented, but could scarcely have taught, was by Spurzheim made to seem intelligible to the most ordinary understanding; and to him therefore must be attributed the reputation of having made phrenology one of the most popular studies or pursuits of the day.

The works of Spurzheim are very numerous, and most of them are generally known. A complete account of them is given, with his Life, in the 'Phrenological Journal,' vol. viii. A memoir of the life and philosophy of Spurzheim was published at Dublin, in 1833, by Mr. Carmichael.

SQUARCIONE, FRANCESCO. This painter, celebrated for his superior acquisitions, as well as his great school and rich collections of works of art, was born of a good family at Padua in 1394, and

after performing many tours in Greece and Italy lived there in great affluence and distinction until his death in 1444. His house was one of the chief attractions in Padua. He was the master of Andrea Mantegna, who lived some time in Squarcione's house, and also of Jacopo Bellini and Marco Zoppo. From his very numerous school (he had 137 scholars) he was called the father and primo maestro of painters. He appears to have been more engaged in teaching than in practising the art. He received indeed many commissions, but he appears to have entrusted their execution mainly to his scholars. The only work at Padua known to have been executed by Squarcione himself is one painted for the Lazara family in 1432, which excels alike in colour, expression, and perspective. The celebrated illustrated Book of Anthems in the church of the Misericordia, which used to be commonly ascribed to Mantegna, is now by competent judges considered one of the commissions of Squarcione executed by his numerous scholars. Vasari terms him erroneously Jacopo Squarcione. (Ridolfi, *Vite de' Pittori Veneti*, &c.)

SQUIRE, SAMUEL, D.D., a learned prelate of the English Church, and author of various works, was the son of an apothecary at Westminster in Wiltshire, where he was born in 1714. He was educated in St. John's College, Cambridge, and became early in life chaplain to Dr. Wynne, bishop of Bath and Wells, by whom he was made chancellor of Wells and archdeacon of Bath. He was afterwards chaplain and private secretary to the Duke of Newcastle. In 1750 he became rector of St. Ann's, Westminster. He had no other preferment, till in 1760 he was made dean of Bristol, and in 1761 bishop of St. David's. His life was prosperous, but short; he died in 1766, at the age of fifty-two. His principal published writings are—'An Enquiry into the Nature of the English Constitution;' 'The Ancient History of the Hebrews Vindicated;' two essays, 1, 'A Defence of the Ancient Greek Chronology,' 2, 'An Enquiry into the Origin of the Greek Language;' an edition of Plutarch's treatise 'On Isis and Osiris;' 'An Essay on the Balance of Civil Power in England;' 'Indifference for Religion inexcusable;' and 'Remarks on Mr. Cart's Specimen of his General History of England.' There is also a Catechism by him, and a collection of sermons preached by him on public occasions. More may be read respecting him in Nichols's 'Literary Anecdotes of the Eighteenth Century,' vol. ii., p. 348.

STACKHOUSE, JOHN, principally known as a botanist, was the youngest son of William Stackhouse, a minister of the Established Church, and the nephew of Thomas Stackhouse, the subject of the following article. He pursued his studies at Oxford, and was made a fellow of Exeter College, which he resigned in 1763, and went to live at Bath, where he resided all the remainder of his life. He employed the leisure which an independent fortune gave him in the pursuit of botany, and made many valuable contributions to that science. He was one of the earliest fellows of the Linnean Society. His attention was principally directed to the study of *Algae*. In 1801 he published his 'Nereis Britannica,' in folio, a work containing descriptions in Latin and English of the *Fuci*, *Algae*, and *Conferve* growing in England, and illustrated with coloured plates. Many new species of marine *Algae* were described in this work, and dissections given of some other species. Of this work a second edition appeared in quarto in 1816; the descriptions are entirely in Latin, and the plates uncoloured. In 1814 he published an edition of Theophrastus 'On Plants,' in 2 vols., which was illustrated with plates, and contained a catalogue of the plants of Theophrastus, with a copious glossary and many valuable notes. In 1811 he published 'Illustrationes Theophrasti,' in which the plants of that author are arranged according to the Linnean system, and the modern synonyms are given. He also published an essay on the Balsam and Myrrh trees, with remarks on the notices of them by modern travellers and ancient writers, especially Theophrastus. He contributed two papers to the 'Linnean Transactions,' one on the *Ulva punctata*, the other on the preparation of plants for herbaria. He died at Bath, in November 1819.

STACKHOUSE, THOMAS, a divine of the English Church, and one of the first persons who wrote extensive works in theology for the booksellers, expressly for the purpose of sale among the less educated portions of the population. He is said to have been born in 1681, but of the place of his birth, his education, and early history, nothing appears to be known. The letters M.A. appear after his name on his monument, and in the title-pages of some of his books, but his name is not found in the list of graduates of Oxford or Cambridge. We have his own authority for saying that he was in early life living at Amsterdam, and performing clerical duties there, but we look in vain in Mr. Stevens's work on the English and Scottish churches in Holland for any notice of him; and the first that is known of him when in England is, that he was curate at Richmond, as afterwards at Ealing and at Finchley, in all which places he was much respected. He continued a curate for the greater part of his life, and the utmost preferment which he obtained was the vicarage of Benham in Berkshire, which was given him in 1733, and where, in 1752, he died and was buried.

Various anonymous tracts have been attributed to him, and there are others to which his name is affixed that are supposed to be by other writers, but none of them are of sufficient importance to require more than this general notice. His first publication was on a subject which continued ever after to be a favourite one with him—

the hardships of the inferior clergy, especially those in and about London. This appeared in the form of 'A Letter to a Right Reverend Prelate' in 1722. In the next year he published 'Memoirs of Bishop Atterbury,' and in 1729 appeared his 'Complete Body of Divinity,' in a folio volume. He engaged at this period in the controversy with the Freethinkers of the time, and in a manner to gain great credit. In 1731 he published 'Reflections on the Nature and Property of Language.' In 1732 he was engaged in an acrimonious dispute with a bookseller, for whom he had engaged to write a work, to be published in numbers, entitled 'A History of the Bible.' A full account of this affair is given in Nichols's 'Literary Anecdotes of the Eighteenth Century,' vol. ii., p. 394-398. The work appeared, and forms two volumes in folio. It embraces the whole of the Sacred History from the beginning to the establishment of Christianity, with maps, prints, and useful tables. In 1747 he published in folio 'A New and Practical Exposition of the Apostles' Creed.' There are other published writings of his not here particularly named. He lived a laborious and necessitous life, and just before his death he "deplored his miserable condition in all the keen expressions of despair and bitter disappointment," in a poem published in the year of his decease, which he entitled 'Vana Doctrinae Emolumenta.'

STAEL, ANNE GERMAINE DE, born at Paris in 1768, was the only child of Necker, the wealthy Genevese banker, and afterwards minister of finance to Louis XVI. Her mother, a Swiss lady, was a woman of considerable acquirements, and her house was resorted to by the men of learning or of wit who lived in Paris. Madame Necker began very early to subject her daughter to a systematic and laborious course of study, until the physicians prescribed relaxation as absolutely necessary for her daughter's health. Mademoiselle Necker, being now left to follow her own taste, applied herself to literary composition, for which she had a natural facility. Her first essays were some tales and plays, which were soon forgotten. In 1788 she published a work of higher pretensions, 'Lettres sur les Ouvrages et le Caractère de J. J. Rousseau,' which began to attract public attention. About this time she was married, through her mother's management, to the Baron of Stael Holstein, the Swedish ambassador at Paris, a nobleman of high character and attainments, but disproportionately older than herself. This marriage however gave her rank and independence; and when the French Revolution broke out, and her parents had retired to Switzerland, the baron's diplomatic character was a protection to his household, and Madame de Stael remained at Paris through the first storms of that period. Her warm imagination was at first captivated by the bright prospects of a revolution which promised the reform of abuses, but her generous nature soon shrunk from the sight of the more frightful abuses which took the place of the old ones. She wrote several articles on the factious conduct of the various parties, and upon their total disregard of the true meaning of liberty. Madame de Stael felt for the oppressed, who were at that time the nobles, the priests, and the royal family. She interested herself especially for the royal family; and she even ventured to publish a defence of the Queen Marie Antoinette, then upon her trial, 'Réflexions sur les Procès de la Reine,' August 1793. But the triumph of the terrorists drove her at last out of Paris, to seek refuge in other countries.

After the fall of the terrorists Madame de Stael returned to Paris, where she became the leader of a distinguished circle of literary men and politicians. Being anxious for the preservation of something like order and individual security, she gave the support of her influence to the existing government of the executive directory. But that government, without morality, sincerity, or dignity, was dying a natural death, when Bonaparte, after his return from Egypt, extinguished it by a bold manoeuvre, and established a military dictatorship in its place. Madame de Stael appears to have disliked and mistrusted Bonaparte from the first, and her salon became the opposition club of the time. She is said to have encouraged Benjamin Constant and other members of the tribunate in their opposition to the projects of law presented by the executive, and to have publicly applauded them for their independent speeches. When the concordat with the pope was under negotiation, Madame de Stael loudly expressed her disapprobation, professing to see in it a new device of Bonaparte's growing tyranny. About the same time, being on a visit to her friends in Switzerland, she was supposed to have encouraged her father to publish his last work, 'Dernières Vues de Politique et de Finance,' in which he descanted against the government of a single man. The work was forbidden in France. At last Bonaparte, first consul, sent Madame de Stael an order to quit Paris, and not to come within forty leagues of it. Strange as it may seem, Madame de Stael, wealthy and independent, was sorely grieved at this prohibition; and she and her friends exerted themselves, though in vain, to have the order recalled. Bonaparte is said to have replied, that he left the whole world open to Madame de Stael, except Paris, which he reserved to himself. (Thibaut-deau; Las Caes.) For Madame de Stael however the salons of Paris were her own element; she felt the want of applause, and of literary and fashionable celebrity; for she had as much ambition as Bonaparte himself, though of a different and more innocuous kind. She went first to Switzerland, and then travelled through Italy, where she gathered materials for her 'Corinne,' which is a poetical description of Italy in the shape of a novel. The work was much admired: it is

eloquent and impassioned; and the authoress has sketched with great truth many peculiarities of the Italian character and habits, which had been overlooked, or misrepresented or caricatured by other travellers. Madame de Stael had already published a novel in 1803, entitled 'Delphine,' which, though powerfully written, is a work of very questionable morality, and she felt herself obliged to write an apology for it in her 'Réflexions sur le But moral de Delphine.' 'Corinne' displays a purer morality, and produces a much more elevating impression on the mind. As a work of fiction however it is decidedly weak: the plot is defective in arrangement, and deficient in dramatic power. The authoress has endeavoured to embody in some of her characters the national characters of their respective countries; she has succeeded in some, and has certainly failed in others. But as a descriptive work, a work of glowing and impassioned eloquence, on some of the most interesting topics with which man is concerned, religion, poetry, the beauties of nature, history, and love, as a poetical picture of a most poetical country, 'Corinne' has the highest merits, and they are of a permanent character.

After having published her book upon Italy, Madame de Stael, still debarred from Paris salons and Paris society, proceeded to visit and study a very different country—Germany, and after her return she composed her work 'De l'Allemagne,' in which she described the feelings, the literature, and the habits of the German people: in this work she is understood to have had considerable assistance from Augustus Schlegel. [SCHLEGEL, AUGUST W. VON]. This work was printed at Paris in 1810. The authoress was not allowed to go to Paris herself, but she was residing either at her seat at Coppet on the banks of the lake of Geneva, or in some provincial town of France forty leagues from the capital. The manuscript was submitted to the censors, according to the existing laws, and after several passages had been expunged, the publication was authorised; 10,000 copies were struck off, when suddenly the whole stock was seized at the publisher's, by gendarmes sent by Savary, Napoleon's minister of police, and suppressed by his order. Madame de Stael, who was staying at Blois, received at the same time order to quit France immediately. She retired to Coppet in Switzerland, when she remonstrated with Savary against this arbitrary proceeding, which was illegal even according to the new law of Napoleon I., as the minister might have seized a work which he considered dangerous, even after the censors had permitted its being printed, but he had no right to destroy it, being bound to refer the matter to the council of state. (Thibaut-deau, 'Empire,' c. 69.) Madame de Stael understood or imagined that one reason for this severity was her having omitted to mention the name of the Emperor Napoleon and his invincible armies, which, Savary said, had become so familiar with Germany. Madame de Stael wrote from Coppet to Savary, saying that she did not see how the emperor any his armies could be introduced with propriety in a work purely literary. Savary's answer is characteristic of the man and the times; and it was prefixed by Madame de Stael to a new edition of her work in 1813. "You must not seek for a cause of the order which I have signified to you in the silence which you have kept respecting the emperor in your last work, for there was no place in it worthy of him. Your exile is a natural consequence of your constant behaviour for years past. I have thought that the air of France was not suitable to you, for we are not yet reduced so low as to seek for models among the nations which you admire. Your last work is not French; and I have stopped its publication. I regret the loss which the bookseller will suffer in consequence, but I could not allow it to appear." Independently of Madame de Stael's political opposition to Napoleon's arbitrary government, there was a decided antipathy between her turn of mind and literary taste and that of France in her time. French literature ever since the time of Louis XIV. had become exclusive and intolerant; it looked down upon the literature of other countries as semi-barbarous, and the national vanity had raised round itself a kind of Chinese wall of pedantic criticism, which had withstood all the storms of political and religious change. It suited the policy and the taste of Napoleon to encourage this feeling of overweening vanity, for as France was to be, according to him, the mistress of all Europe, and was to dictate laws to all nations, it was proper that the language and literature of France should be considered superior to those of all other countries. Madame de Stael, by extolling the literary productions of the Germans and English, had run against all the predilections and aspirations of the French and of Napoleon; and therefore Savary said, and said truly at the time, that "her work was not French." In the end however her work has become French, and her example has had a most beneficial influence upon French literature.

Madame de Stael remained for a time at Coppet, closely watched, even on Swiss ground, by the omnipresent French police. She was forbidden to stir more than ten leagues from her residence in any direction, and her friends were prohibited from visiting her, but at last she contrived to escape from thralldom, and went to Russia on her way to England; for at that time a person from the Continent wishing to reach England must find his way to it through the extremities of Europe. She has given an account of her wanderings and the petty but galling persecution to which she was subjected, in her 'Dix Années d'Exil,' a work which, bating some egotism and exaggeration, may be useful to those who wish to form an accurate idea of Napoleon and his principles of government.

During her residence at Coppet, Madame de Stael, who had been many years a widow, became acquainted with M. de Rocca, of an old family of Geneva, whom she married privately. He was also an author, and published a book on the French war in Spain.

In 1814, after Napoleon's abdication, Madame de Stael returned to Paris, where she, Benjamin Constant, and her other old friends belonged to what was called the Constitutional party, which supported the charter of Louis XVIII. and a *bona fide* representative government, in opposition to the Bonapartists, who were conspiring for Napoleon, to the old revolutionists, who still dreamt of a republic, and to the ultra-royalists, who wished to restore the absolutism of the ancient monarchy. The return of Napoleon from Elba decided the question for the moment. Madame de Stael remained at Paris, and, as well as Benjamin Constant, appeared to be reconciled to Napoleon, thinking that he must now accommodate himself to a constitutional system of government. After his second fall, she returned to Switzerland, and seemed to have weaned herself from active politics. She occupied herself with preparing her last work for the press, '*Considérations sur la Révolution Française*,' published after her death, which took place July 14, 1817. She was buried in the family tomb at Coppet. Her son, the Baron de Stael, who died in 1827, made himself known in France, under the Restoration, by his philanthropy, his attachment to constitutional liberty, and by some works of unpretending merit; among others, his '*Lettres sur l'Angleterre*,' published in 1825.

Madame de Stael's book on the French revolution is one among the crowd of works on that all important subject which deserves to go to posterity. The authoress, being the daughter of Necker, and personally acquainted in early youth with the principal characters of that great drama, was well qualified to record in her after-life the reminiscences of that singular period. In her work she lays bare without bias the springs of action of the different individuals, and exposes the whole internal working of the political machinery, which people from the outside could not accurately understand. She had been, in fact, "behind the scenes," and she was afterwards raised by experience above the vulgar admiration of the crude experiments of the pretended republicans of France. Still her work is not comprehensive; it wants unity of purpose; it is rather a commentary, a book of remarks on the French revolution, than a history of that great event. Her principal object, and it is on her part an amiable one, though somewhat egotistical, was to justify the political conduct of her father, M. Necker, an honest but certainly not a first-rate statesman, and one who was totally unfit for the exigencies of the times. Yet in other respects her work has much merit; it is written in a temperate and impartial tone, it bends to none of the short-lived powers of the times, and it exhibits philosophical as well as political acuteness. "If she had," says her friend Benjamin Constant, "painted individuals more frequently and more in detail, her work, though it might have ranked lower as a literary composition, would have gained in interest." Some of her characters, especially of the earlier period of the revolution, such as Calonne, Brienne, Mirabeau, Pethion, are most graphically sketched.

Madame de Stael wrote several other works. That '*On the Influence of the Passions*,' published in 1796, although it contains many acute remarks, partakes of the unsettled morality of the times, being written just after the period of the reign of terror. In it she reflects upon the fearful vision that had just passed, and this work ought to be read as an appendage to her later work on the French revolution. She wrote also '*Réflexions sur le Suicide*,' '*Essai sur les Fictions*,' and several tales and other minor compositions. She contributed a few articles to the '*Biographie Universelle*,' among which is that on '*Aspasie*.' Her works have been collected and published in 17 vols. 8vo, Paris, 1830. As a literary person she was the most distinguished woman of her age. She was open to the weaknesses of ambition, but she was always independent, honest, and sincere.

STAFFORD, DUKE OF BUCKINGHAM. [BUCKINGHAM, vol. i, col. 992.]

STAFFORD, WILLIAM HOWARD, VISCOUNT, was the second surviving son of Thomas, twentieth earl of Arundel (the collector of the Arundelian Marbles), by his wife the Lady Alatheia Talbot, daughter of Gilbert, seventh earl of Shrewsbury; he was born on the 30th of November, 1612. He was thus uncle to Thomas, the twenty-second earl of Arundel, who was restored, after the return of Charles II., to the dukedom of Norfolk, which had been forfeited by his great-great-grandfather.

Burnet, who knew Lord Stafford in his last days, says, "He was a weak but a fair-conditioned man; he was on ill terms with his nephew's family; and had been guilty of great vices in his youth, which had almost proved fatal to him." While he was known as Sir William Howard, K.B., he married Mary, sister of Henry, thirteenth Baron Stafford; which Henry died, unmarried, in 1637, when his barony descended to his distant relation Roger Stafford, a person who appears to have sunk to the lowest class of the people, though the great grandson of the famous Edward Stafford, third duke of Buckingham, and also of Margaret Plantagenet, the unfortunate Countess of Salisbury, and niece of King Edward IV. Roger's sister was married to a joiner at Newport, in Shropshire, and they had a son who lived in that town, following the trade of a cobbler. Nor had the elder

branch of the family, in which the title remained for several generations, been always much more honourably matched; Roger's uncle, Edward, the eleventh lord, indeed married a daughter of the Earl of Derby; but his son, Edward, the twelfth lord, chose to share his title with his mother's chambermaid; and from her, through a son, who died during the life of his father, were sprung the thirteenth baron, Henry, already mentioned, and his sister, who became the wife of Sir William Howard.

Upon the death of his brother-in-law, Sir William Howard immediately assumed, or at least claimed, the title of Baron Stafford, in right of his wife, a claim which, in any circumstances, certainly could not have been sustained at that day. But it was soon discovered, and admitted on all hands, that the true heir to the barony survived in the person of Roger Stafford, although he had hitherto gone by the name of Fludd or Floyd. Roger however was induced, no doubt for a consideration, to submit his title to the dignity, on the 5th of December 1637, to the decision of the king, "upon which submission," it is stated, "his majesty declared his royal pleasure that the said Roger Stafford, having no part of the inheritance of the said Lord Stafford, nor any other lands or means whatsoever, should make a resignation of all claims to the title of Lord Stafford, for his majesty to dispose of as he should see fit." A deed of surrender was accordingly enrolled on the 7th of December 1639; and although such a resignation of a peerage has since been decided to be illegal, the king now considered himself at liberty to dispose of the dignity. On the 12th of September 1640, Sir William Howard was created Baron, and his wife Baroness Stafford; and on the 11th of November following Lord Stafford was made a viscount, that being found the only way of giving him as high a precedence as the former barons. Roger is supposed to have died unmarried in the course of the same year.

Lord Stafford had been bred a strict Roman Catholic, and during the civil war had adhered to the royal side. After the Restoration, according to Burnet, "he thought the king had not rewarded him for his former services as he had deserved; so he often voted against the court, and made great applications always to the Earl of Shaftesbury. He was on no good terms with the Duke [of York]; for the great consideration the court had of his nephew's family made him to be the most [more?] neglected." He does not however appear to have ever made any figure in parliament down to the time when all the Roman Catholic peers, twenty-one in number (besides three who conformed), were excluded from the House by the act of the 30th of Charles II., st. 2, to which the royal assent was given on the 30th of November 1678.

Lord Stafford is only remembered in history as the last and most distinguished of the numerous victims whose lives were sacrificed in the tragedy of the Popish Plot. [OATES, TITUS.] In his first examination before the Commons, on the 23rd of October 1678, Oates mentioned Stafford as the person who had been appointed by the general of the Jesuits to the office of paymaster of the army. Two days after, Stafford rose in his place in the House of Lords, and stated that he was informed there was a warrant issued out from the lord chief justice of England to apprehend him, and submitted himself to their lordships' judgment. Burnet says, "When Oates deposed first against him, he happened to be out of the way, and he kept out a day longer; but the day after he came in and delivered himself, which, considering the feebleness of his temper and the heat of that time, was thought a sign of innocence." Before the House rose he intimated that he should surrender to the warrant; and after being consigned in the first instance to the prison of the King's Bench, he was ultimately, on the 30th, committed to the Tower, along with the other accused noblemen, the Earl of Powis, and the Lords Petre, Arundel, and Belasyse.

On the 5th of December, a message was brought from the Commons by Sir Scrope How, who informed their lordships that he was commanded to impeach Lord Stafford of high treason and other high crimes and misdemeanors. Three days after the Earl of Essex laid before the House an information which had been sworn on the 24th before two magistrates of the county of Stafford by "Stephen Dugdale, gent., late servant of the Lord Aston, of Tixhall," who asserted therein that in the beginning of September in the preceding year, he had been promised a large reward by Lord Stafford and a Jesuit of the name of Vrie or Evers, if he would join in a conspiracy to take the king's life. The prorogation of the parliament at the end of the month, and its dissolution a few weeks after, prevented any further proceedings being taken until after the assembling of the new parliament in the beginning of March 1679. On the 18th of that month the Lords' committee of privileges, to whom the question had been referred, reported their opinion "that in all cases of appeals and writs of error, they continue and are to be proceeded on 'in statu quo,' as they stood at the commencement of the last parliament, without beginning 'de novo';" and on the following day the House, after debate, agreed to this report. The Commons sent up their articles of impeachment against the five Lords on the 7th of April; and on the 16th Lord Stafford put in his answer, in which he protested his entire innocence of the crimes laid to his charge. Another prorogation followed by a dissolution, took place in the end of May; and the new parliament did not meet for the despatch of business till October 1680.

During all this time the accused lords had lain in the Tower; and meanwhile the plot had been propped up by the testimony of Bedloe, Dangerfield, Turberville, Denis, and other new witnesses. At last, on Tuesday, the 30th of November (his birthday), Lord Stafford—selected, according to Sir John Reresby, as being “deemed to be weaker than the other lords in the Tower”—was brought to the bar of the House of Lords, assembled as a court of justice in Westminster Hall, to take his trial, the lord chancellor, Lord Finch (afterwards earl of Nottingham), presiding as lord high steward. Reresby and Evelyn were both present, and have both given us an account of the scene. A singular circumstance mentioned by Evelyn is, that Stafford's two daughters—the Marchioness of Winchester, being one of them—were with him in his box, as well as the lieutenant of the Tower, the axe-bearer and the guards. He remarks also that just forty years before, when Lord Stafford was tried in the same place, the lord steward was the present prisoner's father (the late Earl of Arundel). Reresby says it was the deepest solemnity he ever saw. Besides Oates and Dugdale, who repeated their former evidence with additions or variations, Turberville swore that Stafford had also offered him a reward to kill the king. The trial lasted seven days. Reresby says that the prisoner so far deceived those who counted on a poor defence, “as to plead his cause to a miracle.” Burnet also, who, as we have seen, had no high opinion of Stafford's strength of mind, admits that he “behaved himself during the whole time, and at the receiving his sentence, with much more constancy than was expected from him.” When the votes of their lordships were taken, on Tuesday, the 7th of December, 31 voted ‘not guilty,’ and 55 ‘guilty.’ (‘State Trials,’ vii., 1293-1576.) Four of the Howards, his relations—namely, the earls of Carlisle, Berkshire, and Suffolk, and Lord Howard of Escrick—condemned him; the only one of his own family who voted for his acquittal was Lord Arundel (sitting as Lord Mowbray), the son of the Duke of Norfolk.

Within two days after his condemnation he sent for Burnet and the Bishop of London, to whom he made the most solemn protestations of his innocence. “I pressed him in several points of religion,” says Burnet, “and urged several things which he said he had never heard before. He said these things on another occasion would have made some impression upon him; but he had now little time, therefore he would lose none in controversy: so I let that discourse fall. I talked to him of those preparations for death in which all Christians agree; he entertained these very seriously, much above what I expected from him.” However, he was desirous of saving his life, if it could be done; and he told Burnet, that if that would obtain his pardon, he could and would discover “many other things that were more material than anything that was yet known, and for which the duke [of York] would never forgive him.” Upon this being reported to the House of Lords, he was immediately sent for, when “he began,” says Burnet, “with a long relation of their [the Roman Catholics'] first consultations about the methods of bringing in their religion, which they all agreed could only be brought about by a toleration. He told them of the Earl of Bristol's project; and went on to tell who had undertaken to procure the toleration for them; and then he named the Earl of Shaftesbury. When he named him he was ordered to withdraw, and the Lords would hear no more from him.” It is pretty evident from all this that he really had nothing of any consequence to tell. “He was sent back,” continues Burnet, “to the Tower; and there he composed himself in the best way he could to suffer, which he did with a constant and undisturbed mind. He supped and slept well the night before his execution, and died without any show of fear or disorder. He denied all that the witnesses had sworn against him.” He was executed on Tower Hill, on the morning of Wednesday, the 29th of December. When his majesty's writ was found to remit all the rest of the sentence except the beheading, the two republican sheriffs, Bethel and Cornish, professed to feel scruples as to whether they were warranted in acting upon it; but the Commons at last stepped in and settled the matter by resolving “That this House is content that the sheriffs of London and Middlesex do execute William, late Viscount Stafford, by severing his head from his body only.” Lord Russell is stated to have “stickered for the severer mode of executing the sentence;” and it is said that when Charles, three years after, granted a similar commutation of punishment when his lordship was sent to the scaffold, his majesty observed, “He shall find that I have the privilege which he was pleased to deny in the case of Lord Stafford.”

A bill to reverse the attainder of Lord Stafford passed the Lords in 1685, but did not obtain the assent of the Commons. In 1688 his widow was created by James II. countess of Stafford for life, and her eldest son Henry earl of Stafford, with remainder to his brothers John and Francis, and their heirs male; but the earldom became extinct by the death of John Paul, the fourth earl, in 1762. In 1800 certain proceedings were instituted on behalf of Sir William Jerningham and the Lady Anastasia Stafford Howard, daughter of William, second earl of Stafford, and great-granddaughter of the attainted lord (who died a nun at Paris in 1807, at the age of eighty-five), as conjoint heirs, with a view of establishing the existence of the barony of Stafford, on the ground that (as above stated) it had been conferred not only upon Sir William Howard, but also upon his wife, and that therefore it descended to her heirs, notwithstanding the forfeiture of her husband. But this claim was not prosecuted. At length however, on

the 17th of June 1824, an act of parliament was passed reversing the viscount's attainder; and the following year Sir George William Jerningham, Bart., was admitted to have established his claim as heir to the barony (which had been granted with remainder to the heirs of Sir William Howard and his wife), through their granddaughter Mary, who married Francis Plowden of Plowden, Esq., in the county of Salop, and was the maternal grandmother of Sir William Jerningham.

STAGNELIUS, ERIK JOHAN, a poet, who may be described as the Swedish Shelley, was born on the 14th of October 1793, in the island of Öland, where his father, who afterwards became bishop of Calmar, was at that time parish priest of Gardslösa and Bredåkra. “From his tenderest years,” says his father, in a letter written after his death, “he showed much genius, and, in particular, a great inclination to poetry. His principal occupation in his earlier years was to turn over the books in my small library. He was almost self-taught, and possessed, young as he was, in some matters the knowledge of a teacher, though where he got it from I could not imagine.” When he went to the university of Lund, from which, in 1812, he transferred himself to that of Upsal, he had what his father terms an amazing stock of learning, and was as remarkable for his strong memory as for his powers of thought and imagination. At the universities he made few acquaintances, and throughout his life continued strikingly averse to society. “He had the advantage,” says Mellin, “over many of the Swedish poets, of not being crushed by poverty, but he was crushed by the still more painful consciousness of his own personal ugliness.” He was in 1815 introduced as a ‘Cancellist,’ or clerk, into the Swedish office for ecclesiastical affairs, of which Nila von Rosenstein, known in Swedish literature as a partisan of the classical school, was then at the head. In 1817 appeared his first poem, ‘Wladimir den Store’ (‘Wladimir the Great’), an epic poem on the conversion of the Russians to Christianity. His next volume of poetry, which was published in 1821, was entitled ‘Liljor i Saron,’ or ‘Lilies of Sharon,’ a collection of short pieces. The poetical beauty of this collection is so great that it surpasses that of any other in the Swedish language; but the philosophy that pervades the volume is of so startling a character, that there is no room for surprise that the poems did not become popular. Stagnelius had framed for himself a system which amalgamated with the doctrines of Schelling the views of Gnosticism, or that philosophy which sees in the course of nature and the general scheme of the universe the traces of a malevolent as well as a benevolent power. With these views, which had taken complete possession of the poet, nearly all his lyric poetry is imbued, and his life became more and more unhappy. He is said to have ruined his health by excesses of different kinds, one of which, that of an immoderate indulgence in brandy, has been the bane of several Swedish poets. The result was a state which occasionally approached to frenzy. “What is stated by Hammarsköld,” says Stagnelius's father, the bishop, “respecting an unfortunate attachment as the cause of my son's unhappy melancholy is entirely groundless. The cause lay wholly and solely in a defective interior organisation, of which I am fully convinced.” Stagnelius still continued in his office in the ecclesiastical department and had even received some promotion not long before, when on the morning of the 3rd of April 1823, he was unexpectedly found dead in his bed.

Stagnelius, though considered as a rising poet, and though in 1818 he had received a gold medal from the Swedish academy for his poem of ‘Woman in the North,’ had not attracted much notice during his life-time, and little of his poetry had seen the light. But when, in 1824, soon after his death, his friend Hammarsköld published his ‘Samlade Skrifter,’ or ‘Collected Writings,’ taken from his manuscripts, his reputation suddenly rose, and like that of Shelley has since continued to increase. For a Swedish poet Stagnelius is singularly prolific, though he is said to have destroyed a great quantity of his compositions, which he was in the habit of throwing into the fire if they did not meet his approbation on re-perusal. His poems fill three volumes. The first of these is occupied with his epics or narrative poems, ‘Wladimir,’ ‘Blenda,’ and ‘Gunlög;’ the second by a series of dramas, of which ‘The Bacchanals,’ a tragedy on the story of Orpheus, ‘Sigurd Ring,’ and ‘Wisbur,’ two tragedies on old northern traditions, ‘The Knight's Tower,’ a mediæval drama of incest, and ‘The Martyrs,’ a dramatic poem on the story of Vivia Perpetua, are the principal. ‘The Lilies of Sharon,’ and a number of other smaller poems occupy the third volume, which is the most interesting of the three. Great fluency of language and beauty of style are the characteristics of all Stagnelius's poems, which are said by the best Swedish critics to exhibit the Swedish language in its most attractive form. In his dramatic poems the principles of his philosophy are of course not prominent, and in ‘The Martyrs’ the spirit of early Christianity is beautifully represented. Stagnelius's works have been more than once reprinted, and have been inserted in the best collection of the Swedish classics. A complete translation of his works into German by Kannegiesser, in six volumes, was published in 1851. An English translation of a few of his poems may be found in the first number of the ‘Foreign Review,’ and in the Howitts’ ‘History of Scandinavian Literature.’

STAHL, GEORGE ERNEST, one of the most celebrated physicians of the last century, was born at Anspach in 1660. He studied medicine at Jena, took his degree of doctor there in 1683, and at once

began to deliver lectures. In 1687 the Duke of Weimar made him his physician; and in 1694, at the instance of Hoffman, he was appointed to a professorship of medicine, anatomy, and chemistry in the University of Halle, then recently established. He taught there for twenty-two years, and upon being appointed physician to the King of Prussia, went to Berlin, where he died in 1734.

The system of medicine which Stahl taught, and on which were founded the principles and practice of his numerous school, may be regarded as produced from a combination of the physiology of Van Helmont, which he learnt at Jena from G. W. Wedel, with the doctrines of Descartes respecting the agency of immaterial principles upon inert matter. Van Helmont taught on the nature and operations of an *Archæus*, as a principle resident in the living body and governing all its actions. Stahl supposed a like influence to be exercised by what he called the *anima*, an immaterial principle which (as far as can be ascertained in the obscurity in which his style of writing has involved his meaning) he seems to have regarded as identical with the soul, and as capable of acting both with consciousness, in the operations of the mind, and unconsciously, in the government of the processes in the living body. He held that this *anima* first forms for itself the body; and then, abhorring the destruction of that which it has formed, directs all the processes of the organisation so as to evade death. For this purpose, it guides them to resist putrefaction, and to expel through the appropriate organs the effete particles and morbid substances accidentally introduced; it directs the repair of all injuries, and, in ordinary nutrition, maintains the due form and composition of the tissues. For this last process (as an example of its agency in all the rest) he supposes the *anima* to have knowledge (independently of the consciousness of the animal in which it works) of the necessary composition of every part of the body and of the materials to be given to each, and to have power to guide aright all the acts necessary to the required end. These acts, he considered, are effected by what he named tonic vital movements, that is, movements of alternate tension and relaxation, dependent on a property of *tone* resident in all the soft tissues of the body, and by which, under the influence of the *anima*, each part directs the movements of the fluid in its vessels or its *parenchyma*.

Disturbances of the government of the *anima* and of this property of *tone* constituted the chief elements in Stahl's pathology; and the signs of disease were regarded by him as indications of the efforts of the *anima* to remove the source of the malady and to preserve the body, either by means of extraordinary tonic movements, or sometimes by the most violent spasms and convulsions. He held that one of the commonest sources of disease was *plethora*, either local or general; and for this, the hemorrhages from different organs at different periods of life were regarded as the remedies employed by the *anima*. Especially, he applied these notions to the *vena porta*, in which, from the slowness of the circulation in it, *plethora* was thought peculiarly apt to occur; and to this condition he mainly attributed *hypochondria*, *melancholy*, *gout*, *calculus*, and *hemorrhoids*; so that it came to be an aphorism of his school, "*Vena porta, porta malorum*." Fevers in general he considered to be the results of the *anima* endeavouring by the local tonic actions to expel some morbid matter; and their fatality, like that of most other diseases, he ascribed to the morbid matter being too abundant or the tonic powers too weak for its expulsion.

Stahl's therapeutics corresponded closely with his theory of disease. His principles of treatment were to aid the beneficial efforts of the *anima* and to remove the obstacles to its action. His remedies were few and simple, consisting chiefly of bleeding for the relief of *plethora*, and of mild evacuant medicines.

Medical science owes much of its progress to the energy and acuteness with which Stahl aided in overturning the notion which, before his time, was generally prevalent in the schools, that the simple laws of chemistry or of mechanics were all on which the phenomena of the living body depended, and in drawing attention to the body as an organism governed by peculiar laws, and having all its healthy processes adapted to one final purpose, namely, the preservation of the whole by the different actions of its parts. He rushed indeed into an extreme opposite to that of his immediate predecessors; for he treated with all the bitter sarcasm and morose contempt of his naturally stern temper every endeavour to apply any other science, even anatomy, in the study of medicine; and he mystified the principle which he supposed to rule the organism. His hypothesis of an '*anima*' has been ridiculed; yet, with another name, it is that which is adopted in nearly all the physiology of the present day: the '*vital principle*' and the '*nature*' of the majority of modern medical writers differ in little more than name from the '*anima*,' the '*archæus*,' and the '*phlogis*' of Hippocrates; the common hypothesis involved in all is that of an immaterial principle resident in the living body, and governing 'with reason' all the processes in it for the final purpose of preserving life. Though the hypothesis be false, the medical sciences have made great progress through being pursued in the spirit which it suggests; and to this progress no man's labours have contributed more than those of Stahl.

Though Stahl despised chemistry in its attempted application to medicine, we owe to him an important step in the advancement of that science. Taking up the crude opinions of Becker, as he did those of Van Helmont, he became the inventor of the theory of *Phlogiston*,

which for many years had such influence in chemistry, and in the working out of which, though it was based in error, so many important truths were ascertained.

Haller, in his '*Bibliotheca Medicinæ Practicæ*,' tom. iii. p. 577, gives a list, collated by J. C. Goetz, of 250 medical works written or superintended and edited by Stahl. That in which his medical doctrines are most completely taught is entitled '*Theoria Medica vera Physiologiam et Pathologiam tanquam Doctrinæ Medicæ partes contemplativas e Naturæ et Artis veris Fundamentis intaminata Ratione et inconcussa Experientia sistens*.' It was published by him in 1707 and 1708. All the peculiarities of his system however are discernible in his inaugural thesis '*De Sanguificatione*,' Jena, 1684. His chemical works were comparatively few: he first proposed the phlogistic theory in 1697, in his '*Zymotechnia Fundamentalibus*.' The best brief account of his doctrines is in Haller, and in Sprengel, '*Histoire de la Médecine*,' tom. v.

STAIR, EARL OF. [DALRYMPLE.]

\* STANFIELD, CLARKSON, R.A. was born at Sunderland towards the close of the last century. Of a somewhat errant disposition, the sea was his first art-academy, and it was perhaps the best he could have entered: it may be noticed as a curious circumstance that young Stanfield served as a sailor on board the same ship in which Douglas Jerrold was a midshipman; and the officers having got up a play, Stanfield painted the scenery, while Jerrold acted as stage-manager. To his sailor days may undoubtedly be attributed Stanfield's thorough acquaintance with everything connected with salt-water which has given his pictures so special a character. Other painters have drawn hulls, and masts, and spars, with a more pattern-book accuracy perhaps, but hardly another has so truly given the vessel's character, and none that we can remember ever made a ship sit so easily and truly on the water, or represented the sea itself with so direct and unexaggerated a fidelity. But when he quitted his sea-academy he entered another the influence of which was by no means so beneficial, though in it he undoubtedly obtained a great accession of artistic power. As the means which circumstances rendered the most opportune for turning his passion for art and his store of sketches to account, he accepted an engagement as a scene-painter at the old *Royalty* theatre by Wellclose Square, then noted as a sailor's theatre, and one consequently where familiarity with the sea and maritime matters would be no small recommendation in a scene-painter. Here he worked hard and acquired much of that mastery over his materials, facility of execution, and knowledge of effect which have ever since distinguished him. He appears to have formed his style in a great measure upon that of Louthembourg, an artist who had raised scene-painting in this country to a standard previously scarcely thought of, and which, until Stanfield succeeded, was certainly never equalled. In course of time Stanfield passed from the *Royalty* to *Drury-lane* theatre, and there on a larger stage and with greatly increased knowledge and power, and more ample means, he painted scenes of unrivalled brilliancy and beauty; and in the moving panoramic views, of which for several years a series used to be exhibited in the Christmas pantomimes, he displayed a succession of pictures so beautiful that regret never failed to be mingled with the pleasure felt in looking at them, at the recollection that they must necessarily perish with the season.

But Mr. Stanfield did not at any time confine his pencil to the service of the theatre. It was there he looked for his chief stay in his earlier artistic life; but he painted marine views and coast scenery for private friends, and with constantly increasing success. It was sometime however before he became known to the frequenters of the picture-galleries. His earlier exhibition triumphs were won in the galleries of the British Institution and the Society of British Artists, of which last society he was for some years a member. It was not till 1832, when his reputation was already established as, in his line, the first of living English painters, that he was elected an Associate of the Royal Academy—having of course first resigned his connection with the Society of British Artists; and in 1835 he was elected an Academician. By this time he was gradually giving up his connection with the theatre, and after a while he entirely relinquished it: only on one or two occasions proffering his matchless skill as a friendly service—as when he painted a drop and a few scenes for his friend Macready; a scene or two for the '*Not so Bad as we Seem*' of the Guild of Literature; and the like for the private theatre of Charles Dickens.

From his election into the Royal Academy, Mr. Stanfield has been one of the most constant and prolific contributors to the exhibitions of that body. It would be impossible therefore to give anything like a complete list of his pictures even if we confined ourselves to such as he sent there; but in truth so large a proportion of them consists of mere views of places that the titles would be little better than a topographical catalogue. The leading ones include numerous views in and about Venice, Naples, the Adriatic, Como, Ischia, Amalfi, Rome, Lago Maggiore, the coasts of Normandy, Holland, &c., with occasionally an English scene, as *Tilbury Fort*, the *Nore*, or the *Reculvers*. As will be seen, these views of places chiefly comprise a combination of sea and land, and, except in some few of his larger and more carefully-considered efforts, never does he work so effectively as when sea and shore, with some toiling craft in danger, or beating up into the bay for shelter, or lying lazily at anchor, form the subject of his

picture; as for instance in his admirable 'Castle of Ischia,' his 'Dutch Boats off Dordrecht,' or his 'Mont St. Michel.' Once for awhile however he took a fancy to run ashore to get up a semi-theatrical piece of effect, like his 'Salvator Rosa's Study,' 1849, and 'Macbeth and the Weird Sisters,' 1850; but luckily the whim did not last long.

Happily, although he won his laurels by an almost topographically faithful rendering of particular scenes, Mr. Stanfield has shown that his power did not forsake him when he essayed a loftier and more poetical theme. He failed it is true in the kind of subjects we have just named, but when he chose for his pictures subjects that lay strictly within the line of his own experience and observation, and that were the genuine product of his own inclination, he was thoroughly successful. Indeed the full power of Stanfield as a painter can only be felt on a studious examination of his great imaginative pictures. Of these the earliest that occurs to us is a work of great power—though not his most perfect work, because in it he did not give free scope to his feeling—the 'Wreck of a Dutch East Indiaman on the Coast of Holland,' 1844. A more striking picture, and, to those who had not seen with what remarkable and continually increasing skill he painted mountains, one that seemed scarcely to fall within his general range, was 'The French Troops (1796) fording the Margra; Sarzana and the Carrara Mountains in the distance,' 1847. With this may fairly rank his 'Battle of Roveredo,' 1851; 'The Pyrenees,' 1854; and his 'St. Sebastian during the Siege under the Duke of Wellington—British troops taking possession of the Heights and Convent of St. Bartolomeo,' 1855. Still nobler and more poetic however are the pictures where ships and the sea play the chief part, as in 'The Victory, bearing the Body of Nelson, towed into Gibraltar seven days after the Battle of Trafalgar,' 1853; 'The Abandoned,' 1856; and his 'Port na Spana, near the Giant's Causeway, with the Wrecked Vessels of the Spanish Armada,' 1857, a work wanting little to render it one of the most impressive of its class which has proceeded from the pencil of any painter of any time or school.

We said above that Stanfield on quitting his sea-academy entered a school which exerted a less wholesome influence upon him, though it gave him immense technical dexterity and knowledge of picturesque effect. To us it seems that most of his faults as a painter are traceable to the influence of his theatrical training. Whilst sea and shore and distant hills are true to the very verge of pictorial realism, it almost invariably occurs that the simple unaffected nature-like spontaneity of appearance is marred by some object—some building, figure, broken spar, or implement—which in a moment suggests that it is placed there to 'tell,' in fact to produce the old stage brilliancy, and which does remind one of the stage lamps and glitter, as well as stage grouping and arrangement. And in the same way, from his eye having been so long accustomed to seek after what would produce a clear sharp impression at a distance, even the best of his works are often hard and deficient in those delicate aerial gradations and atmospheric influences which Turner taught us to look for in scenes and circumstances such as Stanfield loves to paint. But while these are niceties which the ordinary observer will not heed, there are in all Stanfield's pictures such unmistakable knowledge and enjoyment of what he delineates, such evident mastery over his materials, and so true and manly a style of representing nature, as to secure for them general admiration. Indeed it may be doubted whether any other English landscape-painter has on the whole obtained so general a measure of popularity.

In the above enumeration of his paintings we have omitted some to which reference will perhaps be expected. Such are his series of Venetian pictures painted for the Marquis of Lansdowne's seat at Bowood; another series for the Duke of Sutherland's at Trentham; also the 'Battle of Trafalgar,' which he painted for the United Service Club; and the fresco in the summer-house at Buckingham Palace. We ought also to add that he has made numerous designs for engraving, including those for Heath's 'Picturesque Annual,' and his popular 'Coast Scenery.' He has likewise published a series of lithographic copies of his sketches—'The Moselle, the Rhine, and the Meuse,' 30 plates, drawn on stone by Haghe, Gauci, &c., folio, 1838. The Vernon Gallery contains four pictures by Mr. Stanfield. The Sheepshanks collection contains three of his paintings; but in neither collection is there one of his more important works. Mr. Stanfield's son, \*GEORGE C. STANFIELD, is a painter of considerable promise, pursuing a line of landscape very similar to his father's inland views, and favourably distinguished by careful drawing and execution.

STANHOPE, GEORGE, D.D., a dignitary of the English church, whose writings continue to be prized as amongst the most valuable practical works which the divines of the church have provided for the edification of its members, belonged to a family several branches of which have been ennobled, and was the son and grandson of clergymen who had been harshly treated when Puritanism was in the ascendancy. His father had the living of Hartshorne in Derbyshire, where George Stanhope was born in 1660. He had his earlier education at Eton, from whence he passed to King's College, Cambridge. He had the living of Tewing, but resided for the greater part of his life on his vicarage of Lewisham, to which he was presented in 1689 by Lord Dartmouth, to whose son he had been tutor. He gave up

Tewing in 1703, on being presented to the vicarage of Deptford St Nicholas. He commenced D.D. in 1697. In 1701 he was appointed dean of Canterbury. This was the highest preferment he enjoyed, but it was understood that he would have been made bishop of Ely by the Tory Ministry of the latter years of Queen Anne, had the see fallen vacant only a few weeks sooner than happened to be the case. He was chaplain to King William and Queen Anne, and had a share in the education of the Duke of Gloucester, the heir-presumptive to the crown. He was a celebrated preacher, and a very influential person in all affairs relating to the church.

His principal work is his 'Paraphrase and Comment on the Epistles and Gospels as they are read in the Book of Common Prayer.' This was written originally for the special use of the Duke of Gloucester. It is a large work, forming four octavo volumes, and has gone through at least nine editions. Of his other practical writings the chief characteristic is this, that they are, if not direct translations of ancient authors, chiefly Christian, adaptations of their sentiments to the use of members of the English reformed church. Thus we have his 'Morals of Epictetus;' the 'Christian Pattern, by Thomas à Kempis, with Prayers and Meditations for the Sick annexed;' the 'Meditations of Marcus Aurelius Antoninus;' the 'Christian Directory,' written originally by the Jesuit Parsons; 'Pious Breathings,' from the works of Saint Augustine, with select Contemplations from Saint Anselm and Saint Bernard. To these are to be added a translation of Charron's 'Three Books of Wisdom,' and of the Maxims of Rochefoucault. He printed also various Sermons, including a set of Discourses after Boyle's Lectures. His translation of the 'Devotions' of Bishop Andrews, written originally in Greek, was not published till after his death. He died in 1728, and was buried in the church at Lewisham.

STANHOPE, JAMES STANHOPE, FIRST EARL, was the eldest or only son of the Hon. Alexander Stanhope, second son of Philip Stanhope, first earl of Chesterfield. His mother was Katherine, daughter of Arnold Burghill, Esq., of Thingehill, in Herefordshire; and he was born in 1673. His father, who lived till 1707, was employed as envoy by King William to Spain in 1699, and to the Hague in 1700 (during the negotiation of the Partition Treaties), and again by Queen Anne to the Hague in 1702. Young Stanhope accompanied his father to Spain; and, after spending a year or two in that country, made the tour of France and Italy.

He first carried arms under the Duke of Savoy (Victor Amadeus II.), and then under King William, in Flanders, in the war carried on against France by the Grand Alliance, which was terminated by the peace of Ryswick, in 1697. Young as he was, William was so much struck with his spirit and talent, that in 1694 he gave him a captain's commission in the Foot Guards, with the rank of lieutenant-colonel. He was wounded at the siege of Namur in 1695.

He appears to have been first returned to parliament for the borough of Cokeremouth, at the general election after the accession of Anne, in September 1702; and he continued to be a member of the House of Commons from this time till his elevation to the peerage; having been returned again for Cokeremouth in 1705, 1707, 1708, and 1710, for Wendover in 1714, for Cokeremouth in 1715, and lastly for Newport in the Isle of Wight, in April 1717, after having vacated his seat by taking office.

For some years however he appears to have taken little or no part in the proceedings of the House; it is not till 1713 that his name occurs in the reports of the debates; and indeed he was all this time chiefly employed in quite another field. In 1702 he went as a volunteer on the expedition to Cadiz, so disgracefully misconducted under the command of Admiral Sir George Rooke; and in 1703 he proceeded to Portugal, and, having been made a brigadier-general in 1704, served under the Duke of Schomberg in the still more unsuccessful operations carried on in that country, till he was forced to surrender with his regiment at discretion. But soon after, having probably been exchanged, we find him serving again under the Earl of Peterborough, in whose brilliant Spanish campaign of the year 1705 he greatly distinguished himself. After the capture of Barcelona (at which he was present), in September of that year, he was sent home with despatches from Charles III.; and early in 1706 he was sent back by Queen Anne as envoy extraordinary to his Spanish majesty. In 1707 he was made major-general; and in 1708 he was appointed commander-in-chief of the British forces in Spain. That same year he projected and accomplished the capture of Port Mahon and the reduction of the island of Minorca. In 1710 he gained the battles of Almanara (17th July) and Saragossa (9th August); but on the 27th of November following, he and the forces under his command, amounting to 2000 men, being surprised and attacked by the Duke of Vendôme at Brihuega, were, after a gallant defence, forced to surrender themselves prisoners of war.

This terminated his military career. Tindal (iv. 213) says that he was detained in confinement throughout the winter of 1710-11, and "till all the prisoners on both sides were released," that is till the end of the war; but it appears that he was one of the managers for the Commons on the trial of Sacheverell, in the beginning of the year 1710; and he is expressly stated to have distinguished himself in a very particular manner on that occasion before the lords in Westminster Hall. (See his speech in 'State Trials,' xv. 126-134.) As soon as he got home he

had begun to take an active part in politics on the side of the Whig party, to which he had always adhered. One of the first objects against which his friends and he directed their attacks was the commercial treaty with France. Besides his exertions in the House, Tindal says that Stanhope was one of a number of gentlemen (Walpole among them) who attacked the proposed treaty through the press in several excellent pieces; and the editor of the collection of papers called the 'British Merchant,' the publication of which is believed to have chiefly prevented the ratification of the treaty, declares that the great patrons of that work were Stanhope and Charles Montagu (afterwards earl of Halifax). "When our trade was just expiring in the late reign," says this writer, in his preface to the republication of the papers, "General Stanhope came into the House of Commons, as a vote was ready to pass for taking off the duties on French wines for two months, by which our treaty with Portugal would have been instantly broken, by which we should have lost above a million sterling per annum, and have reduced several hundred thousand families to the parish for subsistence. But he opposed the vote, began the debate, and brought them to consent that our merchants should first be heard before it passed." This appears to have been on the 14th of May 1713, when, according to the 'Parliamentary History,' the general made a long speech, the first made by him of which any note has been preserved. We find him afterwards, in the same session, moving an address to the queen (which was carried), to beseech her to use her influence with the Duke of Lorraine and all other princes in amity with her, to prevent them from giving shelter to the Pretender.

On the accession of George I., Stanhope received the reward of his abilities and his party zeal, by being immediately taken into favour and office. On the 24th of September 1714, he was appointed one of the principal secretaries of state, Viscount Townshend being the other. Stanhope and Walpole now became the ministerial leaders in the House of Commons; and in that capacity the former, in the next session, impeached two of the late Tory ministers, the Duke of Ormond and the Earl of Strafford (who had been plenipotentiary to the United Provinces at the negotiation of the treaty of Utrecht).

But it was not long before intrigue and disunion crept in among the knot of attached friends who had thus obtained possession of the government. Stanhope is said to have been indebted for his appointment as secretary of state mainly to Horace Walpole (Sir Robert's younger brother), who was brother-in-law and confidential secretary to Townshend, and who recommended him to that lord, to whom the king had left the selection of his colleague: "Stanhope himself," Coxe tells us, on the information of Lord Orford, "made no application for the office of secretary. His frequent residence in camps, and skill in the profession of arms, rendered him, in his own opinion, more fit for a military than a civil station; and when Walpole proposed it, he considered the offer as a matter of rillery, and applied his hand to his sword. It was not till after much persuasion, and the most solemn assurances that his compliance would materially contribute to the security of the new administration, that he was induced to accept the post." ('Memoirs of Walpole,' i. 96.) Walpole, who had been long on terms of the most intimate friendship with Stanhope, in seconding his brother's recommendation of the latter to Townshend, had, to use Coxe's expression, "answered for his integrity as for his own." But from the first there had been a latent rivalry between Townshend and the ambitious Earl of Sunderland, who had been very ill-pleased with the office of lord-lieutenant of Ireland, a sort of banishment, as he considered it, to which he had been appointed on the formation of the new government, and was not much better satisfied with that of lord privy seal, to which he had been since transferred—holding, in fact, as he did, that he ought to have been at the head of the administration. When the king went over to Hanover, in the summer of 1716, Stanhope was sent with him, specially charged by his colleagues to protect their royal master (and themselves) against the intrigues of Sunderland, who, under the pretext of ill health, had also sought the Continent. But the end was that Sunderland managed to gain over both his Majesty and Stanhope; and that, after much correspondence and negotiation, the details of which may be read in Coxe, Townshend was dismissed from his secretaryship, with an offer of the Irish lieutenancy, which he at first refused, and then accepted, to be turned out of it after only a few weeks' possession. Even Coxe however, who takes an unfavourable view of Stanhope's conduct in this affair, admits that "he did not yield to the suggestions of Sunderland from venal or ambitious motives," but rather from a conviction that Townshend and Walpole were really pursuing an objectionable course of policy. A defence of Stanhope's share in this transaction will be found in chapter seven of Lord Mahon's (Earl Stanhope's) 'History of England.' All the changes consequent upon this commotion were not completed till about the middle of April 1717, when the cabinet was at last reconstructed by Sunderland being made secretary of state, with Addison for his colleague; and Stanhope taking the post of first lord of the treasury, along with that of chancellor of the exchequer. Even this however was only an interim arrangement: in July following Stanhope was removed to the House of Lords, by being created Baron Stanhope, of Elvaston, and Viscount Stanhope, of Mahon in the island of Minorca; and in March 1718 he took the office of secretary, and Sunderland that of first lord of the treasury, Mr. Aislabie being appointed chancellor of the exchequer. A few weeks after Stanhope

was made an earl by the title of Earl Stanhope: that same year he proceeded first to Paris and thence to Madrid, to endeavour to avert hostilities with Spain, an attempt in which he did not succeed; and he was afterwards more than once employed in similar negotiations abroad, being apparently the member of the cabinet who was considered to be best acquainted with foreign countries and foreign politics.

His death was very sudden, and accordant in the circumstances of it with his constitutionally warm and sensitive temper, and with the impetuous bearing of the camp, which he had never altogether shaken off. In the course of the discussions on the South Sea Company affair, which so unhappily involved some of the leading members of the government, the Duke of Wharton had, on the 4th of February 1721, delivered some severe remarks in the House of Lords, comparing the conduct of ministers to that of Sejanus, who had made the reign of Tiberius hateful to the old Romans. Stanhope, in rising to reply, spoke with such vehemence in vindication of himself and his colleagues, that he burst a blood-vessel, and died the next day. "May it be eternally remembered," says the writer of the preface to the 'British Merchant,' "to the immortal honour of Earl Stanhope, that he died poorer in the king's service than he came into it. Walsingham, the great Walsingham, died poor; but the great Stanhope lived in the time of South Sea temptations."

Lord Stanhope has the reputation, among other accomplishments, of having been well acquainted with ancient literature; and some evidence of his research into Roman history remains in a correspondence between his lordship and the Abbé Vertot on the constitution of the Roman senate, which was printed the same year in which he died: 'Memorial to the Abbé Vertot concerning the Constitution of the Roman Senate, with the Abbé's Answer,' London, 4to, 1721, commented upon by Hooke, in his 'Observations on the Roman Senate,' 8vo, 1758.

He married Lucy, daughter of Thomas Pitt, Esq., governor of Madras, the grandfather of the first Lord Chatham. In addition to Coxe and the older writers, the 'History of England from the Peace of Utrecht,' by his descendant the present Earl Stanhope, may be consulted for the latter part of his political course.

STANHOPE, CHARLES, THIRD EARL, a nobleman remarkable for the eccentricity of his character, and for his talents, was born in August 1753. He was the eldest son of Philip, the second earl Stanhope, and his mother was Lady Grisel Hamilton, granddaughter of the Earl of Haddington. On the death of his father, in 1786, he succeeded to the peerage. He was twice married, and his first wife was Lady Hester Pitt, the eldest daughter of the first Earl of Chatham. By this lady he had three daughters, of whom the eldest, Lady Hester Stanhope, quitting her family and connections in Europe, retired to Syria, in which country, after a residence of several years, she died. After the death of his first wife, he married, in 1781, Louisa, daughter of Mr. Henry Grenville, and a relative of the Marquis of Buckingham; and by this lady he had three sons, of whom the eldest was the late earl.

It is to his mechanical inventions that Earl Stanhope principally owes his celebrity. He conferred on mankind an important benefit by the invention of the printing press which goes by his name. He also made some improvements in the process of stereotype printing; in the construction of locks for canals; and among the lighter efforts of his mind may be ranked the invention of an ingenious machine for performing arithmetical operations.

During great part of his life he had studied the action of the electric fluid; and in 1779 he made public his theory of what is called the returning stroke. He imagined that when a large cloud is charged with electricity, it displaces a considerable portion of that fluid from the stratum of air in its neighbourhood; and he considered that, on the discharge of the cloud, the electric matter returns into the portion of the atmosphere from which it had been driven. By this theory he was able to explain in a satisfactory manner the cause of the death (in Berwickshire) of a man and two horses by lightning, at a time when the only thunder-cloud from which a discharge could have taken place was at the distance of several miles from the spot. ('Phil. Transactions,' 1787.)

Earl Stanhope was a decided opponent of the ministry of the day; and probably, if he were living in the present times, he would be considered as a radical Whig. Full of enthusiasm for the improvement of social institutions, he looked with complacency on the great French Revolution, which he considered as an important step towards the attainment of that end; but he is said to have carried out his principles beyond the point to which men of his own party were prepared to follow him. He wrote a reply to Mr. Burke's 'Reflections on the Revolution in France,' a refutation of a 'Plan for a Sinking Fund,' which had been proposed by Dr. Price; and an 'Essay on Juries.' He died in 1816.

\*STANHOPE, PHILIP HENRY, FIFTH EARL, only son of Philip Henry the fourth earl, was born at Walmer, Kent, in 1805. He was educated at Oxford, where he graduated B.A. in 1827, and was created D.C.L. in 1834. In 1832, as Lord Mahon, he was elected member of parliament for Wotton Bassett, which place he continued to represent till its disfranchisement by the Reform Act. He was then (1832) returned for Hertford, but unseated on petition. He was however again elected in 1835, and continued member for Hertford

till 1852. In the House of Commons Lord Mahon secured a high though not a brilliant reputation. In politics he was a follower of Sir Robert Peel, for whom he had also a strong personal attachment. Under the brief administration of the Duke of Wellington, December 1834 to April 1835, he held the office of under secretary of state for Foreign Affairs; and in the ministry of Sir Robert Peel he was secretary to the Board of Control from July 1845 to July 1846. As a politician he will be chiefly remembered by the Copyright Act (5 & 6 Victoria, c. 45, known as Lord Mahon's Act), which he introduced and carried, and which has been generally regarded as a very satisfactory adjustment of the law of copyright. To his efforts also must be ascribed the resolution adopted by the government to form a national gallery of historical portraits.

But it was in literature that Lord Mahon won his principal reputation. His earliest work was a 'History of the War of Succession in Spain,' 8vo, London, 1832, with an Appendix, 1833, which by its research and impartiality secured general praise. A far more important work was his 'History of England from the Peace of Utrecht to the Peace of Versailles, 1713-1788,' of which the first volume appeared in 1836. Other volumes appeared at intervals, but the seventh and concluding volume was not published till the summer of 1854. This work greatly raised the literary character of Lord Mahon. Possessing all the excellences of his former work, it is written with a larger grasp and in a firmer style. Without any pretensions to the brilliancy of some contemporary historians, Lord Mahon secures in a far greater measure than many of them the confidence of his readers by the manifest desire always shown to do justice to the views and the character of those from whom he differs equally with those whose politics are most accordant with his own. He is, too, without aiming at profundity, almost invariably judicious in reflection, temperate in expression, and liberal in opinion. His style is clear and fluent, his narrative well arranged and perspicuous, while in extent of reading and inquiry his work goes far beyond any other treating of the same period. It has in fact taken its place as the historical authority for the period of which it treats. A third and revised edition of the whole work was published in 1853-54.

Lord Mahon's other works are 'Spain under Charles the Second,' 8vo, 1840; 'Life of Louis, Prince of Condé,' 18mo, 1845; 'Life of Belisarius' (2nd ed., 1845); 'Historical Essays, contributed to the Quarterly Review,' 8vo, Lond., 1849; and a 'Life of Joan of Arc,' 1853. He also published 'An Address to the members of the Manchester Athenæum: the importance of Literature to Men of Business,' 8vo, 1853; and 'Addresses delivered at Manchester, Leeds, and Birmingham,' 8vo, 1856. He has likewise edited the writings of the celebrated Earl of Chesterfield, of whose family his own is a branch: 'The Letters of Philip D. Stanhope, Earl of Chesterfield,' 1845, and 'Letters and Writings of P. D. Stanhope, Earl of Chesterfield,' 5 vols. 8vo, 1853; a work which might serve as a model of the manner in which Letters and Writings should be edited. That this is a subject on which Lord Mahon had reflected deeply might, apart from this work, have been known from his remarks on Mr. Sparks' edition of 'Washington's Letters and Writings,' referred to elsewhere. [SPARKS, JARED.] A more important field for the display of his editorial skill has been afforded to him by the Duke of Wellington and Sir Robert Peel having confided their papers to his care for selection and publication. As trustee of the papers of Peel, Lord Mahon has published in conjunction with his co-trustee Mr. Cardwell, two volumes of 'Memoirs by the Right Hon. Sir Robert Peel, Bart., M.P.,' vol. i. (1856) containing the 'Roman Catholic Question, 1828-29,' vol. ii. (1857) 'The New Government, 1834-35,' and 'Repeal of the Corn Laws, 1845-46.' A selection from his correspondence is to follow, but the bulk of the great statesman's papers is to be withheld from the public eye for the present. Lord Mahon succeeded his father as Earl Stanhope March 2, 1855. He was elected a Fellow of the Royal Society March 22, 1827, and President of the Society of Antiquaries in 1846.

STANHOPE, P. D. [CHESTERFIELD, EARL OF.]

STANHOPE, PHILIP, Captain, a brother of the celebrated James, earl Stanhope [STANHOPE, JAMES, FIRST EARL], was from early youth brought up to the sea-service, and in 1704 was appointed to the command of the Hastings frigate. From this vessel he was promoted to the Milford, in which ship he served under Sir Strafford Fairbairne at the siege of Ostend, and was chosen by that commander to bring home the news of the surrender of that fortress to the allies. He afterwards served in the Mediterranean, under the command of Captain Carey, on which station he remained till the close of his life; he there earned the reputation of an active and intelligent officer. In August 1708 it was determined in a council of war held on board the Elizabeth, at the request of Charles, who had taken the title of King of Spain, that the ships, the York and the Milford, should assist in conveying the transports, which had on board General Stanhope and a large body of Catalan troops, to Minorca, the reduction of which island was of importance to the success of the allied cause. Captain Stanhope, desirous of emulating his brother's glory, served as a volunteer in the expedition, and fell in the moment of victory at the assault of the Spanish lines at Port Mahon, September 17, 1708.

STANISLAUS LESZCZYNSKI (commonly written LESZINSKI), king of Poland, and duke of Lorraine, was the last branch of one of the most ancient and distinguished families in Poland. As a proof of

the consideration which that family enjoyed, not only in their own country, but even abroad, we may quote the words of a known Bohemian writer of the 17th century, the Jesuit Balbinus, who says, in his 'Epitome Rerum Bohemicarum,' lib. ii. cap. 7, "Qui Leszczyńskich genus ignorat, Poloniam ignorat, triumphalis familia, ex qua tot duces, tot senatus decora, tot antistites et archiepiscopos numerare licet." The origin of that house may be said to be coeval with that of the Polish state, as its founder in Poland, a Bohemian of note, is supposed to have arrived in that country with the Bohemian princess Dombrowka, who was married in 965 to Mieczysław, duke of Poland, who established the Christian religion in his dominions. From that time this family continued to occupy the high dignities of the church, and important offices in the state, but the name of Leszczyński seems to have been assumed by them early in the 14th century from the estate of Leszno. Venceslav Leszczyński distinguished himself at the council of Constance, 1415, by his exertions in behalf of Huss, in which he was joined by all the Poles present at the council, who made on that occasion common cause with the Bohemians. It seems that the Leszczyńskis had, like many other powerful families in Poland, embraced the opinions of Huss, and they were amongst the first of those who declared themselves in favour of the Reformation in Poland. A Leszczyński of the name of Raphael may be said to have given the signal of an open revolt against the Roman Catholic church, at the diet of 1552, by refusing to kneel and even to uncover himself at the celebration of high mass, in the presence of the king and the assembled states, before the opening of the diet. His conduct was tacitly approved of by the Chamber of Nuncios (House of Commons), which elected him marshal or president of the diet. The Leszczyńskis also did much for the advance of learning in their country, which they particularly promoted by the establishment of a high school on their estate of Leszno or Lissa. They passed to the Roman Catholic church in the second part of the 17th century, but they continued to protect against all oppression the Protestant inhabitants of their estates.

The subject of the present article, born in 1677, was son of Raphael Leszczyński, grand treasurer of Poland. He was highly gifted by nature, and received a very superior education. He was elevated to the dignity of a palatine of Posen at the early age of twenty-three. When Charles XII. of Sweden had expelled from the throne of Poland Augustus II., elector of Saxony, he wished to put one of the sons of John Sobieski in his place; but two of them, James and Constantine, were seized at a hunting-party, and confined in a Saxon fortress by the order of Augustus, and the younger of them, Alexander, refused the crown. Leszczyński was sent as a deputy from the diet to Charles, in order to consult about the election of a new king. A conversation which he had on that occasion with the Swedish king prepossessed the latter so much in favour of Leszczyński, that he recommended him to the assembled diet as a candidate for the throne, a recommendation which, under the existing circumstances, was equal to an order, and could not be disregarded. Leszczyński was therefore elected king, and crowned with his wife, born in Opalinski, in 1705. Between his election and coronation he had experienced a temporary reverse, and was nearly taken by the troops of Augustus, who surprised Warsaw at the time when Charles XII. was in the south of Poland. Stanislaus was obliged to fly with his family in great haste from the capital, and his daughter Maria, who became afterwards queen to Louis XV. of France, was nearly lost in the confusion of the flight, and was found in the stable of a village inn.

The arms of Charles XII. soon compelled Augustus to abandon his temporary advantages, and to sign an abdication of the crown, and Stanislaus appeared to be firmly seated on the throne of his country. But the reverse of Pultawa changed the state of affairs, and Augustus, having entered Poland with a Saxon army, resumed the throne without opposition. Stanislaus retired to the Swedish dominions, and afterwards went to Turkey, in order to induce Charles XII. to accede to a peace of which his own abdication was one of the principal conditions. He was arrested by the Turkish authorities, but treated with the honours due to his station. After some time he was permitted to depart, and he retired to the principality of Deuxponts, which was the family estate of Charles XII., and the revenues of which were assigned by him to Stanislaus. He remained there with his family for many years, and fixed his residence after the death of Charles XII. in Alsatia. His daughter Maria became queen of France in 1723, a circumstance which improved his position. In 1733, after the death of Augustus II., he was elected for the second time king of Poland; but the influence of Russia and Austria opposed to him Augustus III. of Saxony, who was elected by a small minority, but supported by a Saxon and Russian army. Stanislaus was obliged to leave Warsaw, and to retire to Danzig, where he was besieged by Russian and Saxon troops. A small French force, which came by sea to his assistance, was obliged to surrender to the besiegers, after having landed and made an unsuccessful attack on the Russian lines. Stanislaus left Danzig in disguise, and escaped from his enemies. An account of his escape, written by himself, is one of the most romantic incidents either in history or biography, and equals, if not surpasses, the interest of the adventures of prince Charles Edward Stuart after the battle of Culloden. By the treaty of Vienna (1736) between Austria and France, Stanislaus was invested for his life with the possessions of the duchies of Lorraine and Bar, retaining the title of king of Poland. He devoted

himself entirely to the welfare of his new subjects and to literary pursuits. He patronised literature with great zeal, nor did he forget his native land, which he served most effectually by educating a great number of his countrymen at Luneville. He died in 1766, at the age of 89, in consequence of an accident, his clothes having taken fire when he was standing near a chimney. He was so much burnt that he died in a short time. He left some productions in Polish and French. Those in French appeared in 4 vols. at Paris, in 1765, under the title of 'Œuvres du Philosophe Bienfaisant.'

STANISLAUS AUGUSTUS, the last Polish king, the son of Count Stanislaus Poniatowski, [PONIATOWSKI, STANISLAUS, COUNT,] was born in 1732, at Wolezyn, an estate in Lithuania, and received a most careful education. He was of an exceedingly prepossessing exterior; and he was well informed and highly accomplished, having improved the advantages received from his education by his subsequent travels in various parts of Europe. Sir Hanbury Williams, who was English envoy in Poland, became very intimate with the Princess Czartoryski, uncles of Poniatowski, and took a particular liking to this young nobleman. He persuaded Poniatowski to accompany him to St. Petersburg, where he was appointed British minister, and facilitated his *liaison* with the grandduchess of Russia, afterwards Catherine II. This circumstance, and the influence of the Czartoryskis [CZARTORYSKI], prevented the appointment of Poniatowski as Polish ambassador at St. Petersburg, where he continued his intrigue with the grand-duchess. The Czartoryskis determined to put forward Poniatowski as a candidate for the throne of Poland, which was supported with the whole power of Russia.

The projects of the Czartoryskis, becoming known, created a great sensation even before the death of Augustus III. A Russian force having entered Poland to support the election of Stanislaus Poniatowski, the Czartoryskis availed themselves of the assistance of that force, in order to compel the Diet of Convocation to adopt several laws by which the power of dissolving the diet by the veto of a single member was considerably limited, the executive authority of the crown strengthened, and the excessive privileges of the nobles were restricted. Their project of abolishing the veto altogether was prevented by the foreign ambassadors, and the proposition of electing the king by deputies chosen for that purpose was also defeated. The same diet declared that the confederation continued to exist, which prevented future diets, as long as it was not dissolved by veto. The same preponderance which brought about those reforms, effected the election of Poniatowski in 1764, and the diet of his coronation confirmed the reforms to which we have alluded, and introduced other important improvements, particularly in the financial department.

Russia soon perceived how dangerous to its influence in Poland were the reforms which strengthened the government of that country, and it gave its support to the opposition, which was composed of many patriotic individuals, and was too blind to see the advantages of those reforms, being afraid lest they might conduct to a despotic form of government. The diet of 1766 restored, with some few exceptions, the ancient force of the veto. The same power, under the pretext of defending the rights of the anti-Roman Catholic confessions, created division all over the country, and finally, in the diet of 1793, in addition to the equitable law of restoring all Christian confessions to equal rights, passed several others of a different character, which tended to weaken the government, and the acceptance of a Russian guarantee declared that state of things immutable.

In order to save the country from foreign influence, a confederation was organised at Bar, a little town in Podolia, by the patriotic bishop of Kamieniec, Adam Krasinski. It supported and without any regular troops, it struggled for several years against the forces of Russia, until it fell by exhaustion. The Turks, who had taken up arms in favour of Poland, after having represented in vain to the cabinets of Europe the danger of Russian predominance in Poland, were defeated, and the first partition of Poland, which was planned by Frederic II. of Prussia, took place in 1772. By this partition Poland lost, of the 13,500 square miles (15 to a degree) of its territory, 3925 square miles, which comprehended its best provinces, and were unequally divided between Russia, Prussia, and Austria. The spoliating parties called a diet to sanction this iniquitous transaction, and imposed on the country a permanent council, which deprived the king Poniatowski even of the shadow of authority. This great calamity roused the nation, which now strove to compensate its heavy loss by internal improvements. An excellent system of public education was introduced, and literature was encouraged; industry was re-animated, and every kind of improvement rapidly advanced, through the exertions of many distinguished individuals and of Stanislaus himself, who earnestly strove to ameliorate the condition of the country, and was an ardent patron of literature and science and the arts. The chancellor, Andrew Zamoyski, an enlightened and patriotic nobleman, prepared a new code, which removed many ancient abuses and partly emancipated the peasants. The code was rejected by the diet of 1780, but an improved public opinion produced in a few years a general wish for a reform in the constitution of the country. The diet which assembled in 1788, having declared itself permanent, continued till 1792, when, on the 2nd of May, it proclaimed a new constitution, which abolished the veto, made the throne hereditary in the Saxon family, which was to succeed after the

demise of Poniatowski, the reigning king, and introduced some useful regulations. It acknowledged at the same time the necessity of further reforms by enacting that there should be a revision of the constitution after the lapse of twenty years. But a fatal error was committed in neglecting to organise a national force capable of protecting the new constitution from the aggression of its enemies. Russia, who had guaranteed the former state of things in Poland, excited a party composed of a few factious nobles, who, assisted by her troops, formed a confederation at Targovitz, in order to overthrow the new constitution. The king, instead of marching against his enemies, betrayed the cause intrusted to his defence, and, instead of opposing the advance of the Russians, as he had most solemnly promised to do, and ordering a general levy, or *arrière ban*, he paralysed by his orders all measures of defence, and soon became a party to the infamous confederation of Targovitz. On the other side, the king of Prussia, who had encouraged the patriots to amend the constitution, joined the Russians and invaded Poland. The consequence of all this was a second partition of the Polish territory in 1793, by which Prussia took 1061 square miles (15 to a degree), Russia 4553, and Poland retained 4016. The remaining part of Poland was subjected to every kind of vexation from the confederates of Targovitz, who, encouraged by the presence of Russian troops, persecuted the patriots in every possible manner, and the chief persons among them were obliged to seek refuge abroad. The spirit of patriotism was however not quelled by these circumstances. An extensive conspiracy was organised, and insurrections broke out in several parts of Poland. In 1794 Kosciusko arrived at Cracow, and, having assembled a number of peasants armed with scythes, he defeated a superior number of Russian regular troops. The inhabitants of Warsaw, which was occupied by a strong Russian army, rose against their oppressors, and expelled them after a bloody contest. Vilna did the same. Several individuals were convicted of high treason and executed, but the king was treated with respect. The Poles fought with the utmost bravery, but their courage and patriotism proved unavailing against the overwhelming numbers of Russia and Prussia. Kosciusko was defeated, wounded, and taken prisoner at the battle of Maciejowice, and Praga, the suburb of Warsaw, was carried by storm by Suvaroff, and all the inhabitants were massacred. Warsaw capitulated, and the remainder of Poland was divided in 1795 among Russia, Prussia, and Austria.

When the final dismemberment of Poland was effected, Stanislaus retired for some time to the town of Grodno in Lithuania, where he signed the abdication of his throne; a step which he is said to have been induced to adopt by the promise of the payment of his private debts. He was then transferred to St. Petersburg, and a large pension was assigned to him by the Emperor Paul, who treated him with great kindness in many respects, but subjected him to the humiliation of assisting at his coronation at Moscow. He died at St. Petersburg in 1798, and was buried in the Roman Catholic church of that capital.

Stanislaus Poniatowski had four brothers: 1, Casimir, born in 1721, who was grand-chamberlain of Poland; 2, Francis, born in 1723, who had entered the church, but died young; 3, Andrew, born in 1734, died in 1773, a lieutenant-general in the Austrian service; 4, Michael George, born in 1736, died in 1794, archbishop of Gnesno and primate of Poland. There were also two sisters—Louisa, born in 1728, married to Zamoyski, palatine of Podolia; and Isabella, born in 1730, married to Branicki, castellan of Cracow, and the last scion of an illustrious house. This family was invested with the princely title at the coronation of Stanislaus.

The family Poniatowski rose to great distinction in a short time, but it soon passed away, and became extinct. The last of that family was Prince Stanislaus Poniatowski, son of Prince Casimir, the grand-chamberlain, and who died in 1833 at Florence, after having lived for many years in Italy. The last of the Poniatowskis who supported the honour of that name, and whose chivalrous death at the battle of Leipzig in 1813 gave a new eclat to this family, was Prince Joseph, son of Andrew and Countess Kinsky, born in 1763. [PONIATOWSKI, PRINCE JOSEPH.]

STANLEY, THE REV. EDWARD, D.D., Bishop of Norwich, was born in London on the 1st of January 1779, the second son and seventh child of Sir John Thomas Stanley, Bart. of Alderley Park, Cheshire, by Mary, daughter and heiress of Hugh Owen, Esq. of Penrhos in Anglesea. His elder brother, who inherited the baronetcy on his father's death, was raised to the peerage in 1839 by the title of Baron Stanley of Alderley. In his boyhood the future bishop had a passion for the sea and would have preferred the navy to any other profession. Being destined for the Church however he was sent, in 1798, after a desultory education at various schools, to St. John's College, Cambridge; and here in 1802, he graduated B.A. and was 16th Wrangler of his year. He took the degree of M.A. in 1805. In that year,—having meanwhile travelled on the Continent and having had for some time the curacy of Wendlesham, in Surrey—he was presented by his father to the family living of Alderley. In 1810 he married Catherine, eldest daughter of the Rev. Oswald Leicester, rector of Stoke-upon-Trent, Shropshire. He continued rector of Alderley for the period of thirty-two years (1805-37) during which he discharged his duties in a manner so conscientious and so thorough as to gain the affection of all his parishioners in an unusual degree. He worked assiduously among

the population of his parish—which amounted to about 1300; and, besides performing his purely clerical duties, he did everything in his power, by encouraging schools and the like, to promote the intellectual and secular welfare of his parishioners. For the use of the young in his parish he prepared “A series of Questions on the Bible” which was published in 1815. Inheriting Whig principles from his family, he was noted at this time for great liberality and toleration in his ecclesiastical opinions; though the zeal and the warm-heartedness of his Christianity were unquestioned. It was perhaps his slight interest in matters of purely theological controversy that inclined him at this time to the quiet pursuit of natural history. Using the opportunities afforded him by his position as the clergyman of a rural parish, he gratified his tastes in this direction by becoming acquainted with the geology, the mineralogy, the botany, the entomology, and the ornithology of his parish. He became a contributor on topics of natural history, and on kindred topics, to ‘Blackwood’s Magazine’ and to the ‘British Magazine;’ and one of his articles in ‘Blackwood,’ entitled ‘An Adventure on the Alps in the Mauvais Pas’ is supposed to have suggested to Scott the opening scene in his ‘Anne of Geierstein.’ The department of natural history which he principally cultivated was ornithology; and in 1835 he published under the auspices of the Society for Promoting Christian Knowledge, his well-known work in two volumes entitled ‘A Familiar History of Birds, their Nature, Habits, and Instincts.’ He had already lectured on subjects of natural history to one or two Mechanics’ Institutions in the north of England, and in 1836 he was Vice-President of the British Association. He was also a Fellow of the Royal Society and President of the Linnæan Society.

Though never obtruding his politics on his parishioners, he had taken part on the liberal side on some of the questions of the day relating to the Church. In 1829 he had published ‘A few words in favour of our Roman Catholic Brethren,’ advocating Roman Catholic Emancipation. In 1835 he published ‘A Few Notes on Religion and Education in Ireland.’ The spirit shown in these pamphlets, taken along with his excellent character, and his family-connections, recommended him to the Whig government as a suitable man for a vacant bishopric; and accordingly, on the vacation of the see of Norwich by the death of Bishop Bathurst in 1837, Lord Melbourne offered the bishopric to Dr. Stanley. It was with much reluctance that he quitted the parish where he had laboured so long to accept this preferment; with which was conjoined the appointment of Clerk of the Closet of the Chapel Royal. Having accepted the office, however, he set himself with great zeal and punctuality to its duties. Seldom has there been a more hardworking bishop, or one more sanguine in all schemes of improvement. He abandoned his pursuit of natural history and devoted himself exclusively to diocesan business. As the previous bishop had lived to the age of ninety-three, there were necessarily great abuses in the diocese—abuses of non-residence, and the like. These Bishop Stanley set himself to reform with a boldness, which, though successful in the end aroused much bad feeling against him. As in the House of Lords and elsewhere, where public questions were discussed, he always took what was called “The Liberal side” he was accused of latitudinarianism. In the sense of deviation from any of the standards of the Church the charge was untrue; and nothing but the tolerance of his disposition in all non-essential matters gave any colour to it. Beloved by all who knew him, and with the reputation of being one of the most kindly, sanguine, and hospitable men in the Church, he lived till 1849, when he died unexpectedly on the 6th of September at Brahan Castle in Ross-shire, Scotland, where he was then on a visit. He left five children—three sons and two daughters. His eldest son, OWEN STANLEY, entered the navy, where he rose to the rank of captain. He was a man of very considerable scientific attainments, and was regarded as an officer of unusual promise. He had been engaged on a survey of a portion of the coast of Australia, which he had just completed, when he died somewhat suddenly in 1849, his death being apparently hastened by the labours of the survey. Bishop Stanley’s youngest son, Charles Edward, is in the Royal Engineers; his second son—the Rev. Arthur Penrhyn Stanley, is the subject of the succeeding notice, and the foregoing particulars have been derived from a memoir prefixed by him to a collection of his father’s “Addresses and Charges” published in 1851. Of the bishop’s writings his ‘History of Birds’ is the most important: it has passed through several editions. Among his various pamphlets and sermons may be noted his ‘Heads for the Arrangement of Local Information in every Department of Parochial and Rural Interest,’ published in 1848.

\*STANLEY, REV. ARTHUR PENRHYN, the second son of the subject of the preceding notice, was born on the 13th of December 1815, while his father was still rector of Alderley. In 1829 he was sent to Rugby School, to the head-mastership of which Dr. Arnold had been appointed in the preceding year; and here it was, during a residence as pupil from 1829 to 1834, that he formed that acquaintance with Dr. Arnold which his subsequent literary career has commemorated, and to which his culture owed so much. From Rugby he removed in 1834 to University College, Oxford, of which foundation he was elected a scholar in 1837. In the same year a prize poem of his, entitled ‘The Gipsies,’ was recited by him in the theatre at Oxford, and published. In 1838 he graduated B.A., and subsequently

he took the higher degree of M.A. He then became a fellow and tutor of his college, and resided there for some years.

In 1842, on the death of Dr. Arnold, he preached his funeral sermon in the chapel of Rugby School; and the sermon, with an appendix containing a posthumous sermon by Dr. Arnold himself, was published in the same year. In 1844 Mr. Stanley paid a more elaborate and lasting tribute to the memory of his friend and master by publishing ‘The Life and Correspondence of Thomas Arnold, D.D.,’ a work which has produced a deeper effect than most biographies in the English language, and which has passed through many editions at home and been translated into foreign languages. Mr. Stanley’s next work, also produced while he was still a fellow of University College, Oxford, was a volume of ‘Sermons and Essays on the Apostolical Age,’ published at Oxford in 1847. In 1851 he was appointed one of the canons of Canterbury, which office he still holds, along with the chaplaincy to Prince Albert, and one of the chaplaincies to the present Bishop of London, Dr. Tait, who was Dr. Arnold’s successor in the head-mastership of Rugby. The nomination to the latter chaplaincy is quite recent (1857). In 1856 he was elected Regius Professor of Ecclesiastical History in the University of Oxford.

Mr. Stanley’s published works, subsequent to those already mentioned, are his ‘Memoir’ of his father, the late Bishop of Norwich, referred to in the preceding article, and published in 1851 as an introduction to a selection from the bishop’s addresses and charges; a ‘Lecture on the Study of Modern History,’ published in 1854; a work of antiquarian and historical research, entitled ‘Historical Memorials of Canterbury: the Landing of Augustine, the Murder of Becket, Edward the Black Prince and Becket’s Shrine,’ published in 1855, and republished in the same year; a sermon entitled ‘Foundation and Superstructure,’ published in 1855; a lecture entitled ‘The Reformation,’ published in 1856; and an elaborate and important work entitled ‘Sinai and Palestine in Connection with their History,’ published in 1856, and now in a second edition (1857). Canon Stanley is also understood to have contributed to various periodicals. He is now one of the hopes of the Church of England, an inheritor in the main of those principles in theology and ecclesiastical politics which Dr. Arnold represented.

STANLEY, LORD, [DERBY, EARL OF.]

STANLEY, JOHN, bachelor in music, a composer and organist of no inconsiderable celebrity during the latter half of the last century, was born in 1713. Two years after his birth he became blind, owing to an accident, a circumstance which renders the progress and success of his professional life more than usually interesting. At the age of seven he began to learn music, as an amusement, in which he was instructed by Reading (composer of ‘Dulce Domum’), one of the disciples of Dr. Blow, and evinced such extraordinary aptitude for the art, that what his father intended as some alleviation of a grievous calamity, was soon converted into a profession, and the sightless boy became the pupil of one of our great church composers, Dr. Greene, under whom he made such astonishing advances, that at the age of eleven he was appointed organist of All-Hallows, Bread-street, and at thirteen was elected to a similar situation in St. Andrews, Holborn, though he had many able competitors. In 1734 the benchers of the Middle Temple chose him as one of their organists, and the two latter places he held till his decease. On the death of Dr. Boyce, in 1779, Mr. Stanley succeeded him as Master of the King’s Band, and regularly discharged the duties of the office by setting to music the two odes annually produced by the poet-laureate, which were performed at the drawing-rooms held at St. James’s on New-Year’s day and the king’s birthday. During many years Mr. Stanley carried on the Lent oratorios at Drury Lane theatre; first in conjunction with Mr. Smith, Handel’s successor in those performances, and next with Mr. Linley. [LINLEY.] These he conducted in person, accompanying all the songs, choruses, &c., with an accuracy that the ablest musician, in full possession of the sense of vision, could not have exceeded. It is therefore almost superfluous to say that his memory was of the most extraordinary kind, many instances of which are still related, as well as of the additional strength which his other senses gained, apparently as a compensation for the loss of that important one which he had to deplore.

Mr. Stanley died in 1786. His compositions, all of which were published during his life, were numerous, and chiefly of the vocal kind; but he wrote many voluntaries for the organ, which long continued exceedingly popular. These, as well as his cantatas, songs, &c., were widely circulated, and not only spread his fame throughout the two kingdoms, but proved the source of much profit to the author: pleasing in melody, and easy to execute, they were generally admired, but are deficient in some of those qualities which are required in works of lasting reputation.

STANLEY, THOMAS, was born in 1625, at Cumberlow in Hertfordshire. His father, Sir Thomas Stanley, who was connected with the noble family of the earls of Derby, had his son Thomas, during the first fourteen years, educated in his own house in Cumberlow-green, under the tuition of Fairfax, the translator of Tasso. He applied himself with great zeal not only to the study of the ancient languages, but also acquired great facility in reading French, Italian, and Spanish. In 1639 he was accompanied by his tutor to Cambridge, where he entered Pembroke Hall, and continuing his studies with the

same ardour, soon distinguished himself among his fellow students. In 1641 he obtained at Cambridge the degree of M.A., which, according to the register of the University of Oxford, he had obtained in the latter place a year earlier. But it is not known whether he ever studied at Oxford. Some of his biographers state that after the year 1641 he travelled for some time on the Continent, while others are not only silent upon this point, but expressly affirm that while his family during the civil commotions in England took refuge in France, Thomas alone remained behind, and, in order to study the law, took up his residence in London in the Middle Temple, where he formed an intimate friendship with Edward Sherburne, afterwards Sir Edward Sherburne. In his new place of residence Stanley devoted his time partly to his professional pursuits, but more especially to the study of the ancients. The first time that he made his appearance as an author was in 1649, with a volume of Poems and Translations, which has subsequently been often reprinted. The volume contains some English and Latin original poems, together with translations from Greek poets. About the same time he translated several French, Italian, and Spanish poems into English. It must have been as early as this time that his chief attention was directed to one of the two great works to which he owed his reputation,—we allude to his 'History of Philosophy,' the first edition of which appeared in three parts from 1655 to 1662, folio, and was dedicated to his uncle John Marsham, to whom the author attributes the merit of having designed the work. The title is, 'The History of Philosophy, containing the Lives, Opinions, Actions, and Discourses of the Philosophers of every Sect.' A second edition appeared in 1687, folio; a third in 1701, folio; and a fourth in 1743, 4to. The work was translated into Latin by Gothofredus Olearius, 4to, Lips., 1711, with numerous additions and corrections. The latter part of the original, containing the 'History of the Chaldaic Philosophy,' was translated into Latin by Leclerc in 1690, and is contained in vol. ii. of his 'Opera Philosophica.' Stanley's 'History of Philosophy' was certainly at the time a great production, which excelled all that had been done before him in this department; but it is nevertheless only a storehouse of facts and materials diligently collected, and as such it is still a useful book. In every other respect it has been superseded by later works on the same subject.

After the completion of his 'History of Philosophy,' Stanley devoted most of his time to the study of the Greek poets, more especially to Æschylus. In 1663 (some editions bear on the title-page the date 1664) he published the tragedies of Æschylus, with a Latin translation, an explanatory commentary, the Greek scholia, and the fragments, in one vol. folio. This edition, though one of the best that had then appeared, has no great critical value. It was afterwards reprinted, with some alterations, by De Pauw, 4to, Hague, 1745; and with some improvements by S. Butler, Cambridge, 1809, &c. After the publication of his Æschylus, Stanley began an extensive commentary on Æschylus. This work, on which he spent the greater part of the last years of his life, has never been published. The manuscript, consisting of eight volumes folio, is preserved in the public library at Cambridge. There are also some other works, chiefly commentaries on ancient authors, which are ascribed to him, but have not been printed.

Stanley appears to have continued the practice of the legal profession, but he can never have devoted much time to it. He is said to have been a man of great benevolence and integrity. He died in London on the 12th of April 1678, and was buried in the church of St. Martin's-in-the-Fields.

(See the memoir of Stanley by Sir Egerton Brydges, prefixed to his edition of 'Stanley's Poems' (London, 1814 and 1815); and William Wotton's Latin Eulogium on Stanley, in his *Scævola Sammarthani Elogia Gallorum Seculo XVI. Illustrum, præfationem præmisit Ch. A. Heumannus; subjunctum est, quod primum nunc editur Guillelmi Wottoni Elogium Thomæ Stanleii*, p. 307, &c.)

STANZIO'NI, MASSIMO, Cavaliere, a celebrated Italian painter, was born at Naples in 1585. He was the pupil of Caracciolo, but became afterwards the imitator of the great Bolognese painters, especially Guido Reni; he was called the Guido of Naples, and is considered the most correct of the Neapolitan painters. He was an excellent portrait-painter, and was also distinguished for his frescoes. There are several excellent works by Stanzioni in the church of the Certosa, now an hospital, at Naples, especially the picture of St. Bruno presenting the rules of his order to his monks. In the same church is a picture of a dead Christ and the Marys, which, as it had somewhat darkened, Spagnoletto, through jealousy, persuaded the Carthusians to wash with a corrosive water, which completely spoilt it. Stanzioni, disgusted with the baseness of the act, would not restore it, preferring to leave it as a monument of Spagnoletto's meanness. Stanzioni died at Naples in 1650. He had a numerous school, and he left many notices of Neapolitan painters, which were used by Dominici.

STAPEL, JOHN BODEUS A, a Dutch physician, and distinguished as a botanist, was born at Amsterdam in the beginning of the 17th century, where his father Engelbert Stapel practised as a physician. He finished his education at the university of Leyden, where, under the tuition of Vorstius, he acquired a taste for botany; and, in conjunction with this science, he applied himself to the study of the Greek language for the purpose of publishing a complete edition of

the botanical works of Theophrastus. In the midst however of his studies and preparations for his great work, he died at an early age in 1636. He left materials enough for his father to publish an edition of the ten books of Theophrastus, 'De Historia Plantarum.' This work was published at Amsterdam in 1644, and exhibits great industry, being perhaps one of the most laborious editions of Theophrastus ever published. Under the head of each plant he has given all that has been said upon it by Dioscorides, Pliny, and other writers. In addition to plants known to the ancients, he has given descriptions of new ones from America and the Cape of Good Hope. Among the latter is a species belonging to the genus which Linnaeus has consecrated to his name and called *Stapelia*. The original plant was called by Stapel *Fritillaria crassa*. He had made preparations for an edition of Theophrastus, *Αἰτια Φυτικῆ*, or 'De Causis Plantarum;' but his papers were not sufficiently forward for publication. He was a botanist of great promise, and his early death was much lamented by his contemporaries.

STARK, WILLIAM, M.D., was born at Birmingham in 1740, and educated for the medical profession, first at Glasgow, and then successively at Edinburgh, London, and Leyden, at which last place he took his degree in 1767. Returning to London in 1769, he commenced, chiefly at the recommendation of Sir John Pringle and Dr. Franklin, the course of experiments on diet, of which the termination, rather than the scientific results, has rendered him celebrated. To ascertain the effects of different quantities and kinds of food upon the human economy, he confined himself for periods of from four to fourteen days to certain articles of diet, and carefully registered the influence which they seemed to exercise on the several functions of the body. He began, for instance, with bread and water; then he added to them, in succeeding periods, sugar, olive-oil, and milk; then he took different kinds of animal food, and each in different quantities. His last plan (when his previous experiments had already rather disturbed his health) was to try the effects of a diet of bread or flour, with honey and infusion of tea or rosemary. After continuing this for ten days, it brought on diarrhoea and considerable weakness, and to remedy the former he immediately adopted a diet consisting exclusively of bread, cheese, and infusion of rosemary. This produced a totally opposite state of the intestines, and was speedily followed by a condition of low fever, with great disturbance of the general health, and inflammation of the glands of the small intestines, of which, after five days' severe illness, he died.

The termination of Dr. Stark's labours, within seven months of their commencement, is the more melancholy for the few results to which they led. Had he been able to continue them for as many years, it is probable they might have led to some valuable conclusions, though indeed they were but roughly conducted, and open to all the fallacies of experiments performed on one person for the purpose of ascertaining rules to be applied to all. His works were published by Dr. J. Carmichael Smyth, in 1788 (in 1 vol. 4to, London): they include the 'Journal of his Experiments,' and his 'Clinical and Anatomical Observations,' which, though few, give proof of much acuteness in the study of disease. Had their author's judgment equalled his devotion to the cause of science, he might well have been expected to rise to the highest eminence in medicine.

STASZIC, STANISLAV, President of the Polish Royal Society of Arts, and a distinguished patriot and philanthropist, was born in November 1755, at Pila, of which place both his grandfather and father had been burgomaster. After studying at Göttingen and Leipzig, he passed two years at Paris, where he applied himself very sedulously to natural history and physics, and became acquainted with Buffon, D'Alembert, Raynal, and other eminent men. On leaving France he made a tour through Switzerland, Italy, and Sicily, chiefly for the purpose of studying the geology of those countries. Furnished with considerable acquisitions in various departments of science, he returned to his native land, with the hope that his talents would procure for him some distinction and favour; but meeting with only coolness and indifference, he withdrew from society, devoting himself entirely to study, to the exercise of private benevolence, exhortation, and advice in his immediate sphere. Notwithstanding his numerous bounties to others, he was so frugal in all that concerned himself as to be enabled to amass a very considerable capital. With this he purchased an estate, of which he made grants to several families, among whom he parcelled it out. Although he never took an active part in public affairs, he was always ready to aid with his pen the best interests of his country. Among his writings of a political or statistical character, are his 'Warnings for Poland,' 'Statistics of Poland,' and the 'Political Balance of Europe,' to which may be added his 'Geography of the Carpathian Mountains,' and his 'Reflections on the Life of the Chancellor Andrew Zamoiski,' with which enlightened patriot Staszic had for some time lived in daily and familiar intercourse, having been preceptor to his sons shortly after his return from abroad. Of purely literary productions he left but few, and even those were chiefly translations, namely, a prose version of Homer, Buffon's 'Epochs of Nature,' and Racine's poem on Religion, which last he translated at the age of fifteen.

More in compliance with the earnest desire of his mother than with his own inclination, Staszic had taken holy orders, and therefore, exemplary as the general tenor of his conduct was, he did not

display any great religious zeal, with the want of which he was accordingly reproached by his enemies, yet there is no reason whatever for suspecting him of religious indifference, and his personal virtues were of the highest kind, as his patriotism was of the noblest stamp. He died on the 20th of January 1806, and, in addition to the disposal of his estate at Rubieszow, as before mentioned, left considerable bequests to various public institutions and churches, including 200,000 zlots to the Hospital of Jesus, 100,000 to the Chemical Institute, and 45,000 to the Institute for the Deaf and Dumb at Warsaw.

STATIUS, P. PAPINIUS, a Roman poet, was born at Naples, in A.D. 61. His father was an eminent grammarian and poet, and was in consequence much distinguished by the patronage of Domitian. The son was educated at Rome, and his early genius met with like encouragement from the emperor. He gained the prizes in the poetical contests held at that time at Alba and elsewhere. His popularity is described by Juvenal ('Sat.' vii. 82). His tragedy or poem of 'Agave' has not been preserved; neither is the poverty of Statius, which is spoken of by Juvenal, noticed or accounted for elsewhere, though such inconsistencies of circumstance are not unusual in the lives of poets. In the year 80, according to Dodwell ('Annales Statiiani'), he married Claudia, a widow, of whom he makes frequent and affectionate mention in his writings: having no issue by her, he adopted a son. His great success drew upon him the jealousy and ill-will of his rivals, among whom Martial is thought to allude to him under the name Sabellus, and to have slightly omitted his name while making honourable mention of his contemporaries generally. When no longer able to maintain his superiority in the poetical contests, Statius withdrew to the retirement of Naples, where he died in 96. He wrote—1. 'Sylvæ,' a collection of 32 poems distributed in 5 books, on various subjects, such as passing events or passing thoughts would suggest. They are more of a lyric than of an epic character, and are written chiefly in hexameters, and occasionally in the alcaic, sapphic, and other metres. The last book appeared in the last year of the author's life. 2. 'Thebais,' an epic poem in 12 books, giving an account of the Theban war between Eteocles and Polynices: in this work he has borrowed much from Greek sources, and in particular from the 'Thebais' of Antimachus. 3. 'Achilleis,' an unfinished epic poem in 2 books, the further progress of which was arrested by the death of the poet.

The 'Sylvæ' are the most interesting of the poems of Statius. In them we find examples of trifling subjects treated with lyric playfulness of fancy; the poet's thoughts appear in the easy garb of private life; and his domestic feelings and affections are unaffectedly revealed (see the beautiful address to his wife, 'Sylvæ,' iii. 5). Many curious particulars illustrative of the manners and way of life of the Romans of that time may be gathered from this work.

As an epic poet, Statius belongs to a school of later Roman writers, the successors and imitators of Virgil, and, like them, he is characterised by a learned obscurity of allusion, a tasteless and unskilful use of metaphor, and a strained yet feeble mode of expression, masking in pompous language the simplest thoughts, and seeking to surprise the reader by rhetorical artifice rather than to call up the feelings which true poetry suggests. The few facts in the life of Statius are nearly all furnished by passages in his own poems, which are quoted at length by Crusius ('Lives of the Roman Poets,' i. 12mo), and the principal dates are fixed by Dodwell, 'Annales Statiiani'; other authorities quoted by Baehr, 'Geschichte der Römischen Literatur,' are—Critic, 'De Poet. Lat.,' Lil. Gyrard, 'De Lat. Poet. Dial. IV.,' Voss, 'De Poet. Lat.,' Funck, 'De imminent. L. L. senectat.,' Fabricii, 'Bibl. Lat.,' ii.; 'Saxii Onomast.,' i. 273. The principal editions of Statius are—Edit. princ., 1470, folio, Venet., 1483; Bernartius, Antwerp, 1595; ed. Fr. Tiliobroga (Lindenberg), 4to, Paris, 1600; rec. Crusius, 4to, Paris, 1618; J. Fr. Gronovii, 24mo, Amstel., 1653, cum comment. ed. F. Hand., Lips., 8vo, 1817. Very useful editions of the poems of Statius are those in Lemaire's Paris, and in Teubner's Leipzig Greek and Roman Classics.

STAUNTON, SIR GEORGE LEONARD, was the eldest and only surviving son of Colonel George Staunton of Cargin in the county of Galway, Ireland, a gentleman of small fortune, but descended from a very ancient English family. He was born at Cargin on the 19th of April 1727, and received his education partly in Galway and partly in Dublin, until he entered his sixteenth year, when a tendency to consumption rendered necessary an immediate removal to a warmer climate. His father accordingly sent him to Montpellier in the south of France, where he remained some years, and having completed his studies in the college of that city, he took a medical degree.

In 1760 he returned to England, and resided for some time in London, where he occupied himself in contributing some valuable essays to the periodical publications of that day, and formed an acquaintance with many eminent literary men of the time, especially Dr. Johnson, who, in the year 1762, upon his intended embarkation for the West Indies, wrote him an affectionate valedictory letter. This letter is preserved in Boswell's 'Life of Dr. Johnson,' and bears a very high testimony to Mr. Staunton's merits at that early period. Mr. Staunton practised for a short time in the West Indies as a physician, but he held at the same time considerable official situations in the islands, and having acquired a competent fortune, which he invested

in estates in the island of Granada, he returned to England in 1770. In 1771 he married Jane, the second daughter of Benjamin Collins, Esq., of Milford, near Salisbury, and a banker in that city; but the disorder into which his West Indian property fell in his absence obliged him very soon to return to Granada, where he continued to reside until the capture of the island by the French in 1779.

During this period Mr. Staunton devoted himself with considerable success to the practice of the law, a profession much more congenial to his talents and habits than that of medicine, and he was appointed by the crown, attorney-general of the island. In 1774 Lord Macartney went out to Granada as governor, and a warm friendship was soon formed between that nobleman and Mr. Staunton, which ended only with their lives. Upon the capture of the island by the French, Lord Macartney and Mr. Staunton were both sent to France as prisoners of war. Lord Macartney immediately proceeded to England on his parole, but Mr. Staunton remained some time longer at Paris, and had the address and good fortune to obtain, under circumstances of peculiar difficulty, his lordship's exchange as well as his own. Lord Macartney was thus enabled to avail himself of the appointment which the East India Company had conferred upon him, of the government of Madras, and Mr. Staunton accompanied him to India as his confidential secretary. In this character he was in fact his lordship's chief adviser on all the various transactions of his arduous and upon the whole successful government. Nothing could have been apparently more adverse to Mr. Staunton's interests than the capture of Granada. His house and plantation, which lay in view of the enemy when they were landing, were totally pillaged and destroyed. Everything moveable was taken away; and the land itself was afterwards in part confiscated and given away to Frenchmen. The recovery of any part of the wreck of his fortune was rendered hopeless by his sudden and compulsory departure from the island, and he was reduced to the necessity of commencing, as it were, the world anew. These circumstances were nevertheless in the end of great advantage to him, for they led to his immediate removal to a more suitable sphere for the exercise of his talents. While in India Mr. Staunton was engaged in a series of missions of great importance. On a very critical occasion, when the civil and military authorities at Madras were at issue, he undertook the delicate and possibly hazardous office of executing an order of the government, placing under arrest the commander-in-chief of the army, Major-General Stuart; and he thus preserved, by his vigour and promptitude, both the tranquillity of the settlement and the supremacy of the civil government. But the transaction in which his diplomatic abilities were chiefly displayed was the negotiation of a treaty of peace with Tippoo Sultan in 1784, by which the safety of our Indian possessions was secured at a crisis of great difficulty and peril. For this service he was immediately raised to a baronetcy, and the East India Company conferred on him a pension of 500*l.* a year for life. On his return to England he also received the degree of Honorary Doctor of Laws from the University of Oxford.

Lord Macartney, as well as Sir George Staunton, remained at home unemployed from this time until 1792, when the determination of the government to send a splendid embassy to the court of Peking called them both again into active service. At this period, Sir George, having succeeded to his patrimonial estate by the death of his father, and having made a moderate yet sufficient addition to it by his own exertions, was little covetous of further public employment; but the novelty of this undertaking, and the very extensive sphere of public utility to which it seemed to lead, gave it a degree of interest in his mind altogether independent of its pecuniary advantages. Although the negotiations were to have been opened by Lord Macartney, it was to Sir George Staunton that the government chiefly looked for the complete accomplishment of the objects of the mission, and with this view he was provided with separate credentials as minister-plenipotentiary, to be acted on in the absence or after the departure of the ambassador.

Sir George's health fell a sacrifice to his exertions upon this occasion. A few months after his return to England he was seized with an attack of paralysis, from which he never entirely recovered, and after a painful struggle of about six years, he gradually sunk into the grave, retaining however his intellectual faculties in full vigour to the last. He gave to the world a remarkable proof of this, in his published narrative of the proceedings of the Chinese embassy, a work which was not only read with great interest and avidity at the time, but is still referred to as one of the first authorities on all matters connected with China. Sir George died in London, on the 14th of January 1801, in the sixty-fourth year of his age, and was buried in Westminster Abbey, where an elegant monument, by Chantrey, was some years after erected to his memory.

STAYNER, SIR RICHARD, was a naval commander under the Protectorate and during the early part of the reign of Charles II. Nothing is known of his parentage or of the date of his birth. He is first noticed as having, in conjunction with Captain Smith, taken a Dutch East Indiaman of 800 tons burden, which had four chests of silver on board. In 1656 Captain Stayner had three frigates under his command, when he fell in with the Spanish flotilla, which consisted of eight sail. He attacked them: two were captured, one burnt, two sunk, two driven on shore, and one escaped into Cadix. Stayner is

said to have returned to England with treasure amounting to 600,000*l.* sterling. In 1657 he sailed with the fleet under Blake for the purpose of intercepting the Spanish West India flotilla, which had taken shelter in the Bay of Santa Cruz. The Spanish ships were well arranged, and strongly supported by batteries on shore. Blake, though he saw that he could not bring out the ships, resolved to attempt their destruction; and on the 20th of April, Stayner was sent in to begin the attack. He was followed by Blake, with the rest of the fleet. In a few hours the Spaniards had fled to the shore, the batteries were silenced, and the whole of the ships burnt. A more detailed account of this gallant enterprise is given in the article *BLAKE*. For his conduct in this affair Stayner was knighted by Cromwell. Sir Richard Stayner held a command in the fleet under Montague, afterwards Earl of Sandwich, when he went to receive Charles II. His knighthood was confirmed by Charles, and he was constituted rear-admiral of the fleet. He had no further opportunity of distinguishing himself, but he continued to serve, and died at sea on board his ship the *Mary*, in October 1662: his body was brought home, and Pepys has a note under November 28, 1662, that he went "by 10 o'clock to Ironmongers' Hall, to the funeral of Sir R. Stayner."

**STEELE, SIR RICHARD**, was born at Dublin in 1671. His father, who was private secretary to James, first duke of Ormond, sent his son to be educated at the Charterhouse in London; thence Steele was removed to Merton College, Oxford, and admitted a post-master on that foundation in 1691. He afterwards was an ensign in the Guards, and in 1702 attracted the notice of the public as an author by the publication of *'The Funeral, or Grief à-la-Mode,'* a comedy, successfully acted in that year. Two more comedies, *'The Tender Husband,'* acted in 1703, and *'The Lying Lover,'* 1704, followed this first attempt. In 1709 he commenced *'The Tatler,'* the first, in our literature, of a series of periodical works in the form of short essays. He was soon after made one of the commissioners of the Stamp-office. In 1711 he began, in conjunction with Addison, *'The Spectator,'* and in 1713 *'The Guardian.'* In this year he was dismissed from his situation in the Stamp-office, and was elected member for Stockbridge in Hampshire. In March of this year he was expelled the House for writing two pamphlets, *'The Englishman'* and *'The Crisis,'* on the succession to the crown of England, alleged to contain treasonable matter relative to the reigning family: he was supported on this occasion by Addison, and other distinguished members of parliament; and when called upon to take his place at the bar, he had Stanhope on one side of him and Walpole on the other. He spoke, thus supported, with great eloquence and spirit for nearly three hours, but on a vote being taken, his *'Crisis'* was declared a scandalous libel by 245 votes against 152—"a most fierce and unwarrantable stretch," Lord Mahon very truly calls it, "of party violence."

After the accession of George I., in 1715, Steele was made surveyor of the royal stables at Hampton Court, and was knighted on the presentation of an address. The same year he was chosen member for Boroughbridge in Yorkshire, and appointed one of the commissioners of forfeited estates in Scotland. He continued to write articles relative to the political events of the time, and in the latter years of his life appears to have suffered much from poverty, caused partly by improvidence, partly by a habit of speculating in new projects. He sustained a considerable loss—nearly 10,000*l.* by his own account (see his letter to the Duke of Newcastle, *'Epis. Corr.,'* 469)—by the revocation, in 1719, of the patent by which he was constituted governor of the royal company of comedians. In 1722 his comedy of *'The Conscious Lovers'* was acted. Some time before his death he retired into Wales, to his seat at Llangunnor, near Caermarthen, where he died September 1, 1729. He had been twice married, first, to a lady of Barbadoes, secondly, to Elizabeth, the daughter of Jonathan Scurlock of Llangunnor, Esq., by whom he had a daughter, married in 1732 to the Hon. John Trevor, afterwards Baron Trevor of Bromham.

Steele has the merit of having originated a kind of periodical literature not before known in this country. Of the value of the series of works commencing with *'The Tatler,'* of which, in conjunction with Addison, he was the author, it is needless here to speak. They are remarkable for a style combining with the ease of familiar conversation grammatical correctness and purity of language, for the invention and judgment shown in the choice, and the versatility of the treatment, of the subject, and, above all, for the refined and Horatian satire which, expressing itself in a tone of playful irony, and by means of allegory and representation of character never directly personal, formed the taste and reformed the manners of the generation by whom the perusal of these writings was regarded as a passing amusement. Of the papers in *'The Tatler'* by far the greater number are by Steele; 200 out of the 271, of which it consists, being wholly or chiefly by him. Of the *'Spectator,'* his contributions are almost equal in number to those of Addison, but certainly by no means equal in merit. In both the *'Guardian'* and *'Englishman'* Steele had the principal share. Though wanting in the higher qualities which distinguish the essays of Addison, those by Steele are marked by a warm-hearted geniality, a constant liveliness, and a freshness which render them extremely pleasing. Steele's plays were published in 12mo by Tonson, in 1755.

**STEEN, JAN**, one of the most celebrated painters of the Dutch school, was born at Leyden, in 1636. His father was a brewer, who,

complying with his son's desire to be a painter, put him apprentice to Nicholas Knupfer, a German artist of considerable note, at that time residing at Utrecht. He afterwards studied under Van Goyen, who was so pleased with his agreeable manners, and his talents as a painter, that he gave him his daughter Margaret in marriage. Though Steen soon acquired great reputation, he did not gain sufficient to live with comfort, because he spent much time on his pictures, which he finished with extraordinary care. His father therefore advised him to set up a brewery at Delft, in which he had every prospect of success, but his propensity to an idle and dissolute course of life made him neglect his business, and having incurred debts, he was driven by necessity to his pencil. With the assistance of his relations he set up a public-house, which was much frequented, but only gave him more opportunity and temptation to indulge in his intemperate way of life. The scenes which he saw here he transferred, often in a state of intoxication, with unrivalled skill to the canvas. None of his contemporaries surpassed him in the naïveté of his compositions, in the expression and character of his figures, and the skilful distribution of light and shade. "In spirit, humour, and invention," says Dr. Waagen, "Steen excels all other Dutch painters in the same line; to this is added a free, light, easy touch, a great freshness and clearness of colouring, and sometimes a delicacy of execution approaching if not equal to Metzen." He sometimes attempted historical subjects, such as Moses striking the Rock, but it is in scenes of domestic life, of the higher as well as the lower classes, that he is without an equal.

After the death of his wife, by whom he had six children, he married a widow with two children. His business failed, and he was scarcely able to procure sufficient for his subsistence, by the sale and pawning of his pictures, which in his latter years were slightly painted. He died in 1689, leaving his family in great distress. His works, which had not fetched great prices during his life, rose rapidly in value after his death, and are now greatly coveted, and sold at high prices. Several of his finest pictures are in England, in the Royal collection, and the collections of the Duke of Wellington, Lord Ashburton, Sir Robert Peel, Mr. Hope, &c. At Lord Spencer's seat at Althorp there is a fine portrait of Sir Kenelm Digby ascribed to him. His drawings are excessively scarce. He likewise executed a few very spirited etchings, which are also very scarce.

**STEENWYK, HENRY**, the Elder, a celebrated painter, of the Flemish school, was born at Steenwyk in 1550. He studied under his father, who was well versed in painting, architecture, and perspective; and also under John Fredemann, called De Vries. Like his master, he painted architectural subjects; but excelled him and all his contemporaries in truth, delicacy, transparency, and neatness. His favourite subjects were the interiors of Gothic churches and convents, and most frequently views by night, when they were illuminated by flambeaux or tapers. He was a consummate master of chiaroscuro, and his lights and shadows are distributed with the greatest judgment. The reflections of his lights are beautiful, and every column, and all the details of the Gothic architecture, are represented with perfect truth and precision. His pictures are usually enriched with figures by Breughel, Van Tulden, and other distinguished artists. His genuine works are extremely rare, and very highly prized all over Europe. To avoid the troubles of war, he retired to Frankfurt, where he died about 1603.

**STEENWYK, HENRY**, the Younger, the son of the preceding, was born in 1585. He followed the style of his father, by whom he was very carefully instructed, and very good judges have thought that he often equalled him. His friend Vandyck, for whom he frequently painted the architectural and perspective backgrounds of his pictures, induced him to visit England, and introduced him to the court of Charles I., where he met with the encouragement due to his talents, and found employment in this country for several years. He died at London, when still young, but in what year is uncertain. His widow, who had been instructed by her husband, retired to Amsterdam after his death, and practised painting there: her works were greatly esteemed and readily purchased at high prices. The celebrated Peter Neefs, father and son, were among the disciples of the elder Steenwyk. The portrait of the son by Vandyck is engraved in the collection of the portraits of the chief artists of his time.

**STEEVENS, GEORGE**, was born at Stepney, in 1736. His father was connected with mercantile pursuits in London, being a director of the East India Company. George Steevens was placed on the foundation at Eton, and became a scholar of King's College, Cambridge, in 1754. His first publication, and a most useful one, was the reprint, in four volumes, octavo, of *'Twenty of the Plays of Shakespeare,'* being the whole number printed in quarto during his Lifetime, &c. These plays profess to be literal copies of these rare editions; and in several instances the various readings of other quarto editions are given in the foot-notes. This was an acceptable service to all students of our great poet; and a comparison of many of these plays with the originals enables us to say that the reprints are remarkably faithful. This reprint appeared in 1766. The reputation which Steevens thus acquired led, no doubt, to his association with Johnson in the edition of Shakespeare which appeared in 1773 with their joint names. In this edition his assistance was of essential service; for he brought to the task of editing Shakespeare qualities in which Johnson was deficient—a more accurate knowledge of early English literature,

and greater precision in verbal criticism. Neither his character nor that of the age to which he belonged would have led him to any complete conception of Shakspeare's excellence; but what he professed to do, he did satisfactorily. He collated all the copies diligently; he restored many readings which had been tampered with by his editorial predecessors; and he judiciously adhered to the old copies, without attempting to regulate the metre according to the poetical creed of his day. In 1778 the second edition by Johnson and Steevens appeared, in which Malone had rendered some assistance; but Malone, in 1780, published a supplement containing the doubtful plays and the poems. This appeared something like a setting-up on his own account; and Steevens, who thought too highly of himself to pay much respect to others, scarcely forgave this. He and Malone at length became rival editors, each working with very laudable diligence in that species of commentary which resulted from their antiquarian knowledge; but each quite incapable of throwing any new light upon the poet by a genial admiration and a philosophical estimate of his wonderful performances. Their rivalry, in all probability, gave a new direction to the labours of Steevens. He dedicated himself to the production of another edition, in which he should cast aside the principles which had guided his former labours. He possessed a more decided and more acute mind than Malone; and, with an ill-concealed contempt of the plodding diligence of his old fellow-labourer, he went to work to give us a new Shaksperian metre, such as would satisfy the most precise disciple of the ten-syllable school. He proposed, "instead of a timid and servile adherence to ancient copies," to proceed to the "expulsion of useless and supernumerary syllables, and an occasional supply of such as might fortuitously have been omitted." The edition in which this process was perfected was produced in 1793, in 15 vols.; and such was his commendable anxiety for its correctness, that he often walked from his house at Hampstead to his printer's in London, before daybreak, that he might correct the proof-sheets. His experiment was perfectly successful with a public not very critical, who were thus presented with what he called "a commodious and pleasant text of Shakspeare." That text remained undisputed in its authority till the publication of Malone's posthumous edition by Boswell in 1821, in which some attempts were made to adhere to the early copies; and no popular edition, conducted upon a different principle, appeared till that of Mr. Knight, in 1833. In his edition of 1793 Steevens made his well-known avowal that he did not reprint the poems of Shakspeare, "because the strongest act of parliament that could be framed would fail to compel readers into their service."

With the exception of his various editions of Shakspeare, Steevens did not apply himself to any extensive work. He assisted Nichols in his 'Biographical Anecdotes of Hogarth,' and Isaac Reed in the 'Biographia Dramatica.' His ample means put him above the necessity of literary labour. But his leisure was amply filled up by a system of excitement, which was not calculated to add to his happiness or his reputation. He had the command, which his acuteness and sarcastic power might easily secure, of a newspaper and a review; and the 'St. James's Chronicle' and the 'Critical Review' were made the vehicles of the bitterest attacks upon the literary characters of those to whom in private he was all smiles and courtesy. In some satirical verses, as malignant as his own paragraphs, and rather coarser, we have this character of him (Nichols's 'Literary Anecdotes,' viii. 540):—

"Mark the old beau's grimaces, his smirk and palaver;  
Mark his crest and fine folds, but beware of his *slaver*."

Johnson said of him, in answer to Beauclerk's assertion "He is very malignant," "No Sir, he is not malignant. He is mischievous, if you will. He would do no man an essential injury; he may indeed love to make sport of people by vexing their vanity." This, most probably, was the true state of the case. Steevens had no domestic ties, and men were afraid of him. Johnson said, on another occasion, in which there is little doubt he alluded to him, "Sir, he lives like an outlaw." His mock praise, his sarcastic politeness, his anonymous ridicule, gratified his sense of power. He had higher abilities and more scholarship than many of the solemn critics who were then busied about our early literature; for then, as it always must be, the small men, who applied themselves to verbal criticism, fancied themselves great (to use Bentley's forcible image) when they were on a giant's shoulders. While Steevens, in his own notes on Shakspeare, is making the most profound bows to this man's learning and that man's ingenuity, we can see him winking as it were upon his readers, and whispering, "what owls!" Amongst other tricks, and his tricks were very numerous, and some of them rather elaborately concocted with a view to mislead his successors, he set up mock commentators, under the names of Amner and Collins, to perpetrate dirty annotations to which he was ashamed to put his own name; and he once signed a bitter attack on Capell, in his own edition, with the name of his timid rival Malone. George Steevens died at Hampstead, in January 1800; and was buried at Poplar, where his memory is graced by one of Flaxman's monuments.

STEFANI, TOMMASO DE', the first Neapolitan painter mentioned at the revival of art in the 13th century, was born about 1230. A contemporary of Cimabue, he has been represented by Neapolitan writers as superior to that painter, but Marco da Siena says that he was inferior to Cimabue in grandeur of style. Tommaso was patronised by Charles of Anjou and Charles II. He painted the chapel of the

Minutoli, in the Duomo, mentioned by Boccaccio, with a series of frescoes representing the Passion of our Saviour. None of his works have come down to the present time. The year of his death is uncertain.

STEFANO (called FIORENTINO), was born at Florence in 1801. Though his most celebrated works, in the church of Ara Coele at Rome, Santo Spirito at Florence, and elsewhere, are no more, he deserves to be mentioned as a disciple of Giotto, and the only one who attempted something beyond the mere imitation of his master, whom, according to Vasari, he excelled in every department of the art. He was the son of a daughter of Giotto's named Caterina. He was the first who attempted foreshortening, and if he did not completely succeed in this, he certainly made improvements in perspective, and gave new variety of character and life to his heads. He died in 1350. No authenticated picture of his remains in Tuscany, "unless," says Lanzi, "we except a Christ, in the Campo Santo of Pisa," which is in a greater style than the works of his master, but retouched.

STEFANO, TOMMASO DI, supposed to have been the son and pupil of the preceding, born according to Vasari in 1324, was called GIOTTINO, from the resemblance of his works to those of Giotto. A Pietà, at S. Remigi at Florence, and some frescoes of his at Assisi, bear indisputable marks of that style. Vasari says that he finished his works with great care and devotion, being always desirous rather of glory than gain. He died of consumption at the age of thirty-two.

STEFFANI, AGOSTINO, an Italian composer of great eminence in the 17th century, was born, about 1650, at Castello Franco. In his youth he was entered a chorister at St. Mark's, Venice, where a German nobleman, pleased with his singing and appearance, obtained his discharge from the church, took him into Bavaria, there bestowed on him a learned and liberal education, the musical part of it under Ercole Bernabei, and finally, when he had arrived at the proper age, got him ordained. He thenceforward took the title of "abate," by which he is now commonly known. His ecclesiastical compositions soon became numerous, were much admired, spread his fame, and attracted the notice of Ernest, duke of Brunswick, father to George I. of England, who, though a Protestant, invited the Roman Catholic and clerical musician to Hanover, made him director of his chamber music, and committed to him the management of the opera, then just beginning to raise its head in Germany. But the intrigues of singers at length wearied him of his theatrical and rather incongruous occupation, though not till he had composed several operas, which, translated from Italian into German, were performed at Hamburg between 1694 and 1700. These however are forgotten; but his madrigals, motets, and, more especially, his duets, of which Caroline, consort of George II., collected nearly a hundred, are the best known of all his works, and of which it is enough to say, that Handel acknowledged his twelve celebrated duets to have been written in imitation of them.

Steffani was not only a musician but a statesman. He had a considerable share in concerting, with the courts of Vienna and Ratisbon, the scheme for erecting the duchy of Brunswick-Lüneburg into an electorate, for which service the elector assigned him a handsome pension, and Pope Innocent XI. gave him the bishopric of Spiga. In consequence of this he no longer put his name to his compositions, but adopted that of his secretary, Gregorio Piva; and in 1708 relinquished his appointments in Hanover in favour of the, afterwards, great Handel. He died at Frankfurt, in 1729.

STEFFENS, HEINRICH, was born at Stavanger in Norway on May 2, 1773. His parents removed in 1779 to Helsingør, where he received his early education, and in 1787 he was taken to Copenhagen, as his early-displayed piety and eloquence seemed to point out divinity as his proper study, though he had already acquired a great fondness for natural history. In 1790 he was entered at the University of Copenhagen, where he so distinguished himself that he received in 1794 a travelling prize. He spent the summer of that year at Bergen in Norway, and in the autumn while proceeding to Germany he suffered shipwreck at the mouth of the Elbe, saving only his life, and that with difficulty. After residing about a year in Hamburg, he removed to Kiel, where in 1796 he gave lectures in natural history, and acted as private tutor. He however felt a want of a fundamental principle in natural science, and, repairing to Jena, imagined that he found in the theories of Schelling what he needed. He was intrusted with the revision of Schelling's writings on natural philosophy in 1800, and became one of the warmest supporters of the doctrines of Schelling's school (then in its most flourishing state), at least so far as they were restricted to natural philosophy. After having been created adjunct to the professor of philosophy in the University of Jena, he repaired to Freiberg, where he was instructed by and acquired the friendship of Werner. While here he wrote his 'Geognostisch-Geologischen Aufsätze' ('Geognostic-Geological Essays'), not published till 1810, which he expanded in 1811-19 into three volumes of a 'Handbuch der Oryktognosie.' On returning to Denmark in 1802, he excited considerable attention by his lectures; but as he experienced some coldness from influential persons, he accepted in 1804 a call from the University of Halle to become professor there, and while there published (in 1806) his 'Grundzüge der philosophischen Naturwissenschaft' ('Fundamental Features of Philosophical Natural Science'). The years 1807-9 he spent with his friends in Holstein. He then

returned to Halle, and took an extremely active part, not unattended with danger, in the secret preparations of the Prussian patriots to cast off the French yoke, which they felt to be alike burdensome and disgraceful. When the time for action arrived, Steffens joined the Prussian forces as a volunteer, and by his enthusiastic addresses roused and supported the energy of his comrades, with whom he continued till the entry into Paris in 1813. After this he returned to Breslau, where he had been created professor of physics and of natural history. These offices he held till 1831, when he removed in a similar capacity to the University of Berlin, in which city he died on February 13, 1845. While in Breslau he wrote, in connection with what may be called his professional pursuits, his 'Anthropologie,' published in 1822, in which he strove to elucidate on philosophical principles the existence of mankind in connection with the universe. This subject he continued in his 'Polemische Blättern zur Beförderung der speculativen Physik' ('Polemical Leaves for the advancement of Speculative Physics'), in two parts, issued in 1825 and 1835; but these works rather represent the philosophy of the Schelling school than add to our knowledge by any new facts. The intellectual activity and mental riches of Steffens however were not confined to one branch of knowledge, and he frequently and successfully appealed to the present thoughts and feelings of his fellow-countrymen. To this description of works belong his essay 'Ueber die Idee der Universitäten' ('On the Ideas of the Universities'), 1809; 'Die gegenwärtige Zeit, und wie sie geworden' ('The present Time, and what it will become'), 1817; and 'Ueber geheime Verbindungen auf Universitäten' ('On the secret Societies of the Universities'), in 1835. His disinclination also to the attempted church union in Prussia rendered him at first the leader of a considerable number of dissenters from that union, and at length involved him in many controversies, which ultimately occasioned the production of his work 'Von der falschen Theologie und dem wahren Glauben' ('On the false Theology and the true Faith'), in 1824, of which more than one edition has been called for. In 1831 he published 'Wie ich wieder Lutheraner wurde und was mir das Lutherthum ist' ('How I became again a Lutheran, and what Lutheranism is to me'), which is a personal confession of faith, certainly of the Pietist class, but it is of a far higher character of thought than that of most of the works of that sect, and appears to be the result of an inward struggle against the modern system of absolutism, which principle he defines as a positive surrender of the belief in the personality of the Deity. In 1827 also he struck into a new line: he began a series of novels, of which the first 'Die Familien Walseth und Leith,' in three volumes, was followed in 1828 by 'Die vier Norweger,' in six volumes, and that by 'Malcolm' in two. These novels contain many references to himself both in the incidents and opinions, but they also contain well-defined pictures of the peculiarities of national character, narratives of the historical events of the period, with lively and correct descriptions of scenery, especially that of his native country in 'The Four Norwegians,' and all are penetrated with a deep-lying religious feeling, which give them a peculiar character. In the last years of his life he occupied himself with writing a detailed autobiography, 'Was ich erlebte,' published in ten volumes, from 1840 to 1845. It is perhaps too minute, but contains many interesting facts, and a fragment of it has been translated into English under the title of 'Adventures on the Road to Paris,' an account of the advance of the allied armies in 1813. Since his death some posthumous works have been published, 'Nachgelassene Schriften,' with a preface by Schelling.

STEIBELT, DANIEL, a celebrated composer for, and performer on, the pianoforte, was born in 1755 at Berlin, where his father was a manufacturer of musical instruments. When a youth, attracting the notice of William III. of Prussia, he was educated at the charge of that monarch, and soon distinguished himself. In his travels he visited Paris and London. In the former city he had the honour to introduce Haydn's 'Creation,' and also published many works: in the latter he made a considerable stay, took many pupils, and produced and printed much pianoforte music. He afterwards returned to his native country, and finally settled at St. Petersburg, where he was appointed *maitre de chapelle* to the emperor. He there died in 1823, in distressing circumstances, for he had lived thoughtlessly—to use a very mild epithet. Steibelt may almost be said to have formed a pianoforte school, to which the term 'sparkling' may be applied. His best compositions are remarkable for brilliancy, and what we will venture to call picturesque effect, and his execution of them was singularly delicate, animated, and beautiful. He composed also some operas, which were performed in Paris and in St. Petersburg, but these did not survive their author.

STEIN, HEINRICH FRIEDRICH KARL, BARON VON, the great Prussian statesman, was born at Nassau on the 15th of October 1757. He was the third son and ninth child of his father Karl Philipp von Stein, the descendant of one of the old noble families of the German Empire, the possessor of large estates, and who had been in high official employment under the archbishop-elect of Mainz. In 1773 the future statesman went to the University of Göttingen to study law. He afterwards continued his studies at Wetzlar and Vienna. In 1779 he entered the Prussian official service as a director of mines; and in this capacity, and in others to which he was successively appointed during the lifetime of Frederick the Great, he laid the foundation of

his reputation for administrative talent. In 1786, on the death of Frederick the Great, Stein, in company with his friends, Count von Redem and Count Schlabrendorf, visited England; and while here he made it his business to study the constitution and social arrangements of the country with the utmost attention. The impressions made upon him by what he saw and heard in this country, worked powerfully on his mind, and had much influence upon his future career. In particular he seems about this time to have begun to have less respect for that theoretical republicanism to which, with other young Germans, he had till then been attached, and to have come to the conclusion that the greatness and strength of such a country as Britain was owing less to peculiarities of her constitution, which might be supposed to have an abstract value, than to the reality of free and popular institutions which time and the genius of the people had consolidated. On his return to Prussia, he resumed his official employment in connection with the administration of the mines of the kingdom; and about the same time he married the Countess of Wallmoden-Gimborn. As he had himself inherited large property, this marriage made him extremely wealthy. In 1793, at which time the Prussian Government of Frederick William II. was engaged in organising some Westphalian provinces which had been added to the kingdom, Stein was appointed a member of the commission for that purpose; and he afterwards became director, then president, and in 1796 he was appointed supreme president of the Westphalia Chambers of Wesel, Hamm, and Minden; and in this capacity he introduced many improvements into the agriculture, greatly improved the roads, and ameliorated other parts of the social economy of the provinces under his administration.

The above however were but the preliminary employments of this remarkable man; and it was during the eventful reign of the Prussian king Frederick William III. (1797-1840), or rather during the earlier and more eventful part of that reign, that Stein was to accomplish the labours which have made his name famous. In 1804, on the death of Count Struensee, he was invited to Berlin as minister of the department of indirect taxes, excise, salt-works, trade, commerce, public debt, &c. In this important post he laboured indefatigably; and he had already effected, under much difficulty, many reforms in the administration in Prussia, chiefly in the direction of a removal of restrictions on internal commerce, when those misunderstandings between Napoleon and the Prussian king began which led to the French invasion and conquest of Prussia. Stein, from the very first, took a thoroughly German and patriotic view of the war which the coalition was waging against Napoleon, and his differences with his colleagues in the ministry on this and other subjects led to his dismissal in the early part of 1807. The battle of Friedland on the 14th of June in that year decided the fate of Prussia. By the peace of Tilsit the kingdom was shorn of more than half its territory; and what remained was given back to the Prussian king, to be governed by him, rather as a tributary of the French Empire than as an independent sovereign. Then was the moment for Stein's re-appearance. He had gone to reside on his family property in Nassau; but on being invited by the oppressed and desponding Frederick William to become the minister of what remained of his kingdom, he at once complied. He developed his plan for restoring Prussia to her place in Europe. The essence of the plan was contained in these striking words, "What the state loses in *extensive* greatness, it must make up by *intensive* strength." The means towards this "intensive" strengthening of Prussia proposed by Stein were most thorough-going. They amounted to nothing less than a radical change of system in Prussian politics and administration. The true strength of the kingdom, said Stein, was to be found not in the aristocracy, but in the whole nation. Let villenage therefore be abolished throughout Prussia by indemnifying the nobles; let class-distinctions in the eye of the law be abolished as soon as possible; let nobles pay the land-tax as well as others; let the old rule of the Prussian military service, which prevented any but nobles from being commissioned officers, be abrogated. He urged also the formation of a municipal system in Prussia not unlike that of England; and he devised a scheme by which the Prussian youth could be gradually, and yet universally, trained to the use of arms—the peculiarity of the scheme being that the youth should be trained in successive batches, so as not to increase the army and awaken the suspicion of Napoleon. These and many other reforms, forming in their aggregate what has since been called "Stein's system," he explained to the king and others. He was able also personally, to some extent, to carry them into effect with the best results. Napoleon however had heard of "one Stein" who was engaged in retrieving by such means the reverses of Prussia; and in November 1808 Stein was obliged to resign the ministry and take refuge in Austria. Before his departure he addressed a circular to all the high officials of the kingdom, in which, so far as he deemed it prudent, he explained the features of his "system." From what he said in this circular, it became clear that his "system" looked forward to something more than mere administrative changes in Prussia—that, in short, it contemplated the formation of a free national representation, in which all who possessed one hundred acres of land, or were engaged in trade extensively, or in the culture of letters, should take part in the legislation. The administrative part of Stein's system, more especially as regarded the army and the municipality, was put

into effect by his successor in the ministry, Count, afterwards Prince, von Hardenberg; and the result was, as Stein had foreseen, that during the time of Prussia's apparent ruin and weakness, she was gradually gathering strength for the struggle that should restore her to liberty. Nor was Stein in his exile idle. Apart altogether from the system of institutions which he had framed and recommended, he was to a great extent the author and founder of that secret and patriotic society, having for its object the expulsion of the French and the recovery of Prussian and German independence, which between 1808 and 1813 pervaded, under the name of *Tugendbund*, all ranks of German Society, and embraced the noblest German spirits of the time. This *Tugendbund* however contemplated also a future of free representative institutions for Prussia and Germany when they should be liberated.

In 1812 Stein went to Russia, and attached himself as counsellor to the Emperor Alexander, then about to begin his great final struggle with Napoleon I. In 1813, after the entry of the Allies into Saxony, he was named chief of the Administrative Council of all the German territories in the possession of the Allies; and in this year the fruits of his "system" and of the "*Tugendbund*," so far as Prussia was concerned, were seen in the universal rising and the excellent discipline of the Prussian "landwehr." In 1814 Stein accompanied the Allies into Paris, and in the debates then in progress as to the terms on which France should be let off, he took a truly Prussian view, and argued for a far greater measure of vengeance on France for the injuries she had inflicted on Europe since 1792 than the leaders of the Allies were disposed to exact. Stein's part in the Congress of Vienna was not great. He was charged with the preparation of some plans connected with the re-organisation of Germany; and he afterwards published his views on that subject. After the final overthrow of Napoleon I. in 1815, Stein's influence with the leaders of the Allies was gone. His notions of free institutions, of representative government, and of a federal alliance of all the German states by means of a popularly-elected Diet, were not to the taste of the Russian emperor and the other powers of the Congress. Even the Prussian king, who at first, under Stein's inspiration, was disposed to make a stand for the liberal use of the European opportunity afforded by Napoleon's fall, deserted his adviser, and joined the absolutist league. The intrigues of Montgelas, the Bavarian minister, representing the jealousies of some of the minor German states, had something to do with Stein's loss of influence. He retired into private life, and had the pain of seeing the Prussian sovereign and government relapsing from his "system" even in the administrative parts, while the attainment of a national representation, as the means of German union, seemed postponed to a far distant day. His name however lived in the hearts of patriotic Prussians, and from time to time he was heard of. In 1816 he was decorated with the Order of the Prussian Eagle; in 1818 he was at the Congress of Aix-la-Chapelle; in 1827 he was nominated a member of the Prussian Council of State; and in the same year he was *mareschal* of the first assembly of states of Westphalia. In the same year (1827) he published a criticism on some parts of Bourienne's '*Life of Napoleon*,' in which his own share of the events of 1814-15 had been commented on. He died on the 29th of June 1831, leaving behind him the reputation of having been one of the firmest characters and the greatest statesmen that Prussia had produced.

STELLA, JACQUES, a celebrated French painter, was born at Lyon in 1596. His father, François Stella, who was also a painter, died when he was only nine years old, yet, though so young when he lost his father, Stella is said to have had no other master. At the age of twenty he went to Italy, and at Florence he was employed by the Grand-Duke Cosmo II. to execute the decorations which were designed for the celebration of the marriage of his son Ferdinand II. Stella made many designs and painted several pictures for the grand-duke, who gave him apartments and allowed him a similar pension to that which he gave to Callot the engraver. After living seven years in Florence, Stella went to Rome in 1623, and contracted a friendship with Poussin, of whom he became also an imitator.

While in Rome he was by some treachery or misunderstanding thrown into prison, and while in confinement he amused himself with drawing on the wall, in charcoal, the figure of the Virgin with the infant Jesus in her arms. A report of the excellence of the drawing reached the Cardinal Barberini, who went to see it, and from that time a lighted lamp was suspended over it, and the prisoners performed their devotions before it.

In 1634 Stella returned by Venice and Milan to France, with the intention of visiting Spain. At Milan they offered him the directorship of the Academy, with a view of retaining him in that city, but his object was to go to Spain, whither he had been invited by the king. Cardinal Richelieu however succeeded in detaining him in Paris; he procured him apartments in the Louvre, with the title of painter to the king and an annual pension of 1000 francs. In 1644 he was decorated with the cross of St. Michael, and was elevated to the rank of principal painter to the king. He died at Paris in 1657.

Stella remained an imitator of the style of Poussin, but he did not go beyond the drawing and colouring of Poussin, and in the latter respect he exaggerated the defect of Poussin: many of his pictures are very red. He excelled in pastoral pieces, and in the sports of infants; he was also excellent in perspective and architecture. His chief defect

was a want of expression. There are however several good pictures by him in some of the churches of Paris, and there are a few at Lyon. The prints after Stella amount to several hundreds: his niece, Claudine Stella, has engraved fifteen pastoral pieces, fifty-two sports of infants, and three books of ornaments. Edelinck, the Poillys, Melan, and others have engraved some of his greater works. He etched five plates himself, which are very scarce, namely, '*The Descent from the Cross*,' a Madonna, a Saint George, a genre piece with infants dancing, and a large print of the ceremony of the '*Presentation of Tribute to the Grand-Duke of Tuscany*,' of the date 1621, which is very rare. Many woodcuts, apparently by P. Maupin, are marked '*Stella fecit*,' but this alludes to the design, not the woodcut.

(Felibien, *Entretiens*, &c.; D'Argenville, *Vies des Peintres*, &c.; R. Dumezil, *Peintre-Graveur Français*.)

STENO, NICHOLAS, was born in 1638, at Copenhagen, and there also first studied the medical and other sciences. Bartholin was his preceptor in anatomy, and induced him to pursue it with an ardour which was crowned with eminent success. Having left Copenhagen, Steno studied for three years at Leyden, and for two at Paris, and then travelled through the greater part of Germany and Italy. At Florence, Ferdinand II., grand-duke of Tuscany, appointed him his physician in 1667; and Cosmo III., the next duke, retained him in the same post, and made him tutor to his son. In 1669 Steno renounced the Lutheran faith, in which he had been born and educated, but in which his confidence had been shaken during his residence at Paris by Bossuet, and embraced the Roman Catholic religion. Soon after, Frederic III. of Denmark recalled him, but it was not till Christian V., who was more tolerant of Steno's new faith, succeeded, that he was induced to accept the professorship of anatomy at Copenhagen. He held the appointment for only a short time, and then returned to Florence, where, in 1677, giving up the study of anatomy, he took holy orders, and was consecrated Bishop of Heliopolis. Soon after, having been invited to the court of Hanover, the pope made him vicar apostolical of the churches in the north, and in this office he remained, devoting himself zealously to his religious duties till 1679, when, a Lutheran prince succeeding to the government of Hanover, he was obliged to quit the country. He retired to Münster, and there and in other parts of Germany he continued sedulously preaching till 1686, when he died at Schwerin in Mecklenburg.

Steno is now known chiefly through the results of his anatomical labours, which, considering the short period occupied in them, were neither few nor unimportant. In his inaugural dissertation, published in 1661, he described accurately the salivary glands and their ducts, and especially that of the parotid gland, which Casserius had regarded as a ligament, and which has since been commonly called Steno's duct, though it had been before his time observed by Gerard Blasius. In another small treatise Steno first described the ducts of the lachrymal gland. His principal work, '*On the Muscles and Glands*,' &c., was published in 1664, and contains, among many excellent anatomical descriptions, the first good account of the course of the muscular fibres of the heart, the tongue, and the pharynx, and of the anatomy of the respiratory muscles. It includes also most of his observations on the lymph and lymphatics. In his '*Discourse on the Anatomy of the Brain*,' Paris, 1679, Steno speaks of its fibrous structure, and urges the propriety of tracing more carefully than had been hitherto done the course of the nerves into its interior. He wrote also several papers in the '*Acta Hafniensia*,' containing some excellent observations on the motions of the heart in living animals, on the nature of the ovaries and the ova of quadrupeds, and on the development of the chick. A brief account of his researches is published in Haller, '*Bibliotheca Anatomica*,' tom. i. p. 491.

STEPHANUS, ATHENIENSIS, an ancient Greek physician, the author of several treatises still extant. Nothing is known of the events of his life, except that (if we may believe the titles of some manuscripts at Vienna) he was a pupil of Theophilus Protospatharius. (Lambee, '*Biblioth. Vindob.*,' lib. vi., pp. 198, 223, 492; lib. vii., p. 352, ed. Kollar.) Neither is it known for certain when he lived, for his having Theophilus for his tutor does not at all help to decide this question, as it is equally difficult to determine the date of the master as of the pupil. G. J. Vossius ('*Lib. de Philosoph.*,' cap. 13, p. 109, in '*Opera*,' tom. iii., ed. Amst.) and Fabricius ('*Biblioth. Gr.*,' tom. xii., p. 693) think he is the same as the author who is known by the name of Stephanus Alexandrinus, and who dedicated his work '*De Chrysopaia*' to the Emperor Heraclius (A.D. 610-641); and that he might have been called Atheniensis from having been born at Athens, and Alexandrinus from having settled at Alexandria. Probably however neither of these great scholars ever saw his works in the original; as Dietz, his editor, notices several words that occur in them, which seem to belong to the 11th century rather than the 7th. The first of his works that we possess is a Commentary on the '*Prognostics*' of Hippocrates, which was first published by Dietz (who calls him "*inter Hippocratis interpretes sequioris ætatis facile princeps*"), in the first volume of his '*Scholia in Hippocratem et Galenum*,' Regim. Pruss., 1834. There is also a commentary on the '*Aphorisms*' which bears his name, and which in fact agrees word for word with that which is commonly attributed to Theophilus. Some extracts from this are inserted in the second volume of Dietz's collection. His commentary on Galen's '*Ad Glauconem de Medendi Methodo*,' is said by Fabricius

and Choulant ('Handb. der Bücherkunde für die Aeltere Medicin,' Leipzig, 1841) to have been first published at Venice in Greek by Aldus, 8vo, 1536; but Dietz doubts the existence of this edition. He has himself inserted the commentary in the first volume of his collection mentioned above. It had before appeared several times in a Latin translation by Augustinus Gadaldinus, Venet., 8vo, 1554, Lugd., 8vo, 1555 and 1558. Another of his works was published in a Latin translation by Casp. Wolf, with the title 'Alphabetum Empiricum, sive Dioscoridis et Stephani Atheniensis de Remedijs Expertis Liber,' &c., Tiguri, 8vo, 1581. The treatise on fevers, sometimes attributed to Stephanus Atheniensis, is in fact by Palladius. [PALLADIUS, vol. iv., col. 645.]

The work on Alchemy by Stephanus Alexandrinus consists of nine *πράξεις*, or 'Lectures' (see Fabricius, 'Biblioth. Gr.' tom. xii., p. 695), with the title *Στεφάνου Ἀλεξανδρέως, Οἰκουμένηκου Φιλοσόφου καὶ Διδασκάλου, Μεγάλης καὶ ἱερᾶς ταύτης Τέχνης περὶ Χρυσopoίας Πράξεις ἐν Θεῷ πρώτη*. It was published in Latin, Patav., 8vo, 1573, by Dominic Pizimentus, together with Democritus, Synesius, and other writers on the same subject. The Greek text is contained in vol. ii. of Ideler's 'Physici et Medici Græci Minores,' 8vo, Berol., 1842. The writer was a Christian, and lived (as was before noticed) in the 7th century. Reinesius (ap. Fabric., 'Bibl. Gr.' tom. xii., p. 757) speaks highly of his work, but notices that he falls into the common error of the Eastern and Greek churches of that age respecting the procession of the Holy Ghost.

It may be mentioned that the father of Alexander Trallianus (Alex. Trall., 'De Re Med.' lib. iv., cap. 1, p. 230, ed. Guint.), and a physician of Edessa, sent by Justinian as ambassador to the Persian king (Procop., 'De Bello Pers.' lib. ii., cap. 26) must not be confounded with the two writers noticed in this article, both of whom probably lived much later.

STEPHANUS, BYZANTINUS, a Greek grammarian, the author of a geographical dictionary, the earliest probably ever written. Nothing is known of his life, and his age is uncertain; he is placed by Saxius ('Onomasticon,' i. 520) in the latter part of the 5th century. Of his original work nothing but an abridgment made by Hermolaus, another grammarian, who lived in the time of the Emperor Justinian, has come down to us, with the exception of a fragment of the letter Δ beginning with Dyme and ending with Dodona, which was first published from the 'Bibliotheca' of Peter Seguer, by Samuel Tenuilius, Amst., 4to, 1669. A comparison of this portion of the original work with its abridgment will show how much valuable matter has been omitted by Hermolaus. Constantine Porphyrogenetus, in his book 'De Administrando Imperio,' c. 23, 24, and in that on the 'Themata' (lib. 2, Thema 6, 9, 10, 12), quotes from Stephanus and gives much fuller extracts than are found in the 'Epitome,' and in one instance cites him by name (Thema 9, 'De Sicilia'; see 'Excerpta Constantini Peiresciana,' edit. Henr. Valesius, p. 493; and also 'Etymolog. Magnum,' voc. *Σφῆκεια*). In the work, as it has come down to us, much of the letter K, from KE to KO, is wanting, which is known to have existed, according to Scaliger, quoted by Fabricius ('Biblioth. Græc.' lii. 51, Hamburg, 1717). The latter part is less full than the earlier; from Πατρὶς to Σ little more than the names of places and their adjectives are given; from this letter onwards the extracts become less meagre. In X and Ω we have what, from the difference in style, may be considered an uncut transcript of the original; the first nine articles of X are abridged in the 'Codex Vratisl.' like those of the preceding letters, as if the epitomist had desisted suddenly in his undertaking. The difficulty of distinguishing the original material from the possible additions of Hermolaus prevents us from relying with any certainty on several passages in the work which have been thought to refer to Stephanus himself. Under the word *Ἀνακτόρεια*, he or his abridger speaks of Eugenius, a grammarian (according to Suidas) of the time of the Emperor Anastasius; in the article *Γότθοι* occur the words, 'as has been said by me in the Byzantica'; and under *Βήθλεμα* (Bethlehem) are expressions, which prove the writer of them to have been a Christian. Westermann, in the preface to his edition of Stephanus (Lips., 8vo, 1839), is inclined to apply these passages to him rather than to Hermolaus, and his reasons are apparently just. In the Burney manuscript 50, 11, 254, British Museum, in a volume entitled 'Vitæ, Mores, et Dicta Patrum Sanctorum, Ordine Alphabetico disposita, ex Johannis Moschæ Prato Spirituali alisque Auctoribus collecta,' is mention of a Stephanus of Byzantium, who is described as one of the scribes or chartularii of Maurianus the General; his great fame is spoken of, and a miraculous scene at his death is described, at which the narrator and Theodosius, bishop of Babylon, are said to have been present. A Count Maurianus lived in the time of the Emperor Zeno, A.D. 490 ('Chron. Paschal,' 261; 'Corpus Byzant. Script.' Venet., 1729); and another was Comes Domesticorum in the time of Honorius (Banduri, 'Comment. in Antiq. C. P.' lib. ii. 477, *ibid.*), and it is possible that some future discovery may connect the Stephanus mentioned in this passage with the subject of this biography.

Westermann has adopted the title *Ethnica* (*Ἐθνικά*), on the authority of Eustathius, instead of that of *Περὶ Πόλεων*, prefixed to the work by Aldus and others. The editions of Stephanus are Aldi Manutii, Venet., fol., 1502; Florent. ex Juntar. officin., fol., 1521; Gesner, Basil., fol., 1553; Xylander, Basil., fol., 1568, *omne castigat.*; Thomæ de

Pinedo, Amstel., 1678, with a Latin translation and useful commentary, and the fragment published by Tenuilius. Luc. Holsten., Lugd. Batav., 1684, with many annotations; Abraham Berkel, Lugd. Batav., fol., 1688: this edition was finished by Gronovius, 1694, who republished the fragment with a triple Latin translation in the 7th vol. of the 'Thesaurus Antiq. Græc.'; Dindorf, 4 vols. 8vo, Lips. 1825; and Westermann (referred to above), which contains a carefully revised text and a preface in which is given much valuable information.

The work of Stephanus contains many interesting particulars relative to history and mythology; it treats of towns, nations, and tribes, giving to each proper name its gentilitial adjective. It does not however appear, as some have supposed, that the chief object of the author was to convey grammatical information, and a title to the work, written at the end of the fragment already mentioned, and quoted as proving this, is not considered genuine. The number of authors cited in the fragment makes us the more regret the loss of so valuable a compilation as the whole work must have been. The notices of cities in the 'Epitome,' particularly of those which struck coins, are very useful in the illustration of the local history and topography of the ancient world.

STEPHANUS. [STEPHENS.]

STEPHEN, the first Christian martyr, has been supposed, on no very sufficient grounds, to have been one of the 'seventy-two disciples.' It is more likely that he was a Hellenistic Jew, and one of the large body converted on the day of Pentecost by the preaching of St. Peter. He appears to have been a person of some reputation, and was one of the seven deacons chosen to attend to the temporal affairs of the growing church. The Jews, from the different synagogues out of Palestine, exasperated by the defection from their body of so eminent a person as Stephen, lost no opportunity of contending vehemently with him; and ultimately brought him before the Sanhedrim, to give an account of his belief and conduct. In answer, he commenced a fine oration, the object of which appears to have been to open, historically, the true design of the Jewish dispensation, and the consummation of that design in Christ. The object of this discourse has however been disputed; and it was in fact not fully developed by the speaker, as he was interrupted by the clamours of the mob, who "were cut to the heart, and gnashed on him with their teeth." He was however encouraged by a vision of "heaven opened," and of Christ glorified; on declaring which to the people, they rushed upon him, dragged him outside the city, and there stoned him to death, A.D. 33. With his last breath he invoked the pardon of God for his murderers. This was entirely an extrajudicial act, the effect of popular excitement; for the Sanhedrim did not convict him, and had indeed no power to inflict death.

STEPHEN I. was elected bishop of Rome after the death of Lucius, A.D. 253. He was applied to by the Christians of Gaul concerning some differences which they had with Martinianus of Arles, who appears to have been unusually austere in matters of discipline. Next came the commotions among the Christians of Spain concerning the two bishops Basilides and Martialis, who were both deposed. Basilides went to Rome, and, it appears, prevailed upon Stephen to take his part; but the Spanish bishops applied to Cyprian of Carthage, who approved of the despotism of Basilides, and caused it to be confirmed by a council held in Africa. A controversy arose between Stephen and Cyprian concerning the baptism of heretics, but the authenticity of the letters of Cyprian and Firmilian concerning this controversy has been disputed by some church historians and critics. Stephen died in 257, but the manner of his death is not clearly ascertained: the 'Acta S. Stephani' are not considered as genuine. Of Stephen's writings we have only fragments of epistles.

STEPHEN II. was elected after Zacharias in 752, but died three days after his election, without being consecrated, for which reason he is generally omitted in the series of the popes.

STEPHEN III., a native of Rome, was elected the successor of Stephen II. (752), and he is styled by many Stephen II. Astolphus, king of the Longobards, having shortly before driven the Byzantines out of Ravenna, and the Exarchate, and Pentapolis, marched towards Rome, in violation of the peace concluded between his predecessors and that see, and having advanced as far as Narni, sent messengers to the pope, requiring the inhabitants of Rome and its duchy to pay him a capitation tax, and acknowledge him for their liege lord, threatening to pillage Rome in case of refusal. Stephen, having applied in vain for assistance to the Eastern emperor Constantine Copronymus, who was at that time busy in breaking images and persecuting image-worshippers, had recourse to Pepin, king of the Franks, whose accession to that throne in lieu of the deposed Childeric, the last nominal king of the Merovingian dynasty, had been countenanced and sanctioned by Zacharias, Stephen's predecessor. Pepin sent two legates, to endeavour to prevail upon Astolphus to desist from annoying the pope. Their remonstrances proving useless, pope Stephen determined to repair to France in company with Pepin's legates. Pepin received the pope with the greatest respect, and was crowned and anointed by him in the church of St. Denis, together with his two sons Charles and Carloman. It was then agreed between Stephen and Pepin that Pepin should oblige Astolphus to evacuate not only the duchy of Rome, but also the Exarchate and Pentapolis, which he had taken from the Byzantines, and that those territories

should be made over to St. Peter and the Roman see. Pepin, accompanied by Stephen, marched with an army into Italy, defeated Astolphus, besieged him in Pavia, and obliged him to promise to give up Ravenna with the Exarchate, which embraced the actual provinces called the Papal Legations, and the Pentapolis or present March of Ancona, including Urbino and Pesaro. Astolphus made the promise, and gave hostages to Pepin, who quickly returned to France (A.D. 754). In the following year however Astolphus, having recruited his forces, marched straight to Rome, to which he laid siege, devastating the country around. Pope Stephen now wrote to Pepin in the most urgent manner, in the name of St. Peter: "Petrus vocatus Apostolus à Jesu Christo Dei vivi filio: Viris excellentissimis Pipino, Carlo et Carolomanno tribus regibus," &c., promising them and all the French people eternal life, if they would support the rights of St. Peter's see, but threatening them with eternal perdition if they neglected so to do. These remarkable letters of Pope Stephen are in Baronius, Duchesne, and the Codex Carolinus. Pepin quickly repaired to Italy, again defeated Astolphus, who had been obliged to raise the siege of Rome in order to oppose him, and besieged him in Pavia. While Pepin was encamped before that city, an envoy appeared before him, sent by Constantine Copronymus, emperor of the East, who, after praising Pepin for having driven the Longobards out of the Exarchate, demanded its restitution to its former sovereign the emperor. Pepin replied, that the Exarchate had belonged to the Longobards by right of conquest, and also by the will of the people, who had given themselves up to King Luitprand, in consequence of the persecution of the images ordered by the Greek emperors; and that now by the same right those provinces belonged to Pepin, who had taken them from the Longobards, and that he had thought it expedient to give them to the pope for the honour and advancement of the Catholic church, and to keep it free both from the heresies of the Greeks and from the ambition and rapacity of the Longobards. (Anastasius 'in Vita Stephani III.'). Pepin, having dismissed the envoy with this answer, continued to press the siege of Pavia, and Astolphus was obliged to sue for peace. Pepin required him immediately to deliver to his commissioner Fulrad, abbot of St. Denis, the towns of the Exarchate and Pentapolis, and to cause them to be evacuated by the Longobards. This being done, Fulrad carried the keys of those towns to Rome, and deposited them on the sepulchre of the holy Apostle, together with the solemn deed of donation signed by Pepin, his two sons, and the principal barons and prelates of France. This act of donation is lost, but from some of the expressions, gathered from Pope Stephen's letters, it appears that it was made to "the blessed Peter, and the holy church of God," and "to the Roman republic." The city and duchy of Rome were therefore not included in the donation, as they had not been conquered either by the Longobards or by Pepin. The pope then entrusted the administration of the Exarchate to the archbishop of Ravenna. Some critics, especially French, and Sigonius himself, assume that Pepin gave to the pope only the "utile dominium" of the Exarchate and Pentapolis, and retained for himself and his successors the "jus imperii," or sovereign rights.

Soon after this memorable transaction Astolphus died of an accident while hunting, and Desiderius, king of Tuscany, was chosen by the Longobards for their king. Ratchis, brother of Astolphus, who had formerly abdicated the crown and turned monk, left his convent and aspired again to the throne. Desiderius applied to Pope Stephen, who ordered Ratchis to return to his convent. Ratchis obeyed, and Desiderius was acknowledged king. In the following year (April 757) Pope Stephen died, and was succeeded by Paul I. We have of Pope Stephen's writings, besides his letters in the Codex Carolinus, his 'Responsa ad Gallos,' in Harduin's 'Concilia.'

STEPHEN IV., styled III. by some, a Sicilian by birth, was elected pope in 768, more than a year after the death of Paul I., during which time one Constantine, a layman, and brother of Toto, king of Nepi, intruded himself by force on the papal see, having obliged Gregory, bishop of Præneste, to ordain and consecrate him. At last, part of the Roman clergy, supported by the Longobard duke of Spoleto, who sent an armed force to Rome, overcame the faction of Constantine, who was deposed, deprived of his eyes, and shut up in a convent, and Stephen was elected. The new pope convoked a council in the Lateran, in which all the abettors of Constantine were degraded. Shortly after, new disturbances broke out in Rome, which induced Desiderius, king of the Longobards, to go thither with some troops. He had several interviews with Pope Stephen in the Vatican Basilica outside of the walls, and assisted him in quelling the insurrection, the leaders of which had their eyes put out.

King Pepin being dead, the kingdom of the Franks was divided between his two sons, Charles and Carlomann. Bertha, Pepin's widow, having made a journey into Italy, saw King Desiderius, and arranged with him a matrimonial alliance between two of his daughters and her two sons. Pope Stephen, upon hearing this, wrote to the two kings of the Franks a very violent letter, which is contained in the Codex Carolinus, dissuading them from the proposed alliance, and asserting that it would be "arrant folly to contaminate their noble legal race with the perfidious and infected race of the Longobards, who had brought leprosy into Italy, and who did not deserve to be reckoned among nations; that having promised to St. Peter to be friends of his friends, and enemies to his enemies, they ought to shun

the alliance of the Longobards, who were enemies to Rome," adding several scriptural passages which he made to bear upon the subject: he concluded by stating that he wrote this letter upon the sepulchre of the holy Apostle, and he threatened them with excommunication if they spurned his advice. The alliance however took place, at least in part; for Charles (afterwards Charlemagne) married Hermengarda, daughter of Desiderius, whom he repudiated a year after, to marry Hildegard, a German princess.

Sergius, archbishop of Ravenna, being dead, the Archduke Leo was elected his successor; but Mauritius, duke of Rimini, went to Ravenna with an armed force, and violently placed in the archiepiscopal see the archivist Michael, a layman. Pope Stephen refused to consecrate Michael, who, after having stripped the church and treasury of many valuables, at last retired, and made room for Leo. It is said that King Desiderius favoured Michael. Pope Stephen, in the latter part of his pontificate, was at open variance with the king of the Longobards, who kept or recovered possession of Ferrara, Comacchio, and Faenza, which formed part of the long-disputed Exarchate. Pope Stephen died at the beginning of 772, and was succeeded by Adrian I.

STEPHEN V., a native of Rome, succeeded Leo III. in 816. Shortly after his consecration he went to France to confer with the Emperor Louis the Pious, whom he met at Orleans, and who received him with great honour. On his return to Rome, he died in the seventh month of his pontificate. He founded at Rome the monastery of Santa Prassede, which he gave to a congregation of Greek monks, who retained their own liturgy.

STEPHEN VI., a Roman, succeeded Adrian III. in 885. He found, on his succession, the Lateran palace stripped of its treasures and other valuables by the relatives and attendants of the late pope, according to the practice of those times. The public granaries were also empty, and the people of Rome were suffering from famine resulting from a bad harvest and from swarms of locusts which had desolated the country. Stephen ordered the fields to be sprinkled with holy water; but at the same time he promised a bounty in money for every measure of dead locusts which the peasants should bring him, and this had the effect of clearing the country of that scourge. He also sold his own property to relieve the poor. Pope Stephen had been consecrated by John, bishop of Pavia, who was one of the imperial 'missi;' but the Emperor Charles the Fat was angry because the new pope had not waited for his approbation, and he sent some of his officers to Rome to arrest him. Stephen however having forwarded the report of his election, made according to the canonical forms, and numerous attestations of both clergy and laity, the emperor was pacified. In the year 887 Charles the Fat was deposed, and his vast monarchy parcelled out. Berengarius, duke of Friuli, was elected by part of the Italian barons king of Italy; but he found a rival in Guy, duke of Spoleto, who overthrew Berengarius in battle, and was crowned at Rome by the pope, in February 891, with the title of emperor, 'Wido Imperator Augustus.' Soon after this solemnity Pope Stephen died, and was succeeded by Formosus. Pope Stephen is said by Gulielmus Bibliothecarius to have been a man of learning: he collected manuscripts, which he gave to the Basilica of St. Paul.

STEPHEN VII., Bishop of Anagni, and a native of Rome, succeeded in 896 Benedict VI., who had not lived a month after his election, which took place on the death of Formosus. Stephen, from what motive is not clearly ascertained, persecuted with the greatest bitterness the memory of Pope Formosus, caused his body to be disinterred and stripped of its pontifical garments, and thrown into a common grave among laymen. He justified himself by the fact that Formosus, before his elevation to the papacy, had been excommunicated by Pope John VIII., in consequence of the frequent factional strifes which often broke out at Rome. Stephen also annulled all the acts and decrees of Formosus. This affair of Formosus gave rise to much controversy, which lasted during several successive pontificates; and a contemporary writer called Auxilius wrote in defence of the memory of Formosus, 'De Ordinatione Formosi Libri Duo.' In 897 an insurrection of the friends of Formosus broke out at Rome, and Pope Stephen was seized, cast into prison, and strangled. He was succeeded by Romanus, who annulled all Stephen's acts as to Formosus.

STEPHEN VIII., succeeded Leo VI. in 928. This was the period when Marozia, and her husband Guido, duke of Tuscany, ruled in Rome. They had put to death Pope John X., and are said to have done the same to his successor Leo VI., whose pontificate lasted only seven months. The election of Stephen is supposed therefore to have been effected with their approbation; but we have no historical record concerning the particulars of his pontificate. The 10th century is the truly dark age of Italian history. Stephen VIII., styled by some VII., died in December 930, and was succeeded by John XI., son of Marozia.

STEPHEN IX., succeeded Leo VII. in 939. Rome was then governed by Alberic, son of Marozia, who assumed the title of "prince and senator of all the Romans." Little or nothing is known of Stephen IX.'s pontificate. Martinus Polonus alone, a chronicler of dubious authority, says he was roughly handled by the Romans in a popular tumult, and was crippled for the rest of his life. He died in 942, and was succeeded by Martinus III.

STEPHEN X., styled IX. by some, CARDINAL FREDERIC, abbot of Monte Casino, and brother of Godfrey, duke of Tuscany, succeeded

Victor II. in 1057. He had been legate of Leo IX. to the court of Constantinople, and was learned in controversial divinity. His election is said to have been unanimous. By the advice of the monk Hildebrand (afterwards Gregory VII.), he sent two legates to Milan to enforce the decrees concerning the celibacy of the clergy, which the church of Milan had not yet adopted. This dispute had begun in 1021, at the council of Pavia, and it lasted for nearly half a century. Stephen issued also several bulls against simony, which was prevalent in his time. He sent for the learned Petrus Damianus, who had retired to a secluded cloister, and obliged him to come to Rome under pain of excommunication, and made him cardinal and bishop of Ostia. The pope also visited his former monastery of Monte Casino, in which he enforced a strict discipline. He also issued a bull exempting the clergy from the jurisdiction of the lay courts, and from paying tribute to laymen. From some passages of Leo Ostiensis and other chroniclers it has been surmised that he intended to make his brother Godfrey king of Italy. But the pope fell ill, and died at the beginning of 1058. On his deathbed he recommended the clergy and people to wait for the return of Hildebrand from Germany before they elected his successor, but the advice was not followed, and a schism ensued. [BENEDICT X.; NICHOLAS II.]

STEPHEN, SAINT, first king of Hungary, son of the Magyar chief Geysa, and Sarolta, the daughter of Gyula, a Hungarian nobleman who had been baptised in Greece, was born about 979, at Gran (Estragan, the ancient Strigonium).

His father Geysa (Gyözo, that is, 'Victor'), whose fierce and indomitable character the Christian Sarolta had succeeded in softening, allowed Pilgrin, bishop of Lorch, to preach the Gospel to the Magyars; but these first attempts proved unsuccessful, and it was only at a subsequent period, when Geysa himself was converted, that a few of his countrymen followed his example. The number was however greatly increased upon the arrival in Hungary of St. Adalbert, who advised Geysa to allow Christians to settle there; and in consequence of this permission being granted, a number of Germans and Italians established themselves in the neighbourhood of the capital, Gran. The majority of the Hungarians being however still attached to their gods, persecution as well as other means of conversion were used against them. In the midst of preparations for a powerful attack against his heathen countrymen, Geysa died, and Stephen succeeded him in 997.

The legend says that an angel had announced to Geysa the birth of a son, and that St. Stephen, the protomartyr, appeared to Sarolta, and bade her call her offspring after him. The name which he bore before his baptism was Vâik, according to Mailath. Great care was taken by his mother that he should receive a good education; Count Deodatus à San Severino, in Apulia, was appointed his instructor, and St. Adalbert, of Prague, baptised him in 995. Shortly after this he married Gisela, the sister of the Emperor Otho III.

The dissatisfied Magyars, though they had hitherto refrained from any acts of violence against the Christians, who enjoyed the powerful protection of Geysa, now began to make open resistance. The youthful inexperience of Stephen, who had scarcely assumed the reins of government, seemed to give them hopes of succeeding in their attempts to check the progress of Christianity and restore their ancient religion. Indeed it appears that when Kupan, the count of Simegh, had consented to lead the heathen Magyars, a number of those who had received Christian baptism joined his standard. In addition to this, so wavering was the faith of those who remained with Stephen, that the youthful chief could only rely upon the support of the foreigners. Kupan had assembled all his forces, and marched towards Wespriem, in the neighbourhood of which town Stephen met him. After a desperate battle, in which Kupan lost his life, the victory so decidedly leaned towards the side of the Christians, that the remaining adherents of the party of Kupan quitted it. For the purpose of securing the possession of his throne, Stephen sent an embassy to Pope Sylvester II., at the head of which was Astricus or Anasbasius, bishop of the newly-created see of Kolotz, who was instructed to obtain the title of king for Stephen. Astricus soon returned with a crown and a deed of the pope, which gave Stephen unlimited power in the ecclesiastical affairs of his country. The coronation took place on the 15th of August 1000. From the time of his assuming the title of king, the peaceful occupations of Stephen were only interrupted by a few warlike incursions, all of which he successfully repelled.

In 1002 Gyula, his cousin, rebelled against him, and publicly abjured Christianity. After a short campaign he was taken prisoner with his two sons, and Zoltan was appointed governor of Transylvania in his stead. The Bulgarians having assisted Gyula in his rebellion, and threatening to make an incursion into the country, Stephen led an expedition against their chief Kean, and gained a decisive victory over him. The third invasion against Stephen was one conducted by Henry, the son of the Emperor Conrad, who had already advanced as far as the Raab with a powerful army, but after some negotiations the army returned without having fought a single battle. These were the only instances in Stephen's long reign which obliged him to have recourse to arms. Indeed his court was so well known for the security which it afforded, that the two English princes Edwin and Edward, who had been exiled by Canute, went over to Hungary and lived under King Stephen's protection. The whole of his attention was

given to the firm establishment of Christianity, and no means were neglected by him which could induce the few who still persevered in heathenish practices to adopt it. He divided Hungary into ten bishoprics, which were plentifully supplied with monasteries built by Greek architects. Schools were also established, the first and best of which was that of St. Gerard, who had been tutor to Prince Emeric, the king's son. It was afterwards entrusted to the direction of Walter, a monk of Bákony Béli, the fifth monastery founded by Stephen. The country itself being now provided with ecclesiastical and school establishments, a monastery was built at Ravenna for the use of Magyar pilgrims on their way to Rome, where the munificent king had erected a college with a foundation for ten canons, and an inn for his subjects whom the desire of learning might lead to Rome. A large convent in the neighbourhood of Constantinople was the resting-place for Hungarian monks who wished to join their brethren at Jerusalem, and who were entirely supported by the king. These and many other pious and charitable institutions of St. Stephen, joined to his own exemplary life and precepts, soon rooted out the last remnants of paganism. His civil constitution, of which we have no well-authenticated remains, finished the work of civilisation which he had begun thirty years before.

At this period of his life, being fifty-one years of age, he lost his son Emeric, who, under the able tuition of Gerard, had all the accomplishments of his time, and was in every respect worthy of his father. Emeric was married to the daughter of Kresimir, king of Croatia, but he died without issue. Stephen's grief for the loss of his son was increased by the treachery of Gisela, who put out the eyes of Vazul, whom Stephen had designed for his successor, in order that her own son Peter might succeed to the throne. These causes of sorrow so affected Stephen's health that they brought on an illness which afflicted him till his death. About this time an attempt was made against his life by a murderer, who was incited by four of the principal men of the court. Stephen gave a general pardon to all who were concerned in the crime. He died on the 15th of August 1038 (the day of his coronation), forty-one years after the death of his father. In 1033 his relics were enshrined by St. Ladislaus, in a rich chapel which bears his name, in the church of our Lady of Buda. The 20th of August, the day of the translation of his relics, is kept in Hungary as a festival.

St. Stephen was canonised by Benedict IX.; and Pope Innocent XI., in 1686, appointed his festival to be kept on the 2nd of September, the Emperor Leopold having on that day recovered Buda from the Turks. (Chartutius, 'Vita S. Stephani'.)

STEPHEN II., king of Hungary, son of Koloman, whom he succeeded in 1114, at the age of fourteen. He was of a weak intellect, and unwilling to submit to the judgment of his advisers, but was accustomed to act from the impulse of the moment. This quality gave him the name of 'the Lightning,' or 'the Thunderer,' and rendered him odious to his subjects. Soon after his accession to the throne he made war on the Venetians, who could not be reconciled to the loss of Dalmatia, which had been taken from them during the reign of Stephen's father. They sent a fleet, with a considerable army, under the Doge Ordelaf Faleiro, who however did not recover this province, the possession of which was of the greatest importance to the republic. The hostilities, which lasted two years, ended with a treaty which secured the mainland of Dalmatia to Stephen, whilst Venice obtained the adjoining islands. This transaction was scarcely concluded, when Stephen went (1116) to meet Wladislaw, the chief of the Bohemians, for the purpose of renewing the treaties of friendship which had long existed between the two countries. Through the treachery of Solth, the meeting terminated in a quarrel attended with bloodshed; but after a few months the traitor was executed, and the old treaty renewed: some writers however assert that Stephen was a participator in this dishonourable transaction. In the two following years Stephen invaded Poland and Austria, from which expeditions he derived no material benefit. In 1119 he made an incursion into Austria, but the Emperor Leopold, in a decisive battle, completely defeated the Hungarian army, and pursued it as far as Eisenberg.

The bad feeling which such acts had produced in the people was only checked by the great respect for kingly authority; but Stephen at last excited general indignation by filling the country with foreigners, to whom he showed a decided preference. This foolish policy was followed, in 1127, by a war with the grand-duke of Muscovy, Wladimir Monomakh. Yaroslav, the exiled prince of Wladimir, applied to Stephen for aid. The Hungarian army marched into Russia, and advanced without opposition as far as Wladimir. At this crisis Yaroslav died, and with his death the cause of the war ceased. But instead of returning, Stephen insisted upon storming the town; and in consequence of his obstinacy, the chief nobles of his army, with Rozma Peznan at their head, declared that if he would not immediately follow them into their own country, they would elect another king, and leave him at the mercy of the Russians. Intimidated by these threats, Stephen returned to Hungary; but his conduct compelled many of those who were concerned in the revolt to fly to Constantinople. Here they were well received by the Emperor John II., who, upon Stephen's threatening to invade the empire, sent a powerful army against him, which completely defeated the Hungarians at Uj-

Palanka. When peace was restored, Stephen adopted Bela, the son of his relative Arnos, who had been obliged to seek protection at the court of Constantinople, and resigned in his favour in 1131. He then entered a monastery, and died at Waradin, in the thirty-first year of his age.

STEPHEN III. was crowned king of Hungary in 1161, under unfavourable circumstances, arising from the influence which the emperor of Constantinople had exercised over Hungary during the reign of his father. Although Stephen had legitimate claims to the throne, and was generally beloved by the Hungarian nobles, the Emperor Manuel did not approve of his spirit of independence, and signified to the Hungarians that unless they elected Ladislaus, the brother of the late king, he would invade the country. Ladislaus had been brought up at the Byzantine court, and had the Greek interest much more at heart than the Hungarian. Terrified by the approach of a formidable army, the Hungarian nobles elected Ladislaus, who however died in 1161.

STEPHEN IV. On the death of Ladislaus, Stephen IV. was forced upon the Hungarians by the Emperor Manuel; though no man could be less acceptable to them than the debauched uncle of the unfortunate Stephen III. A revolt soon compelled him to seek refuge at the court of his patron, and the lawful king, Stephen III., was unanimously re-elected. During the usurpation of his uncle, Stephen lived under the protection of the archbishop of Gan, Luke Banfi. Manuel seemed to approve of the newly elected king, and gave his daughter in marriage to Bela, the brother of Stephen, on condition that the prince should live at Constantinople. Stephen agreed to this; but upon the arrival of Bela at Constantinople, the emperor claimed his heritage, which consisted of Dalmatia. Stephen refused to admit his claim; whereupon his uncle, Stephen IV., re-appeared at the instigation of Manuel, and commenced hostilities. He was however defeated in a battle by his nephew, and obliged to fly to Semlin, where he died in 1163. Soon after his death Semlin was taken, the kingdom cleared of the partisans of the Greek cause, and in an expedition into Dalmatia, which was conducted by Stephen himself, in 1165, this province was recovered from the hands of Manuel. But whilst engaged in the western part of his kingdom, a Greek army appeared in Hungary. Stephen went to meet it; and a decisive battle, in which the Hungarians were defeated, secured the influence of Greece in Hungary. Stephen III. died in 1173, and was succeeded by his brother Bela III.

STEPHEN V., king of Hungary, succeeded his father Bela in 1270, and began his reign by a war against Ottocar, king of the Bohemians, whom he defeated. A subsequent campaign against the Bulgarians was crowned with success; but the course of his victories was interrupted by his death, which occurred in 1272. This king is sometimes called Stephen IV. by those who do not recognise the usurper of that name.

(*Thwrocz, Chronica Hungarorum*; Ranzanus, *Epitome rerum Hungaricarum Decades Quatuor*; Mailáth, *Geschichte der Magyaren*.)

STEPHEN, king of England, born in 1105, was the third of the four sons of Stephen, earl of Blois, by Adela, daughter of William the Conqueror; and was consequently nephew of Henry I., cousin to that king's daughter the Empress Matilda, and second cousin to Matilda's son, who became king of England as Henry II. Having been early brought over to England by his uncle Henry I., that king, with whom he became a great favourite, besides bestowing upon him several valuable estates here, made him earl of Mortagne in Normandy. Dr. Lingard says that Stephen "had earned by his valour in the field of Tenchebrai the Norman earldom of Mortoil." ('Hist. of Engl.,' i. 158). But when the battle of Tenchebrai was fought, in 1106 [HENRY I. vol. iii. col. 353.], Stephen was only about a twelvemonth old. Henry also procured for him a marriage with Matilda, the daughter and heiress of Eustace, earl of Boulogne (younger brother of the famous Godfrey and Baldwin, king of Jerusalem), by which he acquired that earldom, and also a new alliance with the royal families both of England and Scotland, for the mother of Matilda of Boulogne was Maria, daughter of Malcolm Canmore, and a younger sister of Henry's queen Matilda (the good queen Maud). As Stephen therefore was the nephew of Henry I., so his wife was the niece of Henry's queen; and by this match the issue of Stephen, as well as the issue of Henry, might boast of inheriting the blood of the old Saxon royal family, as being equally sprung from Malcolm's queen Margaret, the sister of Edgar Atheling, a circumstance by no means without influence in the contentions of the two lines.

When Henry, after the loss of his son and the failure of issue by his second wife, determined upon securing the succession to the crown for his daughter the Empress Matilda, the two individuals upon whom he appears to have principally relied for the support of that arrangement were his natural son Robert, earl of Gloucester, and his nephew Stephen. It is not improbable that both may have meditated the attempt which Stephen actually made, and that, if the crown upon Henry's death had not been seized by him, it might have been clutched at by Gloucester. The notions of that age were by no means so settled in favour of legitimate birth as to have prevented the son of the late king, although illegitimate, from having a fair chance in such a competition against his nephew.

Perhaps Henry himself was not without his fears of one or both. He must have felt at least that the existence of two males so nearly

connected with the royal house, and distinguished both for military talent and popular manners, tended to make still more precarious the success of his novel project of a woman-king, a thing opposed to all the notions and habits of the Gothic nations, and (if we except the single instance of a wife of one of the kings of the West Saxons, who is said to have retained the government in her hands for a year after the death of her husband, and then to have been expelled with disdain by the nobles, who would not fight under a woman) unexampled either in England, or in France, or in Normandy, or in the kingdom of Denmark and Norway, whence the Normans came. At the same time it was obviously much better for Matilda that she should have two such near male relations than if she had only one; seeing that, if she had to fear a rival in one of them, she might count with equal certainty upon having a defender in the other. But that which after all gave her the best chance was the circumstance of her having had the good fortune to give birth to a son a few years before her father's death. Indeed she had borne two sons to her second husband before her father died. Had it not been for these lucky accidents it may be doubted if all her father's provident arrangements would have secured the recognition of Matilda's pretensions for a moment after the throne became vacant. But for the existence of the infant Henry of Anjou, or of his younger brother, at the time of his grandfather's death, the crown might probably have been Stephen's without striking a blow—unless there had ensued a fight for it between him and his cousin Gloucester.

In 1125, immediately after the death of her first husband the Emperor Henry V. (whom she was suspected of having made away with), Henry had sent for his daughter to Normandy, and, having the next year brought her over to England, he collected all the chief persons of the realm about him at Windsor while he kept his Christmas, and, having there by presents and promises engaged those among them of greatest influence to support his views, he came to London, and, having proposed the matter in a council consisting of the archbishops, bishops, abbots, earls, and all the thanes, obtained, in the beginning of January 1127, though not, says Malmesbury, without great and long deliberation, the unanimous promise of the assembly, that, if he should die without male issue, they would receive Matilda as his successor. Every individual present who seemed to be of any note—*quicumque in eodem concilio alicujus, videbatur esse momenti* (to adhere to Malmesbury's remarkable expression)—took a solemn oath to that effect: first, the Archbishop of Canterbury and the other bishops and abbots; then the King of Scotland on account of the fiefs he held of the English crown; then Stephen, earl of Boulogne and Mortagne; then the Earl of Gloucester; then the other barons. A few months after this Matilda was married to Geoffrey Plantagenet, the son of the Earl of Anjou; and in the year 1131, when she was in England, having already quarrelled with her husband, the oath of fealty to her was again taken by the bishops and nobility at a grand council held at Northampton; and two years after, on the birth of Matilda's first son Henry, it was once more renewed, in a council held at Oxford, both to her and to her son.

Nevertheless, as soon as Henry had expired in Normandy, December 1st, 1135, Stephen, who, as well as Gloucester, had been for some time in attendance on the dying king, instantly set out for England, and taking ship at Whitsand, near Calais, the usual port of embarkation, landed on the coast of Kent. It appears that, foreseeing his uncle's decease, he had already secured the support of a powerful faction of the clergy and nobility, by means of his younger brother Henry, who, having also stood high in the favour of the late king, had been placed by him in the bishopric of Winchester, and had succeeded in winning over to his brother's interest the most influential subject in the kingdom, Roger, bishop of Salisbury, who, as grand justiciary, was the supreme governor of the realm during the vacancy of the throne. Of Stephen's two elder brothers, it may be here mentioned that William, the eldest, was almost an idiot, and that the other, Theobald, had succeeded to his father's earldom of Blois; so that Stephen, in aspiring to the English crown, did not find either of them in his way. The politic and zealous management of his brother Henry had also gained for him the support of William de Pont de l'Arche, who held the castle of Winchester and the key of the royal treasures deposited there. The consequence was, that although Stephen was refused admission by the inhabitants both of Dover and of Canterbury, he was received with warm welcome by those of London and Winchester; and after Hugh Bigot, earl of Norfolk, the steward of the royal household, had, to remove the scruples, real or affected, of some of his adherents, boldly sworn that Henry on his deathbed had disinherited his daughter and her issue, and left the crown to his nephew, it was resolved by the clergy and nobility who had gathered about him that he should be crowned forthwith, and the ceremony was accordingly performed at Westminster on the 26th of December, St. Stephen's-day, by the Archbishop of Canterbury, assisted by the bishops of Salisbury and Winchester. The commencement of the reign of Stephen is reckoned from that day.

At his coronation Stephen swore,—1, That on all occasions of episcopal vacancies he would appoint a new prelate within a certain time, and meanwhile would leave the temporalities of the see in the charge of some ecclesiastic; 2, That he would make no addition to the royal forests, but would, on the contrary, restore to their owners

such lands as had been made forest by his predecessor; 3, That he would abolish the tax called Danegelt, which, after having been given up by the Confessor, had been restored by the Norman kings. On the other hand, the bishops tendered their allegiance only for so long as the king should maintain the privileges of the church; and the lay barons appear to have also qualified their oath by a similar condition as to his preservation of their estates and honours. Nothing like this had taken place at the commencement of any previous reign since the Conquest.

In January of the following year, 1136, after seeing the body of the late king interred at Reading, Stephen convened a great council of the bishops and the nobility at Oxford, and there signed a charter of the liberties of the church and state, in which he styled himself "Stephen, by the grace of God, elected king of the English by assent of the clergy and the people, consecrated by William, archbishop of Canterbury and legate of the holy Roman Church, and confirmed by Innocent the Pontifex of the holy Roman see." He had shortly before this obtained a bull from Pope Innocent, confirming his election. In this charter he repeated more distinctly the engagements under which he had come at his coronation, declaring besides that he would cause to be observed all the ancient and just laws of the kingdom. There is also a shorter charter of Stephen's, dated at London, which seems to have preceded this, and which was probably granted at or immediately after his coronation. In that he expressly grants to his French and English subjects all the good laws and good customs which they had in the time of the Confessor, a clause which is not found in the larger charter. The confirming clause of the latter also has the qualification, "*salva regia et justa dignitate mea*"—saving my royal and just dignity,—which the other is without.

Meanwhile a feeble attempt had been made by Matilda and her husband to take possession of Normandy; but the Normans themselves, without any assistance from Stephen, soon drove out the army of Angevins which had entered their country. In England at this moment not a hand or voice was lifted up for the daughter of the late king. Even the Earl of Gloucester came forward with the other barons, and did homage, and took the oath of fealty, to Stephen. After a short while however opposition arose in various quarters. In the spring of the year 1136, King David of Scotland, Matilda's uncle, advancing at the head of an army, overran the northern counties, and compelled the barons of those parts to swear fealty to Matilda, and to give hostages for the performance of their oath; and although he agreed to a peace when Stephen marched against him, and restored the lands and castles he had taken, he refused to do homage to the king of England for his possessions in that country. He suffered his eldest son Prince Henry however to do homage for the honour of Huntingdon, which, with the towns of Carlisle and Doncaster, was conferred upon him by Stephen. Meanwhile, during Stephen's detention on the northern border, an insurrection in Matilda's favour broke out in Wales, which he could never effectually suppress, but was obliged to satisfy himself with merely endeavouring to prevent it from extending itself beyond that quarter of the kingdom. Then, although he had obtained the investiture of the duchy of Normandy from the French king Louis, it soon appeared that his possession of the country was only to be retained by force of arms, and that while he had to keep back with the one hand the persevering attacks of the Angevins, he had an almost equally troublesome enemy to keep down with the other in the native chiefs, a large proportion of whom, sometimes arraying themselves on his side, sometimes on that of Matilda, evidently aimed at taking advantage of the contest between the two rivals, to throw off the yoke of the one as well as of the other, and to secure, if not the national independence, at least their individual emancipation from all superiority. And the same spirit quickly began to show and spread itself in England. In some districts the standard of Matilda was raised by the Earl of Gloucester, and various places of strength were seized upon and garrisoned in her name; elsewhere the barons fortified their castles on their own account, and set up each as an independent chieftain. Stephen had his hands full of work with all this disorder and rebellion in the south, when the king of Scotland again appeared on the northern borders. After having ravaged Northumberland with unusual ferocity in the winter of 1137, David and his half-barbarian host retired to Roxburgh, on the approach of the English king in the beginning of the following year; but as soon as Stephen was recalled to the south, the Scots again crossed the border in the end of March 1138. They had taken the castle of Norham, and laid siege to other fortresses, when they were met by Thurstin, archbishop of York, at the head of an army composed of the retainers of the northern English barons, and defeated by him in the famous battle of the Standard, fought on the 22nd of August, 1138, on Cutton Moor, in the neighbourhood of Northallerton. Peace however was not concluded with the Scots till the 9th of April in the following year, when Stephen found himself under the necessity of yielding up to Prince Henry the earldom of Northumberland, with the exception of the forts of Newcastle and Bamborough, for which he engaged to make over to him estates of equivalent value in the south of England.

But by this time the unfortunate English king had found another, and, as it turned out, by far his most formidable enemy. He had quarrelled with the Church. Resolved to reduce the inordinate power of Roger, bishop of Salisbury, and his two nephews, Alexander

and Nigel, bishops of Lincoln and Ely, he had at a council held at Oxford, in June 1138, arrested Roger and Alexander; and although Nigel made his escape, he was eventually compelled to surrender his castle of Devizes, as his brother and his uncle had been to give up theirs of Newark, Salisbury, Sherburn, and Malmesbury. The inflammation excited in the whole ecclesiastical body by this attack was terrific. Even the king's brother, the Bishop of Winchester, who had been lately made papal legate, was either carried away by the general feeling of his order, or, if he did not share in that feeling, found it would be in vain for him to resist it. He summoned his brother to answer for what he had done before a synod of bishops, which met at Winchester. Stephen complied so far as to send one of his ministers to plead for him, who, when a decision upon a preliminary question had been given against the king, appealed to Rome; on which the legate dissolved the synod, on the 1st of September 1139. On the last day of the same month Matilda landed on the coast of Suffolk, and immediately after the Earl of Gloucester unfurled his standard in the west. The war spread rapidly over the whole kingdom. At length, on the 23rd of February 1141, Stephen, while besieging the castle of Lincoln, which was held by Ranulph, Earl of Chester, was attacked by the Earl of Gloucester, and being taken prisoner, was immediately, by Matilda's order, consigned in chains to the castle of Bristol.

On that day month Matilda and her brother, attended by a numerous body of barons of their party, met the legate on the open downs in the neighbourhood of Winchester, when it was solemnly agreed that Henry and the church should acknowledge her as their sovereign, on condition that he should be made her first minister, and especially that all vacant bishoprics and abacies should be filled up on his nomination. Soon after this the Archbishop of Canterbury and all the other bishops gave in their adherence. In the beginning of April the heads of the church met on the summons of the legate at his episcopal city of Winchester; and there he addressed them in a long speech, which Malmesbury, who heard it, has preserved; and in the end the meeting unanimously agreed to confirm his treaty with Matilda. A remarkable circumstance mentioned in the account of this meeting is the appearance of certain deputies from the citizens of London, who, it is stated, on account of the greatness of their city were considered as nobles in England, and who had been summoned to give their attendance by the legate, although the assembly was otherwise composed only of ecclesiastics. They at first stood up for Stephen, but were ultimately persuaded to concur with the rest of the meeting.

But the folly, rapacity, and insolence which Matilda now displayed in her triumph, were soon found to be insupportable by all parties. Taking advantage of the strong popular feeling of disgust, Stephen's queen Matilda, who had remained in arms for her husband in the county of Kent, made her appearance before London while the empress lay there waiting her coronation; and she barely contrived, by springing from table and mounting her horse, to effect her escape to Oxford. The legate now joined his sister-in-law and the Londoners; the empress, with the King of Scots, the Earl of Gloucester, and others of her principal adherents, besieged in the castle of Winchester, fled from that stronghold on the morning of Sunday, the 14th of September, when, being immediately pursued, many of the party were killed; most of the rest, including the Earl of Gloucester, were taken prisoners, and Matilda herself with difficulty escaped to the castle of Devizes. Negotiations were now opened, the result of which was that in the beginning of November Gloucester was exchanged for Stephen. When his brother was thus again at liberty, the legate once more summoned a clerical synod at Westminster, on the 7th of December, at which he defended his abandonment of the cause of Matilda, and as usual carried his brethren along with him in his new course of politics. Stephen himself, having appeared among them, addressed them with pathetic eloquence on the wrongs and indignities he had sustained; and they ended by resolving unanimously to excommunicate all who should adhere to the "Countess of Anjou."
